This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.
1. Foreword

A: FOREWORD
These manuals are used when performing maintenance, repair, or diagnosis of Subaru LEGACY.

Applied model:
BL***** , BP***** from 2004MY

The manuals contain the latest information at the time of publication. Changes in specifications, methods, etc. may be made without notice.
HOW TO USE THIS MANUALS

1. How to Use This Manuals ...........................................................................2
1. How to Use This Manuals

A: HOW TO USE THIS MANUALS

1. STRUCTURE

Each section consists of SCT that are broken down into SC that are divided into sections for each component. The specification, maintenance and other information for the components are included, and the diagnostic information has also been added where necessary.

2. CONTENTS

The first page has an index with tabs.
3. COMPONENT
Illustrations are provided for each component. The information necessary for repair work (tightening torque, grease up points, etc.) is described on these illustrations. Information is described using symbol. To order parts, refer to parts catalogue.

Example:
4. SPECIFICATION
If necessary, specifications are also included.

5. INSPECTION
Inspections to be carried out before and after maintenance are included.

6. MAINTENANCE
- Maintenance instructions for serviceable parts describe work area and detailed step with illustration. It also describes the use of special tool, tightening torque, caution for each procedure.
- If many serviceable parts are included in one service procedure, appropriate reference is provided for each parts.

Example:

15. Main Shaft Assembly for Single-Range

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to MT-33, REMOVAL, Manual Transmission Assembly.>

11) Tighten the lock nuts to the specified torque using ST1 and ST2.

NOTE: Secure the lock nuts in two Places after tightening.

ST2 499987003 SOCKET WRENCH
ST1 498937000 TRANSMISSION HOLDER

Tightening torque: 118 N·m (12.0 kgf-m, 86.8 ft-lb)
7. DIAGNOSIS

Tables showing a step-by-step process make it easy to conduct diagnosis.

8. SI UNITS

Measurements in these manuals are according to the SI units. Metric and yard/pound measurements are also included.

**Example:**

*Tightening torque:*

\[44 \text{ N} \cdot \text{m (4.5 kgf-m, 33 ft-lb)}\]

PRECAUTION

1. Precaution

Page 2
1. Precaution

A: CAUTION
Please clearly understand and adhere to the following general precautions. They must be strictly followed to avoid minor or serious injury to the person doing the work or people in the area.

1. ABS
Handle the ABS as a total system. Do not disassemble or attempt to repair parts which are not instructed in this manual. Follow the instructions in this manual during performing the maintenance of ABSCM&H/U. To disassemble parts without instructions could prevent the ABS system from operating when needed or cause it to operate incorrectly and result in injury.

2. VEHICLE DYNAMICS CONTROL (VDC)
Handle the VDC as a total system. Do not disassemble or attempt to repair individual parts. Doing so could prevent the VDC system from operating when needed or cause it to operate incorrectly and result in injury.

3. BRAKE FLUID
If brake fluid gets in your eyes or on your skin, do the following:
- Wash out your eyes and seek immediate medical attention.
- Wash your skin with soap and then rinse thoroughly with water.

4. RADIATOR FAN
The radiator fan may rotate without warning, even when the engine is not ON. Do not place your hand, cloth, tools or other items near the fan at any time.

5. ROAD TEST
Always conduct road tests in accordance with traffic rules and regulations to avoid bodily injury and interrupting traffic.

6. AIRBAG
To prevent bodily injury from unexpected deployment of airbags and unnecessary maintenance, follow the instructions in this manual when performing maintenance on the airbag components or nearby, and the airbag wiring harnesses or nearby. To prevent unexpected deployment, turn the ignition switch to OFF and disconnect the ground cable from battery, then wait at least 20 seconds to discharge electricity before beginning work.

7. AIRBAG DISPOSAL
To prevent bodily injury from unexpected airbag deployment, do not dispose airbag modules in the same way as other refuse. Follow the special instructions for disposal in this manual. Follow all government regulations concerning disposal of refuse.

8. AIRBAG MODULE
Adhere to the following when handing and storing the airbag module to prevent bodily injury from unexpected deployment:
- Do not hold the harnesses or connectors to carry the module.
- Do not face the bag in the direction that it opens towards yourself or other people.
- Do not face the bag in the direction that it opens towards the floor or walls.

9. AIRBAG SPECIAL TOOL
To prevent unexpected deployment, only use special tools.

10. WINDOW
Always wear safety glasses when working around any glass to prevent glass fragments from damaging your eyes.

11. WINDOW ADHESIVE
Always use the recommended or equivalent adhesive when attaching glass to prevent it from coming loose and falling, resulting in accidents and injury.
1. Note
1. Note

A: NOTE

This is the information that can improve the efficiency of maintenance and assure the sound work.

1. FASTENERS NOTICE

Fasteners are used to prevent the parts from damage, dislocation and play due to looseness. Fasteners must be tightened to the specified torque. Do not apply paint, lubricant, rust retardant or other substance to the surface around bolts, nuts, etc. Doing so will make it difficult to obtain the correct torque and result in looseness and other problem.

2. STATIC ELECTRICITY DAMAGE

Do not touch the control modules, connectors, logic boards and other such parts when there is a possibility of static electricity. Always use a static electricity prevention cord or touch grounded metal for the elimination of static electricity before conducting work.

3. BATTERY

When removing the battery terminal, always be sure to turn the ignition switch to OFF to prevent electrical damage of the control module from overcurrent. Be sure to remove the battery ground cable first.

4. SERVICE PARTS

Use genuine parts for maximum performance and maintenance when conducting repairs. Subaru/FHI will not be responsible for poor performance resulting from the use of parts except for genuine parts.

5. PROTECTING VEHICLE UNDER MAINTENANCE

Make sure to attach the fender cover, seat covers, etc. before work.

6. ENSURING SECURITY DURING WORK

When working in a group of two or more, perform the work with calling each other to ensure mutual safety.

7. LIFTS AND JACKS

When using a lift or shop jack to raise a vehicle, or using rigid rack to support a vehicle, always follow instructions concerning jack-up points and weight limits to prevent the vehicle from falling, which could result in injury. Be especially careful that the vehicle is balanced before raising it. Be sure to set the wheel stoppers when jacking-up only the front or rear side of the vehicle.

NOTE:

- Align the cushion rubber end of plate lift with the end of rubber attachment (portion b). Also, align the protrusion portion of the supporting locations with the end of attachment (portion a).
- Do not use the plate lift whose attachment does not reach the supporting locations.

(4) Rigid rack
(5) Plate lift
(6) Attachment
(A) Front

(1) Front crossmember

(B) Rear

(2) Rear differential
8. TIE DOWNS
Tie downs are used when transporting vehicles and when using the chassis dynamo. Attach tie-down only to the specified locations on the vehicle.

- TIE-DOWN LOCATION

(1) Hook for tie-down
• CHAIN DIRECTION AT TIE-DOWN CONDITION

Measure the distance between the highest tire point and highest arch point before and after tie-down. Difference of measurement value (sinking volume) shall be within 50 mm (1.97 in) and make sure to fix the vehicle securely.

• CHAIN PULLING RANGE AT TIE-DOWN CONDITION

(1) Chain pulling range at tie-down condition
(2) 20°
(3) 45°
9. TOWING

Avoid towing vehicles except when the vehicle cannot be driven. For models with AWD, AT or VTD, use a loader instead of towing. When towing other vehicles, pay attention to the following to prevent hook or vehicle damage resulting from excessive weight.

- Do not tow other vehicles with a front tie-down hook.
- Make sure the towing vehicle is heavier than the towed vehicle.
- FRONT
  Remove the fog light cover (except for OUTBACK model) and hook cover, and then install the hook.

Marked ○: OK, Marked ×: Prohibited, Marked ▲: Conditionally OK.
CAUTION:
• Check ATF, gear oil and rear differential oil before driving.
• Place the shift lever in “N” position during towing.
• Do not lift up the rear wheels to avoid unsteady rotation.
• Turn the ignition key to “ACC”, then check the steering wheel moves freely.
• Release the parking brake to avoid tire dragging.
• Since the power steering does not work, be careful for the heavy steering effort (When engine is stopped)
• Since the servo brake does not work, be careful that the brake is not applied effectively. (When engine is stopped)
• In case of the malfunction of internal transmission or drive system, lift up four wheels (on a trailer) for towing.

10.FRONT HOOD STAY INSTALLATION
• AT THE CHECK AND GENERAL MAINTENANCE

• WHEN WIDER HOOD OPENING IS NECESSARY
Set the stay into the hole of lower hood as shown in the figure below.
11. GENERAL SCAN TOOL
Using general scan tools will greatly improve the efficiency of repairing engine electronic controls. Subaru Select Monitor can be used to diagnose the engine, ABS, air conditioner and other parts.

12. AWD CIRCUIT MEASURES
1) Full-time AWD MT model
Since viscous coupling (limited slip differential) is used in the center differential, cut-off of AWD circuit cannot be carried out.
2) Full-time AWD 5AT model
Since VTD type is used in the center differential, cut-off of AWD circuit cannot be carried out.
3) Full-time AWD 4AT model
Insert a spare fuse into FWD fuse holder in the fuse box located in the left side of engine room to select the FWD. Since electronically controlled MT-P hydraulic multi-plate clutch is adapted for center differential, select FWD. When maintenance is performed with jack-up or on the free roller, check the illumination of AWD warning light in the combination meter.

13. SPEEDOMETER TEST
1) Rear wheel free roller system
   (1) Set the free roller on the floor of rear wheel side securely according to the wheel base and rear tread of the vehicle.
   (2) Let the vehicle ride on the tester and free roller gently.
   **CAUTION:**
   Fix the vehicle using a pulling metal (chain or wire) to the front and rear towing hooks or tie-down hook to prevent the lateral runout of front wheels and springing out of vehicle.

   (A) Free roller

   (3) Set the speedometer tester.
   (4) Conduct the speedometer test work.
   **CAUTION:**
   Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.

2) Rear wheel jack-up system
   (1) Set the vehicle on speedometer tester.
   **CAUTION:**
   Fix the vehicle using a pulling metal (chain or wire) to the front and rear towing hooks or tie-down hook to prevent the lateral runout of front wheels and springing out of vehicle.

   (2) Jack up the rear wheels and set the rigid racks to the specified locations of side sill.

   (A) Rigid rack

   (3) Conduct the speedometer test work.
   **CAUTION:**
   Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.
14. BRAKE TEST

1) Full-time AWD MT model
   (1) Perform this test after driving the vehicle 2 to 3 km (1.24 to 1.86 miles) on road in order to stabilize the viscous torque of viscous coupling.
   (2) Keep the front or rear wheels on the ground for this test.

   NOTE:
   Effect of the viscous torque on braking force will be added approx. 25 kg compared with FWD model.

2) Full-time AWD AT model
   (1) Keep the front or rear wheels on the ground during measurement.

   (2) When the brake dragging force is large.
       • Check the dragging of brake pad or brake shoe.
       • Since it may be affected by the viscosity of viscous coupling, jack up either of the front or rear two wheels to check the each wheel rotation condition with the viscous coupling affection removed.

15. ON THE CAR WHEEL BALANCING

   CAUTION:
   • Carry out this procedures after measuring the balance of each single tire.
   • Set the vehicle so that the front and rear wheels are same height.
   • Release the parking brake during measurement.
   • Rotate each wheel by hands, and make sure it rotates without dragging.
   • Do not operate the clutch quickly and do not accelerate or decelerate suddenly during work.
   • When an error is indicated during engine drive, do not use the motor drive together.

1) Set the rigid rack to the specified locations of side sill, jack up the front or rear two wheels of non-measuring side and set the pickup stands to two wheels of measuring side.

   (A) Brake tester
   (B) Position for measuring front wheel
   (C) Position for measuring rear wheel

2) For drive wheel, drive the tires with engine for measurement.
3) For non-drive wheel, drive the tires from the on the car wheel balancer for measurement.

A: IDENTIFICATION

1. IDENTIFICATION NUMBER AND LABEL LOCATIONS

The V.I.N. (Vehicle Identification Numbers) is used to classify the vehicle.

- POSITIONING OF THE PLATE LABEL FOR IDENTIFICATION

- ENGINE

  (1) Engine serial number (Punch mark)
  (2) Engine type (Crankcase upper side)

- AUTOMATIC TRANSMISSION

  (1) AT type label
  (2) Transmission serial number label

RECOMMENDED MATERIALS

1. Recommended Materials

A: RECOMMENDED MATERIALS

1. GENERAL
To insure the best performance, always use the specified oil, gasoline, adhesive, sealant, etc. or a substitute of equivalent quality.

2. FUEL
Always use gasoline of the same or higher octane value than specified in the owner’s manual. Ignoring the specifications below will result in damage or poor operation of the engine and fuel injection system. Use the specified gasoline to correct performance.

- Unleaded gasoline
Use unleaded gasoline and not leaded gasoline for the vehicle with catalytic converter installed to reduce air pollution. Using leaded gasoline will damage the catalytic converter.

4. FLUID

Use the fluids specified in the table below. Do not mix two different kinds or makes of fluid.

**CAUTION:**
Be sure to use the recommended or equivalent ATF for 5AT. Using the ATF other than recommended or equivalent would be a trouble cause.

PRE-DELIVERY INSPECTION

1. Pre-delivery Inspection

Page 2
1. Pre-delivery Inspection

A: GENERAL DESCRIPTION
The purposes of the pre-delivery inspection (PDI) are as follows.
• Remove the additional parts used for ensuring the vehicle quality during transportation and restore the vehicle to its normal state.
• Check if the vehicle before delivery is in a normal state.
• Check for any damage to the vehicle or parts that may have taken place during transportation or storage.
• Check if the vehicle after repair is in a normal state.
• Make sure to provide a complete vehicle to the customer.
For the above reasons, all SUBARU dealers (dealerships) carry out the PDIs before delivering a vehicle. Refer to this manual unless otherwise specified.

1. APPEARANCE CHECK
   - If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents.
   - When the protective coating is removed, visually check the body paints for damage or stains in detail and repair as necessary.
   - Visually check the windshield glass, door glasses and light lenses for any damage, cracks or excessive gaps to the body sheet metal and repair as necessary.
   - Visually check the plated parts, such as the grilles and door knobs, for damage or loss of gloss and replace the parts as necessary.

2. TIRE CHECK
   - Check the tires for damage, abnormal conditions, and dents on the wheels.
   - Check the tire size, spare tire and tire air pressure described on the tire air pressure label (driver’s side).

3. FUSE INSTALLATION
   Fuses for the back-up circuit have been removed to prevent battery discharge. If the vehicle is about to be delivered to the customer, attach a 20 A fuse (A) as shown in the figure.

4. CONNECTION OF AIR CONDITIONER HARNESS
   A vehicle just delivered has its air conditioner harness disconnected to protect the air conditioner compressor. Connect the harness as shown in the figure. (Except for 3.0 L model)

5. CHECK DOORS FOR LOCK/UNLOCK AND OPEN/CLOSE OPERATIONS
   1) Using the key, lock and unlock the door several times to check for normal operation. Open and close the door several times for smooth movement.

2) Completely close the driver’s door, and then check the smooth movement with operating door lock knob from lock to unlock several times. Set the door lock knob (A) to lock position. Then pull the inner remote (B) to ensure that doors will not open.
For other doors, place the door lock knob (A) to lock position and then pull the inner remote (B) to ensure that doors will not open.

3) Close all the doors, and then press the lock on power door lock switch at driver’s side. Check that all doors including rear gate are locked.

4) Press the driver’s side power door lock switch to unlock side. Check that all doors including rear gate are unlocked.

5) Insert the key to ignition switch, and open the driver’s side door. Press lock on power door lock. Check that the door is not locked.

6. CHECK DOUBLE LOCK OPERATION
1) Fully open all the windows.
2) Remove the key.
3) Lock all the doors using the door key cylinder or keyless transmitter.
4) Verify that all the doors including rear gate are not unlocked when pressing power door lock switch to unlock side.
5) Verify that the door is not opened when operating door lock knob to unlock position and pulling inner remote. Perform the same check for other doors.
6) Check that all the doors are unlocked when door is unlocked using door key cylinder or keyless transmitter, or ignition switch is turned to ON.

7. CHECK OPERATION OF CHILD SAFETY LOCK SYSTEM
1) Set the child safety lock on both rear doors to the lock position.
2) Close the rear doors completely.
3) Check that the lock levers of the rear doors are in the unlock position. Then, pull inner remote of rear doors to ensure that doors will not open.

8. CHECK TRUNK LID FOR OPEN/CLOSE OPERATIONS
1) Operate the trunk lock release lever to check that the trunk opens normally.
2) Open and close the trunk lid several times for smooth movement.
3) Put the lever (A) in the cancel lever of trunk lid to cancel position, and close the trunk lid. Check that the trunk lid will not open even when the trunk lock release lever is operated. Also, check that the trunk lid will open with keyless transmitter, then put the lever back.

9. CHECK REAR GATE FOR LOCK/UNLOCK AND OPEN/CLOSE OPERATIONS

1) Open and close the rear gate several times for smooth movement.
2) Operate the rear gate lever to check that the rear gate is locked and unlocked normally.
   (1) Remove the cover inside the rear gate.
   (2) Operate the lever to check that the rear gate is locked and unlocked normally.

10. OPERATION CHECK OF FUEL LID OPENER LOCK RELEASE LEVER

Operate the fuel lid opener and verify that the fuel lid is unlocked normally. Check that the filler cap is securely closed.

11. ACCESSORY CHECK

Check that the following accessories are provided.
- Owner's manual
- Warranty booklet
- Maintenance note
- Spare key
- Jack
- Tool set
- Spare tire

12. OPERATION CHECK OF FRONT HOOD LOCK RELEASE SYSTEM

Operate the front hood lock release lever (A) to check that the front hood is unlocked normally.
Pre-delivery Inspection

Operate the lever (B) and check that the front hood is opened normally. Support the front hood with hood stay.

13. BATTERY
Check the battery terminals to make sure that there are no rust or corrosions due to fluid leaks. Check that the battery caps are securely tightened.

14. BRAKE FLUID
Check that the brake fluid level is normal. If the amount is insufficient, carry out a brake line test to identify brake fluid leaks and check the brake operation. After that, refill the brake fluid tank with the specified type of fluid.

15. ENGINE OIL
Check the engine oil amount. If the amount of oil is insufficient, check that no leaks are found. Then, add the necessary amount of the specified engine oil.

16. TRANSMISSION GEAR OIL
Check that the transmission gear oil level is normal. If the amount of fluid is insufficient, check that no leaks are found. Then, add the necessary amount of the specified transmission gear oil.

17. AT FRONT DIFFERENTIAL OIL
Check that the AT front differential oil level is normal. If the amount of oil is insufficient, check that no leaks are found. Then, add the necessary amount of the specified AT front differential oil.

• 4AT model

18. ENGINE COOLANT
Check that the engine coolant level on the reservoir tank is normal. If the amount of engine coolant is insufficient, check that no leaks are found. Then, add the necessary amount of coolant with the specified concentration.

• 5AT model
19. CLUTCH FLUID
Check that the clutch fluid level is normal. If the amount of fluid is insufficient, check that no leaks are found. Then, add the necessary amount of specified fluid.

20. WINDOW WASHER FLUID
Check that the window washer fluid level is normal. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of washer fluid.

21. FRONT HOOD LATCH CHECK
Retract the hood stay and close the front hood. Check that the front hood is securely latched.

22. KEYLESS ENTRY SYSTEM
NOTE:
The following inspections show the initial settings. When the settings are different from the initial settings, use Subaru Select Monitor to check the details of each setting for inspections. <Ref. to LAN(diag)-26, OPERATION, Read Current Data.>

1) Fully open all the door windows.
2) Remove the key from the ignition switch and close all the doors including rear gate.
3) Press the “LOCK” or “UNLOCK” button on the keyless transmitter 1 sec. or more and check if the door window of driver seat is opened/closed.
4) Press the trunk open button (except for EK model) or “UNLOCK” button (EK model) for more than one second. Check if the trunk is unlocked and the hazard light flashes twice.

![Keyless Entry System Diagrams](PI-00174, PI-00175, PI-00196, PI-00108)

5) Press the “LOCK” button on the keyless transmitter with the trunk lock opened. Check if the all doors are locked, hazard light blinks five times and warning shows trunk open.
6) Press the “LOCK” button momentarily on the keyless transmitter. Check that all the doors are locked and room light goes off.
7) Press the “UNLOCK” button momentarily on the keyless transmitter. Check that the driver’s door is unlocked and hazard light blinks twice and room light is lit for 15 seconds. And press the “UNLOCK” button momentarily again in 5 seconds (except for EK model). Check that all the doors including rear gate are unlocked.

8) Close all the doors including rear gate and press the “LOCK” button on the keyless transmitter. Press the “OPEN” button on the keyless transmitter and wait for 25 seconds. Check if all the doors including rear gate are locked. (Except for EK model)

23. SEAT
1) Check the seat surfaces for stains or dirt.
2) Check that each seat provides full functionality in sliding and reclining. Check all available functions of the rear seat such as a trunk-through center armrest.

24. SEAT BELT
1) Check installation condition of seat belt.
2) Pull out the seat belt and then release it. Check that the belt retracts smoothly.

25. WHEEL ALIGNMENT
Check the wheel alignment. <Ref. to FS-8, Wheel Alignment.> <Ref. to RS-8, Wheel Alignment.>

26. TEST MODE CONNECTOR
Turn the ignition switch to ON and check that the malfunction indicator light starts blinking. If the light blinks, return the ignition key to LOCK. Pull out the test mode connector from the back of glove box lower cover, and disconnect the test mode connector. Then, turn the ignition key to ON again. If the malfunction indicator light blinks at that time in spite of the disconnected test mode connector, carry out an engine diagnosis.

NOTE:
If it is difficult to pull out the test mode connector, remove the glove box lower cover, and disconnect the test mode connector.

27. IMMOBILIZER SYSTEM
1) Check that the engine starts with all keys that are equipped on vehicle.
2) 60 seconds after turning the ignition switch from ON to ACC or OFF, or immediately after removing the key, check that the security indicator light blinking.

NOTE:
If malfunctions occur, refer to “IMMOBILIZER (DIAGNOSIS)”.
28. STARTING CONDITION
Start the engine and check that the engine starts smoothly. If the battery voltage is low, recharge or replace the battery. If any noises are observed, immediately stop the engine and check and repair the abnormal components.

29. EXHAUST SYSTEM
Listen to the exhaust sound to see if no noises are observed. Check the exhaust leaks.

30. INDICATOR AND WARNING LIGHTS
Check that all the indicator and warning lights are off.

31. CLOCK
Check the clock for normal operations and enough accuracy.

32. AUDIO
Check the radio for full functionality and normal noise level. Also check the CD, MD unit operations.

33. NAVIGATION SYSTEM
1) Check all display function for normal operation. (For operating procedure, refer to operating manuals.)
2) Check the map disc (DVD) are provided on vehicle.
3) Check that the navigation systems operate normally.

34. FRONT ACCESSORY POWER SUPPLY SOCKET
1) Check operation for the front accessory power socket.
2) Check operation of the accessory power socket in console box.

35. LIGHTING SYSTEM
1) Check the headlight operations.
2) Check the stop light operation.
3) Check other lights for normal operations.

36. WIPER DEICER
Check that the wiper deicer operates normally.

37. REAR FOG LIGHT
Check that the rear fog light operates normally.

38. ILLUMINATION CONTROL
Check that the illumination control operates normally.

39. WINDOW WASHER
Check that the window washer system injects washer fluid to the specified area of the windshield shown in the figure.

**Front injection position:**
A: 250 mm (9.84 in)  
B: 435 mm (17.1 in)

![Rear Window Washer Diagram](PI-00185)

40. WIPER
Check the front and rear wipers for normal operations.

41. POWER WINDOW OPERATION CHECK
Operate the power window switches one by one to check that each of the power windows goes up and down without noises.

42. CARGO FAN
Check the cargo fan for normal operations.

43. SUNROOF
Check the sunroof for normal operations.

44. DOOR MIRROR
Check the remote control mirror for normal operations.
45. BRAKE TEST
Check the foot brake for normal operations.

46. PARKING BRAKE
Check the parking brake for normal operations. When applying the parking brake with force of 200 N (20.4 kgf, 45.0 lb), check that the lever stroke of parking brake lever is 5 to 6 notches.

47. AT SHIFT CONTROL
1) Turn the ignition switch to ON.
2) While brake pedal is not depressed, check if the select lever does not move from “P” range.
3) While brake pedal is depressed, check if the select lever moves from “P” range.
4) Set the select lever to other than “P” range.
5) When the ignition switch is turned OFF, check if the ignition key switch cannot be removed.
6) Set the AT select lever to each gear position and check the shifting while driving the vehicle.

48. HEATER & VENTILATION
Operate the heater and ventilation system to check for normal airflow outlet control, air inlet control, airflow capacity and heating performance.

49. AIR CONDITIONER
Operate the air conditioner. Check that the A/C compressor operates normally and enough cooling is provided.

50. CRUISE CONTROL
Operate the cruise control system. Check that the system is activated and deactivated correctly.

51. ATF LEVEL
While engine is idling, check that the ATF level is normal. If the amount is insufficient, check that no leaks are found. Then add the necessary amount of the specified ATF.

(A) Level gauge
(B) ATF level range [70 — 80°C (158 — 176°F)] at “HOT”

(C) Upper level
(D) Lower level
(E) ATF level range [20 — 30°C (68 — 86°F)] at “COLD”
52. POWER STEERING FLUID LEVEL
Check that the power steering fluid level is normal. If the amount is insufficient, check that no leaks are found. Then add the necessary amount of the specified power steering fluid.

53. FLUID LEAK CHECK
Check entire areas of the vehicle for any trace of coolant/oil/liquid leaks.

54. WATER LEAK TEST
Spray the vehicle with water using a hose and check that no water enters the passenger compartment.
- Before performing the water leakage test, remove anything that may obstruct the operation or which must be kept dry.
- Close all the windows and doors securely. Close the hood and trunk lid before starting the test.
- Spray the vehicle with water using a hose. The rate of water spray must be approx. 20 to 25 l (5.3 to 6.6 US gal, 4.4 to 5.5 Imp gal) per minute. When spraying water on areas adjacent to the floor and wheel house, increase the pressure. When spraying water on areas other than the floor and wheel house, decrease the pressure. But the force of water must be made strong occasionally by pressing the end of the hose.

NOTE:
Be sure to keep the hose at least 10 cm (3.9 in) from vehicle.
Check the following areas.
- Front window and body framework mating portion
- Door mating portions
- Glass mating portions
- Rear quarter window mating portions
- Rear window and body framework mating portion
- Around roof drips
If any dampness in the compartments is discovered after the water has been applied, carefully check all the areas that may have possibly contributed to the leak.

55. APPEARANCE CHECK 2
1) When vehicle body is covered with protective film, peel it off.

NOTE:
- Use of steam facilitates peeling off the warp guard.
- For the vehicle left for a long time or at low temperature, sprinkle some water heated 50 — 60°C (122 — 140°F) over the vehicle to raise its surface temperature before peeling off the wrap guard. Do not use the water heated to over 60°C (140°F).
- If the adhesive remains exists on the coated surface, soak a flannel rag, etc. with a small amount of coating wax or solvent such as oil benzene and IPA, put the soaked cloth on the remains lightly, and then wipe them off with a flannel rag, etc.
- Keep solvent from touching the resin or rubber parts. Do not use coating wax or solvent while the component surface temperature is high due to hot weather, etc.
- Dispose of the peeled wrap guard as burnable industrial garbage.

2) Check the whole vehicle body for flaking paint, damage by transportation, corrosion, dirt, cracks or blisters.

NOTE:
- It is better to determine an inspection pattern in order to avoid missing an area, since the total inspection area is wide.
- Do not repair the body paint unless absolutely necessary. Also, if the vehicle is in need of repair to remove scratches or corroded paint, the repair area must be limited to the minimum. Re-painting and spray painting must be avoided as possible.

3) Check each window glass for scratches carefully. Slight damage may be removed by polishing with cerium oxide. (Fill a cup half with cerium oxide, and add warm water to it. Then agitate the content until it turns to wax. Apply this wax to a soft cloth, and polish the glass with it.)

4) Check each portion of the vehicle body and underside components for the formation of rust. If rust is discovered, remove it with sandpaper of #80 to #180 and treat the surface with rust preventive. After this treatment is completed, flush the portion thoroughly, and prepare the surface for repair painting.

5) Check each portion of body and all of the plated parts for deformation or distortion. Also, check each lamp lens for cracks.
6) Peel the protective tape, vinyl wrapping and identification seal attached to the following places.

- Seat
- Door trim
- Floor carpet
- Side sill
- Front hood lock release lever
- Edge rear
- Rear wiper
- Sedan rear combination light (Trunk lid opening portion)
- Roof rail
- Door mirror

- (I): Recommended service for safe vehicle operation.

**NOTE:**
1. When the vehicle is used in extremely dusty conditions, the air cleaner element should be replaced more often.
2. ATF filter is maintenance free part. ATF filter needs replacement when it is physically damaged or ATF leaked.
3. Periodic inspection and replacement of the camshaft drive chains on the 3.0 L models is not required.
### PERIODIC MAINTENANCE SERVICES

#### 2. EXCEPT FOR EUROPE AREA

For periodic maintenance of over 50,000 km (30,000 miles) or 48 months, carry out inspections by referring to the following tables. For a maintenance period gone beyond these tables, apply them repeatedly as a set of 50,000 km (30,000 miles) or 48 months.

3. Engine Oil

A: REPLACEMENT

1) Open the engine oil filter cap for quick draining of engine oil.
   • Except for 3.0 L model

2) Drain the engine oil by removing engine oil drain plug.
   • 3.0 L model

3) Tighten the engine oil drain plug after draining engine oil.
   • 2.0 L non-turbo and 2.5 L model

   NOTE:
   Use a new drain plug gasket.

   **Tightening torque:**
   \[44 \text{ N·m (4.5 kgf-m, 33 ft-lb)\]**
   • DOHC turbo model

   • 3.0 L model

   • 2.0 L non-turbo and 2.5 L model
PERIODIC MAINTENANCE SERVICES

• 3.0 L model

4) Fill engine oil through level gauge up to the center between upper level and lower level. Place the vehicle on a level surface when checking oil level. Use engine oil of proper quality and viscosity, selected in accordance with following.

**Recommended oil:**
Refer to “RM” section. <Ref. to RM-3, LUBRICANTS, RECOMMENDED MATERIALS, Recommended Materials.>

**Engine oil capacity**

Except for 3.0 L model

Upper level:
Approx. 4.0 ᵃ (4.2 US qt, 3.5 Imp qt)

Lower level:
Approx. 3.0 ᵃ (3.2 US qt, 2.6 Imp qt)

3.0 L model

Upper level:
Approx. 5.5 ᵃ (5.8 US qt, 4.8 Imp qt)

Lower level:
Approx. 4.5 ᵃ (4.8 US qt, 4.0 Imp qt)

The proper viscosity oil make the engine ideal temperature, and cranking speed increased by reducing viscous friction in hot condition.

**CAUTION:**
When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API classification and SAE viscosity No. designated by SUBARU.

**NOTE:**
If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils must be used: API classification: SL, SJ or SH

5) Close the engine oil filler cap.
6) Start the engine and warm it up for a time.
7) After the engine stops, recheck the oil level.<Ref. to PM-8, INSPECTION, Engine Oil.>

**B: INSPECTION**

1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe it clean.
3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
4) Remove it again and note the reading. If the engine oil level is below the “L” line, add oil to bring the level up to the “F” line.
   • Except for 3.0 L model

5) After turning off the engine, wait a few minutes for the oil to drain back into the oil pan before checking the level.
6) Just after driving or while the engine is warm, engine oil level may show in the range between the “F” line and the notch mark. This is caused by thermal expansion of engine oil.
7) To prevent overfilling the engine oil, do not add oil above the “F” line when the engine is cold.
4. Engine Oil Filter

A: REPLACEMENT

1) Remove the under cover.
2) Remove the oil filter using ST.
   - ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))
   - ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

   2.0 L non-turbo and 2.5 L model

3) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
4) Install the oil filter by turning it by hand, being careful not to damage seal rubber.
5) Tighten more (approx. 1 turn for oil filter 68 mm (2.68 in) in outer diameter, approx. 3/4 turn for oil filter 65 mm (2.56 in) in outer diameter) after the seal rubber contacts the cylinder block. Do not tighten excessively, or oil may leak.

6) After installing the oil filter, run the engine and make sure that no oil is leaking around seal rubber.

NOTE:
The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.
7) Check the engine oil level. <Ref. to PM-8, INSPECTION, Engine Oil.>

- Turbo model

   ST 498547000 OIL FILTER WRENCH
   - 3.0 L model

   3) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
   4) Install the oil filter by turning it by hand, being careful not to damage seal rubber.
   5) Tighten more (approx. 1 turn for oil filter 68 mm (2.68 in) in outer diameter, approx. 3/4 turn for oil filter 65 mm (2.56 in) in outer diameter) after the seal rubber contacts the cylinder block. Do not tighten excessively, or oil may leak.
5. Spark Plug

A: REPLACEMENT

1. SOHC MODEL

1) Remove the intake duct and intake chamber.
2) Remove the battery.
3) Disconnect the spark plug cord.
4) Remove the spark plug with a spark plug socket.
5) Tighten the new spark plug lightly with hand, and then secure with a spark plug socket to the specified torque.

**Recommended spark plug:**
- 2.5 L EC, EK model
  - NGK: PFR5B-11

  **Except for 2.5 L EC, EK model**
  - CHAMPION: RC10YC4

**Tightening torque:**
- 21 N·m (2.1 kgf-m, 15.2 ft-lb)

**NOTE:**
- Be sure to place the gasket between the cylinder head and spark plug.
- If the torque wrench is not available, tighten the spark plug until gasket contacts cylinder head; then tighten further 1/4 to 1/2 turns.

2. DOHC MODEL

1) Remove the battery and battery carrier.
2) Remove the air cleaner case.
3) Detach the connector from ignition coil.
4) Remove the ignition coil.
5) Remove the spark plug with a spark plug socket.
6) Tighten the new spark plug lightly with hand, and then secure with a spark plug socket to the specified torque.

**Recommended spark plug:**
- NGK: ILFR6B

**Tightening torque:**
- 21 N·m (2.1 kgf-m, 15.2 ft-lb)

7) Tighten the ignition coil.

**Tightening torque:**
- 16 N·m (1.6 kgf-m, 11.7 ft-lb)

**NOTE:**
- Be sure to place the gasket between the cylinder head and spark plug.
- If the torque wrench is not available, tighten the spark plug until gasket contacts cylinder head; then tighten further 1/4 to 1/2 turns.
6. V-belt

A: INSPECTION

1. EXCEPT FOR 3.0 L MODEL

1) Replace the belts if crack, fraying or wear is found.
2) Check the V-belt tension and adjust it if necessary by changing the generator installing position or idler pulley installing position. <Ref. to PM-12, REPLACEMENT, V-belt.>

Belt tension (without belt tension gauge):

(A)
When installing new one: 7 — 9 mm (0.276 — 0.354 in)
At inspection: 9 — 11 mm (0.354 — 0.433 in)

(B)
When installing new one: 7.5 — 8.5 mm (0.295 — 0.335 in)
At inspection: 9.0 — 10.0 mm (0.354 — 0.394 in)

Belt tension (with belt tension gauge):

(A)
When installing new one: 640 — 785 N (65.3 — 80.0 kgf, 144 — 176 lb)
At inspection: 490 — 640 N (50 — 65 kgf, 110 — 144 lb)

(B)
When installing new one: 620 — 760 N (63 — 77 kgf, 140 — 170 lb)
At inspection: 350 — 450 N (36 — 46 kgf, 79 — 101 lb)
2. 3.0 L MODEL

1) Replace the belts if crack, fraying or wear is found.
2) Check that the V-belt automatic tensioner indicator (A) is within the range (D).

B: REPLACEMENT

1. FRONT SIDE BELT (FOR POWER STEERING OIL PUMP AND GENERATOR)

NOTE:
Wipe off any oil and water on the belt and pulley.
1) Remove the collector cover. (If equipped)
2) Remove the V-belt covers.

- Non-turbo model
- Turbo model

3) Loosen the lock bolt (A).
4) Loosen the slider bolt (B).
5) Remove the front side belt (C).
6) Install a new V-belt, and tighten the slider bolt so as to obtain the specified belt tension.
7) Tighten the lock bolt (A).
8) Tighten the slider bolt (B).

Tightening torque:

- **Lock bolt**
  25 N·m (2.5 kgf-m, 18 ft-lb)

- **Slider bolt**
  8 N·m (0.8 kgf-m, 5.8 ft-lb)

2. REAR SIDE BELT (FOR A/C)

NOTE:
Wipe off any oil and water on the belt and pulley.
1) Remove the front side belt.
2) Loosen the lock nut (A).
3) Loosen the slider bolt (B).
4) Remove the rear side belt.
5) Install a new V-belt, and tighten the slider bolt so as to obtain the specified belt tension.
6) Tighten the lock nut (A).
Tightening torque:
23 N·m (2.3 kgf-m, 17.0 ft-lb)

7) Install the front side belt.
   • Non-turbo model <Ref. to ME(H4SO 2.0)-38, FRONT SIDE BELT, INSTALLATION, V-belt.>
   • Turbo model <Ref. to ME(H4DOTC)-39, FRONT SIDE BELT, INSTALLATION, V-belt.>

3. 3.0 L MODEL

1) Fit the tool to the belt tensioner mounting bolt.
2) Turn the tool clockwise, and loosen the V-belt to remove.

3) Remove the V-belt cover.
4) Install in the reverse order of removal.

(1) Power steering oil pump
(2) Belt tension adjuster
(3) Crankshaft pulley
(4) A/C compressor
(5) Belt idler
(6) Generator
7. Timing Belt

A: REPLACEMENT

1. SOHC MODEL

1) Protect the radiator with cardboard and blanket.
2) Remove the V-belt covers.
3) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, V-belt.>
4) Remove the A/C compressor V-belt tensioner.
5) Use the ST to lock the crankshaft, and remove the pulley bolt.

ST 499977100 CRANK PULLEY WRENCH

6) Remove the crank pulley.
7) Remove the belt cover (LH).
8) Remove the front timing belt cover.
9) Remove the timing belt guide. (MT model)
10) Turn the crankshaft and align the alignment marks on crankshaft, and left and right cam sprockets with notches of belt cover and cylinder block.

11) Remove the belt idler.
12) Remove the belt idler (No. 2).

13) Remove the timing belt.
14) Remove the automatic belt tension adjuster assembly.

15) Install in the reverse order of removal. <Ref. to ME(H4SO 2.0)-44, INSTALLATION, Timing Belt.>
2. DOHC MODEL

1) Protect the radiator with cardboard and blanket.
2) Remove the V-belts. <Ref. to ME(H4DOTC)-39, V-belt.>
3) Remove the A/C compressor V-belt tensioner.
4) Remove the pulley bolt. Use the ST to lock crankshaft.
   • Except for turbo MT model:
     ST 499977400 CRANK PULLEY WRENCH
   • Turbo MT model:
     ST 499977100 CRANK PULLEY WRENCH
5) Remove the crank pulley.
6) Remove the belt cover (LH).
7) Remove the belt cover (RH).
8) Remove the front belt cover.
9) Remove the timing belt guide. (Except for non-turbo AT model)

10) Turn the crankshaft and align the alignment marks on crankshaft, and left and right cam sprockets with notches of belt cover and cylinder block. Use the ST to turn crankshaft.
PERIODIC MAINTENANCE SERVICES

ST 499987500 CRANKSHAFT SOCKET

11) Remove the belt idler.

12) Remove the timing belt.
13) Remove the automatic belt tension adjuster assembly.

14) Install in the reverse order of removal. <Ref. to ME(H4DOTC)-43, Timing Belt.>

CAUTION:
When installing the timing belt, be sure to align all alignment marks on the belt with corresponding marks on the sprockets. If incorrectly installed, interference between pistons and valves may occur.

B: INSPECTION

1. SOHC MODEL

1) Remove the front timing belt cover and timing belt cover (LH).
2) While cranking engine at least four rotations, check the timing belt back surface for cracks or damage. Replace the faulty timing belt as needed.
3) Measure the timing belt width $W$. If it is less than 27 mm (1.06 in), check idlers, tensioner, water pump pulley and cam sprocket to determine idler alignment (squareness). Replace the worn timing belt.

4) Install the front timing belt cover and timing belt cover (LH).

2. DOHC MODEL

1) Remove the timing belt cover (LH).
2) While cranking engine at least four rotations, check the timing belt back surface for cracks or damage. Replace the faulty timing belt as needed.
3) Measure the timing belt width $W$. If it is less than 30 mm (1.18 in), check idlers, tensioner, water pump pulley and cam sprocket to determine idler alignment (squareness). Replace the worn timing belt.
4) Install the timing belt cover (LH).
8. Fuel Line

A: INSPECTION
The fuel line is located mostly internally, so check pipes, areas near pipes, and engine compartment piping for rust, hose damage, loose band, etc. If faulty parts are found, repair or replace them.

• 2.0 L non-turbo and 2.5 L model
<Ref. to FU(H4SO 2.0)-53, Fuel Delivery, Return and Evaporation Lines.>

9. Air Cleaner Element

A: REPLACEMENT
1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow sensor. (2.0 L turbo, 3.0 L and 2.5 L EC, EK, K4 model)
   - 3.0 L and 2.5 L EC, EK, K4 model

3) Loosen the clamps (A) which connect the air cleaner case to intake duct. (Turbo model)
4) Remove the clips (B) on air cleaner case.

5) Remove the air cleaner case (rear).
6) Remove the air cleaner element.

7) Install in the reverse order of removal.
   NOTE:
   - Fasten with a clip after inserting the lower tab of the case.

10. Cooling System

A: INSPECTION

1) To check the radiator for leakage, fill it with engine coolant, and attach the radiator cap tester (A) to the filler neck, and apply pressure. Check the following points:

- **Non-turbo model:**
  - 157 kPa (1.6 kg/cm², 23 psi)
- **Turbo model:**
  - 122 kPa (1.2 kg/cm², 18 psi)

- Each portion of radiator for leakage
- Hose joints and other connections for leakage

**NOTE:**
- For turbo model, be sure to install the tester to filler tank side.
- When attaching or detaching tester or when operating tester, use special care not to deform radiator filler neck.

- Non-turbo model

![Image of radiator and filler neck](PM-00128)

- Turbo model

![Image of radiator cap tester](PM-00184)

- When performing this check, be sure to keep the engine stationary and fill radiator with coolant.
- Wipe off check points before applying pressure.
- Use care not to spill coolant when detaching tester from radiator.
- Do not remove the radiator side cap. (Turbo model)

2) Check the radiator cap valve open pressure using radiator cap tester.

**NOTE:**
Rust or dirt on the cap may prevent valve from functioning normally; be sure to clean the cap before testing.

Raise the pressure until the needle of gauge stops and see if the pressure can be retained for five to six seconds. The radiator cap is normal if a pressure above the service limit value has been maintained for this period.

**Radiator cap valve open pressure**

- **Non-turbo model**
  - **Standard:**
    - 93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)
  - **Service limit:**
    - 83 kPa (0.85 kg/cm², 12 psi)

- **Turbo model**
  - **Filler tank side**
    - **Standard:**
      - 93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)
    - **Service limit:**
      - 83 kPa (0.85 kg/cm², 12 psi)
  - **Radiator side**
    - **Standard:**
      - 122 — 152 kPa (1.24 — 1.55 kg/cm², 18 — 22 psi)
    - **Service limit:**
      - 112 kPa (1.14 kg/cm², 16 psi)
3) Start the engine, and then check it does not overheat or it is cooled excessively. If it overheats or it is cooled excessively, check the cooling system.

11. Engine Coolant

A: REPLACEMENT

1. REPLACEMENT OF COOLANT

WARNING:
The radiator is of the pressurized type. Do not attempt to open the radiator cap immediately after the engine has been stopped.

1) Lift-up the vehicle.
2) Remove the under cover.
3) Place a container under drain pipe.
4) Remove the drain cock to drain engine coolant into container.

5) For quick draining, open the radiator cap.

NOTE:
• For turbo model, be sure to open the radiator cap on the filler tank side.
• Be careful not to spill coolant on the floor.

6) Drain the coolant from reservoir tank.
7) Tighten the radiator drain cock securely after draining coolant.
8) Slowly pour the coolant into radiator. Pour the coolant up to air bleeder hole, and then install the cap. (Turbo model)
9) Pour the coolant from radiator filler port to neck of filler. Then, pour the coolant into reservoir tank up to “FULL” level.

Recommended engine coolant:
Refer to “RM” section. <Ref. to RM-5, COOLANT, RECOMMENDED MATERIALS, Recommended Materials.>

Coolant capacity (fill up to “FULL” level):

| LHD AT model                | 2.0 L non-turbo and 2.5 L model (without ATF cooler (with warmer)) | Approx. 6.3 2 (6.7 US qt, 5.5 Imp qt) |
| 2.0 L non-turbo and 2.5 L model (with ATF cooler (with warmer)) | Approx. 6.7 2 (7.1 US qt, 5.9 Imp qt) |
| 3.0 L model (without ATF cooler (with warmer)) | Approx. 7.2 2 (7.6 US qt, 6.3 Imp qt) |
| 3.0 L model (with ATF cooler (with warmer)) | Approx. 7.7 2 (8.1 US qt, 6.8 Imp qt) |

| LHD MT model                | 2.0 L non-turbo and 2.5 L model | Approx. 6.4 2 (6.8 US qt, 5.6 Imp qt) |
| RHD AT model                | 2.0 L non-turbo and 2.5 L model (without ATF cooler (with warmer)) | Approx. 6.4 2 (6.8 US qt, 5.6 Imp qt) |
| 2.0 L non-turbo and 2.5 L model (with ATF cooler (with warmer)) | Approx. 6.8 2 (7.2 US qt, 6.0 Imp qt) |
| Turbo model                 | Approx. 7.3 2 (7.7 US qt, 6.4 Imp qt) |
| 3.0 L model (without ATF cooler (with warmer)) | Approx. 7.2 2 (7.6 US qt, 6.3 Imp qt) |
| 3.0 L model (with ATF cooler (with warmer)) | Approx. 7.8 2 (8.2 US qt, 6.9 Imp qt) |

| RHD MT model                | 2.0 L non-turbo and 2.5 L model | Approx. 6.5 2 (6.9 US qt, 5.7 Imp qt) |

NOTE:
The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

10) Securely install the radiator cap.
11) Run the engine for more than five minutes at 2,000 to 3,000 rpm. (Run engine until radiator becomes hot in order to purge air trapped in cooling system.)
12) Stop the engine and wait until coolant temperature lowers. Then open the radiator cap to check coolant level and add coolant up to radiator filler neck. Next, add coolant into reservoir tank up to “FULL” level.
13) After adding coolant, securely install the radiator and reservoir tank caps.
2. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

Concentration and safe operating temperature of SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]
If the coolant temperature is 25°C (77°F), its specific gravity is 1.054 and the concentration is 45% (point A), the safe operating temperature is −14°C (7°F) (point B), and the freezing temperature is −20°C (−4°F) (point C).

3. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%). The amount of coolant that should be replaced can be determined using the diagram.

[Example]
Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 US qt, 1.8 Imp qt. Drain 2.1 US qt, 1.8 Imp qt of coolant from the cooling system and add 2.1 US qt, 1.8 Imp qt of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.
A: INSPECTION AND ADJUSTMENT

1) Push the release lever to retract the push rod of the operating cylinder and check if the fluid level in the clutch reservoir tank rises or not.

2) If the fluid level rises, pedal free play is correct.

3) If the fluid level does not rise, or the push rod cannot be retracted, adjust the clutch pedal. <Ref. to CL-26, Clutch Pedal.>

4) Check the fluid level using the scale on the outside of the clutch reservoir tank (A). If the level is below “MIN” (B), inspect the clutch master cylinder, operating cylinder and hydraulic line for fluid leaks. If fluid leaks are found, repair or replace. If fluid leaks are not found, add clutch fluid to bring it up to “MAX” (C) of clutch reservoir tank.

**Recommended clutch fluid:**
Refer to “RM” section. <Ref. to RM-5, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>

**CAUTION:**
Prevent the clutch fluid from being splashed over vehicle body. If the clutch fluid is splashed over vehicle body, flush it, and then wipe it up.

**NOTE:**
- Avoid mixing different brands of brake fluid to prevent degradation of the fluid.

- Be careful not to allow dirt or dust to get into the reservoir tank.
13. Transmission Gear Oil

A: REPLACEMENT

1. MANUAL TRANSMISSION

1) Drain the gear oil by removing drain plug.

NOTE:
- Before starting work, cool off the transmission gear oil well.
- If transmission gear oil adheres to the exhaust pipe, wipe it off completely.

2) Replace the gasket with new one, and then tighten the drain plug to specified torque.

**Tightening torque:**
\[ 69 \text{ N} \cdot \text{m} \] \[ (7.0 \text{ kgf-m, 50.6 ft-lb}) \]

3) Fill the transmission gear oil through the oil level gauge hole up to the upper point of level gauge.

**Recommended gear oil:**
Refer to “RM” section. <Ref. to RM-3, LUBRICANTS, RECOMMENDED MATERIALS, Recommended Materials.>

NOTE:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

**Gear oil capacity:**
\[ 3.5 \text{ qt} \] \[ (3.7 \text{ US qt, 3.1 Imp qt}) \]

A: INSPECTION

CAUTION:
The level of ATF varies with fluid temperature. Pay attention to the fluid temperature when checking ATF level.

1) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 — 80°C (158 — 176°F) on Subaru Select Monitor. <Ref. to 4AT(diag)-17, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

2) Make sure the vehicle is level.

3) After selecting all positions (P, R, N, D), shift the select lever in “P” range. Measure the ATF level with engine idling for one or two minutes.

- 4AT model

4) Make sure that ATF level is above the center of upper and lower marks at “HOT” side.

5) If the ATF level is below the center between upper and lower marks, add the recommended ATF until the fluid level is found above the center between upper and lower marks.

CAUTION:
- Use care not to exceed the upper limit level.
- Addition of ATF to the upper limit mark on “HOT” side when the ATF temperature is below 70°C (158°F) will overfilling of ATF, causing a transmission failure.

6) Check ATF level after raising ATF temperature to 70 — 80°C (158 — 176°F) by running the vehicle or by idling the engine again.

7) Check the ATF for leaks. Check for leaks in the transmission. If there are leaks, it is necessary to repair or replace gasket, oil seals, plugs or other parts.
B: REPLACEMENT

1. AUTOMATIC TRANSMISSION FLUID

1) Drain the ATF by removing drain plug.

NOTE:
Before starting work, cool off the ATF well.

- 4AT model

2) Replace the gasket with new one, and then tighten the drain plug to specified torque.

**Tightening torque:**

- **4AT model**
  - 25 N·m (2.55 kgf·m, 18.4 ft-lb)
- **5AT model**
  - 20 N·m (2.0 kgf·m, 4.5 ft-lb)

3) Pour ATF from the ATF charge pipe.

**Recommended ATF:**

Refer to “RM” section. <Ref. to RM-5, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>

**Capacity:**

_Fill the same amount of ATF drained._

4) Check the ATF level. <Ref. to PM-26, INSPECTION, Automatic Transmission Fluid.>

- **5AT model**

2. ATF FILTER

NOTE:
Basically ATF filter is maintenance free, but when it has physically damaged or ATF leaked, the ATF filter needs replacement.

For the replacement procedure of ATF filter, refer to “ATF FILTER”.

- **4AT model**
  - <Ref. to 4AT-64, ATF Filter.>
- **5AT model**
  - <Ref. to 5AT-60, ATF Filter.>
15. Front and Rear Differential Gear Oil

A: REPLACEMENT

1. FRONT DIFFERENTIAL (MT MODEL)
Front differential gear oil for MT model lubricates the transmission and differential together. Refer to “Transmission Oil” for replacement procedure. <Ref. to PM-25, Transmission Gear Oil.>

2. FRONT DIFFERENTIAL (AT MODEL)
1) Drain the differential gear oil by removing drain plug using TORX® BIT T70.

NOTE:
- Before starting work, cool off the differential gear oil well.
- If front differential gear oil adheres to the exhaust pipe, wipe it off completely.
- 4AT model

2) Replace the gasket with new one, and then tighten the drain plug to specified torque.

Tightening torque: 70 N-m (7.1 kgf-m, 16 ft-lb)
3) Fill differential gear oil through the oil level gauge hole up to the upper point of level gauge.

Recommended gear oil: Refer to “RM” section. <Ref. to RM-3, LUBRICANTS, RECOMMENDED MATERIALS, Recommended Materials.>

NOTE:
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

Differential gear oil capacity:
4AT model
1.1 — 1.3 /qt (1.2 — 1.4 US qt, 1.0 — 1.1 Imp qt)

5AT model
1.3 — 1.5 /qt (1.4 — 1.6 US qt, 1.1 — 1.3 Imp qt)

3. REAR DIFFERENTIAL
1) Drain the oil by removing drain plug.
2) Remove the filler plug for quick draining oil.
3) Install the drain plug after draining oil.

NOTE:
- Apply liquid gasket to the drain plug threads for T-type.
- Use a new gasket for VA-type.

Liquid gasket: THREE BOND 1105 (Part No. 004403010)

**NOTE:**
Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

5) Install the filler plug.

**NOTE:**
- Apply liquid gasket to the filler plug threads for T-type.
- Use a new aluminum gasket for VA-type.

**Liquid gasket:**

- THREE BOND 1105 (Part No. 004403010)

**Tightening torque:**

- **VA2-type**
  - 29 N·m (3.0 kgf-m, 21.4 ft-lb)
16. Brake Line

A: INSPECTION

1. BRAKE LINE

1) Check for scratches, swelling, corrosion, traces of fluid leakage on the brake hoses or pipe joints.
2) Check the possibility of adjacent parts interfering with brake pipes/hoses during driving, and loose connections/clamps.
3) Check any trace of fluid leakage, scratches, etc. on master cylinder, wheel cylinder and pressure control valve.

NOTE:

• When the brake fluid level in the reservoir tank is lower than specified limit, the brake warning light on the combination meter will come on.
• Visually check the brake hose for damage. (Use a mirror where it is difficult to see)

2. SERVICE BRAKE

1) Check the free play of brake pedal with pulling up the force of less than 10 N (1 kgf, 2 lb).

Brake pedal free play (Pulling up direction of pedal)

0.5 — 2.0 mm (0.02 — 0.08 in)

2) If the free play is out of specifications above, adjust the brake pedal as follows:

(1) Make sure the engine is off. (No vacuum is applied to brake booster.)
(2) There should be play between brake booster clevis and pin at brake pedal installing portion. [Pulling up the brake pedal pad with a force of less than 10 N (1 kgf, 2 lb) to a stroke of 0.5 to 2.0 mm (0.02 to 0.08 in).]
(3) If there is no free play between clevis pin and clevis, turn brake switch adjusting nut until the clearance between stopper and screw of brake switch becomes 0.3 mm (0.012 in).
3) Check the pedal stroke.
While the engine is idling, depress the brake pedal with a 490 N (50 kgf, 110 lb) load and measure the distance between the brake pedal and steering wheel. With the brake pedal released, measure the distance between pedal and steering wheel again. The difference between the two measurements must be less than specified value. If the distance is more than specified value, there is possibility of air inside the hydraulic unit.

**Brake pedal reserve distance A:**
95 mm (3.7 in)/ 490 N (50 kgf, 110 lb) or less

4) Check to see if air is in the hydraulic brake line by the feel of pedal operation. If air appears to exist in the line, bleed it from the system.

5) Check for even operation of all brakes, using a brake tester or by driving the vehicle for a short distance on a straight road.

3. BRAKE SERVO SYSTEM

1) With the engine off, depress the brake pedal several times applying the same pedal force. Make sure the travel distance should not change.

2) With the brake pedal depressed, start the engine. Make sure the pedal should move slightly toward the floor.

3) With the brake pedal depressed, stop the engine and keep the pedal depressed for 30 seconds. Make sure the pedal height should not change.

4) A check valve is built into the vacuum hose. Disconnect the vacuum hose to inspect function of check valve.

Blow compressed air into vacuum hose from its brake booster side end. Make sure air must flow out of engine side end of hose. Next, blow compressed air into hose from engine side. Make sure air should not flow out of hose.

Replace the both check valve and vacuum hose if the check valve is faulty. Engine side of vacuum hose is indicated by marking “ENG” as shown.

5) Check the vacuum hose for cracks or other damage.

**NOTE:**
When installing the vacuum hose on the engine and brake booster, do not use soapy water or lubricating oil on their connections.

6) Check the vacuum hose to make sure it is tightly secured.
17. Brake Fluid

A: REPLACEMENT
1) Either jack-up the vehicle and place a rigid rack under it, or lift-up the vehicle.
2) Remove all the wheels.
3) Drain the brake fluid from master cylinder.
4) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
Refer to “RM” section. <Ref. to RM-5, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>

NOTE:
• Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
• Be careful not to allow dirt or dust to get into the reservoir tank.

Air bleeding sequence (1) → (2) → (3) → (4)

5) Install one end of a vinyl tube onto the air bleeder and insert the other end of the tube into a container to collect the brake fluid.

NOTE:
• Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
• During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
• The brake pedal operation must be very slow.
• For convenience and safety, two people should do the work.
• The amount of brake fluid required is approx. 500 ml (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.

6) Instruct your co-worker to depress the brake pedal slowly two or three times and then hold it depressed.
7) Loosen the bleeder screw approximately 1/4 turn until a small amount of brake fluid drains into the container, and then quickly tighten the screw.
8) Repeat steps 6) and 7) until there are no air bubbles in drained brake fluid and new fluid flows through vinyl tube.

NOTE:
Add brake fluid as necessary while performing the air bleed operation, in order to prevent the tank from running short of brake fluid.
9) After completing the bleeding operation, hold the brake pedal depressed and tighten the screw and install bleeder cap.

Tightening torque:
8 N·m (0.8 kgf-m, 5.8 ft-lb)

10) Bleed air from each wheel cylinder by following steps from 5) to 9).
11) Depress the brake pedal with a force of approx. 294 N (30 kgf, 66 lb) and hold it there for approx. 20 seconds. At this time check the pedal to see if it makes any unusual movement. Visually inspect the bleeder screws and brake pipe joints to confirm there is no fluid leakage.
12) Install the wheels, and drive the vehicle for a short distance between 2 to 3 km (1 to 2 miles) to confirm brakes are operating properly.
18. Disc Brake Pad and Disc

A: INSPECTION
1) Jack-up the vehicle and support with rigid racks. Then remove the wheels.
2) Visually check the pad thickness through inspection hole of disc brake assembly. Replace the pad if necessary.

NOTE:
When replacing a pad, always replace the pads for both the left and right wheels at the same time. Also replace the pad clips if they are twisted or worn.

3) Check the disc rotor, and correct or replace if it is damaged or worn.

4) Remove the caliper body. <Ref. to BR-20, Front Disc Brake Assembly.> <Ref. to BR-28, Rear Disc Brake Assembly.>
5) Tighten the wheel nuts to secure disk rotor.
6) Set a dial gauge at a point less than 10 mm (0.39 in) from outer periphery of the rotor, and then measure the disk rotor runout.

**Disc rotor runout limit:**
Front: 0.05 mm (0.002 in)
Rear: 0.05 mm (0.002 in)
19. Parking Brake

A: INSPECTION

Inspect the brake linings and disc rotor of both sides of the rear brake at the same time by removing disc rotor.

1) Inspect the brake shoes for damage or deformation and check the brake linings for wear.

NOTE:
Always replace both primary and secondary brake shoes for the left and right wheels at the same time.

Thickness of brake lining (except for back metal):

- Standard value: 3.2 mm (0.126 in)
- Wear limit: 1.5 mm (0.059 in)

2) Check the inside of disk rotor for wear, dents or other damage. If the inside surface of disc rotor is streaked, correct the surface with emery cloth (#200 or more). If it is unevenly worn or tapered, correct or replace it.

Brake drum inside diameter:

- Standard value: 170 mm (6.69 in)
- Wear limit: 171 mm (6.73 in)

B: ADJUSTMENT

For rear disc brake, adjust the parking brake after bleeding air.

1) Remove the rear cover (rubber) installed at back plate.
2) Turn the adjuster toward arrow mark (upward) until it is locked slightly, by using flat-tip screwdriver as shown in the illustration.

3) Turn back (downward) the adjuster 3 to 4 notches.
4) Install the cover (rubber) in original position correctly.

3) If the deformation or wear of back plate, shoe, etc. is noticeable, replace them.
20. Suspension

A: INSPECTION

1. SUSPENSION BALL JOINT

1) Jack-up the vehicle until front wheels are off ground.
2) Grasp the bottom of tire and move it in and out. If relative movement is observed between the brake disc cover (A) and end of front arm (D), ball joint (C) may be excessively worn.

3) Grasp the end of front arm and move it up and down. Relative movement (A) between the housing (D) and front arm (C) boss indicates ball joint (B) may be excessively worn.

4) If relative movement is observed in the step 2), 3), remove and inspect the ball joint. If the free play exceeds standard value, replace the ball joint. <Ref. to FS-17, Front Ball Joint.>

5) Damage of dust seal

Visually inspect the ball joint dust seal. If it is damaged, remove the front arm. <Ref. to FS-19, Front Arm.> And measure free play of ball joint. <Ref. to FS-17, Front Ball Joint.>

   1) When looseness exceeds standard value, replace the ball joint.
   2) If the dust seal is damaged, replace with a new ball joint.

NOTE:
When the front arm ball joint has been removed or replaced, check the toe-in of front wheel. If the front wheel toe-in is not at specified value, adjust the toe-in. <Ref. to FS-8, Wheel Alignment.>

2. FRONT, REAR SUSPENSION BUSHING

Apply pressure with tire lever etc, and inspect the bushing for wear or crack. Replace the bushings if there is wear or crack.

3. WHEEL ARCH HEIGHT

1) Unload the cargoes and set the vehicle in curb weight (empty) condition.
2) Check the wheel arch height of front and rear suspensions to ensure that they are within specified values. <Ref. to FS-8, Wheel Alignment.>

3) When the wheel arch height is out of standard, visually inspect following components and replace deformed parts.
   • Suspension components [Front strut assembly and rear damper assembly]
   • Parts connecting suspension and body

4) If no components are deformed, adjust the wheel arch height by replacing the suspension which wheel arch height is out of standard. <Ref. to FS-8, Wheel Alignment.> <Ref. to RS-8, Wheel Alignment.>
4. WHEEL ALIGNMENT OF FRONT SUS-PENSION

1) Check the alignment of front suspension to ensure that following items conform to standard values.
   - Toe-in
   - Camber
   - Caster
   - Steering angle
   <Ref. to FS-8, Wheel Alignment.>

2) When the caster angle does not conform to reference obviously, visually inspect the following components and replace deformed parts.
   - Suspension components [Strut assembly, cross-member, front arm, etc.]
   - Parts connecting suspension and body

3) When the toe-in and camber are out of standard value, adjust them so that they conform to standard value.

4) When the right-and-left turning angles of tire are out of standard, adjust to standard value.

5. WHEEL ALIGNMENT OF REAR SUS-PENSION

1) Check the alignment of rear suspension to ensure that following items are within standard values.
   - Toe-in
   - Camber
   - Thrust angle
   <Ref. to RS-8, Wheel Alignment.>

2) When the camber angle does not conform to standard value, visually inspect the following components. If the deformation is observed, replace the damaged parts.
   - Suspension components [Shock absorber, front link, rear link, upper link, rear arm, sub frame, etc]
   - Parts connecting suspension and body

3) When the toe-in and thrust angle are out of standard value, adjust them so that they conform to standard value.

6. OIL LEAKAGE OF STRUT AND SHOCK ABSORBER

Visually inspect the front strut and rear shock absorber for oil leakage. Replace the front strut and rear shock absorber if oil leaks excessively.

7. TIGHTNESS OF BOLTS AND NUTS

Check the bolts and nuts for looseness. Retighten the bolts and nuts to specified torque. If the self-locking nuts and bolts are removed, replace them with new ones.
   - Front suspension
   <Ref. to FS-2, General Description.>

8. DAMAGE TO SUSPENSION PARTS

Check the following parts and the fastening portion of the vehicle body for deformation or excessive rusting which impairs the suspension. If necessary, replace the damaged parts with new ones. If minor rust formation, pitting, etc. are noted, remove the rust and take rust prevention measure.
   - Front suspension
     - Front arm
     - Crossmember
     - Strut
   - Rear suspension
     - Sub frame
     - Front link
     - Rear link
     - Upper link
     - Rear arm
     - Shock absorber
   - In the area where salt is sprayed to melt snow on a road in winter, check suspension parts for damage caused by rust every 12 months after lapse of 60 months. Take rust prevention measure as required.
21. Wheel Bearing

A: INSPECTION

1. FRONT WHEEL BEARING

NOTE:
Inspect the condition of front wheel bearing grease.
1) Jack-up the front side of vehicle.
2) While holding the front wheel by hand, swing it in and out to check bearing free play.
3) Loosen the wheel nuts, and remove the front wheel.
4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.

Service limit:
Straight-ahead position within 0.05 mm (0.0020 in)

5) Remove the bolts and self-locking nuts, and extract the front arm from front crossmember.
6) Remove the PTJ of front drive shaft from transmission. <Ref. to DS-13, Front Axle.>
7) While supporting the front drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
If the hub is noisy or binds, replace the front axle.

2. REAR WHEEL BEARING

1) Jack-up the rear side of vehicle.
2) While holding the rear wheel by hand, swing it in and out to check bearing free play.
3) Loosen the wheel nuts, and remove the rear wheel.
4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial play in axial direction.

Service limit:
Straight-ahead position within 0.05 mm (0.0020 in)

5) Remove the DOJ of rear drive shaft from rear differential. <Ref. to DS-26, Rear Drive Shaft.>
6) While supporting rear drive shaft horizontally with one hand, turn the hub with the other hand to check for noise or binding.
22. Axle Boots and Joints

A: INSPECTION

1. FRONT AND REAR AXLE BOOTS

Inspect the front axle boots (A) and rear axle boots (B) for deformation, damage or failure. If faulty, replace them with new ones. <Ref. to DS-22, Front Drive Shaft.> <Ref. to DS-26, Rear Drive Shaft.>

- Front

- Rear

2. PROPELLER SHAFT

Inspect the propeller shaft for damage or failure. If faulty, replace them with new ones. <Ref. to DS-10, Propeller Shaft.>
23. Steering System (Power Steering)

A: INSPECTION

1. STEERING WHEEL

1) Set the steering wheel in a straight-ahead position, and check the wheel spokes to make sure they are correctly set in their specified positions.

2) Lightly turn the steering wheel to the left and right to determine the point where front wheels start to move.

   Measure the distance of the movement of steering wheel at the outer periphery of wheel.

   **Steering wheel free play:**
   
   0 — 17 mm (0 — 0.67 in)

   ![Steering wheel free play](PS-00450)

   (1) Steering wheel free play

Move the steering wheel vertically toward the shaft to ascertain if there is play in the direction.

   **Maximum permissible play:**
   
   0.5 mm (0.020 in)

3) Drive the vehicle and check the following items during operation.

   1) Steering force:
   The effort required for steering should be smooth and even at all points, and should not vary.

   2) Pulled to one side:
   Steering wheel should not be pulled to either side while driving on a level surface.

   3) Wheel runout:
   Steering wheel should not show any sign of runout.

   4) Return factor:
   Steering wheel should return to its original position after it has been turned and then released.

2. STEERING SHAFT JOINT

When the steering wheel free play is excessive, disconnect the universal joint of steering shaft and check it for any play and yawing torque (at the point of the crossing direction). Also inspect for any damage to sealing or worn serrations. If the joint is loose, retighten the mounting bolts to the specified torque.

   **Tightening torque:**
   
   24 N⋅m (2.4 kgf-m, 17.4 ft-lb)

3. GEARBOX

1) With the vehicle placed on a level surface, turn the steering wheel 90° in both the left and right directions.

   While the wheel is being rotated, reach under the vehicle and check for looseness in gearbox.

   **Tightening torque:**
   
   59 N⋅m (6.0 kgf-m, 43.4 ft-lb)

2) Check the boot for damage, cracks or deterioration.
3) With the vehicle placed on a level surface, quickly turn the steering wheel to the left and right. While steering wheel is being rotated, check the gear backlash. If any noise is noticed, adjust the gear backlash.
4) Adjustment for LHD model
   (1) Apply liquid gasket to at least 1/3 of entire perimeter of adjusting screw thread.
   (2) Tighten adjusting screw to 25 N⋅m (2.5 kgf-m, 18.0 ft-lb) and then loosen.
   (3) Tighten adjusting screw to 3.9 N⋅m (0.40 kgf-m, 2.9 ft-lb) and then loosen 20°.
5) Adjustment for RHD model
   (1) Apply liquid gasket to at least 1/3 of entire perimeter of adjusting screw thread.
   (2) Tighten adjusting screw to 9.8 N⋅m (1.0 kgf-m, 7.2 ft-lb) and then loosen.
   (3) Tighten adjusting screw to 4.9 N⋅m (0.50 kgf-m, 3.6 ft-lb) and then loosen.
   (4) Tighten adjusting screw to 4.9 N⋅m (0.50 kgf-m, 3.6 ft-lb) and then loosen 37°.
6) Install the lock nut. While holding adjusting screw with a wrench, tighten the lock nut using ST. ST 926230000 SPANNER

Tightening torque (lock nut):
LHD model
25 N⋅m (2.5 kgf-m, 18.0 ft-lb)
RHD model
39 N⋅m (4.0 kgf-m, 28.9 ft-lb)

Hold the adjusting screw with a wrench to prevent it from turning while tightening the lock nut.

4. TIE-ROD
1) Check the tie-rod and tie-rod ends for bends, scratches or other damage.

2) Check the connections of knuckle ball joints for play, inspect for damage on dust seals, and check free play of ball studs. If castle nut is loose, retighten it to the specified torque, then tighten further up to 60° until cotter pin hole is aligned.

Tightening torque:
27 N⋅m (2.75 kgf-m, 19.9 ft-lb)

3) Check the lock nut on the tie-rod for tightness. If it is loose, retighten it to the specified torque.

Tightening torque:
83 N⋅m (8.5 kgf-m, 61.5 ft-lb)

5. POWER STEERING FLUID LEVEL

NOTE:
- At power steering fluid temperature 20°C (68°F); read the fluid level on the “COLD” side.
- At power steering fluid temperature 80°C (176°F); read the fluid level on the “HOT” side.
1) Place the vehicle with engine “OFF” on a level surface.
2) Remove the cover. (3.0 L and turbo model)
3) Check the fluid level using the scale on the outside of the reservoir tank (A). If the level is below “MIN” (B), add fluid to bring it up to “MAX” (C).
NOTE:
If fluid level is at MAX level or above, drain fluid to keep the level in the specified range of indicator by using a syringe or the like.

Recommended fluid:
Refer to "RM" section. <Ref. to RM-5, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>

Fluid capacity:
0.8 ℓ (0.8 US qt, 0.7 Imp qt)

6. POWER STEERING FLUID FOR LEAKS
Inspect the underside of oil pump and gearbox of power steering system, hoses, pipes and their couplings for fluid leaks.
If the fluid leaks are found, retighten their fitting bolts (or nuts) and/or replace their parts.

NOTE:
- Wipe the leaked fluid off after correcting fluid leaks.
- Also pay attention to clearances between hoses (or pipes) and other parts when inspecting fluid leaks.

7. HOSES OF OIL PUMP FOR DAMAGES
Check the pressure hose and return hose of oil pump for crack, swell or damage. Replace the hose with a new one if necessary.

NOTE:
Prevent hoses from turning and/or bending when installing hoses.

8. POWER STEERING PIPES FOR DAMAGES
Check the power steering pipes for corrosion and damage. Replace the pipes with new ones if necessary.

9. GEARBOX BOOTS
Inspect both sides of the gearbox boot as follows, and correct the defects if necessary.
1) Positions (A) and (B) of the gearbox boot are fitted correspondingly in grooves (A) and (B) of the gearbox and rod (C).
2) Clips are fitted outside of positions (A) and (B) of boot.
3) Boot does not have crack and hole.

NOTE:
Rotate the position (B) of gearbox boot against the twist of it produced by adjustment of toe-in, etc. Apply grease to the groove (C).

10. FITTING BOLTS AND NUTS
Inspect the fitting bolts and nuts of oil pump and bracket for looseness, and retighten them if necessary.
Inspect and/or retighten them when engine is cold.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.
2. Throttle Body

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Disconnect the connectors from the throttle position sensor and manifold absolute pressure sensor.

4) Disconnect the engine coolant hoses from throttle body.
5) Remove the bolts which secure throttle body to intake manifold.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
8 N·m (0.8 kgf·m, 5.8 ft-lb)
3. Intake Manifold

A: REMOVAL

1) Release the fuel pressure.  
<Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Open the fuel filler flap lid, and remove the fuel filler cap.

3) Disconnect the ground cable from battery.

4) Remove the air cleaner case and air intake chamber.  
<Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>  
<Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>

5) Disconnect the spark plug cords from spark plugs.

6) Disconnect the engine coolant hoses from throttle body.

7) Disconnect the PCV hose from intake manifold.

8) Disconnect the brake booster hose.

9) Disconnect the engine harness connectors from bulkhead harness connectors.

10) Disconnect the connectors from engine coolant temperature sensor.

11) Disconnect the knock sensor connector.

12) Disconnect the connector from crankshaft position sensor.

13) Disconnect the connector from power steering pump switch (A).
14) Disconnect the connector from oil pressure switch (B).

15) Disconnect the connector from camshaft position sensor.

16) Remove the EGR pipe from intake manifold. (EC, EK, K4 model)

17) Disconnect the fuel hoses from fuel pipes.

**WARNING:**
- Be careful not to spill fuel.

- Catch the fuel from hoses using a container or cloth.

18) Remove the bolts which secure intake manifold to cylinder head.

19) Remove the intake manifold.

**B: INSTALLATION**

1) Install the intake manifold onto cylinder heads.

**NOTE:**
Use a new gasket.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

2) Connect the fuel hoses.
NOTE:
If fuel hoses or clamps are damaged, replace them with new ones.

*Tightening torque (Hose clamp screw):*
1.25 N·m (0.13 kgf-m, 0.94 ft-lb)

3) Install the EGR pipe to intake manifold. (EC, EK, K4 model)

*Tightening torque:*
34 N·m (3.4 kgf-m, 24.6 ft-lb)

6) Connect the connector to oil pressure switch (B).

7) Connect the connector to crankshaft position sensor.

8) Connect the knock sensor connector.

9) Connect the connectors to engine coolant temperature sensor.

10) Connect the PCV hose to intake manifold.

5) Connect the connector to power steering pump switch (A).

(A) Fuel delivery hose
(B) Return hose
(C) Evaporation hose
11) Connect the brake booster hose.

12) Connect the engine harness connectors to bulkhead harness connectors.

13) Connect the engine coolant hoses to throttle body.

14) Connect the spark plug cords to spark plugs.

15) Install the air cleaner case and air intake chamber. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

16) Install the fuse of fuel pump to main fuse box.

17) Connect the battery ground cable to battery.

C: DISASSEMBLY

1) Disconnect the engine ground terminal from intake manifold.

2) Remove the ignition coil & ignitor ASSY. <Ref. to IG(H4SO 2.0)-8, REMOVAL, Ignition Coil & Ignitor ASSY.>

3) Remove the throttle body. <Ref. to FU(H4SO 2.0)-10, REMOVAL, Throttle Body.>

4) Remove the EGR valve. (EC, EK, K4 model) <Ref. to FU(H4SO 2.0)-28, REMOVAL, EGR Valve.>

5) Disconnect the pressure regulator vacuum hose from intake manifold.

6) Remove the fuel pipe protector LH.
7) Remove the fuel pipe protector RH.

8) Disconnect the connectors from fuel injector.

9) Remove the purge control solenoid valve. <Ref. to EC(H4SO 2.0)-7, REMOVAL, Purge Control Solenoid Valve.> 
10) Remove the harness band (A) and bolts (B), (C) which secure engine harness to intake manifold.

11) Remove the engine harness from intake manifold.
12) Remove the bolts which install injector pipe on the intake manifold as shown in the figure.

13) Remove the fuel injector.
FUEL INJECTION (FUEL SYSTEMS)

Intake Manifold

(1) Remove the clip which secures fuel injector from injector pipe.

(2) Remove the fuel injector with lifting up the fuel injector pipe.

14) Loosen the clamp which holds fuel injector pipe LH to fuel hose, and then disconnect the pipe from fuel hose.

15) Loosen the clamp which holds fuel injector pipe RH to fuel hose, and then disconnect the pipe from fuel hose.

16) Remove the fuel injector pipe.

17) Remove the bolt which installs fuel pipes on intake manifold.

18) Remove the fuel pipe assembly and pressure regulator, from intake manifold.

D: ASSEMBLY

1) Install the fuel pipe assembly and pressure regulator to intake manifold.

NOTE:
- Use a new gasket.
- When assembling the nipple, apply liquid gasket.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010)

2) Tighten the bolt which installs fuel pipes on intake manifold.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

3) Connect the fuel injector pipe RH to fuel hose, and tighten the clamp screw.
4) Connect the fuel injector pipe LH to fuel hose, and tighten the clamp screw.

5) Install the fuel injectors.
6) Install the clip which secures fuel injector.

7) Tighten the bolts which install injector pipe on intake manifold.
   - LH side
   - Tightening torque: 19 N·m (1.9 kgf-m, 13.7 ft-lb)

   - RH side
   - Tightening torque: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

8) Install the engine harness onto intake manifold.
9) Secure the engine harness with harness band (A) and bolts (B), (C).

**Tightening torque:**
- (B): 16 N·m (1.6 kgf-m, 11.8 ft-lb)
- (C): 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

10) Install the purge control solenoid valve. <Ref. to EC(H4SO 2.0)-7, INSTALLATION, Purge Control Solenoid Valve.>

11) Connect the connectors to fuel injector.

12) Install the fuel pipe protector RH.

**Tightening torque:**
- 19 N·m (1.9 kgf-m, 13.7 ft-lb)

13) Install the fuel pipe protector LH.

**Tightening torque:**
- 19 N·m (1.9 kgf-m, 13.7 ft-lb)

14) Connect the pressure regulator vacuum hose to intake manifold.

15) Install the EGR valve. (EC, EK, K4 model) <Ref. to FU(H4SO 2.0)-28, INSTALLATION, EGR Valve.>

16) Install the throttle body to intake manifold. <Ref. to FU(H4SO 2.0)-10, INSTALLATION, Throttle Body.>

17) Install the ignition coil & ignitor ASSY. <Ref. to IG(H4SO 2.0)-8, INSTALLATION, Ignition Coil & Ignitor ASSY.>

18) Install the engine ground terminal to intake manifold.

FU(H4SO 2.0)-18
E: INSPECTION
Make sure the fuel pipe and fuel hoses are not damaged and the connections are tightened firmly.
4. Engine Coolant Temperature Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the generator. <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.>
3) Disconnect the connectors from engine coolant temperature sensor.

4) Remove the engine coolant temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
18 Nm (1.8 kgf-m, 13.0 ft-lb)
5. Crankshaft Position Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the bolt which installs crankshaft position sensor to cylinder block.

3) Remove the crankshaft position sensor, and disconnect the connector from it.

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:*
*T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)*
6. Camshaft Position Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from camshaft position sensor.

3) Remove the bolt which installs camshaft position sensor to the support.

4) Remove the bolt which installs camshaft position sensor support to camshaft cap LH.

5) Remove the camshaft position sensor and the support as a unit.

6) Remove the camshaft position sensor itself.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
- Camshaft position sensor support
  6.4 N·m (0.65 kgf·m, 4.7 ft-lb)
- Camshaft position sensor
  6.4 N·m (0.65 kgf·m, 4.7 ft-lb)
7. Knock Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
3) Remove the harness bracket from intake manifold.

4) Disconnect the knock sensor connector.

5) Remove the knock sensor from cylinder block.

B: INSTALLATION
1) Install the knock sensor to cylinder block.

**NOTE:**
Extraction area of knock sensor cord must be positioned at a 60° angle relative to the engine rear.

**Tightening torque:**
24 N·m (2.4 kgf-m, 17.4 ft-lb)

2) Connect the knock sensor connector.

3) Install the harness bracket to intake manifold.

**Tightening torque:**
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

4) Install the air cleaner case.
<Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.>
5) Connect the battery ground cable to battery.
8. Throttle Position Sensor

A: SPECIFICATION
Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body.
Refer to “Throttle Body” for removal and installation procedure. <Ref. to FU(H4SO 2.0)-10, REMOVAL, Throttle Body.> <Ref. to FU(H4SO 2.0)-10, INSTALLATION, Throttle Body.>
9. Manifold Absolute Pressure Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

![Manifold Absolute Pressure Sensor Removal Diagram]

2) Disconnect the connector from manifold absolute pressure sensor.

![Manifold Absolute Pressure Sensor Connection Diagram]

3) Remove the manifold absolute pressure sensor from throttle body.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
2.0 N·m (0.20 kgf-m, 1.5 ft-lb)
10. Intake Air Temperature Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from intake air temperature sensor.
3) Remove the intake air temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.
11. EGR Valve

A: REMOVAL

NOTE:
EGR valve is equipped to EC, EK and K4 model.
1) Disconnect the ground cable from battery.
2) Disconnect the connector from EGR valve.
3) Remove the EGR valve from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
19 N·m (1.9 kgf-m, 13.7 ft-lb)
12. Fuel Injector

A: REMOVAL

1. RH SIDE

1) Release the fuel pressure.  
<Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Disconnect the ground cable from battery.
4) Remove the air cleaner case.  <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
5) Remove the spark plug cords from spark plugs (#1 and #3 cylinders).
6) Remove the fuel pipe protector RH.
7) Disconnect the connector from fuel injector.
8) Remove the clip which secure fuel injector.
9) Remove the bolts which hold fuel injector pipe onto intake manifold.
10) Remove the fuel injector while lifting up the fuel injector pipe.

2. LH SIDE

1) Release the fuel pressure.  
<Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Remove the battery.
4) Remove the spark plug cords from spark plugs (#2 and #4 cylinders).
Fuel Injector

5) Remove the fuel pipe protector LH.

6) Disconnect the connector from fuel injector.

7) Remove the clips which secure fuel injector.

8) Remove the bolts which hold fuel injector pipe onto intake manifold.

9) Remove the fuel injector while lifting up the fuel injector pipe.

**B: INSTALLATION**

1. RH SIDE
   Install in the reverse order of removal.
   NOTE:
   Use new O-rings.

   **Tightening torque:**
   19 N·m (1.9 kgf-m, 13.7 ft-lb)
Fuel Injector

Tightening torque: 
6.4 N·m (0.65 kgf·m, 4.7 ft-lb)

Tightening torque: 
19 N·m (1.9 kgf·m, 13.7 ft-lb)

Tightening torque: 
19 N·m (1.9 kgf·m, 13.7 ft-lb)

Tightening torque: 
19 N·m (1.9 kgf·m, 13.7 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque: 
6.4 N·m (0.65 kgf·m, 4.7 ft-lb)
13. Front Oxygen (A/F) Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
3) Remove the connector of front oxygen (A/F) sensor.
4) Remove the clip holding harness.
5) Lift-up the vehicle.
6) Remove the under cover.
7) Apply spray-type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
8) Remove the front oxygen (A/F) sensor.

CAUTION:
When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION
1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound:
SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.
2) Install the front oxygen (A/F) sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)

3) Install the under cover.
4) Lower the vehicle.
5) Hold the harness with clip.
6) Connect the connector of front oxygen (A/F) sensor.
7) Install the air intake duct. <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
8) Connect the battery ground cable to battery.
14. Rear Oxygen Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle.
3) Disconnect the connector from rear oxygen sensor.
4) Remove the clip holding harness.
5) Apply spray-type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
6) Remove the rear oxygen sensor.

CAUTION:
When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION
1) Before installing rear oxygen sensor, apply anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

Anti-seize compound: SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to the protector of rear oxygen sensor.
2) Install the rear oxygen sensor.

Tightening torque: 21 N·m (2.1 kgf-m, 15.2 ft-lb)
3) Hold the harness with clip.
4) Connect the connector to rear oxygen sensor.
5) Lower the vehicle.
6) Connect the battery ground cable to battery.
15. Engine Control Module (ECM)

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger’s side. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

3) Detach the floor mat of front passenger seat.

4) Remove the protect cover.

5) Remove the nuts (A) which hold ECM to bracket.

6) Remove the clip (B) from bracket.

7) Disconnect the ECM connectors and take out the ECM.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
- When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage to fuel injection system.
- When replacing the ECM, be careful not to damage the harnesses and connectors.

_Tightening torque:_

5 N·m (0.5 kgf-m, 3.6 ft-lb)
16. Main Relay

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from main relay.

B: INSTALLATION
Install in the reverse order of removal.
17. Fuel Pump Relay

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from fuel pump relay.

B: INSTALLATION
Install in the reverse order of removal.
18. Electronic Throttle Control Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>

3) Remove the harness cover (A).

4) Disconnect the connector from electric control throttle relay.

B: INSTALLATION

Install in the reverse order of removal.
19. Fuel

A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:
• Place “NO FIRE” signs near the working area.
• Be careful not to spill fuel on the floor.
1) Remove the fuse of fuel pump from main fuse box.
2) Start the engine and run until it stalls.
3) After the engine stalls, crank it for five more seconds.
4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:
• Place “NO FIRE” signs near the working area.
• Be careful not to spill fuel on the floor.
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Lift-up the vehicle.
5) Remove the fuel tank protector.
6) Set a container under the vehicle and remove the drain plug from fuel tank to drain fuel from the fuel tank.
7) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

_Tightening torque:_
- 26 N·m (2.65 kgf-m, 19.2 ft-lb)
8) Install the fuel tank protector.

NOTE:
Use a new nut.

_Tightening torque:_
- Nut 9.0 N·m (0.92 kgf-m, 6.6 ft-lb)
- Bolt 17.5 N·m (1.78 kgf-m, 12.9 ft-lb)
20. Fuel Tank  
A: REMOVAL

**WARNING:**  
- Place “NO FIRE” signs near the working area.  
- Be careful not to spill fuel on the floor.

1) Set the vehicle on a lift.  
2) Release the fuel pressure.  
   <Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Drain fuel from the fuel tank.  
   <Ref. to FU(H4SO 2.0)-38, DRAINING FUEL, PROCEDURE, Fuel.>
4) Remove the rear seat.
5) Remove the service hole cover from fuel pump.  
   (1) Remove the bolts (A).  
   (2) Push the grommet (B) down under the body and remove the service hole cover.
6) Disconnect the connector from fuel pump.
7) Remove the service hole cover from fuel sub level sensor.  
   (1) Remove the bolts (A).
8) Disconnect the connector (A) from fuel sub level sensor.  
9) Disconnect the quick connector from the fuel delivery (B) and return hose (C).  
   <Ref. to FU(H4SO 2.0)-53, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
10) Remove the rear wheels.
11) Remove the bolts which secure rear brake hose installation bracket.
12) Remove the rear brake caliper and tie it to the side of vehicle body.

13) Remove the parking brake cable from parking brake assembly. <Ref. to PB-7, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

14) Lift-up the vehicle.

15) Remove the rear exhaust pipe.<Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.>

16) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>

17) Remove the heat shield cover.

18) Disconnect the connector from rear ABS wheel speed sensor.

19) Remove the bolts which install parking brake cable clamp.

20) Remove the rear suspension assembly.

**CAUTION:**
A helper is required to perform this work.

(1) Support the rear differential with transmission jack.

(2) Remove the bolt which installs rear shock absorber to rear suspension arm.
(3) Remove the bolts which secure rear suspension assembly to body.

(4) Remove the rear suspension assembly.

21) Disconnect the two-way valve hose (A) from two-way valve, and then remove the two-way valve from bracket.

22) Loosen the clamp and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.

23) Support the fuel tank with transmission jack, remove the bolts from fuel tank bands and dismount the fuel tank from vehicle.

**WARNING:**
A helper is required to perform this work.

**B: INSTALLATION**

1) Support the fuel tank with transmission jack, set the fuel tank, and then temporarily tighten the bolts of fuel tank band.

**WARNING:**
A helper is required to perform this work.
2) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

11) Lower the vehicle.

12) Connect the parking brake cable to parking brake assembly. <Ref. to PB-8, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>

13) Install the rear brake caliper.

14) Tighten the bolt which secures rear brake hose installation bracket.

15) Install the rear wheels.

16) Lower the vehicle.

17) Connect the connector (A) to fuel sub level sensor.

18) Connect the quick connector to the fuel delivery (B) and return hose (C). <Ref. to FU(H4SO 2.0)-54, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

NOTE:
Be careful not to misconnect the delivery side and return side.

19) Install the service hole cover of fuel sub level sensor.
20) Connect the connector to fuel pump.

21) Install the service hole cover of fuel pump.

22) Install the rear seat.
23) Install the fuse of fuel pump to main fuse box.

C: INSPECTION
1) Check that the fuel tank is not holed, cracked, or otherwise damaged.
2) Make sure that the fuel hoses and fuel pipes are not cracked and those connections are tight.
21. Fuel Filler Pipe

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Release the fuel pressure.
<Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the filler cap.
3) Disconnect the ground cable from battery.
4) Remove the screws which secure the packing.
5) Lift-up the vehicle.
6) Remove the rear wheel RH.
7) Set a container under the vehicle and remove the drain plug from fuel tank to drain fuel from the fuel tank.
8) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

Tightening torque:
26 N·m (2.65 kgf-m, 19.2 ft-lb)
9) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
10) Remove the rear sub frame. <Ref. to RS-23, REMOVAL, Rear Sub Frame.>
11) Remove the bolts which hold fuel filler pipe bracket on the body.
12) Loosen the clamp and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.
13) Remove the fuel filler pipe to under side of the vehicle.
**B: INSTALLATION**

1) Open the fuel filler flap lid.
2) Set the fuel saucer (A) with rubber packing (C) and insert the fuel filler pipe into hole from the inner side of apron.
3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

**NOTE:**
If the edges of rubber packing are folded toward the inside, straighten it with a flat tip screwdriver.

4) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

5) Tighten the bolts which hold fuel filler pipe bracket on the body.

**Tightening torque:**

\[ 7.5 \, N \cdot m \, (0.75 \, kgf-m, \, 5.4 \, ft-lb) \]

6) Install the rear sub frame. <Ref. to RS-23, INSTALLATION, Rear Sub Frame.>
7) Install the mud guard. <Ref. to EI-29, INSTALLATION, Mud Guard.>
8) Install the rear wheel RH.
9) Lower the vehicle.
10) Install the fuse of fuel pump to main fuse box.
11) Connect the battery ground cable to battery.
22. Fuel Pump

**A: REMOVAL**

**WARNING:**
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

**NOTE:**
Fuel pump assembly consists of fuel pump and fuel level sensor.

1) Release the fuel pressure. 
<Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain fuel. <Ref. to FU(H4SO 2.0)-38, DRAINING FUEL, PROCEDURE, Fuel.>
3) Remove the rear seat.
4) Remove the service hole cover.
   (1) Remove the bolts (A).
   (2) Push the grommet (B) down under the body and remove the service hole cover.
5) Disconnect the connector from fuel pump.
6) Disconnect the quick connector and then disconnect the fuel delivery hose, return hose and jet pump hose. <Ref. to FU(H4SO 2.0)-53, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
7) Remove the nuts which install fuel pump assembly onto fuel tank.

8) Take off the fuel pump assembly from fuel tank.

**B: INSTALLATION**
Install in the reverse order of removal.

**NOTE:**
Use a new gasket.
(1) Ensure the sealing portion is free from fuel or foreign particles before installation.
(2) Tighten the nuts to specified torque in the order as shown in the figure.

**Tightening torque:**
4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

**C: INSPECTION**
Connect the lead harness to the connector terminal of fuel pump and apply the battery power supply to check whether the pump operates.

**WARNING:**
- Wipe off the fuel completely.
- Keep battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply to ON and OFF on the battery side.
Fuel Pump

- Do not run fuel pump for a long time under non-load condition.
23. Fuel Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:
Fuel level sensor is built in fuel pump assembly.
1) Remove the fuel pump assembly. <Ref. to FU(H4SO 2.0)-47, REMOVAL, Fuel Pump.>
2) Disconnect the connector from fuel pump bracket.
3) Remove the fuel level sensor.

B: INSTALLATION
Install in the reverse order of removal.
Fuel Sub Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

1) Drain fuel. <Ref. to FU(H4SO 2.0)-38, DRAINING FUEL, PROCEDURE, Fuel.>
2) Remove the rear seat.
3) Remove the service hole cover.
   (1) Remove the bolts (A).
   (2) Push the grommet (B) down under the body and remove the service hole cover.
4) Disconnect the connector from fuel sub level sensor.
5) Disconnect the quick connector and then disconnect the fuel delivery hose, return hose and jet pump hose. <Ref. to FU(H4SO 2.0)-53, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
6) Remove the bolts which install the fuel sub level sensor on fuel tank.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
- Use a new gasket.
- (1) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (2) Tighten the nuts and bolts to specified torque in the order as shown in the figure.

Tightening torque:
- 4.4 Nm (0.45 kgf-m, 3.3 ft-lb)
25. Fuel Filter

A: SPECIFICATION

Fuel filter forms a unit with fuel pump.
Refer to Fuel Pump for removal and installation.
<Ref. to FU(H4SO 2.0)-47, REMOVAL, Fuel Pump.>
<Ref. to FU(H4SO 2.0)-47, INSTALLATION, Fuel Pump.>
26. Fuel Damper Valve

A: REMOVAL

1. DELIVERY SIDE

1) Release the fuel pressure. <Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Remove the fuel damper valve from fuel delivery line.

2. RETURN SIDE

Fuel damper valve forms a unit with fuel injector pipe RH. Refer to “Intake Manifold” for removal. <Ref. to FU(H4SO 2.0)-14, DISASSEMBLY, Intake Manifold.>

B: INSTALLATION

1. DELIVERY SIDE

Install in the reverse order of removal.

Tightening torque:

1.25 N·m (0.13 kgf-m, 0.94 ft-lb)

2. RETURN SIDE

Fuel damper valve forms a unit with fuel injector pipe RH. Refer to “Intake Manifold” for installation. <Ref. to FU(H4SO 2.0)-16, ASSEMBLY, Intake Manifold.>
27. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL
1) Set the vehicle on a lift.
2) Release the fuel pressure. <Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Remove the floor mat. <Ref. to EI-73, REMOVAL, Floor Mat.>
5) Disconnect the fuel delivery pipes and hoses, and then disconnect the fuel return pipes and hoses, evaporation pipes and hoses.

6) In the engine compartment, disconnect the fuel delivery hoses, return hoses and evaporation hose.

9) Separate the quick connector on fuel line.
   (1) Clean the pipe and connector, if they are covered with dust.
   (2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag, etc.

7) Lift-up the vehicle.
8) Remove the fuel tank. <Ref. to FU(H4SO 2.0)-39, REMOVAL, Fuel Tank.>

3) Hold the connector (A) and push retainer (B) down.
4) Pull out the connector (A) from retainer (B).
CAUTION:
Always use a new retainer.

(A) Connector
(B) Retainer
(C) Pipe

B: INSTALLATION
1) Connect the quick connector on fuel line.

CAUTION:
- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

(A) Seal surface
(B) Pipe

(1) Set the new retainer (B) to connector (A).
(2) Push the pipe into the connector completely.

2) Connect the fuel delivery hose to the pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).
Type A: When the amount of inserting is specified.
Type B: When the amount of inserting is not specified.

\[ L : 2.5 \pm 1.5 \text{ mm (0.098} \pm 0.059 \text{ in)} \]

\[ L : 22.5 \pm 2.5 \text{ mm (0.886} \pm 0.098 \text{ in)} \]

3) Connect the return hose and evaporation hose to pipe by approx. 15 mm (0.59 in) from the hose end.

Fuel return hose:
\[ L = 22.5 \pm 2.5 \text{ mm (0.885} \pm 0.098 \text{ in)} \]

Fuel evaporation hose:
\[ L = 17.5 \pm 2.5 \text{ mm (0.689} \pm 0.098 \text{ in)} \]
CAUTION:
Be sure to inspect the hoses and their connections for fuel leakage.

C: INSPECTION
1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
2) Make sure that the fuel pipe and fuel hose connections are tightened firmly.

| 2) Defective operation of fuel meter. | Replace. |

| **5. Noise** | |
| 1) Large operation noise or vibration of fuel pump. | Replace. |

**NOTE:**

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent those problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent at the time when the fuel reduced at half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain the water from both the fuel filter and fuel tank or use water removing agent in the fuel tank.
- Before using water removing agent, follow the cautions noted on the bottle.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

A: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Front Catalytic Converter

A: REMOVAL
The front and rear catalytic converters are integrated into center exhaust pipe as a unit; therefore, refer to “Center Exhaust Pipe” for removal procedure. <Ref. to EX(H4SO 2.0)-10, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION
The front and rear catalytic converters are integrated into center exhaust pipe as a unit; therefore, refer to “Center Exhaust Pipe” for installation procedure. <Ref. to EX(H4SO 2.0)-10, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3. Rear Catalytic Converter

A: REMOVAL
The front and rear catalytic converters are integrated into center exhaust pipe as a unit; therefore, refer to “Center Exhaust Pipe” for removal procedure. <Ref. to EX(H4SO 2.0)-10, REMOVAL, Center Exhaust Pipe.>

NOTE:
Connect the evaporation hose as shown in the figure.

• 2.0 L model
C: INSPECTION
Make sure the hoses are not cracked or loose.
7. Two-way Valve

A: REMOVAL
1) Lift-up the vehicle.
2) Disconnect the evaporation hoses from two-way valve.
3) Remove the two-way valve as a unit with bracket from body.

4) Remove the two-way valve from bracket.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:

INTAKE (INDUCTION)

General Description

B: CAUTION
- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Air Cleaner Element

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow and intake air temperature sensor. (2.5 L EC, EK, K4 model)

3) Remove the clip (A) from upper side of air cleaner case.

4) Pull the air cleaner case (rear) to rearward of the vehicle, and then remove the air cleaner element.

NOTE:
Be careful that the power steering hose is secured to the under side of air cleaner case (rear).

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Fasten the air cleaner case (rear) with a clip after inserting the lower tab of the case.

C: INSPECTION
Replace if excessively damaged or dirty.
3. Air Cleaner Case

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the air intake duct. <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>

3) Disconnect the connector from mass air flow and intake air temperature sensor. (2.5 L EC, EK, K4 model)

4) Loosen the clamp (A) which connects the air cleaner case to intake duct.

5) Remove the clip (B) from upper side of air cleaner case.

6) Remove the air cleaner case (rear) and air cleaner element.

7) Remove the bolt (A) and nut (B) which hold the air cleaner case on body.

8) Remove the air cleaner case (front).
B: INSTALLATION
Install in the reverse order of removal.

_Tightening torque:_
- Bolt (A): 6.0 N·m (0.6 kgf-m, 4.4 ft-lb)
- Nut (B): 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

NOTE:
Fasten with a clip after inserting the lower tab of the case.

C: INSPECTION
Check for cracks or loose connection.
4. Air Intake Chamber

A: REMOVAL
1) Disconnect the ground cable from battery. (Except for EC, EK, K4 model)

2) Disconnect the connector from intake air temperature sensor. (Except for EC, EK, K4 model)

3) Loosen the clamp (A) which connects the air intake chamber to throttle body.
4) Loosen the clamp (B) which connects the intake duct to air intake chamber.
5) Remove the bolt (C) which secures the air intake chamber to the stay.

6) Disconnect the three parts of blow-by hose, and remove the air intake chamber.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Clamp (A), (B) 3.0 N·m (0.3 kgf-m, 2.2 ft-lb)
Bolt (C) 6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

C: INSPECTION
1) Check for cracks or loose connections.
2) Inspect that no foreign objects in the air intake chamber.
5. Air Intake Duct

A: REMOVAL
1) Remove the clips which install the air intake duct on the front side of body.
2) Remove the air intake duct.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Check for cracks or loose connections.
2) Inspect that no foreign objects in the air intake duct.
6. Resonator Chamber

A: REMOVAL
Refer to “Air Cleaner Case” for removal procedure because the resonator chamber forms a single unit with air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>

B: INSTALLATION
Refer to “Air Cleaner Case” for installation procedure because the resonator chamber forms a single unit with air cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.>

C: INSPECTION
Check for cracks or loose connections.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

### Mechanical

#### Valve seat
- **Refacing angle**: 90°
- **Contacting width**
  - **Intake**: Standard 0.8 — 1.4 (0.03 — 0.055)
  - **Exhaust**: Standard 1.2 — 1.8 (0.047 — 0.071)

#### Valve guide
- **Inside diameter**: mm (in) 6.000 — 6.012 (0.2362 — 0.2367)
- **Protrusion above head**
  - **Intake**: 20.0 — 21.0 (0.787 — 0.827)
  - **Exhaust**: 16.5 — 17.5 (0.650 — 0.689)

#### Valve
- **Head edge thickness**
  - **Intake**: Standard 0.8 — 1.2 (0.03 — 0.047)
  - **Exhaust**: Standard 1.0 — 1.4 (0.039 — 0.055)
- **Stem outer diameters**
  - **Intake**: 5.950 — 5.965 (0.2343 — 0.2348)
  - **Exhaust**: 5.945 — 5.960 (0.2341 — 0.2346)
- **Valve stem gap**: mm (in)
  - **Intake**: Standard 0.035 — 0.062 (0.0014 — 0.0024)
  - **Exhaust**: Standard 0.040 — 0.067 (0.0016 — 0.0026)

C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.

### E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- V-belt
- Timing belt
- Valve rocker assembly
- Camshaft
- Cylinder head
2. Compression

A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

1) After warming-up the engine, turn the ignition switch to OFF.
2) Make sure that the battery is fully charged.
3) Release the fuel pressure. <Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
4) Remove all the spark plugs. <Ref. to IG(H4SO 2.0)-5, REMOVAL, Spark Plug.>
5) Fully open the throttle valve.
6) Check the starter motor for satisfactory performance and operation.
7) Hold the compression gauge tight against the spark plug hole.

NOTE:
When using a screw-in type compression gauge, the screw (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

8) Crank the engine by means of the starter motor, and read the maximum value on the gauge when the pointer is steady.

9) Perform at least two measurements per cylinder, and make sure that the values are correct.

Compression (350 rpm and fully open throttle):
Standard:
1,020 — 1,275 kPa (10.4 — 13.0 kgf/cm², 148 — 185 psi)

Difference between cylinders:
49 kPa (0.5 kgf/cm², 7 psi) or less
3. Idle Speed

A: INSPECTION

1) Before checking the idle speed, check the following:
   (1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
   (2) Ensure the malfunction indicator light does not illuminate.

2) Idle the engine.

3) Stop the engine, and turn the ignition switch to OFF.

4) When using Subaru Select Monitor, refer to the following. <Ref. to ME(H4SO 2.0)-13, SPECIAL TOOL, PREPARATION TOOL, General Description.>
   (1) Insert the cartridge to the Subaru Select Monitor.
   (2) Connect the Subaru Select Monitor to data link connector.
   (3) Turn the ignition switch to ON, and Subaru select monitor switch to ON.
   (4) Select {Each System Check} in the Main Menu.
   (5) Select {Engine} in the Selection Menu.
   (6) Select {Current Data Display & Save} in the Engine Control System Diagnosis.
   (7) Select {Data Display} in the Data Display Menu.
   (8) Start the engine, and read engine idle speed.

5) When using the tachometer (Secondary pick-up type):
   (1) Attach the pick-up clip to No. 1 cylinder spark plug cord.

(2) Start the engine, and read engine idle speed.

NOTE:
This ignition system provides simultaneous ignition for #1 and #2 plugs. It must be noted that some tachometers may register twice that of actual engine speed.

6) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, A/C, etc. OFF)

Idle speed [No load and gears in “N” or “P” range]:
650±100 rpm

7) Check the idle speed when loaded. (Turn the A/C switch to “ON” and operate the compressor for at least one minute before measurement.)

Idle speed [A/C “ON” and gears in “N” or “P” range]:
800±100 rpm

NOTE:
Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted. If the idle speed is out of specifications, refer to General Diagnosis Table under “Engine Control System”. <Ref. to EN(H4SO 2.0)(diag)-2, Basic Diagnostic Procedure.>
4. Ignition Timing

A: INSPECTION

**CAUTION:**
After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.

1) Idle the engine.
2) To check the ignition timing, connect a timing light to #1 cylinder spark plug cord, and illuminate the timing mark with the timing light.
3) Start the engine and check the ignition timing at the following idle speed.

**Ignition timing [BTDC/rpm]:**

\[ 13° \pm 10° / 650 \]

If the timing is not correct, check the ignition control system. <Ref. to EN(H4SO 2.0)(diag)-2, Basic Diagnostic Procedure.>
5. Intake Manifold Vacuum

A: INSPECTION

1) Idle the engine.
2) Disconnect the brake vacuum hose from the intake manifold, and then install the vacuum gauge.
3) Keep the engine at the idle speed and read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of the engine can be diagnosed as described below.

Vacuum pressure (at idling, A/C “OFF”):
Less than −60.0 kPa (−450 mmHg, −17.72 in. Hg)

<table>

</tr>
</thead>
<tbody>
<tr>
<td>1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.</td>
<td>Air leakage around intake manifold gasket, disconnection or damage of vacuum hose</td>
</tr>
<tr>
<td>2. When engine speed is reduced slowly from higher speed, needle stops temporarily when it is lowering or becomes steady above normal position.</td>
<td>Exhaust pressure is too high, or exhaust system is clogged.</td>
</tr>
<tr>
<td>3. Needle intermittently drops to position lower than normal position.</td>

</tr>
<tr>
<td>6. Needle vibrates above and below normal position in narrow range.</td>
<td>Defective ignition system</td>
</tr>
</tbody>
</table>
6. Engine Oil Pressure

A: INSPECTION

1) Disconnect the ground cable from battery.

2) Remove the generator from bracket. <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.>

3) Disconnect the connector from oil pressure switch.

4) Remove the pressure switch from cylinder block. <Ref. to LU(H4SO 2.0)-17, REMOVAL, Oil Pressure Switch.>

5) Connect the oil pressure gauge hose to cylinder block.

6) Connect the battery ground cable to battery.

7) Start the engine, and measure oil pressure.

CAUTION:
- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H4SO 2.0)-19, INSPECTION, General Diagnostic Table.>
- If the oil pressure warning light is turned to ON but oil pressure is within specification, replace the oil pressure switch. <Ref. to LU(H4SO 2.0)-19, INSPECTION, General Diagnostic Table.>

NOTE:
The specified value is based on an engine oil temperature of 80°C (176°F).

8) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(H4SO 2.0)-17, INSTALLATION, Oil Pressure Switch.>

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

Oil pressure:
Standard
88 kPa (0.9 kg/cm², 13 psi) or more at 800 rpm
294 kPa (3.0 kg/cm², 43 psi) or more at 5,000 rpm
7. Fuel Pressure

A: INSPECTION

WARNING:
Before removing the fuel pressure gauge, release fuel pressure.

NOTE:
When the fuel pressure is out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.

1) Release the fuel pressure.
<Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Disconnect the fuel delivery hose from fuel damper, and connect a fuel pressure gauge.

4) Install the fuse of fuel pump to main fuse box.
5) Start the engine.
6) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

Fuel pressure:
Standard: 284 — 314 kPa (2.9 — 3.2 kg/cm², 41 — 46 psi)

7) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

Fuel pressure:
Standard: 206 — 235 kPa (2.1 — 2.4 kg/cm², 30 — 34 psi)

NOTE:
The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kg/cm², 1 to 3 psi) higher than standard values during high-altitude operations.
8. Valve Clearance

A: INSPECTION

NOTE:
Inspection and adjustment of valve clearance should be performed while engine is cold.
1) Set the vehicle on a lift.
2) Lift-up the vehicle.
3) Remove the under cover.
4) Lower the vehicle.
5) Disconnect the ground cable from battery.

6) Remove the timing belt cover (LH).

7) When inspecting #1 and #3 cylinders:
   (1) Disconnect the spark plug cords from spark plugs RH side. <Ref. to IG(H4SO 2.0)-5, RH SIDE, REMOVAL, Spark Plug.>
   (2) Disconnect the PCV hose from rocker cover (RH).
   (3) Remove the bolts, then remove the rocker cover (RH).
8) When inspecting #2 and #4 cylinders:
   (1) Disconnect the spark plug cords from spark plugs (LH Side). <Ref. to IG(H4SO 2.0)-5, LH SIDE, REMOVAL, Spark Plug.>
   (2) Disconnect the PCV hose from rocker cover (LH).
   (3) Remove the bolts, then remove the rocker cover (LH).
9) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

NOTE:
When the arrow mark (A) on cam sprocket (LH) comes exactly to the top, #1 cylinder piston is brought to the top dead center of compression stroke.

10) Measure #1 cylinder valve clearance using thickness gauge.

CAUTION:
- Insert the thickness gauge (A) in as horizontally as possible with respect to the valve stem end face.
- Measure the exhaust valve clearances while lifting-up the vehicle.

Valve clearance (Standard):
   Intake: 
     0.20±0.04 mm (0.0079±0.0016 in)
   Exhaust: 
     0.25±0.04 mm (0.0098±0.0016 in)

11) If necessary, adjust the valve clearance. <Ref. to ME(H4SO 2.0)-29, ADJUSTMENT, Valve Clearance.>
12) Measure the valve clearance in #3, #2 and #4 cylinder in the same measurement procedure as #1 cylinder.
NOTE:
- Be sure to set the cylinder pistons to their respective top dead centers on compression stroke before measuring valve clearances.
- By rotating the crank pulley clockwise every 180° from the state that #1 cylinder piston is on the top dead center of compression stroke, #3, #2 and #4 cylinder pistons come to the top dead center of compression stroke in this order.

13) After inspection, install the related parts in the reverse order of removal.

**B: ADJUSTMENT**

**CAUTION:**
Adjustment of valve clearance should be performed while engine is cold.

1) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

NOTE:
When the arrow mark (A) on cam sprocket (LH) comes exactly to the top, #1 cylinder piston is brought to the top dead center of compression stroke.

2) Adjust the #1 cylinder valve clearance.
   1. Loosen the valve rocker nut and screw.
   2. Place a suitable thickness gauge.
   3. While noting the valve clearance, tighten the valve rocker adjusting screw.
   4. When the specified valve clearance is obtained, tighten the valve rocker nut.

   **Tightening torque:**
   10 N·m (1.0 kgf-m, 7.2 ft-lb)

   **CAUTION:**
   - Insert the thickness gauge in as horizontally as possible with respect to the valve stem end face.
   - Adjust the exhaust valve clearances while lifting-up the vehicle.

3) Adjust the valve clearance in #3, #2 and #4 cylinder in the same adjustment procedure as #1 cylinder.

NOTE:
- Be sure to set the cylinder pistons to their respective top dead centers on compression stroke before adjusting valve clearances.
- By rotating the crank pulley clockwise every 180° from the state that #1 cylinder piston is on the top dead center of compression stroke, #3, #2 and #4 cylinder pistons come to the top dead center of compression stroke in this order.

4) Ensure the valve clearances of each cylinder are within specifications. If necessary, readjust the valve clearances.

9. Engine Assembly

A: REMOVAL

1) Set the vehicle on a lift.
2) Open the front hood fully and support with the front food stay.
3) Collect the refrigerant from A/C system. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
4) Release the fuel pressure. <Ref. to FU(H4SO 2.0)-38, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.> or <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
5) Remove the fuel filler cap.
6) Disconnect the ground cable from battery.

7) Remove the air intake duct, air cleaner case and air intake chamber. 
   <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
8) Remove the under cover.
9) Remove the radiator from vehicle. <Ref. to CO(H4SO 2.0)-20, REMOVAL, Radiator.>
10) Disconnect the A/C pressure hoses from A/C compressor.
11) Remove the air intake chamber stay.
12) Disconnect the following connectors and cables.

(1) Front oxygen (A/F) sensor connector

(2) Rear oxygen sensor connector

(3) Engine ground cable

(4) Engine harness connectors
(5) Generator connector and terminal

(A) Terminal
(B) Generator connector

(6) A/C compressor connectors

(7) Power steering switch connector

13) Disconnect the following hoses.
   (1) Brake booster vacuum hose
   (2) Heater inlet and outlet hoses

14) Remove the power steering pump from bracket.
   (1) Loosen the lock bolt and slider bolt, and remove the front side belt. <Ref. to ME(H4SO 2.0)-38, FRONT SIDE BELT, REMOVAL, V-belt.>
   (2) Remove the power steering pump bracket.
   (3) Place the power steering pump on the right side wheel apron.

15) Remove the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>

16) Remove the nuts which hold lower side of transmission to engine.

17) Remove the nuts which install front cushion rubber onto front crossmember.

18) Separate the torque converter clutch from drive plate. (AT model)
   (1) Lower the vehicle.
   (2) Remove the service hole plug.
   (3) Remove the bolts which hold torque converter clutch to drive plate.
(4) Remove other bolts while rotating the engine using a socket wrench.

19) Remove the pitching stopper.

20) Disconnect the fuel delivery hose (A), return hose (B) and evaporation hose (C).

**CAUTION:**
- Catch fuel from the hose into container.
- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.

21) Support the engine with a lifting device and wire ropes.

22) Support the transmission with a garage jack.

**CAUTION:**
- Doing this is very important because the transmission lowers for its own weight. This work is also of great importance for facilitating reinstallation.

23) Separation of engine and transmission.
   (1) Remove the starter. <Ref. to SC(H4SO 2.0)-6, REMOVAL, Starter.>
   (2) Remove the bolts which hold upper side of transmission to engine.

24) Set the ST to converter case. (AT model)

25) Remove the engine from vehicle.
   (1) Slightly raise the engine.
   (2) Raise the transmission with garage jack.
(3) Move the engine horizontally until main shaft is withdrawn from clutch cover.
(4) Slowly move the engine away from engine compartment.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.
(26) Remove the front cushion rubbers.

B: INSTALLATION
1) Install the front cushion rubbers.

**Tightening torque:**

35 N·m (3.6 kgf-m, 25.8 ft-lb)

2) Position the engine in engine compartment and align it with transmission.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

3) Apply a small amount of grease to splines of main shaft. (MT model)
4) Tighten the bolts which hold upper side of transmission to engine.

**Tightening torque:**

50 N·m (5.1 kgf-m, 36.9 ft-lb)

5) Remove the lifting device and wire ropes.
6) Remove the garage jack.
7) Install the pitching stopper.

**Tightening torque:**

T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)  
T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

8) Remove the ST from converter case. (AT model)

NOTE:
Be careful not to drop the ST into the converter case when removing the ST.

ST 498277200 STOPPER SET
9) Install the starter. <Ref. to SC(H4SO 2.0)-6, INSTALLATION, Starter.>
10) Install the torque converter clutch to drive plate. (AT model)

(1) Tighten the bolts which hold torque converter clutch to drive plate.
(2) Tighten other bolts while rotating the engine using a socket wrench.

**CAUTION:**
Be careful not to drop bolts into the torque converter clutch housing.

**Tightening torque:**

25 N·m (2.5 kgf-m, 18.1 ft-lb)

(3) Clog the service hole plug and prevent foreign matters from being mixed.
11) Install the power steering pump on bracket.

(1) Install the power steering pump on bracket, and tighten the bolts.
**Engine Assembly**

**Tightening torque:**

22 N·m (2.2 kgf-m, 16 ft-lb)

(2) Connect the power steering switch connector.

(3) Install the front side belt and adjust it. <Ref. to ME(H4SO 2.0)-38, FRONT SIDE BELT, INSTALLATION, V-belt.>

12) Lift-up the vehicle.
13) Tighten the nuts which hold lower side of transmission to engine.

**Tightening torque:**

50 N·m (5.1 kgf-m, 36.9 ft-lb)

14) Tighten the nuts which install the front cushion rubber onto crossmember.

**Tightening torque:**

85 N·m (8.7 kgf-m, 63 ft-lb)

15) Install the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
16) Lower the vehicle.
17) Connect the following hoses:
   1) Fuel delivery hose, return hose and evaporation hose
   2) Heater inlet and outlet hoses
   3) Brake booster vacuum hose
18) Connect the following connectors:
   1) Front oxygen (A/F) sensor connector
   2) Rear oxygen sensor connector
   3) Engine ground cable

**Tightening torque:**

14 N·m (1.4 kgf-m, 10.1 ft-lb)

(4) Engine harness connectors
(5) Generator connector and terminal
(6) A/C compressor connector
19) Install the air intake chamber stay.

**Tightening torque:**

16 N·m (1.6 kgf-m, 11.6 ft-lb)

20) Install the A/C pressure hoses. <Ref. to AC-38, INSTALLATION, Hose and Tube.>
21) Install the radiator to vehicle. <Ref. to CO(H4SO 2.0)-21, INSTALLATION, Radiator.>
22) Install the air intake duct, air cleaner case and air intake chamber. <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
23) Install the under cover.
24) Install the battery in the vehicle, and connect cables.
25) Fill engine coolant. <Ref. to CO(H4SO 2.0)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
26) Check the ATF level and replenish it if necessary.

NOTE:
Make sure the front cushion rubber mounting bolts are securely installed.
<Ref. to 4AT-31, INSPECTION, Automatic Transmission Fluid.>
27) Charge the A/C system with refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>
28) Remove the front hood stay, and close the front hood.
29) Take off the vehicle from a lift.

C: INSPECTION
1) Check pipes and hoses are installed firmly.
2) Check that the engine coolant and ATF are at specified levels.
10. Engine Mounting

A: REMOVAL
1) Remove the engine assembly. <Ref. to ME(H4SO 2.0)-30, REMOVAL, Engine Assembly.>
2) Remove the engine mounting from engine assembly.

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:
  Engine mounting;  
  35 N·m (3.6 kgf-m, 25.8 ft-lb)

C: INSPECTION
Make sure that no crack or other damages do not exist.
11. Preparation for Overhaul

A: PROCEDURE

1) After removing the engine from the body, secure it in the ST shown below.

ST1  498457000  ENGINE STAND ADAPTER
     RH

ST2  498457100  ENGINE STAND ADAPTER
     LH

ST3  499817100  ENGINE STAND

2) In this section the procedures described under each index are all connected and stated in order. The procedure for overhauling of the engine will be completed when you go through all steps in the process. Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.
12. V-belt

A: REMOVAL

NOTE:
Perform the following procedures with the engine installed to the body.

1. FRONT SIDE BELT
1) Remove the V-belt covers.
2) Loosen the lock bolt (A).
3) Loosen the slider bolt (B).
4) Remove the front side belt (C).

2. REAR SIDE BELT
1) Loosen the lock nut (A).
2) Loosen the slider bolt (B).
3) Remove the rear side belt.
4) Remove the belt tensioner.

B: INSTALLATION

NOTE:
Wipe off any oil or water on the belt and pulley.

1. FRONT SIDE BELT
1) Install a V belt (C), and tighten the slider bolt so as to obtain the specified belt tension. <Ref. to ME(H4SO 2.0)-39, INSPECTION, V-belt.>
2) Tighten the lock bolt (A).
3) Tighten the slider bolt (B).

Tightening torque:
Lock bolt (A):
25 N·m (2.5 kgf-m, 18.1 ft-lb)

2. REAR SIDE BELT
1) Install the belt tensioner.
2) Install a V belt, and tighten the slider bolt (B) so as to obtain the specified belt tension.
<Ref. to ME(H4SO 2.0)-39, INSPECTION, V-belt.>
3) Tighten the lock nut (A).
Tightening torque:
Lock nut (A):
23 N·m (2.3 kgf-m, 17.0 ft-lb)

C: INSPECTION
1) Replace the belts, if cracks, fraying or wear is found.
2) Remove the V-belt cover and reservoir tank. (with belt tension gauge)
3) Check the V-belt tension and adjust it if necessary by changing the generator installing position or idler pulley installing position.

Belt tension (with belt tension gauge)

(A)
When installing new parts:
618 — 755 N (63 — 77 kgf, 139 — 170 lb)
At inspection:
490 — 640 N (50.0 — 65.3 kgf, 110.2 — 143.9 lb)

(B)
When installing new parts:
740 — 880 N (75.5 — 89.7 kgf, 166 — 198 lb)
At inspection:
350 — 450 N (35.7 — 45.9 kgf, 78.7 — 101.2 lb)

Belt tension (without belt tension gauge)

(A)
When installing new parts:
7 — 9 mm (0.276 — 0.354 in)
At inspection:
9 — 11 mm (0.354 — 0.433 in)

(B)
When installing new parts:
7.5 — 8.5 mm (0.295 — 0.335 in)
At inspection:
9.0 — 10.0 mm (0.354 — 0.394 in)
13. Crank Pulley

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>
2) Remove the crank pulley bolt. To lock the crankshaft, use ST.
   ST 499977400 CRANK PULLEY WRENCH (2.0 L model)
   ST 499977100 CRANK PULLEY WRENCH (2.5 L model)
3) Remove the crank pulley.

B: INSTALLATION
1. 2.0 L MODEL
1) Install the crank pulley.
2) Install the pulley bolt.
   To lock the crankshaft, use ST.
   ST 499977400 CRANK PULLEY WRENCH
   (1) Clean the crankshaft thread using compressed air.
   (2) Apply engine oil to the crank pulley bolt seat and thread.
   (3) Tighten the bolts temporarily with tightening torque of 44 N-m (4.5 kgf-m, 33 ft-lb).
   (4) Tighten the crank pulley bolts.
   **Tightening torque:** 130 N-m (13.3 kgf-m, 95.9 ft-lb)
3) Confirm that the tightening angle of the crank pulley bolt is 45° or more. Perform the following procedures when less than 45°.

2. 2.5 L MODEL
1) Install the crank pulley.
2) Install the pulley bolt.
   To lock the crankshaft, use ST.
   ST 499977100 CRANK PULLEY WRENCH
   (1) Clean the crankshaft thread using compressed air.
   (2) Apply engine oil to the crank pulley bolt seat and thread.
   (3) Tighten the bolts temporarily with tightening torque of 44 N-m (4.5 kgf-m, 33 ft-lb).
   (4) Tighten the crank pulley bolts.
5) Install the V-belts. <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

CAUTION:
If the tightening angle of crank pulley bolt is less than 45°, the bolt should be damaged. In this case, the bolt must be replaced.
   (1) Replace and clean the crank pulley bolts.

Crank pulley bolt:
   **Part No. 12369AA011**
   (2) Clean the crankshaft thread using compressed air.
   (3) Apply engine oil to the crank pulley bolt seat and thread.
   (4) Tighten the bolts temporarily with tightening torque of 44 N-m (4.5 kgf-m, 33 ft-lb).
   (5) Tighten the crank pulley bolts keeping them in an angle 45° — 60°.

NOTE:
Conduct the tightening procedures by confirming the turning angle of the crank pulley bolt referring to the gauge indicated on the timing belt cover.
4) Install the belt tensioner.
Crank Pulley

Tightening torque:
180 N·m (18.4 kgf·m, 132.8 ft-lb)

3) Confirm that the tightening angle of crank pulley bolt is 65 degrees or more. If the tightening angle of crank pulley bolt is less than 65 degrees, conduct the following procedures.
   (1) Replace the crank pulley bolts and clean them.

   crank pulley bolt: 12369AA011
   (2) Clean the crankshaft thread using compressed air.
   (3) Apply engine oil to the crank pulley bolt seal and thread.
   (4) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft-lb).
   (5) Tighten the crank pulley bolts keeping them in an angle between 65 degrees and 75 degrees.

NOTE:
Conduct the tightening procedures by confirming the turning angle of crank pulley bolt referring to the gauge indicated on timing belt cover.

4) Install the A/C belt tensioner.

5) Install the V-belt. <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

C: INSPECTION
1) Make sure the V-belt is not worn or otherwise damaged.
2) Check the tension of the belt. <Ref. to ME(H4SO 2.0)-39, INSPECTION, V-belt.>
14. Timing Belt Cover

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4SO 2.0)-40, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover (LH).
4) Remove the front timing belt cover.

B: INSTALLATION
1) Install the front timing belt cover.
   
   **Tightening torque:**
   - 5 N-m (0.5 kgf-m, 3.6 ft-lb)
2) Install the timing belt cover (LH).
   
   **Tightening torque:**
   - 5 N-m (0.5 kgf-m, 3.6 ft-lb)
3) Install the crank pulley. <Ref. to ME(H4SO 2.0)-40, INSTALLATION, Crank Pulley.>
4) Install the V-belts. <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

C: INSPECTION
Check the cover for damage.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

15. Timing Belt

A: REMOVAL

1. TIMING BELT

1) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4SO 2.0)-40, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4SO 2.0)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt guide. (MT model)

5) If the alignment mark (a) or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as shown in procedures below.
   (1) To turn crankshaft, use the ST: Align the mark (a) of sprocket to the cylinder block notch (b), and then ensure the right side cam sprocket mark (c), cam cap and cylinder head matching surface (d) or left side cam sprocket mark (e), timing belt cover notch (f) are properly adjusted.
   (2) Using white paint, put alignment marks or arrow marks on the timing belts in relation to the crank sprocket and cam sprockets.

Specified data:
Z₁: Length of 46.8 teeth
Z₂: Length of 43.7 teeth

6) Remove the belt idler (No. 2).
7) Remove the belt idler No. 2.

8) Remove the timing belt.

2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY
1) Remove the belt idler (No. 1).

2) Remove the automatic belt tension adjuster assembly.

B: INSTALLATION
1. AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER

1) Preparation for installation of automatic belt tension adjuster assembly.

CAUTION:
- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the push adjuster rod gradually taking more than three minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into cylinder. Doing so may damage the cylinder.
- Do not release the press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.
(2) Slowly move the adjuster rod down with a pressure of 294 N (30 kgf, 66 lb) until the adjuster rod is aligned with the stopper pin hole in the cylinder.
(3) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (0.08 in) (nominal) dia. hex wrench inserted into the stopper pin hole in cylinder, secure the adjuster rod.
2) Install the automatic belt tension adjuster assembly.

**Tightening torque:**

39 N·m (4.0 kgf-m, 28.9 ft-lb)

3) Install the belt idler (No. 1).

**Tightening torque:**

39 N·m (4.0 kgf-m, 28.9 ft-lb)

---

2. TIMING BELT

1) Prepare for installation of automatic belt tension adjuster assembly. <Ref. to ME(H4SO 2.0)-44, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

2) Installation of timing belt:

1. Turn the cam sprocket No. 2 using ST1, and turn the cam sprocket No. 1 using ST2 so that their alignment marks (A) come to top positions.

2. While aligning the alignment mark (B) on timing belt with the mark (A) on sprockets, position the timing belt properly.

3) Install the belt idler No. 2.

**Tightening torque:**

39 N·m (4.0 kgf-m, 28.9 ft-lb)

4) Install the belt idler (No. 2).

**Tightening torque:**

39 N·m (4.0 kgf-m, 28.9 ft-lb)
5) After ensuring the marks on timing belt and cam sprockets are aligned, remove the stopper pin from belt tension adjuster.

6) Install the timing belt guide. (MT model)
   (1) Temporarily tighten the timing belt guide mounting bolts.
   (2) Check and adjust the clearance between timing belt and timing belt guide by using thickness gauge.

**Clearance:**
\[1.0 \pm 0.5 \text{ mm (0.039} \pm 0.020 \text{ in)}\]

(3) Tighten the timing belt guide mounting bolts.

7) Install the timing belt cover.  
   <Ref. to ME(H4SO 2.0)-42, INSTALLATION, Timing Belt Cover.>

8) Install the crank pulley.  
   <Ref. to ME(H4SO 2.0)-40, INSTALLATION, Crank Pulley.>

9) Install the V-belts.  
   <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

C: INSPECTION

1. TIMING BELT

1) Check the timing belt teeth for breaks, cracks and wear. If any fault is found, replace the belt.
2) Check the condition of the backside of belt. If cracks are found, replace the belt.

**CAUTION:**
- Be careful not to let oil, grease or coolant contact the belt. Remove quickly and thoroughly if this happens.
- Do not bend the timing belt sharply.

**In radial diameter h:**
\[60 \text{ mm (2.36 in) or more}\]
2. AUTOMATIC BELT TENSION ADJUST-ER

1) Visually check the oil seals for leaks, and rod ends for abnormal wear or scratches. If necessary, replace the faulty parts.
2) Check that the adjuster rod does not move when a pressure of 294 N (30 kgf, 66 lb) is applied to it. This is to check adjuster rod stiffness.
3) If the adjuster rod is not stiff and moves freely when applying 294 N (30 kgf, 66 lb), check it using the following procedures:
   (1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this operation two to three times.
   (2) With the adjuster rod moved all the way up, apply a pressure of 294 N (30 kgf, 66 lb) to it. Check the adjuster rod stiffness.
   (3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

CAUTION:
- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press the adjuster rod gradually taking more than three minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
- Press the adjuster rod as far as the end surface of cylinder. Do not press the adjuster rod into cylinder. Doing so may damage the cylinder.

4) Measure the amount of rod protrusion beyond the body. If it is not within specifications, replace with a new one.

Amount of rod protrusion H:
\[ 5.7 \pm 0.5 \text{ mm} \ (0.224 \pm 0.020 \text{ in}) \]

3. BELT TENSION PULLEY

1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the automatic belt tension adjuster assembly if faulty.
2) Check the belt tension pulley for smooth rotation. Replace if noise or excessive play occurs.
3) Check the belt tension pulley for grease leakage.

4. BELT IDLER

1) Check the belt idler for smooth rotation. Replace if noise or excessive play occurs.
2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.
3) Check the belt idler for grease leakage.
16. Cam Sprocket

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4SO 2.0)-40, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4SO 2.0)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt. <Ref. to ME(H4SO 2.0)-43, REMOVAL, Timing Belt.>
5) Remove the camshaft position sensor. <Ref. to FU(H4SO 2.0)-22, REMOVAL, Camshaft Position Sensor.>
6) Remove the cam sprocket No. 2. To lock the camshaft, use ST.
   ST 18231AA010 CAM SPROCKET WRENCH

NOTE:
CAM SPROCKET WRENCH (499207100) can also be used.

7) Remove the cam sprocket No. 1. To lock the camshaft, use ST.
   ST 499207400 CAM SPROCKET WRENCH

B: INSTALLATION
1) Install the cam sprocket No. 1. To lock the camshaft, use ST.
   ST 499207400 CAM SPROCKET WRENCH

Tightening torque:
78 N\cdot m (8.0 kgf-m, 57.9 ft-lb)

NOTE:
Do not confuse left and right side cam sprockets during installation. Cam sprocket No. 2 is identified by a protrusion used to monitor the camshaft position sensor.

2) Install the cam sprocket No. 2. To lock the camshaft, use ST.
   ST 18231AA010 CAM SPROCKET WRENCH

NOTE:
CAM SPROCKET WRENCH (499207100) can also be used.

Tightening torque:
78 N\cdot m (8.0 kgf-m, 57.9 ft-lb)

3) Install the camshaft position sensor. <Ref. to FU(H4SO 2.0)-22, INSTALLATION, Camshaft Position Sensor.>
4) Install the timing belt. <Ref. to ME(H4SO 2.0)-44, INSTALLATION, Timing Belt.>
5) Install the timing belt cover. <Ref. to ME(H4SO 2.0)-42, INSTALLATION, Timing Belt Cover.>
6) Install the crank pulley. <Ref. to ME(H4SO 2.0)-40, INSTALLATION, Crank Pulley.>
7) Install the V-belts. <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

C: INSPECTION
1) Check the cam sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between cam sprocket and key.
3) Check the cam sprocket protrusion used for sensor for damage and contamination of foreign matter.
17. Crank Sprocket

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4SO 2.0)-40, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4SO 2.0)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt. <Ref. to ME(H4SO 2.0)-43, REMOVAL, Timing Belt.>
5) Remove the cam sprocket. <Ref. to ME(H4SO 2.0)-48, REMOVAL, Cam Sprocket.>
6) Remove the crank sprocket.

B: INSTALLATION
1) Install the crank sprocket.
2) Install the cam sprocket. <Ref. to ME(H4SO 2.0)-48, INSTALLATION, Cam Sprocket.>
3) Install the timing belt. <Ref. to ME(H4SO 2.0)-44, INSTALLATION, Timing Belt.>
4) Install the timing belt cover. <Ref. to ME(H4SO 2.0)-42, INSTALLATION, Timing Belt Cover.>
5) Install the crank pulley. <Ref. to ME(H4SO 2.0)-40, INSTALLATION, Crank Pulley.>
6) Install the V-belts. <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

C: INSPECTION
1) Check the crank sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between crank sprocket and key.

3) Check the crank sprocket protrusion used for sensor for damage and contamination of foreign matter.
18. Valve Rocker Assembly

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>

4) Remove the timing belt. <Ref. to ME(H4SO 2.0)-43, REMOVAL, Timing Belt.>
5) Remove the cam sprocket. <Ref. to ME(H4SO 2.0)-48, REMOVAL, Cam Sprocket.>
6) Disconnect the PCV hose and remove the rocker cover.
7) Removal of valve rocker assembly
   (1) Remove the bolts (a) through (h) in alphabetical sequence.
   NOTE: Leave two or three threads of bolts (g) and (h) engaged in order to retain the valve rocker assembly.

B: INSTALLATION
1) Install the valve rocker assembly.
   (1) Temporarily tighten the bolts (a) through (d) equally in order as shown in the figure.
   NOTE: Do not allow the valve rocker assembly to damage knock pins.
   (2) Tighten the bolts (e) through (h) to specified torque.

C: DISASSEMBLY
1) Remove the bolts which secure the rocker shaft.
2) Extract the rocker shaft. Remove the valve rocker arms, springs and shaft supports from rocker shaft.
   NOTE: Keep all the removed parts in order for re-installing in their original positions.
3) Remove the nut and adjusting screw from valve rocker.

D: ASSEMBLY
1) Install the adjusting screw and nut to valve rocker.
2) Arrange the valve rocker arms, springs and shaft supports in assembly order, and then insert the valve rocker shaft.
   Tightening torque (Shaft supports installing bolts): 5 N·m (0.5 kgf-m, 3.6 ft-lb)
   NOTE: Valve rocker arms, rocker shaft and shaft supports have identification marks. Ensure the parts with same markings are properly assembled.
3) Install the valve rocker shaft securing bolts.
E: INSPECTION

1. VALVE ROCKER ARM AND ROCKER SHAFT

1) Measure the inner diameter of valve rocker arm and outer diameter of valve rocker shaft, and determine the difference (oil clearance) between the two values.

Clearance between arm and shaft:
Standard:
0.020 — 0.054 mm (0.0008 — 0.0021 in)

2) If the oil clearance exceeds the standard value, replace the valve rocker arm or shaft, whichever shows greater amount of wear.

Rocker arm inside diameter:
22.020 — 22.041 mm (0.8669 — 0.8678 in)

Rocker shaft diameter:
21.987 — 22.000 mm (0.8656 — 0.8661 in)

3) If the cam or valve contact surface of valve rocker arm is worn or dented excessively, replace the valve rocker arm.

4) Check that the valve rocker arm roller rotates smoothly. If not, replace the valve rocker arm.
19. Camshaft

16) Remove the plug from the rear side of camshaft.
**CAUTION:**
- Do not remove the oil seal unless necessary.
- Do not scratch the journal surface when removing the oil seal.

**B: INSTALLATION**
1) Apply a coat of engine oil to camshaft journals and install the camshaft.
2) Install the camshaft cap.
   - (1) Apply liquid gasket to the mating surfaces of camshaft cap.

C: INSPECTION

1. CAMSHAFT

1) Measure the bend, and repair or replace if necessary.

   Service limit:
   0.020 mm (0.00079 in)

2) Check the journal for damage and wear. Replace if faulty.

3) Measure the outer diameter of camshaft journal and inner diameter of cylinder head journal, and determine the difference (oil clearance) between the two values. If the oil clearance exceeds standard value, replace the camshaft or cylinder head as necessary.

4) Check the cam face condition, and remove the minor faults by grinding with oil stone. Measure the cam height H. If it exceeds the limit, replace it.

9) Remove the camshaft. <Ref. to ME(H4SO 2.0)-53, REMOVAL, Camshaft.>
10) Remove the cylinder head bolts in alphabetical sequence as shown in the figure.

NOTE:
Leave bolts (a) and (c) engaged by three or four threads to prevent the cylinder head from falling.

11) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.
12) Remove the bolts (a) and (c) to remove the cylinder head.

CAUTION:
Be careful not to scratch the mating surface of cylinder head and cylinder block.
14) Similarly, remove the right side cylinder head.

B: INSTALLATION
1) Install the cylinder head and gaskets on cylinder block.

CAUTION:
• Use new cylinder head gaskets.
• Be careful not to scratch the mating surface of cylinder block and cylinder head.
2) Tighten the cylinder head bolts.
   (1) Apply a coat of engine oil to washers and bolt threads.
   (2) Tighten all bolts to 29 N-m (3.0 kgf-m, 22 ft-lb) in alphabetical sequence.
      Then tighten all bolts to 69 N-m (7.0 kgf-m, 51 ft-lb) in alphabetical sequence.
   (3) Back off all bolts by 180° in reverse order of installation, and back them off again by 180°.
   (4) Tighten all bolts to 42 N-m (3.9 kgf-m, 31 ft-lb) in alphabetical sequence.
   (5) Tighten all bolts by 80° — 90° in alphabetical sequence.
   (6) Tighten all bolts by 40° — 45° in alphabetical sequence.

NOTE:
Do not tighten the bolts more than 45°.
   (7) Further tighten bolts (a) and (b) by 40°—45°.

NOTE:
Ensure the total “re-tightening angle” in the [former two steps], do not exceed 90°.

**E: INSPECTION**

1. VALVE SPRING

1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within the standard value presented in the table.
2) To measure the squareness of the valve spring, stand the spring on a surface plate and measure its deflection at the top of spring using a try square.

2. INTAKE AND EXHAUST VALVE OIL SEAL

In the following case, pinch and remove the oil seal from valve using pliers, and then replace it with a new one.
- When the lip is damaged.
- When the spring is out of the specified position.
- When readjusting the surfaces of intake valve and valve seat.
- When replacing the intake valve guide.

1) Place the cylinder head on ST1.
2) Using ST2, press-fit the oil seal.

   **CAUTION:**
   - Apply engine oil to oil seal before press-fitting.
   - When press-fitting the oil seal, do not use a hammer or strike in.
   - Differentiate between the intake valve oil seal and exhaust valve oil seal by noting their difference in color.

F: ADJUSTMENT

1. CYLINDER HEAD

1) Make sure that no crack or other damage do not exist. In addition to visual inspection, inspect important areas by means of red lead check. Also make sure the gasket installing surface shows no trace of gas and water leaks.

2) Place the cylinder head on the ST.

3) Measure the warping of the cylinder head surface that mates with crankcase using a straight edge and thickness gauge.

   If the warping exceeds the limit, regrind the surface with a surface grinder.

   Warping limit:
   - 0.03 mm (0.0012 in)

   Grinding limit:
   - 0.1 mm (0.004 in)

   Standard height of cylinder head:
   - 97.5 mm (3.839 in)

   NOTE:
   Uneven torque for the cylinder head bolts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

2. VALVE SEAT

Inspect the intake and exhaust valve seats, and correct the contact surfaces with a valve seat cutter if they are defective or when valve guides are replaced.

Valve seat width W:

   Standard
   - Intake (A) 0.8 — 1.4 mm (0.03 — 0.055 in)
   - Exhaust (B) 1.2 — 1.8 mm (0.047 — 0.071 in)

3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring respectively the outer diameter of valve stem and inner diameter of valve guide with a micrometer.

(A) Straight edge
(B) Thickness gauge
Clearance between the valve guide and valve stem:

**Standard**

- **Intake**
  0.035 — 0.062 mm (0.0014 — 0.0024 in)
- **Exhaust**
  0.040 — 0.067 mm (0.0016 — 0.0026 in)

2) If the clearance between valve guide and stem exceeds the standard value, replace the valve guide or valve itself whichever shows greater amount of wear. See the following procedure for valve guide replacement.

**Valve guide inner diameter:**

- **6.000 — 6.012 mm (0.2362 — 0.2367 in)**

**Valve stem outer diameters:**

- **Intake**
  5.950 — 5.965 mm (0.2343 — 0.2348 in)
- **Exhaust**
  5.945 — 5.960 mm (0.2341 — 0.2346 in)

1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.

2) Insert ST2 into the valve guide and press it down to remove the valve guide.

3) Turn the cylinder head upside down and place the ST as shown in the figure.

- **Intake side:**
  - ST 499767700 VALVE GUIDE ADJUSTER
- **Exhaust side:**
  - ST 499767800 VALVE GUIDE ADJUSTER

4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.

5) Put a new valve guide, coated with sufficient oil, in cylinder, and insert the ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

- **Intake side:**
  - ST 499767800 VALVE GUIDE ADJUSTER
- **Exhaust side:**
  - ST 499767800 VALVE GUIDE ADJUSTER
(6) Check the valve guide protrusion.

**Valve guide protrusion L:**

**Intake**
20.0 — 21.0 mm (0.787 — 0.827 in)

**Exhaust**
16.5 — 17.5 mm (0.650 — 0.689 in)

(7) Ream the inside of valve guide using ST. Put the reamer in valve guide, and rotate the reamer slowly clockwise while pushing it lightly. Bring the reamer back while rotating it clockwise. After reaming, clean the valve guide to remove chips.

**CAUTION:**
- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

ST 499767400  VALVE GUIDE REAMER

(8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

**4. INTAKE AND EXHAUST VALVE**

1) Inspect the flange and stem of valve, and replace if damaged, worn or deformed, or if “H” exceed the standard value.

**H:**

**Intake**
Standard: 0.8 — 1.2 mm (0.03 — 0.047 in)

**Exhaust**
Standard: 1.0 — 1.4 mm (0.039 — 0.055 in)

**Valve overall length:**

**Intake**
120.6 mm (4.75 in)

**Exhaust**
121.7 mm (4.79 in)

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. <Ref. to ME(H4SO 2.0)-60, VALVE SEAT, ADJUSTMENT, Cylinder Head.> Install a new intake valve oil seal after lapping.

30) Similarly remove the piston pins from #3 and #4 pistons.
31) Remove the bolts which connect cylinder block on the side of #2 and #4 cylinders.
32) Back off the bolts which connect cylinder block on the side of #1 and #3 cylinders two or three turns.
33) Set up the cylinder block so that #1 and #3 cylinders are on the upper side, then remove the cylinder block connecting bolts.
34) Separate the cylinder block (RH) and (LH).

NOTE:
When separating the cylinder block, do not allow the connecting rod to fall or damage the cylinder block.

35) Remove the rear oil seal.
36) Remove the crankshaft together with connecting rod.
37) Remove the crankshaft bearings from cylinder block using a hammer handle.

NOTE:
Be careful not to confuse the crankshaft bearing combination. Press the bearing at the end opposite to locking lip.

38) Draw out each piston from cylinder block using a wooden bar or hammer handle.

NOTE:
Be careful not to confuse the original combination of piston and cylinder.
B: INSTALLATION

NOTE:
Remove oil on the mating surface of bearing and cylinder block before installation. Apply a coat of engine oil to crankshaft pins.

1) Position the crankshaft on the #2 and #4 cylinder block.

2) Apply liquid gasket to the mating surface of #1 and #3 cylinder block, and position it on #2 and #4 cylinder block.

Liquid gasket:

12) Position the second ring gap at 180° on the reverse side of the top ring gap.

13) Position the upper rail gap at (C) in the figure.

14) Align the upper rail spin stopper (E) to the side hole (D) on the piston.

15) Position the expander gap at 180° on the reverse side of (C) that shown (F) in the figure.

16) Position the lower rail gap at 120° on counterclockwise of (C) that shown (G) in the figure.

**CAUTION:**
- Ensure ring gaps do not face the same direction.
- Ensure ring gaps are not within the piston skirt area.
17) Install the snap ring.
Install snap rings in the piston holes located opposite to the service holes in cylinder block, when positioning all pistons in the corresponding cylinders.

NOTE:
Use new snap rings.

CAUTION:
Piston front mark faces towards the front of engine.

18) Install the piston.
(1) Place the cylinder block to face the #1 and #2 cylinder side upward.
(2) Using ST1, turn the crankshaft so that #1 and #2 connecting rods are set at bottom dead center.

   (3) Apply a coat of engine oil to piston pin, and insert the piston pin into piston and connecting rod through service hole.
   (4) Install the snap ring.

   **NOTE:**
   Use new snap rings.

   (5) Apply liquid gasket around the service hole plug.

   **Liquid gasket:**
   THREE BOND 1215 (Part No. 004403007) or equivalent

(6) Install the service hole plug and gasket.

   **NOTE:**
   Use a new gasket.

CAUTION:
- Be sure to use a new gasket.
- When installing the water pump, tighten bolts in two stages in alphabetical sequence as shown in the figure.

31) Install the water by-pass pipe for heater.
32) Install the oil filter.
33) Tighten the cylinder head bolts.
   (1) Apply a coat of engine oil to washers and bolt threads.
   (2) Tighten all bolts to 29 N·m (3.0 kgf-m, 22 ft-lb) in alphabetical sequence. Then tighten all bolts to 69 N·m (7.0 kgf-m, 51 ft-lb) in alphabetical sequence.

43) Install the intake manifold.<Ref. to FU(H4SO 2.0)-12, INSTALLATION, Intake Manifold.>
C: DISASSEMBLY

1) Remove the connecting rod cap.
2) Remove the connecting rod bearing.

NOTE:
Arrange the removed connecting rod, connecting rod cap and bearing in order, to prevent confusion.

3) Remove the piston rings using the piston ring expander.
4) Remove the oil ring by hand.

NOTE:
Arrange the removed piston rings in proper order, to prevent confusion.

5) Remove the snap ring.
D: ASSEMBLY

1) Apply oil to the surfaces of the connecting rod bearings.
2) Install the connecting rod bearings on connecting rods and connecting rod caps.
3) Position each connecting rod with the marked side facing forward, and install it.
4) Install the connecting rod cap with connecting rod nut.
   Ensure the arrow on connecting rod cap faces toward front during installation.

**CAUTION:**
- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

5) Install the expander, lower rail and upper rail in this order by hand. Install the second ring and top ring with a piston ring expander.

**E: INSPECTION**

1. CYLINDER BLOCK
   1) Visually check for cracks and damage. Especially, inspect the important parts by means of red lead check.
   2) Check the oil passages for clogging.
   3) Inspect the cylinder block surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

   **Warping limit:**
   - 0.025 mm (0.00098 in)

   **Grinding limit:**
   - 0.1 mm (0.004 in)

   **Standard height of cylinder block:**
   - 201.0 mm (7.91 in)

2. CYLINDER AND PISTON
   1) The cylinder bore size is stamped on the cylinder block’s front upper surface.

   **NOTE:**
   - Measurement should be performed at a temperature of 20°C (68°F).
   - Standard sized pistons are classified into two grades, “A” and “B”. These grades should be used as guide lines in selecting a standard piston.
Standard diameter:
2.0 L model
A: 92.005 — 92.015 mm (3.6222 — 3.6226 in)
B: 91.995 — 92.005 mm (3.6218 — 3.6222 in)
2.5 L model
A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)
B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)

Out-of-roundness:
Standard
0.010 mm (0.0004 in)

2) How to measure the inner diameter of each cylinder:
Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights as shown in the figure, using a cylinder bore gauge.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Taper:
Standard
0.015 mm (0.0006 in)

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:
Measure the outer diameter of each piston at the height as shown in the figure. (Thrust direction)

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Piston grade point H:
2.0 L model
40.0 mm (1.575 in)
2.5 L model
37.0 mm (1.457 in)
**Standard**

- **2.0 L model**
  - A: 92.005 — 92.015 mm (3.6222 — 3.6226 in)
  - B: 91.995 — 92.005 mm (3.6219 — 3.6222 in)
- **2.5 L model**
  - A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)
  - B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)

**0.25 mm (0.0098 in) oversize**

- **2.0 L model**
  - 92.245 — 92.265 mm (3.6317 — 3.6325 in)
- **2.5 L model**
  - 99.745 — 99.765 mm (3.9270 — 3.9278 in)

**0.50 mm (0.0197 in) oversize**

- **2.0 L model**
  - 92.495 — 92.515 mm (3.6415 — 3.6423 in)
- **2.5 L model**
  - 99.995 — 100.015 mm (3.9368 — 3.9376 in)

5) Calculate the clearance between cylinder and piston.

**NOTE:**
Measurement should be performed at a temperature of 20°C (68°F).

**Cylinder to piston clearance at 20°C (68°F):**

**Standard**

- 0.010 — 0.010 mm (-0.00039 — 0.00039 in)

6) Boring and honing

(1) If the value of taper, out-of-roundness, or cylinder-to-piston clearance measured exceeds the standard value or if there is any damage on the cylinder wall, rebore it to use an oversize piston.

**CAUTION:**
When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only. Nor use an oversize piston for one cylinder only.

(2) If the cylinder inner diameter exceeds limit* after boring and honing, replace the cylinder block.

*:** 2.0 L model

- 92.515 mm (3.6423 in)

**2.5 L model**

- 100.015 mm (3.9376 in)

**NOTE:**
Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention when measuring the cylinder diameter.

**Limit of cylinder boring:**

- 0.5 mm (0.020 in)

### 3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks and wear, and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. [Ref. to ME(H4SO 2.0)-76, CYLINDER AND PISTON, INSPECTION, Cylinder Block.] If any of the clearances is not within the standard value, replace the piston. Or bore the cylinder to use an oversize piston.

3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

**Clearance between piston hole and piston pin:**

**Standard**

- 0.004 — 0.008 mm (0.0002 — 0.0003 in)
4) Check the snap ring installation groove (A) on the piston for burr. If necessary, remove burr from the groove so that the piston pin can lightly move.

5) Check the piston pin snap ring for distortion, cracks and wear.

4. PISTON RING

1) If the piston ring is broken, damaged or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

CAUTION:
- Mark is displayed on the end of top and second rings. When installing the rings to the piston, face these marks upward.
- Oil ring consists of the upper rail, expander and lower rail. Be careful about the direction of rail when installing the oil ring to piston.

2) Clean the piston ring groove and piston ring.
3) Squarely place the piston ring and oil ring in cylinder, and measure the piston ring gap with a thickness gauge.

5. CONNECTING ROD

1) Replace the connecting rod, if the large or small end thrust surface is damaged.
2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.
Limit of bend or twist per 100 mm (3.94 in) in length:
0.10 mm (0.0039 in)

3) Install the connecting rod fitted with bearing to crankshaft and measure the side clearance (thrust clearance). If side clearance exceeds the limit, replace the connecting rod.

Connecting rod side clearance:
Standard
0.070 — 0.330 mm (0.0028 — 0.0130 in)

4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.
5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within the specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at the connecting rod small end.

Clearance between piston pin and bushing:
Standard
0 — 0.022 mm (0 — 0.0009 in)

7) Replacement procedure is as follows.
   (1) Remove the bushing from connecting rod with ST and press.
   (2) Press the bushing with ST after applying oil on the periphery of bushing.

<table>

ST 499037100 CONNECTING ROD BUSHING REMOVER AND INSTALLER

(3) Make two 3 mm (0.12 in)-holes in bushing. Ream the inside of bushing.
(4) After completion of reaming, clean the bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely, and check it for cracks using red lead. Replace if faulty.
2) Measure the bend of crankshaft. If it exceeds the limit, repair or replace it.

NOTE:
If a suitable V-block is not available, install #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings, and then measure the crankshaft bend using a dial gauge.

Crankshaft bend limit:
0.035 mm (0.0014 in)

3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and replace or recondition crankshaft as necessary. When grinding the crank journal or crank pin, finish them to the specified dimensions according to the undersize bearing to be used.

4) Measure the side clearance of crankshaft at center bearing. If clearance exceeds the limit, replace the bearing.

**Crankshaft side clearance:**

**Standard**

\[
0.030 — 0.115 \text{ mm (0.0012 — 0.0045 in)}
\]

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting and wear.
6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and replace or recondition the crankshaft as necessary.

**Crankshaft oil clearance:**

**Standard**

\[
0.010 — 0.030 \text{ mm (0.0004 — 0.0012 in)}
\]

</table>
| Regular clicking sound               | Sound increases as engine speed increases. | • Valve mechanism is defective.  
• Incorrect valve clearance  
• Worn valve rocker  
• Worn camshaft  
• Broken valve spring |
| Heavy and dull clank                  | Oil pressure is low.             | • Worn camshaft main bearing  
• Worn connecting rod bearing (big end) |
|                                      | Oil pressure is normal.          | Damaged engine mounting                                                      |
| High-pitched clank (Spark knock)     | Sound is noticeable when accelerating with an overload. | • Ignition timing advanced  
• Accumulation of carbon inside combustion chamber  
• Wrong spark plug  
• Improper gasoline |
| Clank when engine speed is 1,000 to 2,000 rpm | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*) | • Worn camshaft main bearing  
• Worn bearing at crankshaft end of connecting rod |
| Knocking sound when engine is operating under idling speed and engine is warm | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*) | • Worn cylinder liner and piston ring  
• Broken or stuck piston ring  
• Worn piston pin and hole at piston end of connecting rod |
|                                      | Sound is not reduced if each fuel injector connector is disconnected in turn. (NOTE*) | • Unusually worn valve lifter  
• Worn cam gear  
• Worn camshaft journal bore in crankcase |
| Squeaky sound                        | —                               | Insufficient generator lubrication                                             |

| Gear scream when starting engine     | —                               | • Defective ignition starter switch  
• Worn gear and starter pinion                                                 |
| Sound like polishing glass with a dry cloth | —                               | • Loose drive belt  
• Defective water pump shaft                                                   |
| Hissing sound                        | —                               | • Loss of compression  
• Air leakage in air intake system, hoses, connections or manifolds           |
| Timing belt noise                    | —                               | • Loose timing belt  
• Belt contacting with case/adjacent part                                       |
| Valve tappet noise                   | —                               | Incorrect valve clearance                                                     |

**NOTE**

When disconnecting the fuel injector connector, the malfunction indicator light illuminates and DTC is stored in ECM memory. Therefore, carry out the clear memory mode <Ref. to EN(H4SO 2.0)(diag)-38, OPERATION, Clear Memory Mode.> and inspection mode <Ref. to EN(H4SO 2.0)(diag)-32, OPERATION, Inspection Mode.> after connecting the fuel injector connector.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

General Description

B: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Front Exhaust Pipe

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the front oxygen (A/F) sensor connector.

3) Lift-up the vehicle.
4) Disconnect the rear oxygen sensor connector.

5) Separate the center exhaust pipe from rear exhaust pipe.

6) Remove the under cover.

7) Remove the nuts which hold front exhaust pipe onto cylinder heads.

CAUTION: Be careful not to pull down the front and center exhaust pipe assembly.

8) Remove the bolt which holds center exhaust pipe to hanger bracket.

9) Remove the front and center exhaust pipe assembly from the vehicle.

CAUTION:
• Be careful not to let the front and center exhaust pipe assembly fall off when removing as it is quite heavy.
• After removing the front and center exhaust pipe assembly, do not apply excessive pulling force on the rear exhaust pipe.

10) Separate the front exhaust pipe from center exhaust pipe.
11) Remove the front oxygen (A/F) sensor and rear oxygen sensor. <Ref. to FU(H4SO 2.0)-32, REMOVAL, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4SO 2.0)-33, REMOVAL, Rear Oxygen Sensor.> or <Ref. to FU(H4SO 2.5)-34, REMOVAL, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4SO 2.5)-35, REMOVAL, Rear Oxygen Sensor.>

**B: INSTALLATION**

1) Install the front oxygen (A/F) sensor and rear oxygen sensor. <Ref. to FU(H4SO 2.0)-32, INSTALLATION, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4SO 2.0)-33, INSTALLATION, Rear Oxygen Sensor.> or <Ref. to FU(H4SO 2.5)-34, INSTALLATION, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4SO 2.5)-35, INSTALLATION, Rear Oxygen Sensor.>

2) Install the front exhaust pipe to center exhaust pipe.

**NOTE:**

Use a new gasket.

**Tightening torque:**

40.8 N·m (4.2 kgf-m, 30.1 ft-lb)

3) Install the front and center exhaust pipe assembly to the vehicle.

4) Temporarily tighten the bolt which holds the center exhaust pipe to hanger bracket.

5) Install the nuts to cylinder head which hold front exhaust pipe.

**Tightening torque:**

30 N·m (3.1 kgf-m, 22.4 ft-lb)

6) Install the under cover.

7) Tighten the bolts which install the center exhaust pipe to rear exhaust pipe.

**Tightening torque:**

18 N·m (1.8 kgf-m, 13.0 ft-lb)

8) Tighten the bolt which holds the center exhaust pipe to hanger bracket.

**Tightening torque:**

35 N·m (3.6 kgf-m, 26.0 ft-lb)
9) Connect the rear oxygen sensor connector.

10) Lower the vehicle.
11) Connect the front oxygen (A/F) sensor connector.

12) Connect the battery ground cable to battery.

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3. Center Exhaust Pipe

A: REMOVAL
After removing the center and front exhaust pipes as one unit, separate them. Refer to “Front Exhaust Pipe” for removal procedure. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>

B: INSTALLATION
Install the center exhaust pipe and front exhaust pipe as one unit. Refer to “Front Exhaust Pipe” for installation procedure. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
4. Rear Exhaust Pipe

A: REMOVAL
1) Separate the rear exhaust pipe from center exhaust pipe.

2) Separate the rear exhaust pipe from muffler.
CAUTION: Be careful not to pull down the rear exhaust pipe.
- LH side

• RH side (2.5 L model)

3) Apply a coat of spray type lubricant to mating area of cushion rubber.

B: INSTALLATION
1) Apply a coat of spray type lubricant to mating area of cushion rubber.
2) Install the rear exhaust pipe bracket to cushion rubber.

3) Install the rear exhaust pipe to muffler.
NOTE: Use a new gasket and self-locking nut.

Tightening torque:
48 N\text{m} (4.9 \text{kgf-m}, 35.4 \text{ft-lb})
- LH side
• RH side (2.5 L model)

4) Install the rear exhaust pipe to center exhaust pipe.

**Tightening torque:**

\[ 18 \text{ N·m (1.8 kgf·m, 13.0 ft·lb)} \]

---

**C: INSPECTION**

1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3) Make sure the cushion rubber is not worn or cracked.
5. Muffler

A: REMOVAL
1) Separate the muffler from rear exhaust pipe.
   • LH side
   • RH side (2.5 L model)

2) Apply a coat of spray type lubricant to mating area of cushion rubber.
   • LH side
   • RH side (2.5 L model)

3) Remove the front and rear cushion rubber, and then remove the muffler.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Use a new gasket and self-locking nut.

Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)
   • LH side
   • RH side (2.5 L model)

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3) Make sure the cushion rubber is not worn or cracked.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

#### DETECTING CONDITION:
- Engine coolant temperature is more than 96°C (205°F).
- Vehicle speed is below 19 km/h (12 MPH).

#### TROUBLE SYMPTOMS:
Radiator main and sub fan do not rotate under the above conditions.

3. Engine Coolant

A: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

1) Lift-up the vehicle.
2) Remove the under cover.
3) Remove the drain plug to drain engine coolant into container.

NOTE:
Remove the radiator cap so that engine coolant will drain faster.

4) Install the drain plug.

2. FILLING OF ENGINE COOLANT

1) Fill engine coolant into the radiator up to the filler neck position.

Coolant capacity (fill up to “FULL” level):

MT model:
6.5 ㎖ (6.9 US qt, 5.7 Imp qt)

AT model (model without ATF warmer):
6.4 ㎖ (6.8 US qt, 5.6 Imp qt)

AT model (model with ATF warmer):
6.8 ㎖ (7.2 US qt, 6.0 Imp qt)

NOTE:
The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.
B: INSPECTION

1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]
If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054, the concentration is 45% (point A), the safe operating temperature is −14°C (7°F) (point B), and the freezing temperature is −20°C (4°F) (point C).

2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%). The amount of coolant that should be replaced can be determined using the diagram.

[Example]
Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 US qt, 1.8 Imp qt. Drain 2.1 US qt, 1.8 Imp qt of coolant from the cooling system and add 2.1 US qt, 1.8 Imp qt of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.
4. Water Pump

A: REMOVAL
1) Remove the radiator. <Ref. to CO(H4SO 2.0)-20, REMOVAL, Radiator.>
2) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.>
3) Remove the timing belt. <Ref. to ME(H4SO 2.0)-43, TIMING BELT, REMOVAL, Timing Belt.>
4) Remove the automatic belt tension adjuster.
5) Remove the belt idler No. 2.
6) Remove the cam sprocket (LH) using ST.
   ST 18231AA010 CAM SPROCKET WRENCH
   NOTE:
   CAM SPROCKET WRENCH (499207100) can also be used.
7) Remove the belt cover No. 2 (LH).
8) Remove the tensioner bracket.
9) Disconnect the hose from water pump.
10) Remove the water pump.

B: INSTALLATION
1) Install the water pump onto cylinder block (LH).
   NOTE:
   • Use a new gasket.
   • When installing the water pump, tighten the bolts in two stages in alphabetical sequence as shown in figure.
**Water Pump**

**Tightening torque:**

First:
- $12 \text{ N} \cdot \text{m (1.2 kgf-m, 8.7 ft-lb)}$

Second:
- $12 \text{ N} \cdot \text{m (1.2 kgf-m, 8.7 ft-lb)}$

2) Connect the hose to the water pump.
3) Install the tensioner bracket.

**Tightening torque:**

- $25 \text{ N} \cdot \text{m (2.5 kgf-m, 18.1 ft-lb)}$

4) Install the belt cover No. 2 (LH).

**Tightening torque:**

- $5 \text{ N} \cdot \text{m (0.5 kgf-m, 3.6 ft-lb)}$

5) Install the cam sprocket (LH) using ST.
   
   ST  18231AA010  CAM SPROCKET WRENCH

NOTE:
CAM SPROCKET WRENCH (499207100) can also be used.

6) Install the belt idler No. 2.

**Tightening torque:**

- $39 \text{ N} \cdot \text{m (4.0 kgf-m, 28.9 ft-lb)}$

7) Install the automatic belt tension adjuster to which tension rod is held with pin. <Ref. to ME(H4SO 2.0)-44, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

8) Install the timing belt. <Ref. to ME(H4SO 2.0)-45, TIMING BELT, INSTALLATION, Timing Belt.>

9) Install the V-belts. <Ref. to ME(H4SO 2.0)-38, INSTALLATION, V-belt.>

10) Install the radiator. <Ref. to CO(H4SO 2.0)-21, INSTALLATION, Radiator.>

**C: INSPECTION**

1) Check the water pump bearing for smooth rotation.
2) Check the water pump pulley for abnormalities.
3) Make sure the impeller is not deformed or damaged.
4) Inspect the clearance between impeller and pump case.
Clearance between impeller and pump case:
Standard value
0.5 — 1.5 mm (0.020 — 0.060 in)

5) After water pump installation, check the pulley shaft for engine coolant leaks and noise. If leaks or noise are noted, replace the water pump assembly.
5. Thermostat

A: REMOVAL
1) Set the vehicle on a lift.
2) Lift-up the vehicle.
3) Remove the under cover.
4) Drain engine coolant completely.
<Ref. to CO(H4SO 2.0)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
5) Disconnect the radiator outlet hose from thermostat cover.

6) Remove the thermostat cover and gasket, and then remove the thermostat.

B: INSTALLATION
1) Install a gasket to thermostat, and install the thermostat and gasket to water pump as a unit. Then, install the thermostat cover.

NOTE:
- When reinstalling the thermostat, use a new gasket.
- The thermostat must be installed with the jiggle pin facing to the up side.
Thermostat cover

(C) Thermostat
(D) Jiggle pin

2) Connect the radiator outlet hose to thermostat cover.
3) Install the under cover.
4) Lower the vehicle.
5) Fill with engine coolant. <Ref. to CO(H4SO 2.0)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION
Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.
- Inspection method
Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measurement should be to the specification.

Starting temperature to open:
80 — 84 °C (176 — 183 °F)

Fully opens:
95 °C (203 °F)
6. Radiator
A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Remove the heat shield cover from radiator. (Model without ATF warmer)
6) Drain engine coolant completely.  
   <Ref. to CO(H4SO 2.0)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
7) Disconnect the connector (A) of radiator main fan motor and connector (B) of sub fan motor.
8) Disconnect the radiator outlet hose from thermostat cover.
9) Disconnect the ATF cooler hoses from ATF pipes. (Model without ATF warmer)  
   Plug the ATF pipe to prevent ATF leaks.
10) Lower the vehicle.
11) Disconnect the over flow hose.
12) Remove the reservoir tank. <Ref. to CO(H4SO 2.0)-29, REMOVAL, Reservoir Tank.>
13) Remove the hood stay holder.

14) Remove the air intake duct. <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
15) Disconnect the radiator inlet hose from engine.

16) Remove the radiator upper brackets.

17) Lift the radiator up and away from vehicle.

**B: INSTALLATION**
1) Attach the radiator lower cushions to holes on the radiator lower bracket.

2) Install the radiator to vehicle.

**NOTE:**
Make pins on the lower side of radiator be fitted into the radiator lower cushions on body side.
3) Install the radiator upper brackets and tighten the bolts.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.0 ft-lb)

4) Connect the radiator inlet hose.

5) Install the air intake duct. <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
6) Install the hood stay holder.

7) Install the reservoir tank. <Ref. to CO(H4SO 2.0)-29, INSTALLATION, Reservoir Tank.>
8) Connect the over flow hose.
9) Lift-up the vehicle.
10) Connect the ATF cooler hoses. (Model without ATF warmer)

11) Connect the radiator outlet hose.

12) Connect the connector (A) to radiator main fan motor and connector (B) to sub fan motor.

13) Install the heat shield cover. (Model without ATF warmer)

14) Install the under cover.

15) Lower the vehicle.

16) Connect the battery ground cable to battery.

17) Fill with engine coolant. <Ref. to CO(H4SO 2.0)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

18) Check the ATF level. <Ref. to 4AT-31, INSPECTION, Automatic Transmission Fluid.>

C: INSPECTION

1) Remove the radiator cap, top off the radiator with coolant, and then attach the tester in place of cap.

2) Apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) to the radiator to check if:
   - Engine coolant leaks at/around radiator.
   - Engine coolant leaks at/around hoses or connections.

CAUTION:
- Engine should be turned off.
- Wipe engine coolant from check points in advance.
• Be careful to prevent engine coolant from spurting out when removing tester.
• Be careful not to deform the filler neck of radiator when installing or removing the tester.
7. Radiator Cap

A: INSPECTION

1) Attach the radiator cap to tester.

2) Increase pressure until the tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for five to six seconds.

_Standard pressure:_

93 — 123 kPa (0.95 — 1.25 kg/cm\(^2\), 14 — 18 psi)

_Service limit pressure:_

83 kPa (0.85 kg/cm\(^2\), 12 psi)

**CAUTION:**

Be sure to remove foreign matter and rust from the cap in advance, otherwise results of pressure test will be incorrect.
8. Radiator Main Fan and Fan Motor

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Disconnect the connector (A) of main fan motor.
6) Remove the heat shield cover. (Model without ATF warmer)
7) Remove the ATF hose from the clip of radiator main fan motor assembly. (Model without ATF warmer)
8) Lower the vehicle.
9) Disconnect the over flow hose.
10) Remove the reservoir tank. <Ref. to CO(H4SO 2.0)-29, REMOVAL, Reservoir Tank.>

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
When the radiator main fan motor assembly cannot be installed, loosen the bolts which secure radiator sub fan motor assembly.

Tightening torque:
7.5 N⋅m (0.76 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY
1) Remove the clip which holds motor connector onto the shroud.
2) Remove the nut which holds the fan onto fan motor and shroud.

11) Remove the bolts which hold the radiator main fan shroud to radiator.

12) Remove the radiator main fan motor assembly.
3) Remove the bolts which install fan motor onto the shroud.

D: ASSEMBLY
Assemble in the reverse order of disassembly.

_Tightening torque:_
4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

_Tightening torque:_
3.4 N·m (0.35 kgf-m, 2.5 ft-lb)
9. Radiator Sub Fan and Fan Motor

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Disconnect the connector (B) of sub fan motor.
6) Remove the heat shield cover. (Model without ATF warmer)
7) Remove the ATF hose from the clip of radiator sub fan motor assembly. (Model without ATF warmer)
8) Lower the vehicle.
9) Remove the air intake duct. <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
10) Remove the bolts which hold the radiator sub fan shroud to radiator.
11) Remove the radiator sub fan motor assembly from the lower side of vehicle.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

C: DISASSEMBLY
1) Remove the clip which holds the fan motor connector onto shroud.
2) Remove the nut which holds fan onto the fan motor and shroud assembly.
3) Remove the bolts which install fan motor onto the shroud.

**D: ASSEMBLY**

Assemble in the reverse order of disassembly.

*Tightening torque:*

4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

*Tightening torque:*

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)
10. Reservoir Tank

A: REMOVAL
1) Disconnect the over flow hose.
2) Pull out the reservoir tank to the direction of arrow while pushing the pawl (A).

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Make sure the engine coolant level is between “FULL” and “LOW”.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

2 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from oil pressure switch.  
3) Turn the ignition switch to ON.  
4) Measure the voltage of harness between oil pressure switch connector and chassis ground.  
**Connector & terminal**  
(E11) No. 1 (+) — Chassis ground (−):  
Is the voltage more than 10 V?  
Replace the oil pressure switch.  
Go to step 3.

1) Turn the ignition switch to OFF.  
2) Remove the combination meter.  
3) Measure the resistance of the combination meter.

3. Engine Oil

A: INSPECTION
1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe it clean.
3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and properly orientated.
4) Remove it again and check the engine oil level. If the engine oil level is below “L” line, add oil to bring the level up to “F” line.
5) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the level.
6) Just after driving or while the engine is warm, engine oil level show in the range between “F” line and the notch mark. This is caused by thermal expansion of the engine oil.

NOTE:
To prevent overfilling the engine oil, do not add oil above “F” line when the engine is cold.

B: REPLACEMENT
1) Open the engine oil filler cap for quick draining of the engine oil.
2) Lift-up the vehicle.
3) Drain engine oil by loosening the engine oil drain plug.

NOTE:
Prepare a container for draining of engine oil.

4) Tighten the engine oil drain plug after draining the engine oil.

NOTE:
Use a new drain plug gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb)

5) Use the engine oil of proper quality and viscosity, fill engine oil through the oil filler duct to upper level on level gauge. Make sure that the vehicle is parked on a level surface when checking oil level.

Recommended oil:
Refer to “SPECIFICATION” for the recommended oil. <Ref. to LU(H4SO 2.0)-2, SPECIFICATION, General Description.>

Engine oil capacity:

Upper level
4.0 Q (4.2 US qt, 3.5 Imp qt)

Lower level
3.0 Q (3.2 US qt, 2.6 Imp qt)

6) Close the engine oil filler cap.
7) Start the engine and warm it up for a time.
8) After the engine stops, recheck the oil level. If necessary, add engine oil up to the upper level on level gauge.

   ST 499977400 CRANK PULLEY WRENCH (2.0 L model)
   ST 499977100 CRANK PULLEY WRENCH (2.5 L model)
10) Remove the water pump. <Ref. to CO(H4SO 2.0)-15, REMOVAL, Water Pump.>
11) Remove the timing belt guide. (MT model)
12) Remove the crank sprocket.
13) Remove the bolts which install oil pump onto cylinder block.

NOTE:
When disassembling and checking the oil pump, loosen the relief valve plug before removing the oil pump.

14) Remove the oil pump by using flat tip screwdriver.

CAUTION:
Be careful not to scratch mating surfaces of cylinder block and oil pump.

B: INSTALLATION
Install in the reverse order of removal.
Perform the following.
1) Apply liquid gasket to the matching surfaces of oil pump.

Liquid gasket:
THREE BOND 1215 (Part No. 004403007) or equivalent
2) Replace the O-ring (A) with a new one.

3) Apply a coat of engine oil to the inside of oil seal.

4) Position the oil pump, aligning the notched area with the crankshaft, and push the oil pump straight.

CAUTION:
- Make sure the oil seal lip is not folded.
- Be careful not to scratch oil seal when installing oil pump on cylinder block.

5) Install the oil pump.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
C: DISASSEMBLY
Remove the screws which secure oil pump cover and then disassemble oil pump. Inscribe alignment marks on the inner and outer rotors so that they can be replaced in their original positions during reassembly.

CAUTION:
Before disassembling the oil pump, remove the relief valve.

D: ASSEMBLY
1) Install the front oil seal using ST.
   ST 499587100 OIL SEAL INSTALLER

NOTE:
Use a new oil seal.

2) Apply a coat of engine oil to the inner and outer rotors.
3) Install the inner and outer rotors in their original positions.
4) Install the oil relief valve and relief valve spring and plug.

NOTE:
Use a new gasket.
5) Install the oil pump cover.

Tightening torque:
   T1: 5.4 N·m (0.55 kgf-m, 4.0 ft-lb)
   T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)
**E: INSPECTION**

1. **TIP CLEARANCE**
   Measure the tip clearance of rotors. If the clearance is out of the standard value, replace the rotors as a matched set.

   **Tip clearance:**
   - **Standard value**
     - 0.04 — 0.14 mm (0.0016 — 0.0055 in)

2. **CASE CLEARANCE**
   Measure the clearance between the outer rotor and oil pump rotor housing. If the clearance is out of the standard value, replace the oil pump case.

   **Case clearance:**
   - **Standard value**
     - 0.10 — 0.175 mm (0.0039 — 0.0069 in)

3. **SIDE CLEARANCE**
   Measure the clearance between oil pump inner rotor and pump cover. If the clearance is out of the standard value, replace the rotor or oil pump case.

   **Side clearance:**
   - **Standard value**
     - 0.02 — 0.07 mm (0.0008 — 0.0028 in)

4. **OIL RELIEF VALVE**
   Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

   **Relief valve spring:**
   - **Free length**
     - 72.8 mm (2.866 in)
   - **Installed length**
     - 54.7 mm (2.154 in)
   - **Load when installed**
     - 81.3 N (8.29 kgf, 18.24 lb)

5. **OIL PUMP CASE**
   Check the worn shaft hole, clogged oil passage, worn rotor chamber, cracks and other faults.

6. **OIL SEAL**
   Check the oil seal lips for deformation, hardening, wear, etc, and replace if defective.
5. Oil Pan and Strainer

A: REMOVAL
1) Set the vehicle on a lift.
2) Remove the front wheels.
3) Disconnect the ground cable from battery.

4) Remove the air intake duct and air cleaner case. <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
5) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
6) Remove the pitching stopper.

7) Remove the hood stay holder (A) and radiator upper brackets (B).

8) Support the engine with a lifting device and wire ropes.

9) Lift-up the vehicle.

CAUTION:
When lifting up the vehicle, raise up wire ropes at the same time.

10) Remove the under cover.
11) Drain engine oil. <Ref. to LU(H4SO 2.0)-8, REPLACEMENT, Engine Oil.>
12) Remove the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-10, REMOVAL, Center Exhaust Pipe.>
13) Remove the nuts which install front cushion rubber onto front crossmember.

14) Remove the bolts which install oil pan on cylinder block with engine raised up.
15) Insert the oil pan cutter blade into the clearance between cylinder block and oil pan.

CAUTION:
Do not use a screwdriver or similar tool in place of oil pan cutter.

16) Remove the oil strainer.
17) Remove the baffle plate.

3) Apply liquid gasket to the mating surfaces and install the oil pan.

**Liquid gasket:**
THREE BOND 1207C (Part No. 004403012) or equivalent

B: INSTALLATION

**CAUTION:**
Before installing the oil pan, clean the mating surface of oil pan and cylinder block.

1) Install the baffle plate.

*Tightening torque:*
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

2) Install the oil strainer onto baffle plate.

**NOTE:**
Replace O-ring with new one.

*Tightening torque:*
10 N·m (1.0 kgf-m, 7.2 ft-lb)

5) Lower the engine onto front crossmember.
6) Tighten the nuts which install front cushion rubber onto front crossmember.

**Tightening torque:**
69 N·m (7.0 kgf-m, 50.9 ft-lb)

7) Install the front and center exhaust pipe.  
<Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>  
<Ref. to EX(H4SO 2.0)-10, INSTALLATION, Center Exhaust Pipe.>
8) Install the under cover.
9) Lower the vehicle.

**CAUTION:**
When lowering the vehicle, lower the lift-up device and wire ropes at the same time.

10) Remove the lifting device and wire ropes.

11) Install the pitching stopper.

**Tightening torque:**

- **T1:** 50 N·m (5.1 kgf-m, 36.9 ft-lb)
- **T2:** 58 N·m (5.9 kgf-m, 42.8 ft-lb)

12) Install the hood stay holder (A) and radiator upper brackets (B).

13) Install the air intake chamber.  
<Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
14) Install the air intake duct and air cleaner case.  
<Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>  
<Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.>
15) Install the front wheels.
16) Connect the battery ground cable to battery.

17) Fill engine oil.  
<Ref. to LU(H4SO 2.0)-8, INSPECTION, Engine Oil.>

**C: INSPECTION**
Visually check that the oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.
6. Oil Pressure Switch

A: REMOVAL
1) Remove the generator from bracket.
   <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.>
2) Disconnect the terminal from oil pressure switch.

3) Remove the oil pressure switch.

B: INSTALLATION
1) Apply liquid gasket to the oil pressure switch threads.

   Liquid gasket:
   THREE BOND 1324 (Part No. 004403042) or equivalent

2) Install the oil pressure switch onto engine block.

   Tightening torque:
   25 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Connect the terminal to oil pressure switch.

4) Install the generator to bracket.
   <Ref. to SC(H4SO 2.0)-14, INSTALLATION, Generator.>

C: INSPECTION
Check the oil pressure switch installation portion for oil leakage and oil seepage.
7. Engine Oil Filter

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the oil filter using ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))
ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

B: INSTALLATION
1) Clean the oil filter installing surface on cylinder block.
2) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
3) Install the oil filter turning it by hand, being careful not to damage the seal rubber.
4) Tighten more after the seal rubber contacts the cylinder block.

NOTE:
• In case of oil filter in outer diameter 68 mm (2.68 in), tighten by approx. one turn.
• In case of oil filter in outer diameter 65 mm (2.56 in), tighten by approx. 2/3 to 3/4 turn.
• Over-tightening may cause oil leak.

C: INSPECTION
1) After installing the oil filter, run engine and make sure that no oil is leaking around the seal rubber.

NOTE:
The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.
2) Check the engine oil level. <Ref. to LU(H4SO 2.0)-8, INSPECTION, Engine Oil.>
# General Diagnostic Table

2. Spark Plug

A: REMOVAL

CAUTION:
All spark plugs installed on an engine must be of the same heat range.

Spark plug:
<Ref. to IG(H4SO 2.0)-2, SPECIFICATION, General Description.>

1. RH SIDE
1) Disconnect the ground cable from battery.
2) Remove the air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
3) Remove the spark plug cords by pulling the boot.
   (Do not pull the cord itself.)
4) Remove the spark plug with a spark plug socket.

B: INSTALLATION

1. RH SIDE
Install in the reverse order of removal.

_Tightening torque:_

\[21 \text{ N\cdotm (2.1 kgf-m, 15.2 ft-lb)}\]

NOTE:
The above torque should be only applied to new spark plugs without oil on their threads.
In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

2. LH SIDE
Install in the reverse order of removal.

_Tightening torque:_

\[21 \text{ N\cdotm (2.1 kgf-m, 15.2 ft-lb)}\]

NOTE:
The above torque should be only applied to new spark plugs without oil on their threads.
In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.
C: INSPECTION
Check the electrodes and inner and outer ceramic insulator of plugs, noting the type of deposits and the degree of electrode erosion.

1) Normal:
Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

2) Carbon fouled:
Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in the city, weak ignition, too rich fuel mixture, dirty air cleaner, etc.
It is advisable to replace with plugs having hotter heat range.

3) Oil fouled:
Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If the same condition remains after repair, use a hotter plug.

4) Overheating:
White or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.

CAUTION:
Avoid using a plug cleaner because of the spark plug with a platinum tip. (2.5 L model)

D: ADJUSTMENT
Adjust the spark plug gap, if necessary, by measuring with a gap gauge. (2.0 L model)

Spark plug gap: L
1.0 — 1.1 mm (0.039 — 0.043 in)
NOTE:
Replace with a new spark plug if the area (A) is worn to spherical shape.
3. Ignition Coil & Ignitor ASSY

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the spark plug cords from ignition coil & ignitor ASSY.
   • 2.0 L model

3) Disconnect the connector (A) from ignition coil & ignitor ASSY.
   • 2.0 L model

4) Remove the bolt (B) which secures the ignition coil & ignitor ASSY to intake manifold.
   • 2.5 L model

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

CAUTION:
Connect the spark plug cords to correct positions. Failure to do so will damage the unit.

C: INSPECTION
Check the following using a tester. Replace if defective.
• Secondary coil resistance

CAUTION:
• If the resistance is extremely low, it indicates the presence of a short-circuit.
• Ignitor is integrated with the coil. Therefore the resistance of primary side coil cannot be measured.
Specified resistance (2.0 L model):

[Secondary side]
Between (A) and (B)
18.0 kΩ ± 20%
Between (C) and (D)
18.0 kΩ ± 20%

Specified resistance (2.5 L model):

[Secondary side]
Between (A) and (B)
11.2 kΩ ± 15%
Between (C) and (D)
11.2 kΩ ± 15%
4. Spark Plug Cord

A: INSPECTION
Check the following items:
- Damage to cords, deformation, burning or rust formation of terminals
- Resistance values of cords

**Resistance value (2.0 L model):**
- #1 cord: 5.9 — 11.1 kΩ
- #2 cord: 8.8 — 14.8 kΩ
- #3 cord: 6.8 — 11.7 kΩ
- #4 cord: 8.8 — 14.8 kΩ

**Resistance value (2.5 L model):**
- #1 cord: 7.1 — 12.1 kΩ
- #2 cord: 12.1 — 19.9 kΩ
- #3 cord: 7.7 — 13.0 kΩ
- #4 cord: 12.3 — 20.2 kΩ

C: CAUTION
• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Starter

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>

3) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>

4) Remove the air intake chamber stay LH. (Non-turbo model).
   • MT model
   5) Disconnect the connector and terminal from starter.

6) Remove the starter from transmission.

NOTE:
In case of MT model, the bolt is used in place of nut (A) shown in the figure.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
In case of MT model, the bolt is used in place of nut (A) shown in the figure.

**Tightening torque:**
50 N·m (5.1 kgf·m, 37 ft-lb)
C: DISASSEMBLY

1. STARTER ASSEMBLY

1) Loosen the nut which holds terminal M of switch assembly, and then disconnect the connector.

2) Remove the bolts which hold switch assembly, and then remove the switch assembly, plunger and plunger spring from starter as a unit.

3) Remove the nuts of both sides, and then remove rear cover set.

4) Remove the through-bolts and brush holder screws of both sides, and then detach the rear cover and brush holder assembly.

5) Remove the armature and yoke assembly from front bracket.

6) Remove the packing A, planetary gear and packing B.
7) Remove the plate.

8) Remove the shaft assembly and overrunning clutch from front bracket as a unit.

NOTE:
Check the following points before removal.
- Lever direction
- Position of internal gear assembly

9) Remove the overrunning clutch from shaft assembly as follows:
   (1) Remove the stopper from ring by lightly tapping the stopper with an appropriate tool (such as a fit socket wrench).

D: ASSEMBLY

NOTE:
Apply grease to the following parts before assembly.
- Sleeve bearing
- Pinion shaft rotating part
- Shaft spline portion
- Inside of reduction system
- Lever fulcrum/Clutch rotating part

1) Install the overrunning clutch to shaft assembly.
2) Install the stopper to shaft assembly as follows.
(1) Insert the ring into the shaft groove by lightly tapping it with an appropriate tool (such as a fit socket wrench).

(2) Install the stopper to ring using a press.

(3) Install the shaft assembly to front bracket while taking care of the following points.
   (1) Lever direction

(4) Install the plate.

(5) Install the planetary gear.

(6) Install the packing A and B while taking care of installing positions.

(7) Install the armature to yoke assembly.
8) Install the yoke to front bracket matching front bracket to the groove of yoke assembly.

9) Install the brush holder to yoke assembly as follows.
   (1) Press the brush down into brush holder, and then fix the brush in that position using an appropriate tool (such as a fit socket wrench).
   (2) Match the brush holder to groove of yoke, and then slide the brush holder into yoke assembly to install.

10) Install the rear cover matching it’s groove to brush holder assembly.

11) Install rear cover set.

12) Install the switch assembly to front bracket as follows.
   (1) Insert the plunger and plunger spring into switch assembly.
   (2) Hook the plunger protrusion on lever edge to install plunger to front bracket.
13) Connect the connector to terminal M of switch assembly.

E: INSPECTION

1. ARMATURE

1) Check the commutator for any sign of burns of rough surfaces or stepped wear. If wear is of a minor nature, correct it by using sand paper.

2) Run-out test

Check the commutator for run-out, and then replace if it exceeds the limit.

**Commutator run-out:**

- **Standard**
  - 0.05 mm (0.0020 in)
- **Service limit**
  - Less than 0.10 mm (0.0039 in)

3) Depth of segment mold

Check the depth of segment mold.

4) Armature short-circuit test

Check the armature for short-circuit by placing it on growler tester. Hold an iron sheet against the armature core while slowly rotating the armature. A short-circuited armature will cause the iron sheet to vibrate and to be attracted to core. If the iron sheet is attracted or vibrates, the armature, which is short-circuited, must be replaced or repaired.

5) Armature ground test

Using a circuit tester, touch one probe to the commutator segment and the other to shaft. There should be no continuity. If there is continuity, the armature is grounded. Replace the armature if it is grounded.
2. YOKE
Make sure the pole is set in position.

3. OVERRUNNING CLUTCH
Inspect the teeth of pinion for wear and damage. Replace if it is damaged. Rotate the pinion in the right direction of rotation (counterclockwise). It should rotate smoothly. But in the opposite direction, it should be locked.

CAUTION:
Do not clean the overrunning clutch with oil to prevent grease from flowing out.

4. BRUSH AND BRUSH HOLDER
1) Brush length
Measure the brush length, and then replace if it exceeds the service limit. Replace if abnormal wear or cracks are noticed.

   Brush length:
   - Standard
     12.3 mm (0.484 in)
   - Service limit
     7.0 mm (0.276 in)

2) Brush movement
Be sure the brush moves smoothly inside brush holder.

3) Brush spring force
Measure the brush spring force with a spring scale. If it is less than the service limit, replace the brush holder.

   Brush spring force:
   - Standard
     15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lb) (when new)
   - Service limit
     2.5 N (0.25 kgf, 0.56 lb)

5. SWITCH ASSEMBLY
Be sure there is continuity between the terminals S and M, and between terminal S and ground. Use a circuit tester (set in “ohm”). Also check to be sure there is no continuity between terminal M and B.

   Terminal / Specified resistance:
   - S — M / Less than 1 Ω
   - S — Ground / Less than 1 Ω
   - M — B / More than 1 MΩ

6. SWITCH ASSEMBLY OPERATION
1) Using a lead wire, connect the terminal S of switch assembly to positive terminal of battery, and starter body to ground terminal of battery. The pinion should be forced endwise on shaft.

   CAUTION:
   With the pinion forced endwise on shaft, starter motor can sometimes rotate because current flows, through pull-in coil, to motor. This is not a problem.

2) Disconnect the connector from terminal M. Then using a lead wire, connect the positive terminal of battery and terminal M and ground terminal to starter body.
   In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.
7. PERFORMANCE TEST

The starter should be submitted to performance tests whenever it has been overhauled, to assure its satisfactory performance when installed on the engine.

Three performance tests, no-load test, load test, and lock test, are presented here; however, if the load test and lock test cannot be performed, carry out at least the no-load test.

For these performance tests, use the circuit shown in the figure.

![Circuit Diagram](SC-00077)

(A) Variable resistance
(B) Starter body
(C) Magnetic switch

1) No-load test
With switch on, adjust the variable resistance for the voltage to obtain 11 V, read the ammeter and measure the starter speed. Compare these values with the specifications.

**No-load test (Standard):**

- **Voltage / Current**
  - **MT model**
    - 11 V / 95 A or less
  - **AT model**
    - 11 V / 90 A or less

- **Rotating speed**
  - **MT model**
    - 2,500 rpm or more
  - **AT model**
    - 2,000 rpm or more

2) Load test
Apply the specified braking torque to starter. The condition is satisfactory if the current draw and starter speed are within specifications.

**Load test (Standard):**

- **Voltage / Load**
  - **MT model**
    - 7.5 V / 8.84 N·m (0.90 kgf-m, 6.5 ft-lb)
  - **AT model**
    - 7.7 V / 16.7 N·m (1.70 kgf-m, 12.3 ft-lb)

3) Lock test
With the starter stalled, or not rotating, measure the torque developed and current draw when the voltage is adjusted to the specified voltage.

**Lock test (Standard):**

- **Voltage / Current**
  - **MT model**
    - 4 V / 680 A or less
  - **AT model**
    - 3.5 V / 960 A or less

- **Torque**
  - **MT model**
    - 17 N·m (1.73 kgf-m, 12.5 ft-lb)
  - **AT model**
    - 31 N·m (3.16 kgf-m, 22.9 ft-lb)
3. **Generator**

**A: REMOVAL**

1) Disconnect the ground cable from battery.

2) Disconnect the connector and terminal from generator.
   - Non-turbo model
   - Turbo model

3) Remove the V-belt covers.
4) Remove the front side belts.
   <Ref. to ME(H4SO 2.0)-38, FRONT SIDE BELT, REMOVAL, V-belt.> or <Ref. to ME(H4DOTC)-39, FRONT SIDE BELT, REMOVAL, V-belt.>

5) Remove the bolts which install the generator onto bracket.

**B: INSTALLATION**

Install in the reverse order of removal.

*Tightening torque:*

\[ 25 \text{ N\cdotm (2.5 kgf\cdotm, 18.1 ft-lb)} \]

**CAUTION:**

Check and adjust the V-belt tension.

<Ref. to ME(H4SO 2.0)-39, INSPECTION, V-belt.> or <Ref. to ME(H4DOTC)-40, INSPECTION, V-belt.>

**C: DISASSEMBLY**

1) Remove the four through-bolts.
2) Heat portion (A) of rear cover to 50°C (122°F) with a heater drier.

3) Then insert the tip of a flat tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

4) Hold the rotor with a vise and remove pulley nut.

CAUTION:
When holding the rotor with a vise, place aluminum plates or wooden pieces on the vise jaws to prevent rotor from damage.

5) Remove the ball bearing as follows.
   (1) Remove the bolt, and then remove the bearing retainer.
   (2) Firmly install an appropriate tool (such as a fit socket wrench) to bearing inner race.
   (3) Push the ball bearing off the front cover using a press.
6) Remove the bearing from rotor using a bearing puller.

7) Unsolder connection between rectifier and stator coil to remove the stator coil.

**CAUTION:**
Do not allow a 180 — 270 W soldering iron to contact the terminals for more than 5 seconds at once because the rectifier cannot withstand so much heat.

8) Remove the IC regulator as follows.
   1) Remove the screws which secure IC regulator to rear cover.

9) Remove the brush as follows.
   1) Remove cover A.
   2) Remove cover B.
   3) Separate the brush from connection to remove.
10) Remove the rectifier as follows.
   (1) Remove the bolt which secures the rectifier.
   (2) Remove the cover of terminal B.
   (3) Remove the nut of terminal B, and then remove the rectifier.

CAUTION:
Be sure to remove the wire after reassembly.

D: ASSEMBLY

Assemble in the reverse order of disassembly.
1) Pulling up brush
Before assembling, press the brush down into brush holder, and then fix them in that position by passing a [1 mm (0.08 in) dia. 40 to 50 mm (1.6 to 2.0 in) long] wire through the hole as shown in the figure.

2) Install the ball bearing.
   (1) Set the ball bearing on the front cover, and then securely install an appropriate tool (such as a fit socket wrench) to the bearing outer race.
   (2) Press the ball bearing into the specified position using a press.
   (3) Install the bearing retainer.
3) Press the bearing (rear side) into the rotor shaft using a press to install.
4) Heat the bearing box in rear cover [50 to 60°C (122 to 140°F)], and then press the rear bearing into rear cover.

CAUTION:
Grease should not be applied to rear bearing. Remove the oil completely if it is found on bearing box.
5) After reassembly, turn the pulley by hand to check that rotor turns smoothly.
E: INSPECTION

1. DIODE

CAUTION:
Never use a mega tester (designed for reading high voltage) or any other similar instrument for this test; otherwise, the diodes may be damaged.

1) Checking positive diode
Check for continuity between the diode lead and positive side heat sink. The positive diode is in good condition if resistance is 1 Ω or less only in the direction from the diode lead to heat sink.

2) Checking negative diode
Check for continuity between the negative side heat sink and diode lead. The negative diode is in good condition if resistance is 1 Ω or less only in the direction from the heat sink to diode lead.

2. ROTOR

1) Slip ring surface
Inspect the slip rings for contamination or any roughness on the sliding surface. Repair the slip ring surface using a lathe or sand paper.

2) Slip ring outer diameter
Measure the slip ring outer diameter. If the slip ring is worn, replace the rotor assembly.

Specified resistance:
Approx. 1.8 — 2.2 Ω

4) Insulation test
Check the continuity between slip ring and rotor core or shaft. If resistance is 1 Ω or less, the rotor coil is grounded, and so replace the rotor assembly.

5) Ball bearing (rear side)
Check the rear ball bearing. Replace if it is noisy or if the rotor does not turn smoothly.
3. STATOR

1) Continuity test
Inspect the stator coil for continuity between each end of the lead wires. If resistance is 1 MΩ or more, the lead wire is broken, and so replace the stator assembly.

2) Insulation test
Inspect the stator coil for continuity between stator core and each end of lead wire. If resistance is 1 Ω or less, the stator coil is grounded, and so replace the stator assembly.

4. BRUSH

1) Measure the length of each brush. If wear exceeds the service limit, replace the brush. Each brush has the service limit mark (A) on it.

   Brush length:
   Service limit (1)
   5.0 mm (0.197 in)
   Standard (2)
   18.5 mm (0.728 in)

2) Checking brush spring for proper pressure
Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.08 in). Then measure the pressure of brush spring. If the pressure is less than 2.648 N (270 g, 9.52 oz), replace the brush spring with a new one. The new spring must have a pressure of 4.609 to 5.786 N (470 to 590 g, 16.58 to 20.810 oz).

5. BEARING (FRONT SIDE)

Check the front ball bearing. If the resistance is felt while rotating, or if abnormal noise is heard, replace the ball bearing.
4. Battery

A: REMOVAL
1) Disconnect the positive (+) terminal after disconnecting the negative (−) terminal of battery.
2) Remove the flange nuts from battery rods and take off battery holder.
3) Remove the battery.

B: INSTALLATION
Install in the reverse order of removal.

**Tightening torque:**

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

**NOTE:**
- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the negative (−) terminal of battery.
- Initial diagnosis of electronic control throttle is performed after battery installation. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.

C: INSPECTION

**WARNING:**
- Electrolyte has toxicity; be careful handling the fluid.
- Avoid contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.
- Batteries produce explosive gases. Keep sparks, flame, cigarettes away.
- Ventilate when charging or using in enclosed space.
- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. Never lean over a battery.
- Do not let battery fluid contact eyes, skin, fabrics, or paint-work because battery fluid is corrosive acid.

- To lessen the risk of sparks, remove rings, metal watch-bands, and other metal jewelry. Never allow metal tools to contact the positive battery terminal and anything connected to it while you are at the same time in contact with any other metallic portion of the vehicle. This may cause short circuit.

1. EXTERNAL PARTS
Check the battery case, top cover, vent plugs, and terminal posts for dirt or cracks. If necessary, clean with water and wipe with a dry cloth. Apply a thin coat of grease on the terminal posts to prevent corrosion.

2. ELECTROLYTE LEVEL
Check the electrolyte level in each cell. If the level is below MIN level, bring the level to MAX level by pouring distilled water into the battery cell. Do not fill beyond MAX level.

3. SPECIFIC GRAVITY OF ELECTROLYTE
1) Measure specific gravity of electrolyte using a hydrometer and a thermometer.

Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following equation:

\[ S_{20} = S_t + 0.0007 \times (t - 20) \]

**S**_{20}: Specific gravity corrected at electrolyte temperature of 20°C (68°F)

**S**_t: Measured specific gravity

**t**: Measured temperature (°C)

Determine whether or not battery must be charged, according to corrected specific gravity.

**Standard specific gravity:** 1.220 — 1.290 [20°C (68°F)]

2) Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between specific gravity and state of charge is as shown in the figure.
D: MEASUREMENT

WARNING:
Do not bring an open flame close to the battery at this time.

CAUTION:
- Prior to charging, corroded terminals should be cleaned with a brush and common caustic soda solution.
- Be careful since battery electrolyte overflows while charging the battery.
- Observe instructions when handling the battery charger.
- Before charging the battery on vehicle, disconnect the battery ground terminal to prevent damage of generator diodes or other electrical modules.

1. JUDGMENT OF BATTERY IN CHARGED CONDITION

1) Specific gravity of electrolyte should be held within the specific range from 1.250 to 1.290 for more than one hour.
2) Voltage per battery cell should be held at a specific value in a range from 2.5 to 2.8 V for more than one hour.

2. CHECK HYDROMETER FOR STATE OF CHARGE

</tr>
</tbody>
</table>

* Check electrical system before replacement.

3. NORMAL CHARGING

Charge the battery at current value specified by manufacturer or at approx. 1/10 of battery’s ampere-hour rating.

4. QUICK CHARGING

Quick charging is a method that the battery is charged in a short period of time with a relatively large current by using a quick charger. Since a large current flow raises electrolyte temperature, the battery is subject to damage if the large current is used for prolonged time. For this reason, the quick charging must be carried out within a current range that will not increase the electrolyte temperature above 40°C (104°F). Also the quick charging is a temporary means to bring battery voltage up to a fair value and, as a rule, a battery should be charged slowly with a low current.

CAUTION:
- Observe the items in 3. NORMAL CHARGING.
- Never use more than 10 A when charging the battery because it will shorten the battery life.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

CAUTION:
- All airbag system wiring harnesses and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.
   - The ECM will be destroyed instantly.
   - The fuel injector and other parts will be damaged.

3) Do not disconnect the battery terminals while the engine is running.
   A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and ECM, be sure to turn the ignition switch to OFF. Perform the inspection mode after connecting the connectors.

5) Poor contact has been identified as a primary cause of this problem. Measure the voltage or resistance of individual sensor or all electrical control modules using a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Remove the ECM from the located position after disconnecting two cables on battery. Otherwise, the ECM may be damaged.

CAUTION:
When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on the fuel injection system.

7) Connectors of each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts as the grounding point to body when measuring voltage and resistance inside the passenger compartment.

9) Use engine grounding terminal or engine as the grounding point to body when measuring voltage and resistance in the engine compartment.

10) Use TCM mounting stud bolts as the grounding point to body when measuring voltage and resistance inside the passenger compartment.

11) Every MFI-related part is a precision part. Do not drop them.

12) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:
- The antenna must be kept as far apart as possible from the control unit. (The ECM is located under the steering column, inside of instrument panel lower trim panel.)
General Description

- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items mentioned above.
- Incorrect installation of the radio may affect the operation of ECM.

13) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

14) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes must be distinguished clearly when performing diagnostics.

15) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer’s complaint, and distinguish between the three causes.

16) For AT models, do not hold the stall for more than five seconds. (from closed throttle, fully open throttle to stall engine speed.)

17) On the model with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clear procedure of self-diagnosis function.

B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems.

1. BATTERY

1) Measure battery voltage and specific gravity of electrolyte.

_Standard voltage: 12 V_

_**Specific gravity: Above 1.260**_

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUND

Make sure the engine grounding terminal is properly connected to engine.

3. SELF-DIAGNOSIS FUNCTION

When detecting a malfunction by self-diagnosis function on ECM, malfunction indicator light illuminates and malfunction occurrence is displayed. Calling the self-diagnosis result is performed by the Subaru Select Monitor.

- A/C is turned OFF.
- All accessory switches are turned OFF.
7. Data Link Connector

A: NOTE
This connector is used for Subaru Select Monitor.

CAUTION:
Do not connect any scan tools except for OBD-II general scan tool and Subaru Select Monitor, because the circuit for Subaru Select Monitor may be damaged.

8. OBD-II General Scan Tool

A: OPERATION

1. HOW TO USE OBD-II GENERAL SCAN TOOL

1) Prepare a general scan tool (OBD-II general scan tool) required by SAE J1978.
2) Connect the OBD-II general scan tool to data link connector located in the lower portion of instrument panel (on driver’s side).

3) Using the OBD-II general scan tool, call up DTC and freeze frame data.

OBD-II general scan tool functions consist of:

   1) MODE $01: Current powertrain diagnostic data
   2) MODE $02: Powertrain freeze frame data
   3) MODE $03: Emission-related powertrain DTC
   4) MODE $04: Clear/Reset emission-related diagnostic information

Read out the data according to repair procedures. (For detailed operation procedures, refer to the operation manual of OBD-II general scan tool.)

NOTE:
For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO 2.0)(diag)-66, List of Diagnostic Trouble Code (DTC).>

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

<table>

</tr>
</tbody>
</table>

NOTE:
Refer to OBD-II general scan tool manufacturer’s operation manual to access generic OBD-II PIDs (MODE $01).
3. MODE $02 (POWERTRAIN FREEZE FRAME DATA)
Refer to data denoting the operating condition when trouble is detected by on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

<table>
<thead>
<tr>
<th>PID</th>

</tbody>
</table>

NOTE:
Refer to OBD-II general scan tool manufacturer’s operation manual to access freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE (DTC))
Refer to “Read Diagnostic Trouble Code (DTC)” for information about data denoting emission-related powertrain DTC. <Ref. to EN(H4SO 2.0)(diag)-31, Read Diagnostic Trouble Code (DTC).>

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)
Refer to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

NOTE:
Refer to OBD-II general scan tool manufacturer’s operation manual to clear or reset emission-related diagnostic information (MODE $04).
9. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO 2.0)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4SO 2.0)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.
   (1) Data link connectors is located in the lower portion of instrument panel (on the driver’s side).

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

6) Using the Subaru Select Monitor, call up DTCs and data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTCs. <Ref. to EN(H4SO 2.0)(diag)-31, Read Diagnostic Trouble Code (DTC).>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (OBD MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTCs. <Ref. to EN(H4SO 2.0)(diag)-31, Read Diagnostic Trouble Code (DTC).>
ENGINE (DIAGNOSTICS)

4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
6) Using the scroll key, scroll the display screen up or down until the desired data is shown.

**NOTE:**
For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”. 
10. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» screen, select the {DTC Display}, and then press the [YES] key.
5) On the «Diagnostic Code(s) Display» screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

NOTE:
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO 2.0)(diag)-66, List of Diagnostic Trouble Code (DTC).>

## Inspection Mode

### 1. PREPARATION FOR THE INSPECTION MODE

1) Check that the battery voltage is more than 12 V and fuel remains half [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Lift-up the vehicle using a garage jack and place it on rigid racks, or drive the vehicle onto free rollers.

**WARNING:**
- Before lifting-up the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front or rear towing hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when the engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and vehicle.

- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

2. SUBARU SELECT MONITOR

1) After clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO 2.0)(diag)-38, Clear Memory Mode.>
2) Idle the engine.
3) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO 2.0)(diag)-7, PREPARATION TOOL, General Description.>
4) Connect the diagnosis cable to Subaru Select Monitor.
5) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4SO 2.0)(diag)-7, PREPARATION TOOL, General Description.>
6) Connect the test mode connector (A) located at the lower portion of glove box.
7) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver's side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

8) Turn the ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

9) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
10) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
11) Press the [YES] key after the information of engine type has been displayed.
12) On the «Engine Diagnosis» screen, select the {D Check} and press the [YES] key.
13) When the “Perform D Check?” is shown on the screen, press the [YES] key.
14) Perform subsequent procedures as instructed on the display screen.

• If trouble still remains in the memory, the corresponding DTC appears on the display screen.

NOTE:
• For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
• For the details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO 2.0)(diag)-66, List of Diagnostic Trouble Code (DTC).>
• Release the parking brake.
• The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis function.

3. OBD-II GENERAL SCAN TOOL

1) After clearing memory, check for any remaining unresolved trouble data: <Ref. to EN(H4SO 2.0)(diag)-38, Clear Memory Mode.>
2) Warm up the engine.
3) Connect the test mode connector (A) at the lower side of instrument panel (on the driver’s side).
4) Connect the OBD-II general scan tool to its data link connector in the lower portion of instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor and OBD-II general scan tool.

5) Start the engine.

NOTE:
• Ensure the select lever is placed in “P” position before starting. (AT model)
• Depress the clutch pedal when starting engine. (MT model)
6) Using the select lever or shift lever, turn the “P” position switch and “N” position switch to ON.
7) Depress the brake pedal to turn brake switch ON. (AT model)
8) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.

9) Place the select lever or shift lever in “D” position (AT model) or “1st” gear (MT model) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:
• On AWD vehicles, release the parking brake.
• The speed difference between front and rear wheels may light ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

10) Using the OBD-II general scan tool, check for DTC and record the result(s).

NOTE:
• For detailed operation procedures, refer to the operation manual of OBD-II general scan tool.
• For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO 2.0)(diag)-66, List of Diagnostic Trouble Code (DTC).>
12. Drive Cycle

A: PROCEDURE

There are three drive patterns for the trouble diagnosis. Driving in the specified pattern allows to diagnose malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check whether they correctly resume their functions by driving in the required drive pattern.

1. PREPARATION FOR DRIVE CYCLE

1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12V or more.
2) After performing the diagnostics and cleaning memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO 2.0)(diag)-38, Clear Memory Mode.>
3) Separate the test mode connector.

NOTE:
• Except for the water temperature specified items at starting, the diagnosis is carried out after engine warm up.
• Carry out the diagnosis which is marked * on DTC twice, then, after finishing first diagnosis, stop the engine and do second time at the same condition.

2. AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE.

13. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {Memory Clear} and press the [YES] key.
5) When the “Done” and “Turn Ignition Switch OFF” are shown on the display screen, turn the ignition switch to OFF and then Subaru Select Monitor switch to OFF.

NOTE:
- Initial diagnosis of electronic control throttle is performed after memory clearance. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

2. SUBARU SELECT MONITOR (OBD MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
5) On the «OBD Menu» display screen, select the {DTC Clear} and press the [YES] key.
6) When the “Perform Diagnostic Code(s) Clear?” is shown on the screen, press the [YES] key.
7) Turn the ignition switch to OFF and then turn the Subaru Select Monitor switch to OFF.

NOTE:
- Initial diagnosis of electronic control throttle is performed after memory clearance. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
14. Compulsory Valve Operation Check Mode

A: PROCEDURE
1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO 2.0)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4SO 2.0)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) located at the lower portion of glove box.

5) Connect the Subaru Select Monitor to data link connector located in the lower portion of instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

6) Turn the ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

7) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
8) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
9) Press the [YES] key after the information of engine type has been displayed.
10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.
11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.
12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.
13) Pressing the [NO] key completes the compulsory valve operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

15. Malfunction Indicator Light

A: PROCEDURE

1. Activation of malfunction indicator light. <Ref. to EN(H4SO 2.0)(diag)-42, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>

2. Check that the malfunction indicator light does not come on. <Ref. to EN(H4SO 2.0)(diag)-43, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

3. Check that the malfunction indicator light does not go off. <Ref. to EN(H4SO 2.0)(diag)-45, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF., Malfunction Indicator Light.>

4. Check that the malfunction indicator light does not blink. <Ref. to EN(H4SO 2.0)(diag)-46, MALFUNCTION INDICATOR LIGHT DOES NOT BLINK., Malfunction Indicator Light.>

5. Check that the malfunction indicator light remains blinking. <Ref. to EN(H4SO 2.0)(diag)-49, MALFUNCTION INDICATOR LIGHT REMAINS BLINKING., Malfunction Indicator Light.>
B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light (A) in the combination meter illuminates.

NOTE:
If the malfunction indicator light does not illuminate, perform the diagnosis of malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H4SO 2.0)(diag)-43, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or emission control system is malfunctioning.

3) Turn the ignition switch to OFF and connect the test mode connector.

   (1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light illuminates.
   (2) Malfunction indicator light blinks at a cycle of 0.5 Hz after starting the engine. (During diagnosis)
   (3) Malfunction indicator light blinks at a cycle of 3 Hz after diagnosis if there is no trouble. Malfunction indicator light illuminates if faulty.
C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

DIAGNOSIS:
The malfunction indicator light circuit is open or shorted.

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not come on.

   **NOTE:**  
   • Blown out fuse (No. 5)  
   • Open or short circuit in harness between fuse (No. 5) and battery terminal  
   • Poor contact in ignition switch connector |
D: MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF.

DIAGNOSIS:
The malfunction indicator light circuit is shorted.

TROUBLE SYMPTOM:
Although malfunction indicator light comes on when the engine runs, DTC is not shown on the Subaru Select Monitor display.

#### Warning:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel.
  1) Release the fuel pressure.
     1. Disconnect the connector from fuel pump relay.
     2. Start the engine and run it until it stalls.
     3. After the engine stalls, crank it for five more seconds.
     4. Turn the ignition switch to OFF.
  2) Connect the connector to fuel pump relay.
  3) Disconnect the fuel delivery hose, and connect the fuel pressure gauge.
  4) Install the fuel filler cap.
  5) Start the engine and idle while gear position is neutral.
  6) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

#### Warning:

1. Start the engine.
2. While observing the Subaru Select Monitor or OBD-II general scan tool screen, warm-up the engine until coolant temperature is above 70°C (160°F). If the engine is already warmed-up, operate at idle speed for at least 1 minute.
3. Read the data of front oxygen (A/F) sensor signal during idling using Subaru Select Monitor or OBD-II general scan tool.

**NOTE:**
- Subaru Select Monitor
  For detailed operation procedure, refer to “READ CURRENT DATA FOR ENGINE”. <Ref. to EN(H4SO 2.0)(diag)-25, Subaru Select Monitor.>
- OBD-II general scan tool
  For detailed operation procedures, refer to OBD-II General Scan Tool Instruction Manual.

Race the engine at speeds from idling to 5,000 rpm for a total of 5 cycles.

**NOTE:**
- Air fuel ratio is rich at normal condition or during racing.
- To increase engine speed to 5,000 rpm, slowly depress accelerator pedal, taking approximately 5 seconds, and quickly release accelerator pedal to decrease engine speed.

- Turn the ignition switch to OFF.
- Disconnect the connector from ECM and front oxygen (A/F) sensor connector.
- Measure the resistance between ECM and front oxygen (A/F) sensor.

CB: DTC P2135 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” / “B” VOLTAGE RATIONALITY

DTC DETECTING CONDITION:
Immediately at fault recognition

TROUBLE SYMPTOM:
- Erroneous idling
- Poor driving performance

CAUTION:
After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO 2.0)(diag)-38, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO 2.0)(diag)-32, OPERATION, Inspection Mode.>.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

2. Throttle Body

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Disconnect the connectors from the throttle position sensor and manifold absolute pressure sensor.

4) Disconnect the engine coolant hoses (A) from throttle body.
5) Remove the bolts (B) which secure throttle body to intake manifold.

B: INSTALLATION
Install in the reverse order of removal.
NOTE:
Use a new gasket.

_Tightening torque:_
8 N·m (0.8 kgf-m, 5.8 ft-lb)
3. Intake Manifold

A: REMOVAL
1) Release the fuel pressure. <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Disconnect the ground cable from battery.

4) Remove the air cleaner case and air intake chamber. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
5) Disconnect the spark plug cords from spark plugs.
6) Disconnect the engine coolant hoses (A) from throttle body.
7) Disconnect the PCV hose (A) from intake manifold.
8) Disconnect the brake booster hose (B).
9) Disconnect the engine harness connectors (C) from bulkhead harness connectors.
10) Disconnect the connectors from engine coolant temperature sensor.
11) Disconnect the knock sensor connector.
12) Disconnect the connector from crankshaft position sensor.
13) Disconnect the connector from power steering pump switch (A).
14) Disconnect the connector from oil pressure switch (B).
15) Disconnect the connector from camshaft position sensor.

16) Remove the EGR pipe from intake manifold. (EC, EK and K4 model)

17) Disconnect the fuel hoses from fuel pipes.

**WARNING:**
- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

18) Remove the bolts which secure intake manifold to cylinder head.

19) Remove the intake manifold.

**B: INSTALLATION**

1) Install the intake manifold onto cylinder heads.

**NOTE:**
Use a new gasket.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

2) Connect the fuel hoses.

**NOTE:**
If fuel hoses or clamps are damaged, replace them with new ones.

**Tightening torque (Hose clamp screw):**
1.25 N·m (0.13 kgf-m, 0.94 ft-lb)
3) Install the EGR pipe to intake manifold. (EC, EK and K4 model)

**Tightening torque:**

34 N·m (3.4 kgf-m, 24.6 ft-lb)

4) Connect the connector to camshaft position sensor.

5) Connect the connector to power steering pump switch (A).

6) Connect the connector to oil pressure switch (B).

7) Connect the connector to crankshaft position sensor.

8) Connect the knock sensor connector.

9) Connect the connectors to engine coolant temperature sensor.

10) Connect the PCV hose (A) to intake manifold.

11) Connect the brake booster hose (B).

12) Connect the engine harness connectors (C) to bulkhead harness connectors.

13) Connect the engine coolant hoses (A) to throttle body.

14) Connect the spark plug cords to spark plugs.
15) Install the air cleaner case and air intake chamber. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
16) Install the fuse of fuel pump to main fuse box.
17) Connect the battery ground cable to battery.

C: DISASSEMBLY
1) Disconnect the engine ground terminal from intake manifold.
2) Remove the ignition coil & ignitor ASSY. <Ref. to IG(H4SO 2.0)-8, REMOVAL, Ignition Coil & Ignitor ASSY.>
3) Remove the throttle body. <Ref. to FU(H4SO 2.5)-11, REMOVAL, Throttle Body.>
4) Remove the EGR valve. (EC, EK and K4 model) <Ref. to FU(H4SO 2.5)-30, REMOVAL, EGR Valve.>
5) Remove the PCV pipe. (EC, EK and K4 model)
6) Disconnect the pressure regulator vacuum hose (A) from intake manifold.
7) Remove the fuel pipe protector LH.
8) Remove the fuel pipe protector RH.
9) Disconnect the connectors (A) from fuel injector.
10) Remove the harness band (B) which holds engine harness to injector pipe.
11) Remove the tumble generator valve actuator. (EC, EK and K4 model) <Ref. to FU(H4SO 2.5)-29, REMOVAL, Tumble Generator Valve Actuator.>
12) Remove the purge control solenoid valve. 
<Ref. to EC(H4SO 2.0)-7, REMOVAL, Purge Control Solenoid Valve.>
13) Remove the harness band clips which install the engine harness.

14) Remove the bolts which hold the engine harness to intake manifold.

15) Remove the engine harness from intake manifold.
16) Remove the bolts which install injector pipe on the intake manifold as shown in the figure.
   • RH side

17) Remove the fuel injectors from injector pipe.
18) Loosen the clamp which holds fuel injector pipe RH to fuel hose, and then disconnect the pipe from fuel hose.

19) Loosen the clamp which holds fuel injector pipe LH to fuel hose, and then disconnect the pipe from fuel hose.

20) Remove the fuel injector pipe.
21) Remove the bolt which installs pressure regulator on intake manifold.
22) Remove the bolt which installs the fuel pipes on intake manifold.

23) Remove the fuel pipe assembly and pressure regulator, from intake manifold.
24) Remove the intake manifold. (EC, EK and K4 model)

D: ASSEMBLY
1) Install the intake manifold. (EC, EK and K4 model)

NOTE:
- Use a new gasket.
- When assembling the nipple, apply liquid gasket.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010)

Tightening torque:
8.75 N·m (0.89 kgf-m, 6.5 ft-lb)

2) Tighten the bolt which installs the fuel pipes on intake manifold.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

3) Tighten the bolt which installs pressure regulator on intake manifold.

Tightening torque:
19 N·m (1.9 kgf-m, 13.7 ft-lb)

4) Connect the fuel injector pipe.
5) Connect the fuel injector pipe LH to fuel hose, and tighten the clamp screw.

6) Connect the fuel injector pipe RH to fuel hose, and tighten the clamp screw.

7) Install the fuel injectors.
8) Tighten the bolts which install injector pipe on intake manifold.
   - RH side
   **Tightening torque:**
   \[19 \text{ N\cdot m} (1.9 \text{ kgf\cdot m, 13.7 ft-lb})\]

9) Tighten the two bolts which install fuel pipes on intake manifold.
   **Tightening torque:**
   \[6.4 \text{ N\cdot m} (0.65 \text{ kgf\cdot m, 4.7 ft-lb})\]

10) Install the engine harness onto intake manifold.

11) Tighten the bolts which install engine harness on intake manifold.
   **Tightening torque:**
   \[16 \text{ N\cdot m} (1.6 \text{ kgf\cdot m, 11.8 ft-lb})\]

12) Hold the engine harness by harness band clips.

13) Install the purge control solenoid valve. <Ref. to EC(H4SO 2.0)-7, INSTALLATION, Purge Control Solenoid Valve.>

14) Install the tumble generator valve actuator. (EC, EK and K4 model) <Ref. to FU(H4SO 2.5)-29, INSTALLATION, Tumble Generator Valve Actuator.>

15) Connect the connectors (A) to fuel injector.
16) Hold the engine harness to injector pipe by harness band (B).
17) Install the fuel pipe protector RH.

**Tightening torque:**

19 N·m (1.9 kgf-m, 13.7 ft-lb)

18) Install the fuel pipe protector LH.

**Tightening torque:**

19 N·m (1.9 kgf-m, 13.7 ft-lb)

19) Connect the pressure regulator vacuum hose (A) to intake manifold.

20) Install the PCV pipe. (EC, EK and K4 model)

21) Install the EGR valve. (EC, EK and K4 model)

<Ref. to FU(H4SO 2.5)-30, INSTALLATION, EGR Valve.>

22) Install the throttle body to intake manifold.

<Ref. to FU(H4SO 2.5)-11, INSTALLATION, Throttle Body.>

23) Install the ignition coil & ignitor ASSY. <Ref. to IG(H4SO 2.0)-8, INSTALLATION, Ignition Coil & Ignitor ASSY.>

24) Install the engine ground terminal to intake manifold.

**Tightening torque:**

19 N·m (1.9 kgf-m, 13.7 ft-lb)

---

**E: INSPECTION**

Make sure the fuel pipe and fuel hoses are not damaged and the connections are tightened firmly.
4. Engine Coolant Temperature Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the generator. <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.>
3) Disconnect the connectors from engine coolant temperature sensor.

4) Remove the engine coolant temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
18 N·m (1.8 kgf-m, 13.0 ft-lb)
5. Crankshaft Position Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the bolt which installs crankshaft position sensor to cylinder block.

3) Remove the crankshaft position sensor, and disconnect the connector from it.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
\[ T: 6.4 \text{ N} \cdot \text{m} (0.65 \text{ kgf} \cdot \text{m}, 4.7 \text{ ft-lb}) \]
6. Camshaft Position Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from camshaft position sensor.

3) Remove the bolt which installs camshaft position sensor to the support.

4) Remove the bolt which installs the camshaft position sensor support to camshaft cap LH.

5) Remove the camshaft position sensor and the support as a unit.

6) Remove the camshaft position sensor itself.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
- Camshaft position sensor support: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
- Camshaft position sensor: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
7. Knock Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
3) Disconnect the knock sensor connector.

4) Remove the knock sensor from cylinder block.

B: INSTALLATION
1) Install the knock sensor to cylinder block.

NOTE:
Extraction area of knock sensor cord must be positioned at a 60° angle relative to the engine rear.

Tightening torque:
24 N·m (2.4 kgf·m, 17.4 ft-lb)

2) Connect the knock sensor connector.

3) Install the air cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.>
4) Connect the battery ground cable to battery.
8. Throttle Position Sensor

A: SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body. Refer to “Throttle Body” for removal and installation procedure.  
<Ref. to FU(H4SO 2.5)-11, REMOVAL, Throttle Body.>  
<Ref. to FU(H4SO 2.5)-11, INSTALLATION, Throttle Body.>
9. Manifold Absolute Pressure Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from manifold absolute pressure sensor.

3) Remove the manifold absolute pressure sensor from throttle body.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Use new O-rings.

*Tightening torque:*

\[ 2.0 \text{ N\cdot m (0.2 kgf\cdot m, 1.5 ft-lb)} \]
10. Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL

NOTE:
Mass air flow and intake air temperature sensor is installed to EC, EK and K4 model.
1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow and intake air temperature sensor.
3) Remove the mass air flow and intake air temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

* Tightening torque:*
  1.0 N·m (0.10 kgf-m, 0.74 ft-lb)
11. Intake Air Temperature Sensor

A: REMOVAL

NOTE:
Intake air temperature sensor is installed to models except for EC, EK and K4.
1) Disconnect the ground cable from battery.
2) Disconnect the connector from intake air temperature sensor.
3) Remove the intake air temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.
12. Tumble Generator Valve Assembly

A: REMOVAL

NOTE:
This component is installed to EC, EK and K4 model.

1) Release the fuel pressure.
<Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Disconnect the ground cable from battery.

4) Remove the intake manifold.
<Ref. to FU(H4SO 2.5)-12, REMOVAL, Intake Manifold.>
5) Disconnect the connector from tumble generator valve actuator.

6) Remove the fuel injectors.
<Ref. to FU(H4SO 2.5)-31, REMOVAL, Fuel Injector.>

7) Remove the tumble generator valve body from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.
NOTE:
Use a new gasket.

Tightening torque: 8.75 N·m (0.89 kgf-m, 6.5 ft-lb)
13. Tumble Generator Valve Actuator

A: REMOVAL

1. RH SIDE

NOTE:
This component is installed to EC, EK and K4 model.

1) Release the fuel pressure.
<Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid and remove the fuel filler cap.
3) Disconnect the ground cable from battery.
4) Remove the intake manifold.
<Ref. to FU(H4SO 2.5)-12, REMOVAL, Intake Manifold.>
5) Disconnect the connector from tumble generator valve RH.
6) Remove the tumble generator valve RH.

3) Disconnect the ground cable from battery.

4) Disconnect the connector from tumble generator valve LH.
5) Remove the tumble generator valve LH.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

*Tightening torque:*
6 N·m (0.61 kgf-m, 4.4 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

*Tightening torque:*
6 N·m (0.61 kgf-m, 4.4 ft-lb)

2. LH SIDE

1) Release the fuel pressure.
<Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
14. EGR Valve

A: REMOVAL

NOTE:
EGR valve is installed to EC, EK and K4 model.

1) Disconnect the ground cable from battery.

2) Disconnect the connector from EGR valve.

3) Remove the EGR valve from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.

Tightening torque:
19 N·m (1.9 kgf-m, 13.7 ft-lb)
15. Fuel Injector

A: REMOVAL

1. RH SIDE

1) Release the fuel pressure.
   <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Disconnect the ground cable from battery.
4) Remove the air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
5) Remove the spark plug cords from spark plugs (#1 and #3 cylinders).
6) Remove the fuel pipe protector RH.
7) Disconnect the connector (A) from fuel injector.
8) Remove the harness band (B) which holds engine harness to injector pipe.
9) Remove the bolts which hold fuel injector pipe onto intake manifold.
10) Remove the fuel injector while lifting up the fuel injector pipe.

2. LH SIDE

1) Release the fuel pressure.
   <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Remove the battery.
4) Remove the spark plug cords from spark plugs (#2 and #4 cylinders).
5) Remove the fuel pipe protector LH.
6) Disconnect the connector (A) from fuel injector.
Fuel Injector

7) Remove the harness band (B) which holds engine harness to injector pipe.

8) Remove the bolts which hold fuel injector pipe onto intake manifold.

9) Remove the fuel injector while lifting up the fuel injector pipe.

B: INSTALLATION

1. RH SIDE
Install in the reverse order of removal.

NOTE:
- Use new O-rings.
- O-ring (B) is used for EC, EK and K4 model.

Tightening torque:
19 N·m (1.9 kgf-m, 13.7 ft-lb)
2. LH SIDE

Install in the reverse order of removal.

NOTE:
- Use new O-rings.
- O-ring (B) is used for EC, EK and K4 model.

Tightening torque:
- **6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

Tightening torque:
- **19 N·m (1.9 kgf-m, 13.7 ft-lb)**
Front Oxygen (A/F) Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the air intake duct. <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
3) Remove the connector of front oxygen (A/F) sensor.

4) Remove the clip holding harness.
5) Lift-up the vehicle.
6) Remove the under cover.
7) Apply spray-type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
8) Remove the front oxygen (A/F) sensor.

CAUTION:
When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION
1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound:
SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.

2) Install the front oxygen (A/F) sensor.

Tightening torque:
21 N·m (2.1 kgf·m, 15.2 ft-lb)

3) Install the under cover.
4) Lower the vehicle.
5) Hold the harness with clip.
6) Connect the connector of front oxygen (A/F) sensor.
7) Install the air intake duct. <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
8) Connect the battery ground cable to battery.
17. Rear Oxygen Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.
3) Disconnect the connector from rear oxygen sensor.

4) Remove the clip holding harness.
5) Apply spray-type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
6) Remove the rear oxygen sensor.

CAUTION:
When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION
1) Before installing rear oxygen sensor, apply anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

Anti-seize compound:
SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to the protector of rear oxygen sensor.
2) Install the rear oxygen sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)

3) Hold the harness with clip.
4) Connect the connector to rear oxygen sensor.

5) Lower the vehicle.
6) Connect the battery ground cable to battery.
18. Engine Control Module (ECM)

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger's side. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
3) Detach the floor mat of front passenger seat.
4) Remove the protect cover.

5) Remove the nuts (A) which hold the ECM to bracket.
6) Remove the clip (B) from bracket.

7) Disconnect the ECM connectors and take out the ECM.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:
- When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage to fuel injection system.
- When replacing the ECM, be careful not to damage the harnesses and connectors.

Tightening torque:
5 N·m (0.5 kgf-m, 3.6 ft-lb)
19. Main Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>

3) Remove the harness cover (A).

4) Disconnect the connector from main relay.

B: INSTALLATION

Install in the reverse order of removal.
20. Fuel Pump Relay

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from fuel pump relay.

B: INSTALLATION
Install in the reverse order of removal.
21. Electronic Throttle Control Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from electric throttle control relay.

B: INSTALLATION

Install in the reverse order of removal.
22. Fuel

A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Remove the fuse of fuel pump from main fuse box.

2) Start the engine and run it until it stalls.
3) After the engine stalls, crank it for five more seconds.
4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Lift-up the vehicle.
5) Remove the fuel tank protector.
6) Set a container under the vehicle and remove the drain plug from fuel tank to drain fuel from fuel tank.
7) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

_Tightening torque:
26 N·m (2.65 kgf-m, 19.2 ft-lb)

8) Install the fuel tank protector.

NOTE:
Use a new nut.

_Tightening torque:
Nut
9.0 N·m (0.92 kgf-m, 6.6 ft-lb)
Bolt
17.5 N·m (1.78 kgf-m, 12.9 ft-lb)
23. Fuel Tank

A: REMOVAL

WARNING:
• Place “NO FIRE” signs near the working area.
• Be careful not to spill fuel on the floor.

1) Set the vehicle on a lift.
2) Release the fuel pressure.
   <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Drain fuel from the fuel tank.
   <Ref. to FU(H4SO 2.5)-40, DRAINING FUEL, PROCEDURE, Fuel.>
4) Remove the rear seat.
5) Remove the service hole cover from fuel pump.
   (1) Remove the bolts (A).
   (2) Push the grommet (B) down under the body and remove service hole cover.

6) Disconnect the connector from fuel pump.

7) Remove the service hole cover from fuel sub level sensor.
   (1) Remove the bolts (A).

8) Disconnect the connector (A) from fuel sub level sensor.
9) Disconnect the quick connector from the fuel delivery (B) and return hose (C).
   <Ref. to FU(H4SO 2.5)-55, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

10) Remove the rear wheels.
11) Remove the bolts which secure the rear brake hose installation bracket.
12) Remove the rear brake caliper and tie it to the vehicle body side.

13) Remove the parking brake cable from parking brake assembly. <Ref. to PB-7, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

14) Lift-up the vehicle.

15) Remove the rear exhaust pipe. <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.>

16) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>

17) Remove the heat shield cover.

18) Disconnect the connector from rear ABS wheel speed sensor.

19) Remove the bolts which install the parking brake cable clamp.

20) Remove the rear suspension assembly.

**CAUTION:**

A helper is required to perform this work.

(1) Support the rear differential with transmission jack.

(2) Remove the bolt which installs the rear shock absorber to rear suspension arm.
(3) Remove the bolts which secure the rear suspension assembly to body.

(4) Remove the rear suspension assembly.
21) Disconnect the two-way valve hose (A) from two-way valve, and then remove the two-way valve from bracket.

22) Loosen the clamp and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.

23) Support the fuel tank with transmission jack, remove the bolts from fuel tank bands, and dismount the fuel tank from vehicle.

WARNING:
A helper is required to perform this work.

B: INSTALLATION
1) Support the fuel tank with transmission jack, set the fuel tank, and then temporarily tighten the bolts of fuel tank band.

WARNING:
A helper is required to perform this work.
2) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

3) Install the two-way valve to bracket, and connect the two-way valve hose (A) to two-way valve.

4) Tighten the bolts of fuel tank band.

**Tightening torque:**

- **T1:** 125 N·m (12.7 kgf-m, 92.2 ft-lb)
- **T2:** 65 N·m (6.2 kgf-m, 48 ft-lb)
- **T3:** 175 N·m (17.8 kgf-m, 129 ft-lb)

5) Install the rear suspension assembly.

**CAUTION:**

A helper is required to perform this work.

- (1) Support the rear differential with transmission jack.
- (2) Support the rear suspension assembly, and then tighten the bolts which secure the rear suspension assembly to body.
6) Tighten the bolts which install the parking brake cable clamp.

**Tightening torque:**

\[18 \text{ N} \cdot \text{m (1.8 kgf-m, 13.0 ft-lb)}\]

7) Connect the connector to rear ABS wheel speed sensor.

**Tightening torque:**

\[32 \text{ N} \cdot \text{m (3.3 kgf-m, 23.9 ft-lb)}\]

8) Install the heat shield cover.
9) Install the propeller shaft. *Ref. to DS-11, INSTALLATION, Propeller Shaft.*
10) Install the rear exhaust pipe. *Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.*
11) Lower the vehicle.
12) Connect the parking brake cable to parking brake assembly. *Ref. to PB-8, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).*
13) Install the rear brake caliper.
14) Tighten the bolt which secures rear brake hose installation bracket.

**Tightening torque:**

\[33 \text{ N} \cdot \text{m (3.4 kgf-m, 25 ft-lb)}\]

15) Install the rear wheels.
16) Lower the vehicle.
17) Connect the connector (A) to fuel sub level sensor.
18) Connect the quick connector to the fuel delivery (B) and return hose (C). *Ref. to FU(H4SO 2.5)-56, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.*

**NOTE:**
Be careful not to misconnect the delivery side and return side.

19) Install the service hole cover of fuel sub level sensor.

*(A) Bolt  (B) Grommet*
20) Connect the connector to fuel pump.

21) Install the service hole cover of fuel pump.

22) Install the rear seat.
23) Install the fuse of fuel pump to main fuse box.

C: INSPECTION
1) Check that the fuel tank is not holed, cracked or otherwise damaged.
2) Make sure that the fuel hoses and fuel pipes are not cracked and those connections are tight.
24. Fuel Filler Pipe

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Release the fuel pressure.
   <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the filler cap.
3) Disconnect the ground cable from battery.
4) Remove the screws which secure the packing.
5) Lift-up the vehicle.
6) Remove the rear wheel RH.
7) Set a container under the vehicle, and remove the drain plug from the fuel tank to drain fuel from fuel tank.
8) Tighten the fuel drain plug.
   NOTE:
   Use a new gasket.

Tightening torque:
26 N·m (2.65 kgf-m, 19.2 ft-lb)

9) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
10) Remove the rear sub frame. <Ref. to RS-23, REMOVAL, Rear Sub Frame.>
11) Remove the bolts which hold the fuel filler pipe bracket on the body.
12) Loosen the clamp and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.
13) Remove the fuel filler pipe to under side of the vehicle.
B: INSTALLATION

1) Open the fuel filler flap lid.
2) Set the fuel saucer (A) with rubber packing (C) and insert the fuel filler pipe into hole from the inner side of apron.
3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

NOTE:
If the edges of rubber packing are folded toward the inside, straighten it with a flat tip screwdriver.

4) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

5) Tighten the bolts which hold the fuel filler pipe bracket on the body.

Tightening torque: 7.5 N m (0.75 kgf-m, 5.4 ft-lb)

6) Install the rear sub frame. <Ref. to RS-23, INSTALLATION, Rear Sub Frame.>
7) Install the mud guard. <Ref. to EI-29, INSTALLATION, Mud Guard.>
8) Install the rear wheel RH.

9) Lower the vehicle.
10) Install the fuse of fuel pump to main fuse box.
11) Connect the battery ground cable to battery.
Fuel Pump

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

NOTE:
Fuel pump assembly consists of fuel pump and fuel level sensor.

1) Release the fuel pressure.
   <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Drain the fuel. <Ref. to FU(H4SO 2.5)-40, DRAINING FUEL, PROCEDURE, Fuel.>
3) Remove the rear seat.
4) Remove the service hole cover.
   (1) Remove the bolts (A).
   (2) Push the grommet (B) down under the body and remove the service hole cover.
5) Disconnect the connector from fuel pump.
6) Disconnect the quick connector and then disconnect the fuel delivery hose, return hose and jet pump hose. <Ref. to FU(H4SO 2.5)-55, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
7) Remove the nuts which install the fuel pump assembly onto fuel tank.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.
(1) Ensure the sealing portion is free from fuel or foreign particles before installation.
(2) Tighten the nuts to specified torque in the order as shown in the figure.

Tightening torque:
4.4 Nm (0.45 kgf-m, 3.3 ft-lb)

C: INSPECTION

Connect the lead harness to the connector terminal of fuel pump and apply the battery power supply to check whether the pump operates.

WARNING:
- Wipe off the fuel completely.
- Keep battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply to ON and OFF on the battery side.
• Do not run fuel pump for a long time under non-load condition.
26. Fuel Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:
Fuel level sensor is built in fuel pump assembly.
1) Remove the fuel pump assembly.  <Ref. to FU(H4SO 2.5)-49, REMOVAL, Fuel Pump.>
2) Disconnect the connector from fuel pump bracket.
3) Remove the fuel level sensor.

B: INSTALLATION
Install in the reverse order of removal.
27. Fuel Sub Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

1) Drain fuel. *<Ref. to FU(H4SO 2.5)-40, DRAINING FUEL, PROCEDURE, Fuel.>*
2) Remove the rear seat.
3) Remove the service hole cover.
   (1) Remove the bolts (A).
   (2) Push the grommet (B) down under the body and remove the service hole cover.
4) Disconnect the connector from fuel sub level sensor.
5) Disconnect the quick connector and then disconnect the fuel delivery hose, return hose and jet pump hose. *<Ref. to FU(H4SO 2.5)-55, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>*
6) Remove the nuts and bolts which install the fuel sub level sensor on fuel tank.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.
(1) Ensure the sealing portion is free from fuel or foreign particles before installation.
(2) Tighten the nuts and bolts to specified torque in the order as shown in the figure.

**Tightening torque:**
4.4 N·m (0.45 kgf-m, 3.3 ft-lb)
28. Fuel Filter

A: SPECIFICATION
Fuel filter forms a unit with fuel pump.
Refer to Fuel Pump for removal and installation.
<Ref. to FU(H4SO 2.5)-49, REMOVAL, Fuel Pump.>
<Ref. to FU(H4SO 2.5)-49, INSTALLATION, Fuel Pump.>
Fuel Damper Valve

A: REMOVAL

1. DELIVERY SIDE

1) Release the fuel pressure.
<Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Remove the fuel damper valve from fuel delivery line.

2. RETURN SIDE

Fuel damper valve forms a unit with fuel injector pipe RH.
Refer to “Intake Manifold” for removal. <Ref. to FU(H4SO 2.5)-15, DISASSEMBLY, Intake Manifold.>

B: INSTALLATION

1. DELIVERY SIDE

Install in the reverse order of removal.

_Tightening torque:_

\[ 1.25 \text{ N\cdot m (0.13 kgf\cdot m, 0.94 ft\cdot lb)} \]

2. RETURN SIDE

Fuel damper valve forms a unit with fuel injector pipe RH.
Refer to “Intake Manifold” for installation. <Ref. to FU(H4SO 2.5)-17, ASSEMBLY, Intake Manifold.>
30. Fuel Delivery, Return and Evaporation Lines

**A: REMOVAL**

1) Set the vehicle on a lift.
2) Release the fuel pressure. <Ref. to FU(H4SO 2.5)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Remove the floor mat. <Ref. to EI-73, REMOVAL, Floor Mat.>
5) Disconnect the fuel delivery pipes and hoses, and then disconnect the fuel return pipes and hoses, evaporation pipes and hoses.
6) In the engine compartment, disconnect the fuel delivery hoses, return hoses, and evaporation hose.
7) Lift-up the vehicle.
8) Remove the fuel tank. <Ref. to FU(H4SO 2.5)-41, REMOVAL, Fuel Tank.>
9) Separate the quick connector on fuel line.
   (1) Clean the pipe and connector, if they are covered with dust.
   (2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag, etc.
(3) Hold the connector (A) and push retainer (B) down.
(4) Pull out the connector (A) from retainer (B).

CAUTION:
Always use a new retainer.

B: INSTALLATION
1) Connect the quick connector on fuel line.

CAUTION:
• Always use a new retainer.
• Make sure that the connected portion is not damaged or dust-covered. If necessary, clean the seal surface of pipe.

(1) Set the new retainer (B) to connector (A).

(2) Push the pipe into the connector completely.

CAUTION:
• Pull the connector to ensure it is connected securely.
• Ensure the two retainer pawls are engaged in their mating positions in the connector.
• Be sure to inspect the hoses and their connections for fuel leakage.

2) Connect the fuel delivery hose to the pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).
Type A: When the amount to be inserted is specified.
Type B: When the amount to be inserted is not specified.
Fuel Delivery, Return and Evaporation Lines

Fuel Injection (Fuel Systems)

\[ q : 2.5 \pm 1.5 \text{ mm (0.098} \pm 0.059 \text{ in)} \]

\[ L : 22.5 \pm 2.5 \text{ mm (0.886} \pm 0.098 \text{ in)} \]

3) Connect the return hose and evaporation hose to the pipe by approx. 15 mm (0.59 in) from hose end.

**Fuel return hose:**

\[ L = 22.5 \pm 2.5 \text{ mm (0.885} \pm 0.098 \text{ in)} \]

**Fuel evaporation hose:**

\[ L = 17.5 \pm 2.5 \text{ mm (0.689} \pm 0.098 \text{ in)} \]

**CAUTION:**

Be sure to inspect the hoses and their connections for fuel leakage.

C: INSPECTION

1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
2) Make sure the fuel pipe and fuel hose connections are tightened firmly.

**NOTE:**
- When the vehicle is left unused for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent those problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent each time the fuel is reduced to half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain the water from both the fuel filter and fuel tank or use water removing agent in the fuel tank.
- Before using water removing agent, follow the cautions noted on the bottle.

| **1** CHECK ENGINE START FAILURE.  
  1) Ask the customer when and how the trouble occurred using the interview check list.  
  <Ref. to EN(H4SO 2.5)(diag)-3, CHECK, Check List for Interview.>  
  2) Start the engine. | Does the engine start? | Go to step 2. | Inspection using “Diagnostics for Engine Starting Failure”, <Ref. to EN(H4SO 2.5)(diag)-54, Diagnostics for Engine Starting Failure.> |
| **2** CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT. | Does the malfunction indicator light illuminate? | Go to step 3. | Inspection using “General Diagnostic Table”. <Ref. to EN(H4SO 2.5)(diag)-261, INSPECTION, General Diagnostic Table.> |
| **3** CHECK INDICATION OF DTC ON DISPLAY.  
  1) Turn the ignition switch to OFF.  
  2) Connect the Subaru Select Monitor to data link connector.  
  3) Turn the ignition switch to ON, and the Subaru Select Monitor switch to ON.  
  4) Read DTC on Subaru Select Monitor. | Is DTC displayed on the Subaru Select Monitor? | Record the DTC. Repair the trouble cause. <Ref. to EN(H4SO 2.5)(diag)-70, List of Diagnostic Trouble Code (DTC).> Go to step 4. | Repair the related parts.  
  NOTE: If DTC is not shown on display although the engine warning light illuminates, perform the diagnostics of malfunction indicator light circuit or combination meter. <Ref. to EN(H4SO 2.5)(diag)-44, Malfunction Indicator Light.> |
| **4** PERFORM DIAGNOSIS.  
  1) Perform the clear memory mode. <Ref. to EN(H4SO 2.5)(diag)-41, Clear Memory Mode.>  
  2) Perform the inspection mode. <Ref. to EN(H4SO 2.5)(diag)-34, Inspection Mode.> | Is DTC displayed on the Subaru Select Monitor? | Check on “Diagnostic Chart with Diagnostic Trouble Code (DTC)” <Ref. to EN(H4SO 2.5)(diag)-80, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> | Finish the diagnosis. |

3. General Description

**A: CAUTION**

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

**CAUTION:**
- All airbag system wiring harnesses and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.
   - The ECM will be destroyed instantly.
   - The fuel injector and other parts will be damaged.

3) Do not disconnect the battery terminals while the engine is running.
   - A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and ECM, be sure to turn the ignition switch to OFF. Perform the inspection mode after connecting the connectors.

5) Poor contact has been identified as a primary cause of this problem. Measure the voltage or resistance of individual sensor or all electrical control modules using a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Remove the ECM from the located position after disconnecting two cables on battery. Otherwise, the ECM may be damaged.

**CAUTION:**

When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on the fuel injection system.

**NOTE:**

Immobilizer system must be registered when installing the ECM of the model with immobilizer. For doing so, all ignition keys and ID cards should be prepared. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

7) Connectors of each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts as the grounding point to chassis when measuring voltage and resistance inside the passenger compartment.

9) Use engine grounding terminal or engine as the grounding point to the chassis when measuring voltage and resistance in the engine compartment.

10) Use TCM mounting stud bolts as the grounding point to chassis when measuring voltage and resistance inside the passenger compartment.

11) Every MFI-related part is a precision part. Do not drop them.

12) Observe the following cautions when installing a radio in MFI equipped models.

**CAUTION:**
- The antenna must be kept as far apart as possible from the control unit. (The ECM is located under the steering column, inside of instrument panel lower trim panel.)
General Description

- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items mentioned above.
- Incorrect installation of the radio may affect the operation of ECM.

13) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

14) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes must be distinguished clearly when performing diagnostics.

15) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer’s complaint, and distinguish between the three causes.

16) For AT models, do not hold the stall for more than five seconds. (from closed throttle, fully open throttle to stall engine speed.)

17) On the model with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clear procedure of self-diagnosis function.

**B: INSPECTION**

Before performing diagnostics, check the following items which might affect engine problems.

1. **BATTERY**

   1) Measure battery voltage and specific gravity of electrolyte.

   *Standard voltage: 12 V*

   *Specific gravity: Above 1.260*

   2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. **ENGINE GROUND**

   Make sure the engine grounding terminal is properly connected to engine.

3. **SELF-DIAGNOSIS FUNCTION**

   When detecting a malfunction by self-diagnosis function on ECM, malfunction indicator light illuminates and malfunction occurrence is displayed. Calling the self-diagnosis result is performed by the Subaru Select Monitor.

Measuring condition:
• After engine is warmed-up.
• Gear position is in “N” or “P” range.
• A/C is turned OFF.
• All accessory switches are turned OFF.
7. Data Link Connector

A: NOTE
This connector is used for Subaru Select Monitor.

CAUTION:
Do not connect any scan tools except for Subaru Select Monitor or OBD-II general scan tool, because the circuit for Subaru Select Monitor may be damaged.

8. OBD-II General Scan Tool

A: OPERATION

1. HOW TO USE OBD-II GENERAL SCAN TOOL

1) Prepare a general scan tool (OBD-II general scan tool) required by SAE J1978.
2) Open the cover and connect the OBD-II general scan tool to data link connector located in the lower portion of instrument panel (on the driver’s side).

3) Using the OBD-II general scan tool, call up DTC and freeze frame data.

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refer to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

<table>

NOTE:
Refer to OBD-II general scan tool manufacturer’s instruction manual to access generic OBD-II PIDs (MODE $01).
3. **MODE $02 (POWERTRAIN FREEZE FRAME DATA)**

Refer to data denoting the operating condition when trouble is detected by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

<table>

**NOTE:**
Refer to OBD-II general scan tool manufacturer’s operation manual to access freeze frame data (MODE $02)

4. **MODE $03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE (DTC))**

Refer to “Read Diagnostic Trouble Code (DTC)” for information about data denoting emission-related powertrain DTC. <Ref. to EN(H4SO 2.5)(diag)-33, Read Diagnostic Trouble Code (DTC)>.

5. **MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)**

Refer to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

**NOTE:**
Refer to OBD-II general scan tool manufacturer’s operation manual to clear or reset emission-related diagnostic information (MODE $04).

6. **MODE $06**

Refer to test value of troubleshooting and data of test limit on support data bit sequence table. List of support data is shown in the following table.

7. **MODE $07**

Refer to the data of DTC (pending code) for troubleshooting result about emission in first time.

8. **MODE $09**

Refer to the data of vehicle specification (VIN, calibration ID, etc.).
9. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO 2.5)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4SO 2.5)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.
   (1) Data link connector is located in the lower portion of instrument panel (on the driver’s side).

5) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

6) Using the Subaru Select Monitor, call up DTC and data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTCs. <Ref. to EN(H4SO 2.5)(diag)-33, Read Diagnostic Trouble Code (DTC).>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (OBD MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTCs. <Ref. to EN(H4SO 2.5)(diag)-33, Read Diagnostic Trouble Code (DTC).>

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor or OBD-II general scan tool.
4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
6) Using the scroll key, scroll the display screen up or down until the desired data is shown.

5. READ CURRENT DATA FOR ENGINE (OBD MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {OBD system} and press the [YES] key.
5) On the «OBD Menu» display screen, select the {Current Data Display/Save}, and press the [YES] key.
6) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
7) Using the scroll key, scroll the display screen up or down until the desired data is shown.

10. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» screen, select the {DTC Display}, and then press the [YES] key.
5) On the «Diagnostic Code(s) Display» screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

NOTE:
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO 2.5)(diag)-70, List of Diagnostic Trouble Code (DTC).>

2. SUBARU SELECT MONITOR (OBD MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
5) On the «OBD Menu» display screen, select the {DTC Display} and press the [YES] key.
6) Make sure DTC is shown on the screen.

NOTE:
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO 2.5)(diag)-70, List of Diagnostic Trouble Code (DTC).>
### 11. Inspection Mode

#### A: PROCEDURE

Carry out trouble diagnosis shown in the following DTC table.
When performing trouble diagnosis which is not shown in the DTC table, refer to the next item Drive cycle.

1. PREPARATION FOR THE INSPECTION MODE

1) Check if the battery voltage is more than 12 V and fuel remains half [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Lift-up the vehicle using a garage jack and place it on rigid racks, or drive the vehicle onto free rollers.

WARNING:
• Before lifting-up the vehicle, ensure parking brakes are applied.
• Do not use a pantograph jack in place of a rigid rack.
• Secure a rope or wire to the front or rear towing hooks to prevent the lateral runout of front wheels.
• Do not abruptly depress/release clutch pedal or accelerator pedal during works even when the engine is operating at low speeds since this may cause vehicle to jump off free rollers.
• In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and vehicle.
• Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

2. SUBARU SELECT MONITOR

1) After clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO 2.5)(diag)-41, Clear Memory Mode.>
2) Idle the engine.
3) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO 2.5)(diag)-7, PREPARATION TOOL, General Description.>
4) Connect the diagnosis cable to Subaru Select Monitor.
5) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4SO 2.5)(diag)-7, PREPARATION TOOL, General Description.>
6) Connect the test mode connector (A) located at the lower portion of glove box.
7) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor or OBD-II general scan tool.

8) Turn the ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

9) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

10) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.

11) Press the [YES] key after the information of engine type has been displayed.

12) On the «Engine Diagnosis» screen, select the {D Check} and press the [YES] key.

13) When the “Perform D Check?” is shown on the screen, press the [YES] key.

14) Perform subsequent procedures as instructed on the display screen.

- The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clear procedure of self-diagnosis function.

3. OBD-II GENERAL SCAN TOOL

1) After performing the diagnostics and clearing memory, check for any remaining unresolved trouble data: <Ref. to EN(H4SO 2.5)(diag)-41, Clear Memory Mode.>

2) Warm up the engine.

3) Connect the test mode connector (A) at the lower side of globe box.

4) Connect the OBD-II general scan tool to its data link connector in the lower portion of instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor or OBD-II general scan tool.

5) Start the engine.

NOTE:
- Ensure the select lever is placed in “P” range before starting. (AT model)
- Depress the clutch pedal when starting engine. (MT model)

6) Using the select lever or shift lever, turn the “P” position switch and “N” position switch to ON.

7) Depress the brake pedal to turn brake switch ON. (AT model)

8) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.

• Release the parking brake.

NOTE:
• For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
• For the details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”.<Ref. to EN(H4SO 2.5)(diag)-70, List of Diagnostic Trouble Code (DTC).>
Inspection Mode

9) Place the select lever or shift lever in “D” range (AT model) or “1st” gear (MT model) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:
• On AWD model, release the parking brake.
• The speed difference between front and rear wheels may light ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

10) Using the OBD-II general scan tool, check for DTC and record the result(s).

NOTE:
• For detailed operation procedures, refer to the operation manual of OBD-II general scan tool.
• For detailed concerning DTC, refer to “List of Diagnostic Trouble Code (DTC)”.

<Ref. to EN(H4SO 2.5)(diag)-70, List of Diagnostic Trouble Code (DTC).>
12. Drive Cycle

A: PROCEDURE

There are three drive patterns for the trouble diagnosis. Driving in the specified pattern allows to diagnose malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check whether they correctly resume their functions by driving in the required drive pattern.

1. PREPARATION FOR THE DRIVE CYCLE

1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12 V or more.
2) After performing the diagnostics and cleaning memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO 2.5)(diag)-41, Clear Memory Mode.>
3) Separate the test mode connector.

NOTE:
- Except for the engine coolant temperature specified items at starting, the diagnosis is carried out after engine warm up.
- Carry out the diagnosis which is marked * on DTC twice, then, after finishing first diagnosis, stop the engine and do second time at the same condition.

2. AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE.

13. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {Memory Clear} and press the [YES] key.
5) When the “Done” and “Turn Ignition Switch OFF” are shown on the display screen, turn the ignition switch to OFF and then Subaru Select Monitor switch to OFF.

NOTE:
- Initial diagnosis of electronic control throttle is performed after memory clearance. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

2. SUBARU SELECT MONITOR (OBD MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
5) On the «OBD Menu» display screen, select the {DTC Clear} and press the [YES] key.
6) When the “Perform Diagnostic Code(s) Clear?” is shown on the screen, press the [YES] key.
7) Turn the ignition switch to OFF and then turn the Subaru Select Monitor switch to OFF.

NOTE:
- Initial diagnosis of electronic control throttle is performed after memory clearance. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.
- For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

14. Compulsory Valve Operation Check Mode

A: OPERATION
1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO 2.5)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4SO 2.5)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) located at the lower portion of glove box.
5) Connect the Subaru Select Monitor to data link connector located in the lower portion of instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor or OBD-II general scan tool.

6) Turn the ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

7) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
8) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
9) Press the [YES] key after the information of engine type has been displayed.
10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.
11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.
12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.
13) Pressing the [NO] key completes the compulsory valve operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light (A) in the combination meter illuminates.

NOTE:
If the malfunction indicator light does not illuminate, perform the diagnosis of malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H4SO 2.5)(diag)-46, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or emission control system is malfunctioning.

3) Turn the ignition switch to OFF and connect the test mode connector.
   (1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light illuminates.
   (2) Malfunction indicator light blinks at a cycle of 0.5 Hz after starting the engine. (During diagnosis)
   (3) Malfunction indicator light blinks at a cycle of 3 Hz after diagnosis if there is no trouble. Malfunction indicator light illuminates if faulty.

# Diagnostics for Engine Starting Failure

## ENGINE (DIAGNOSTICS)

### Step 6: Check Input Signal for Ignition Coil & Ignitor Assy.

1. Connect the connector to ignition coil & ignitor Assy.
2. Check if voltage varies synchronously with engine speed when cranking, while monitoring voltage between ignition coil & ignitor Assy connector and engine ground.

**Connector & terminal**
- (E12) No. 1 (+) — Engine ground (−)
- (E12) No. 4 (+) — Engine ground (−)

**Check:** Does the voltage vary more than 10 V?

**Yes:** Go to step 7.

**No:** Replace the ignition coil & ignitor Assy. <Ref. to IG(H4SO 2.0)-8, Ignition Coil & Ignitor Assy.>

### Step 7: Check Harness Between ECM and Ignition Coil & Ignitor Assy Connector.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ECM.
3. Disconnect the connector from ignition coil & ignitor Assy.
4. Measure the resistance of harness between ECM and ignition coil & ignitor Assy connector.

**Connector & terminal**
- (B135) No. 18 — (E12) No. 1
- (B135) No. 17 — (E12) No. 4

**Check:** Is the resistance less than 1 Ω?

**Yes:** Go to step 8.

**No:** Repair the harness and connector.

**NOTE:** In this case, repair the following:
- Open circuit in harness between ECM and ignition coil & ignitor Assy connector
- Poor contact in coupling connector

### Step 8: Check Harness Between ECM and Ignition Coil & Ignitor Assy Connector.

Measure the resistance of harness between ECM and engine ground.

**Connector & terminal:**
- (B135) No. 18 — Engine ground
- (B135) No. 17 — Engine ground

**Check:** Is the resistance more than 1 MΩ?

**Yes:** Go to step 9.

**No:** Repair the ground short circuit in harness between ECM and ignition coil & ignitor Assy connector.

### Step 9: Check Poor Contact.

Check poor contact in ECM connector.

**Check:** Is there poor contact in ECM connector?

**Yes:** Repair the poor contact in ECM connector.

**No:** Check fuel pump circuit. <Ref. to EN(H4SO 2.5)(diag)-64, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>

### Step 2: Check Operation of Each Fuel Injector.
- While cranking the engine, check each fuel injector emits operating sound. Use a sound scope or apply a screwdriver to the injector for this check.
- Does the fuel pump emit operating sound? Check the fuel pressure. <Ref. to ME(H4SO 2.0)-27, INSPECTION, Fuel Pressure.> Go to step 3.

### Step 3: Check Power Supply to Each Fuel Injector.
1) Turn the ignition switch to OFF.
2) Disconnect the connector from fuel injector.
3) Turn the ignition switch to ON.
4) Measure the power supply voltage between fuel injector terminal and engine ground.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

**Check:** Is the voltage less than 1 V?

- **Yes:** Replace the ECM. 
  
  &lt;Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).&gt; 
  
- **No:** Repair the battery short circuit in harness between ECM and rear oxygen sensor connector. After repair, replace the ECM.  
  
  &lt;Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).&gt; 

### Step 7: CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.
1. Turn the ignition switch to OFF.
2. Disconnect the connector from rear oxygen sensor.
3. Turn the ignition switch to ON.
4. Measure the voltage between rear oxygen sensor connector and chassis ground.
   **Connector & terminal**
   
   - **(B19) No. 2 (+) — Chassis ground (−):**

**Check:** Is the voltage more than 10 V?

- **Go to step 8.**
- **Yes:** Repair the power supply line.
  
  **NOTE:** In this case, repair the following:
  - Open circuit in harness between main relay and rear oxygen sensor connector
  - Poor contact in rear oxygen sensor connector
  - Poor contact in coupling connector

### Step 8: CHECK REAR OXYGEN SENSOR.
1. Turn the ignition switch to OFF.
2. Measure the resistance between rear oxygen (A/F) sensor connector terminals.
   **Terminals**
   
   - **No. 1 — No. 2:**

**Check:** Is the resistance less than 30 Ω?

- **Yes:** Repair the harness and connector.
  
  **NOTE:** In this case, repair the following:
  - Open circuit in harness between rear oxygen sensor and ECM connector
  - Poor contact in rear oxygen sensor connector
  - Poor contact in ECM connector
  - Poor contact in coupling connector
- **No:** Replace the rear oxygen sensor.

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### 8 CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR CONNECTOR.

1) Turn the ignition switch to OFF.
2) Disconnect the connector from manifold absolute pressure sensor.
3) Turn the ignition switch to ON.
4) Measure the voltage between manifold absolute pressure sensor connector and engine ground.

**Connector & terminal**

(E21) No. 3 (+) — Engine ground (−):

Is the voltage more than 4.5 V?  
- **Yes**  
  Go to step 9.  
  Repair the open circuit in harness between ECM and manifold absolute pressure sensor connector.
- **No**  
  Go to step 9.

#### 9 CHECK HARNESS BETWEEN ECM AND MANIFOLD ABSOLUTE PRESSURE SENSOR CONNECTOR.

1) Turn the ignition switch to OFF.
2) Disconnect the connector from ECM.
3) Measure the resistance of harness between ECM and manifold absolute pressure sensor connector.

**Connector & terminal**

(B136) No. 35 — (E21) No. 2:

Is the resistance less than 1 Ω?  
- **Yes**  
  Go to step 10.  
  Repair the open circuit in harness between ECM and manifold absolute pressure sensor connector.
- **No**  
  Repair the poor contact in manifold absolute pressure sensor connector.

#### 10 CHECK POOR CONTACT.

Check poor contact in manifold absolute pressure sensor connector.

Is there poor contact in manifold absolute pressure sensor connector?  
- **Yes**  
  Repair the poor contact in manifold absolute pressure sensor connector.
- **No**  
  Replace the manifold absolute pressure sensor. <Ref. to FU(H4SO 2.5)-25, Manifold Absolute Pressure Sensor.>

*Warning:*  
- Place “NO FIRE” signs near the working area.  
- Be careful not to spill fuel.  
1) Release the fuel pressure.  
   (1) Disconnect the connector from fuel pump relay.  
   (2) Start the engine and run it until it stalls.  
   (3) After the engine stalls, crank it for five more seconds.  
   (4) Turn the ignition switch to OFF.  
2) Connect the connector to fuel pump relay.  
3) Disconnect the fuel delivery hose, and connect the fuel pressure gauge.  
4) Install the fuel filler cap.  
5) Start the engine and idle while gear position is neutral.  
6) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

General Description

**C: CAUTION**
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

2. Throttle Body

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the intercooler. <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
4) Disconnect the connectors from throttle position sensor.
5) Disconnect the engine coolant hose from throttle body.
6) Remove the bolts which secure throttle body to intake manifold.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Always use new O-rings.
3. Intake Manifold

A: REMOVAL

1) Release the fuel pressure.  
   <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Remove the collector cover.
4) Disconnect the ground cable from battery.

5) Lift-up the vehicle.
6) Remove the under cover.
7) Drain the coolant about 3.0 L (3.2 US qt, 2.6 Imp qt).
8) Remove the intake duct from air cleaner case.
9) Remove the intercooler.  <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
10) Remove the generator.  <Ref. to SC(H4SO2.0)-14, REMOVAL, Generator.>
11) Remove the coolant filler tank.  
    <Ref. to CO(H4DOTC)-31, REMOVAL, Coolant Filler Tank.>
12) Disconnect the PCV hose assembly from cylinder block.
13) Disconnect the engine coolant hose from throttle body.
14) Disconnect the brake booster hose.
15) Disconnect the engine harness connectors from bulkhead harness connectors.
16) Disconnect the connectors from the engine coolant temperature sensor (A), oil pressure switch (B) and crankshaft position sensor (C).

17) Disconnect the knock sensor connector.

18) Disconnect the connector from intake camshaft position sensor.

19) Disconnect the connector from the intake oil flow control solenoid valve.

20) Disconnect the connector from the exhaust camshaft position sensor (A) and exhaust oil flow control solenoid valve (B).

21) Disconnect the connector from ignition coil.

22) Remove the engine harness bracket from rocker cover.

23) Disconnect the fuel delivery hose, return hose and evaporation hose.
CAUTION:
- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

NOTE:
If fuel hoses or clamps are damaged, replace them with new ones.

24) Remove the bolts which hold intake manifold onto the cylinder heads.

3) Tighten the hose clamp screws.

**Tightening torque:**
\[ 1.25 \text{ N} \cdot \text{m} \text{ (0.13 kgf-m, 0.94 ft-lb)} \]

4) Connect the connector to the exhaust camshaft position sensor (A) and exhaust oil flow control solenoid valve (B).

5) Connect the connector to intake oil flow control solenoid valve.

25) Remove the intake manifold.

**B: INSTALLATION**

1) Install the intake manifold onto cylinder heads.

NOTE:
Use a new gasket.

**Tightening torque:**
\[ 25 \text{ N} \cdot \text{m} \text{ (2.5 kgf-m, 18.1 ft-lb)} \]

2) Connect the fuel delivery hose, return hose and evaporation hose.
6) Connect the connector to the engine coolant temperature sensor (A), oil pressure switch (B) and crankshaft position sensor (C).

7) Connect the connector to knock sensor.

8) Connect the connector to intake camshaft position sensor.

9) Connect the connector to ignition coil.

10) Install the engine harness bracket to rocker cover.

11) Connect the engine harness connector to bulkhead harness connector.

12) Connect the brake booster hose.
Intake Manifold

13) Connect the engine coolant hose to throttle body.

14) Connect the PCV hose assembly to cylinder block.

15) Install the coolant filler tank.  
<Ref. to CO(H4DOTC)-31, INSTALLATION, Coolant Filler Tank.>

16) Install the intercooler.  <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>

17) Install the intake duct to air cleaner case.

18) Install the fuse of fuel pump to main fuse box.

19) Connect the battery ground cable to battery.

20) Lift-up the vehicle.

21) Install the under cover.

22) Fill with engine coolant.  
<Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

23) Install the collector cover.

C: DISASSEMBLY

1) Disconnect the engine ground terminal from ground stay.

2) Remove the solenoid valve bracket assembly from intake manifold, and disconnect the connector from the wastegate control solenoid valve, manifold absolute pressure sensor and purge control solenoid valve.

3) Disconnect the evaporation hoses (A) and filter assembly (B).

4) Disconnect the connectors from throttle position sensor.

5) Remove the throttle body from intake manifold.
6) Disconnect the connectors from fuel injector.

7) Remove the bolt which secures the air bypass pipe to intake manifold.

8) Disconnect the PCV pipe (A), harness assembly (B) and intake duct (C) from intake manifold.

9) Remove the bolt which holds fuel injector pipe LH onto the front side of intake manifold.

10) Remove the coolant filler tank stay from intake manifold.

11) Remove the bolts which hold fuel injector pipe onto intake manifold.

   • RH side

   • LH side

12) Remove the bolt which holds the fuel pipe to intake manifold.
13) Remove the fuel injectors.

14) Remove the bolts which hold the fuel injector pipe RH onto the lower side of intake manifold.

15) Loosen the clamp which holds fuel hose to injector pipe, and then disconnect the pipe from fuel hose.

16) Remove the fuel injector pipe.

17) Remove the intake manifold (upper) from intake manifold (lower).

D: ASSEMBLY

1) Install the intake manifold (lower) to intake manifold (upper).

NOTE:
Use new O-rings.

*Tightening torque:*
8.3 N·m (0.85 kgf-m, 6.1 ft-lb)

2) Install the fuel injector pipe.

3) Connect the both fuel injector pipes with a fuel hose and secure them with clamps.

4) Tighten the bolt which secures the fuel injector pipe RH onto the lower side of intake manifold.

*Tightening torque:*
6.5 N·m (0.66 kgf-m, 4.8 ft-lb)
5) Install the fuel injectors.

6) Tighten the bolt which secures fuel pipe onto intake manifold.

   **Tightening torque:**
   
   \[ 6.5 \text{ N} \cdot \text{m} (0.66 \text{ kgf-m, 4.8 ft-lb}) \]

7) Tighten the bolts which secure fuel injector pipe onto intake manifold.

   **Tightening torque:**
   
   \[ 19 \text{ N} \cdot \text{m} (1.94 \text{ kgf-m, 13.7 ft-lb}) \]

8) Install the coolant filler tank stay to intake manifold.

   **Tightening torque:**
   
   \[ 19 \text{ N} \cdot \text{m} (1.94 \text{ kgf-m, 13.7 ft-lb}) \]

9) Tighten the bolt which installs fuel injector pipe LH on the front side of intake manifold.

   **Tightening torque:**
   
   \[ 6.5 \text{ N} \cdot \text{m} (0.66 \text{ kgf-m, 4.8 ft-lb}) \]

10) Install the PCV pipe (A), harness assembly (B) and intake duct (C) to intake manifold.
11) Tighten the bolt which secures air bypass pipe onto intake manifold.

**Tightening torque:**
6.5 N·m (0.66 kgf·m, 4.8 ft-lb)

12) Connect the connectors to fuel injector.

13) Install the throttle body to intake manifold.

**NOTE:**
Use new O-rings.

14) Connect the connector to throttle position sensor.

**Tightening torque:**
8 N·m (0.8 kgf·m, 5.9 ft-lb)

15) Connect the evaporation hoses (A) and filter assembly (B).
NOTE:
Connect the evaporation hose as shown in the figure.

16) Connect the connector to the wastegate control solenoid valve, manifold absolute pressure sensor and purge control solenoid valve, and install the solenoid bracket assembly to intake manifold.

**Tightening torque:**
19 N·m (1.94 kgf-m, 13.7 ft-lb)

17) Install the engine ground terminal to ground stay.

**Tightening torque:**
19 N·m (1.94 kgf-m, 13.7 ft-lb)

**E: INSPECTION**
Make sure that the fuel hoses and fuel pipes are not cracked and that connections are tight.
4. Engine Coolant Temperature Sensor

A: REMOVAL

1) Remove the collector cover.
2) Disconnect the ground cable from battery.

3) Remove the generator. <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.>
4) Drain coolant. <Ref. to CO(H4DOTC)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
5) Disconnect the connectors from engine coolant temperature sensor.

6) Remove the engine coolant temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

\[ 18 \text{ Nm (1.8 kgf-m, 13.3 ft-lb)} \]
5. Crankshaft Position Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the bolt which installs crankshaft position sensor to cylinder block.
4) Remove the crankshaft position sensor, and disconnect the connector from it.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
\[ T: 6.4 \text{ Nm} \ (0.65 \text{ kgf-m, 4.7 ft-lb}) \]
6. Camshaft Position Sensor

A: REMOVAL

1. INTAKE SIDE
   1) Remove the collector cover.
   2) Disconnect the ground cable from battery.
   3) Disconnect the connector from camshaft position sensor RH.
   4) Remove the camshaft position sensor RH from the rear side of cylinder head.
   5) Remove the camshaft position sensor LH in the same procedure as RH.

2. EXHAUST SIDE
   1) Disconnect the ground cable from battery.
   2) Lift-up the vehicle.
   3) Remove the under cover.
   4) Remove the sensor cover.
   5) Disconnect the connector from camshaft position sensor RH.
   6) Remove the camshaft position sensor RH from the lower side of cylinder head.
   7) Remove the camshaft position sensor LH in the same procedure as RH.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.65 kgf·m, 4.7 ft-lb)
7. Knock Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the intercooler. <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
4) Disconnect the knock sensor connector.
5) Remove the knock sensor from cylinder block.

B: INSTALLATION
1) Install the knock sensor to cylinder block.
NOTE:
Extraction area of knock sensor cord must be positioned at a 60° angle relative to the engine rear.

Tightening torque:
24 N·m (2.4 kgf-m, 17.4 ft-lb)

2) Connect the knock sensor connector.
3) Install the intercooler. <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
4) Connect the battery ground cable to battery.
5) Install the collector cover.
8. Throttle Position Sensor

A: SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body. Refer to “Throttle Body” for removal and installation. <Ref. to FU(H4DOTC)-12, REMOVAL, Throttle Body.>  <Ref. to FU(H4DOTC)-12, INSTALLATION, Throttle Body.>
9. Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow and intake air temperature sensor.
3) Remove the mass air flow and intake air temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

_Tightening torque:_
1.0 N·m (0.10 kgf·m, 0.74 ft-lb)
10. Manifold Absolute Pressure Sensor

**A: REMOVAL**
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Disconnect the connector from manifold absolute pressure sensor (A), and remove the filter assembly (B) from intake manifold.
4) Remove the manifold absolute pressure sensor from solenoid valve bracket.

**B: INSTALLATION**
Install in the reverse order of removal.

*Tightening torque:*
6.5 N·m (0.66 kgf-m, 4.8 ft-lb)
11. Fuel Injector

A: REMOVAL

1. RH SIDE

1) Release the fuel pressure.
   <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the fuel filler cap.
3) Remove the collector cover.
4) Disconnect the ground cable from battery.

5) Remove the coolant filler tank.
   <Ref. to CO(H4DOTC)-31, REMOVAL, Coolant Filler Tank.>
6) Disconnect the connector from fuel injector.
7) Remove the screw and remove the fuel injector.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
3.5 N·m (0.36 kgf-m, 2.6 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
3.5 N·m (0.36 kgf-m, 2.6 ft-lb)
12. Oil Flow Control Solenoid Valve

A: REMOVAL

1. INTAKE SIDE

Oil flow control solenoid valve forms a unit with camshaft cap.
Refer to “Camshaft” for removal. <Ref. to ME(H4DOTC)-53, REMOVAL, Camshaft.>

2. EXHAUST SIDE

1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.
3) Remove the under cover.
4) Remove the oil flow control solenoid valve from cylinder head.

B: INSTALLATION

1. INTAKE SIDE

Install in the reverse order of removal.

2. EXHAUST SIDE

Install in the reverse order of removal.
13. Wastegate Control Solenoid Valve

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Disconnect the connector from wastegate control solenoid valve (A).
4) Disconnect the pressure hose (B) from wastegate control solenoid valve.
5) Remove the wastegate control solenoid valve from bracket.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
6.5 N·m (0.66 kgf-m, 4.8 ft-lb)
14. Front Oxygen (A/F) Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Disconnect the connector from front oxygen (A/F) sensor.
4) Apply spray-type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
5) Remove the front oxygen (A/F) sensor.

CAUTION:
When removing the oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

B: INSTALLATION
1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound:
SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to protector of front oxygen (A/F) sensor.
2) Install the front oxygen (A/F) sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)
15. Rear Oxygen Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle.
3) Disconnect the connector from rear oxygen sensor.
4) Apply spray-type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
5) Remove the rear oxygen sensor.

CAUTION:
When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

B: INSTALLATION
1) Before installing rear oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of rear oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound:
SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to protector of rear oxygen sensor.
2) Install the rear oxygen sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)
16. Engine Control Module (ECM)  

A: REMOVAL  
1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger side.  
<Ref. to EI-60, REMOVAL, Lower Inner Trim.>
3) Detach the floor mat of front passenger’s seat.
4) Remove the protect cover.

5) Remove the nuts (A) which hold the ECM to bracket.
6) Remove the clip (B) from bracket.

7) Disconnect the ECM connectors and take out the ECM.

B: INSTALLATION  
Install in the reverse order of removal.

CAUTION:
- When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage to the fuel injection system.
- When replacing the ECM, be careful not to damage the harnesses and connectors.
17. Main Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>

3) Remove the harness cover (A).

4) Disconnect the connector from main relay.

B: INSTALLATION

Install in the reverse order of removal.
18. Fuel Pump Relay

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from fuel pump relay.

B: INSTALLATION
Install in the reverse order of removal.
Electronic Throttle Control Relay

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from electronic throttle control relay.

B: INSTALLATION
Install in the reverse order of removal.
20. Fuel Pump Control Unit

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the rear quarter trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
3) Remove the fuel pump control unit.

4) Disconnect the connector from fuel pump control unit.

B: INSTALLATION
Install in the reverse order of removal.
21. Fuel

A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:
• Place “NO FIRE” signs near the working area.
• Be careful not to spill fuel on the floor.
1) Remove the fuse of fuel pump from main fuse box.

2) Start the engine and run it until it stalls.
3) After the engine stalls, crank it for five more seconds.
4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:
• Place “NO FIRE” signs near the working area.
• Be careful not to spill fuel on the floor.
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Open the fuel filler flap lid and remove the fuel filler cap.
4) Lift-up the vehicle.
5) Remove the fuel tank protector.
6) Set a container under the vehicle and remove drain plug from fuel tank to drain fuel from the fuel tank.

7) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

Tightening torque:
26 N·m (2.65 kgf·m, 19.2 ft-lb)
22. Fuel Tank

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Set the vehicle on a lift.
2) Release the fuel pressure.
<Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Drain fuel from the fuel tank.
<Ref. to FU(H4DOTC)-40, DRAINING FUEL, PROCEDURE, Fuel.>
4) Remove the rear seat.
5) Remove the service hole cover from fuel pump.
   (1) Remove the bolt (A).
   (2) Push the grommet (B) down under the body and remove the service hole cover.

6) Disconnect the connector from fuel pump.

7) Remove the service hole cover from fuel sub level sensor.
   (1) Remove the bolt (A).

8) Disconnect the connector (A) from fuel sub level sensor.
9) Disconnect the quick connector from the fuel delivery (B) and return hose (C).
<Ref. to FU(H4DOTC)-56, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

10) Remove the rear wheel.
11) Remove the bolts which secure rear brake hose installation bracket.
12) Remove the rear brake caliper and tie it to the side of vehicle body.

13) Remove the parking brake cable from parking brake assembly. <Ref. to PB-7, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

14) Lift-up the vehicle.

15) Remove the rear exhaust pipe. <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.>

16) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>

17) Remove the heat shield cover.

18) Disconnect the connector from rear ABS wheel speed sensor.

19) Remove the bolts which install parking brake cable clamp.

20) Remove the rear suspension assembly.

**CAUTION:**
A helper is required to perform this work.

   (1) Support the rear differential with transmission jack.
   (2) Remove the bolt which installs the rear shock absorber to rear suspension arm.
(3) Remove the bolts which secure the rear suspension assembly to body.

WARNING:
A helper is required to perform this work.

(4) Remove the rear suspension assembly.
21) Disconnect the two-way valve hose (A) from two-way valve, and then remove the two-way valve from bracket.

WARNING:
A helper is required to perform this work.

22) Loosen the clamp and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.

23) Support the fuel tank with transmission jack, remove the bolts from fuel tank bands and dismount the fuel tank from vehicle.
Fuel Tank

2) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

3) Install the two-way valve to bracket, and connect the two-way valve hose (A) to two-way valve.

4) Tighten the bolt of fuel tank band.

**Tightening torque:**
- T1: 125 N·m (12.7 kgf-m, 92.2 ft-lb)
- T2: 65 N·m (6.2 kgf-m, 48 ft-lb)
- T3: 175 N·m (17.8 kgf-m, 129 ft-lb)

5) Install the rear suspension assembly.

**CAUTION:**
A helper is required to perform this work.

- (1) Support the rear differential with transmission jack.
- (2) Support the rear suspension assembly, and then tighten the bolts which secure the rear suspension assembly to body.

6) Tighten the bolts which install parking brake cable clamp.

**Tightening torque:**
- 62 N·m (6.3 kgf-m, 46 ft-lb)
7) Connect the connector to ABS wheel speed sensor.

8) Install the heat shield cover.

**Tightening torque:**
17.5 N·m (1.78 kgf-m, 12.9 ft-lb)

9) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
10) Install the rear exhaust pipe. <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.>
11) Lower the vehicle.
12) Connect the parking brake cable to parking brake assembly. <Ref. to PB-8, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>
13) Install the rear brake caliper.
14) Tighten the bolts which secure the rear brake hose installation bracket.

15) Install the rear wheel.
16) Lower the vehicle.
17) Connect the connector (A) to fuel sub level sensor.
18) Connect the quick connector to the fuel delivery (B) and return hose (C). <Ref. to FU(H4DOTC)-57, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

**NOTE:**
Be careful not to misconnect the delivery side and return side.

19) Install the service hole cover of fuel sub level sensor.
20) Connect the connector to fuel pump.

21) Install the service hole cover of fuel pump.

22) Install the rear seat.
23) Install the fuse of fuel pump to main fuse box.

C: INSPECTION
1) Check that the fuel tank is not holed, cracked or otherwise damaged.
2) Make sure that the fuel hoses and fuel pipes are not cracked and that connections are tight.
23. Fuel Filler Pipe

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
1) Release the fuel pressure.  
   <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid and remove the filler cap.
3) Disconnect the ground cable from battery.

4) Remove the screws which secure packing.

5) Lift-up the vehicle.
6) Remove the rear wheel RH.

7) Set a container under the vehicle and remove drain plug from fuel tank to drain fuel from the fuel tank.

8) Tighten the fuel drain plug.
NOTE:  
Use a new gasket.

Tightening torque:  
26 N·m (2.65 kgf·m, 19.2 ft-lb)
9) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
10) Remove the rear sub frame. <Ref. to RS-23, REMOVAL, Rear Sub Frame.>
11) Remove the bolts which hold the fuel filler pipe bracket on the body.

12) Loosen the clamp, and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.

13) Remove the fuel filler pipe to under side of the vehicle.
FUEL INJECTION (FUEL SYSTEMS)

B: INSTALLATION

1) Open the fuel filler flap lid.
2) Set the fuel saucer (A) with rubber packing (C) and insert the fuel filler pipe into hole from the inner side of apron.
3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

NOTE:
If the edges of rubber packing are folded toward the inside, straighten it with a flat tip screwdriver.

4) Correctly insert the fuel filler hose (A) and vent pipe (B) to specified position, and then tighten the clamp.

5) Tighten the bolts which hold the fuel filler pipe bracket on the body.

6) Install the rear sub frame. <Ref. to RS-23, INSTALLATION, Rear Sub Frame.>
7) Install the mud guard. <Ref. to EI-29, INSTALLATION, Mud Guard.>
8) Install the rear wheel RH.
9) Lower the vehicle.
10) Install the fuse of fuel pump to main fuse box.
11) Connect the battery ground cable to battery.

Tightening torque: 7.5 N·m (0.75 kgf-m, 5.4 ft-lb)
24. Fuel Pump

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

NOTE:
Fuel pump assembly consists of fuel pump and fuel level sensor.

1) Release the fuel pressure. <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid and remove the fuel filler cap.
3) Disconnect the ground cable from battery.
4) Lift-up the vehicle.
5) Remove the fuel tank protector.
6) Set a container under the vehicle and remove the drain plug from fuel tank to drain fuel from the fuel tank.
7) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

_Tightening torque:_
26 N·m (2.65 kgf·m, 19.2 ft·lb)

8) Remove the rear seat.
9) Remove the service hole cover.
   (1) Remove the bolt (A).
(2) Push the grommet (B) down under the body and remove the service hole cover.

10) Disconnect the connector from fuel pump.

11) Disconnect the quick connector and then disconnect the fuel delivery hose, return hose and jet pump hose. <Ref. to FU(H4DOTC)-56, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

12) Remove the nuts which install the fuel pump assembly onto fuel tank.

13) Take off the fuel pump assembly from fuel tank.
B: INSTALLATION
Install in the reverse order of removal.

NOTE:
• Use a new gasket.
• Ensure the sealing portion is free from fuel or foreign particles before installation.
• Tighten the nuts to specified torque in the order as shown in the figure.

Tightening torque: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

C: INSPECTION
Connect the lead harness to the connector terminal of fuel pump, and apply the battery power supply to check whether the pump operate.

WARNING:
• Wipe off the fuel completely.
• Keep battery as far apart from fuel pump as possible.
• Be sure to turn the battery supply to ON and OFF on the battery side.
• Do not run fuel pump for a long time under non-load condition.
25. Fuel Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:
Fuel level sensor is built in fuel pump assembly.
1) Remove the fuel pump assembly.
   <Ref. to FU(H4DOTC)-49, REMOVAL, Fuel Pump.>
2) Disconnect the connector from fuel pump bracket.
3) Remove the fuel level sensor.

B: INSTALLATION
Install in the reverse order of removal.
Fuel Sub Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.
3) Set a container under the vehicle and remove the drain plug from fuel tank to drain the fuel from fuel tank.

4) Tighten the fuel drain plug.

Tightening torque:

7) Disconnect the connector from fuel sub level sensor.

8) Disconnect the quick connector and then disconnect the fuel delivery hose, return hose and jet pump hose. <Ref. to FU(H4DOTC)-56, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

9) Remove the bolts which install the fuel sub level sensor on fuel tank.

10) Remove the fuel sub level sensor.
Fuel Sub Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
- Use a new gasket.
- Ensure the sealing portion is free from fuel and foreign particles before installation.
- Tighten the nuts and bolts to specified torque in the order as shown in the figure.

_Tightening torque:_

29. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL

1) Set the vehicle on a lift.
2) Release the fuel pressure. <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid and remove the fuel filler cap.
4) Remove the floor mat. <Ref. to EI-73, REMOVAL, Floor Mat.>
5) Disconnect the fuel delivery pipes and hoses, and then disconnect the fuel return pipes and hoses, evaporation pipes and hoses.

6) In the engine compartment, disconnect the fuel delivery hoses, return hoses and evaporation hose.

9) Separate the quick connector of fuel line.
   (1) Clean the pipe and connector, if they are covered with dust.
   (2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag etc.

7) Lift-up the vehicle.
8) Remove the fuel tank. <Ref. to FU(H4DOTC)-41, REMOVAL, Fuel Tank.>

(A) Fuel delivery hose
(B) Return hose
(C) Evaporation hose

3) Hold the connector (A) and push retainer (B) down.
(4) Pull out the connector (A) from retainer (B).
CAUTION:
Always use a new retainer.

B: INSTALLATION
1) Connect the quick connector on fuel line.

CAUTION:
- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

(A) Connector
(B) Retainer
(C) Pipes

(1) Set the new retainer (B) to connector (A).
(2) Push the pipe into the connector completely.

CAUTION:
- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.
- Be sure to inspect hoses and their connections for fuel leakage.

2) Connect the fuel delivery hose to the pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).
Type A: When the amount of inserting is specified.
Type B: When the amount of inserting is not specified.

\[ L : 2.5 \pm 1.5 \text{ mm (0.098} \pm 0.059 \text{ in)} \]

\[ L : 22.5 \pm 2.5 \text{ mm (0.886} \pm 0.098 \text{ in)} \]

3) Connect the return hose and evaporation hose to pipe by approx. 15 mm (0.59 in) from the hose end.

**Fuel return hose:**
\[ L = 22.5 \pm 2.5 \text{ mm (0.885} \pm 0.098 \text{ in)} \]

**Fuel evaporation hose:**
\[ L = 17.5 \pm 2.5 \text{ mm (0.689} \pm 0.098 \text{ in)} \]
CAUTION:
Be sure to inspect hoses and their connections for fuel leakage.

C: INSPECTION
1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
2) Make sure that the fuel pipe and fuel hose connections are tightened firmly.

**NOTE:**
- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent those problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent at the time when the fuel reduced at half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain the water from both the fuel filter and fuel tank or use water removing agent in the fuel tank.
- Before using a water removing agent, follow the cautions that noted on the bottle.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

1. General Description

A: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Front Catalytic Converter

A: REMOVAL
1) Remove the center exhaust pipe.
   <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.>
2) Separate the front catalytic converter (A) from rear catalytic converter (B).

![Diagram of Front Catalytic Converter](image)

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Always use new gasket.

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3. Rear Catalytic Converter

A: REMOVAL
1) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.>
2) Separate the rear catalytic converter (B) from front catalytic converter (A).

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Always use new gasket.

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
4. Canister

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the rear wheel LH.
3) Remove the rear mud guard LH.
4) Remove the canister protector.
5) Disconnect the quick connector (A).
6) Remove the canister (B) from body.

B: INSTALLATION
Install in the reverse order of removal.
NOTE:
Make sure there are no damage or dust on the connection of quick connector. If necessary, clean the seal surface of pipe.

Tightening torque:
8.3 N·m (0.85 kgf-m, 6.1 ft-lb)

C: INSPECTION
Make sure the canister and canister hoses are not cracked or loose.
5. Purge Control Solenoid Valve

**A: REMOVAL**
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the solenoid valve bracket assembly from intake manifold.
4) Disconnect the connector from purge control solenoid valve.
5) Disconnect the evaporation hose from the intake manifold and fuel pipe assembly.
6) Remove the purge control solenoid valve from solenoid valve bracket assembly.

B: INSTALLATION
Install in the reverse order of removal.

**Tightening torque:**
19 N·m (1.94 kgf-m, 13.7 ft-lb)

NOTE:
Connect the evaporation hose as shown in the figure.

C: INSPECTION
Make sure the hoses are not cracked or loose.
6. Two-way Valve

A: REMOVAL
1) Lift-up the vehicle.
2) Disconnect the evaporation hoses from two-way valve.
3) Remove the two-way valve as a unit with bracket from body.
4) Remove the two-way valve from bracket.

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)*

C: INSPECTION
Make sure the hoses are not cracked or loose.
7. PCV Valve

A: REMOVAL
1) Remove the intake manifold.
   <Ref. to FU(H4DOTC)-13, REMOVAL, Intake Manifold.>
2) Remove the PCV valve from intake manifold.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Apply liquid gasket to the bolt threads of PCV valve.

Liquid gasket:
   THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:
   23 N·m (2.35 kgf-m, 17.0 ft-lb)

2. Air Cleaner Element

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Disconnect the connector (A) from mass air flow sensor.
3) Loosen the clamps (B) which connect air intake boot to intake duct.
4) Remove the clips (C) from air cleaner case.
5) Remove the air cleaner case (rear) and air intake boot.
6) Remove the air cleaner element.

B: INSTALLATION
Install in the reverse order of removal.
NOTE:
When installing the air cleaner case (rear), align the protrusion part of air cleaner case (rear) to the hole of air cleaner case (front).

C: INSPECTION
Replace if excessively damaged or dirty.
3. Air Cleaner Case

A: REMOVAL
1) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
2) Remove the air cleaner element. <Ref. to IN(H4DOTC)-7, REMOVAL, Air Cleaner Element.>

8) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.>
9) Lower the vehicle.
10) Disconnect the engine coolant hose which is connected to coolant filler tank.

11) Separate the turbocharger joint pipe from turbocharger.

12) Remove the bolts which secure oil pipe bracket to turbocharger.
13) Remove the oil inlet pipe from turbocharger.

14) Remove the bolts which secure turbocharger to bracket.

15) Disconnect the hoses from the oil outlet pipe (A) and coolant pipe (B) located under the turbocharger.

16) Take out the turbocharger from engine compartment.
B: INSTALLATION

1) Connect the hoses to the oil outlet pipe (A) and coolant pipe (B) located under the turbocharger.

2) Install the turbocharger to bracket.

**Tightening torque:**
33 N·m (3.4 kgf-m, 24.6 ft-lb)

3) Install the oil inlet pipe to turbocharger.

**Tightening torque:**
- T1: 5.0 N·m (0.51 kgf-m, 3.7 ft-lb)
- T2: 16 N·m (1.6 kgf-m, 11.6 ft-lb)

4) Install the joint pipe to turbocharger.

**Tightening torque:**
35 N·m (3.6 kgf-m, 25.8 ft-lb)

5) Connect the engine coolant hose which is connected to the coolant filler tank.

6) Lift-up the vehicle.

7) Install the center exhaust pipe.
<Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.>

8) Install the linear motion mounting bracket.

**Tightening torque:**
40 N·m (4.1 kgf-m, 29.5 ft-lb)

9) Install the linear motion mounting.
<Ref. to ME(H4DOTC)-37, INSTALLATION, Linear Motion Mounting.>

C: CAUTION
- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be reinstalled in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools, or not to stain seats and windows with coolant or oil. Place a cover over fender, as required, for protection.
- Prior to starting work, prepare the following: Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from vehicle.

- V-belt
- Timing belt
- Camshaft
- Cylinder head
2. Compression

A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

1) Remove the collector cover.
2) After warming-up the engine, turn the ignition switch to OFF.
3) Make sure that the battery is fully charged.
4) Release the fuel pressure. <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
5) Remove all the spark plugs. <Ref. to IG(H4DOTC)-4, REMOVAL, Spark Plug.>
6) Fully open the throttle valve.
7) Check the starter motor for satisfactory performance and operation.
8) Hold the compression gauge tight against the spark plug hole.

NOTE:
When using a screw-in type compression gauge, the screw (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

9) Crank the engine by means of the starter motor, and read the maximum value on the gauge when the pointer is steady.

10) Perform at least two measurements per cylinder, and make sure that the values are correct.

Compression pressure (Throttle fully open):
Standard:
1,100 — 1,300 kPa (11.2 — 13.3 kg/cm², 160 — 189 psi)

Difference between cylinders:
49 kPa (0.5 kgf/cm², 7 psi) or less
3. Idle Speed

A: INSPECTION
1) Before checking the idle speed, check the following:
   (1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
   (2) Ensure the malfunction indicator light does not illuminate.
2) Idle the engine.
3) Stop the engine, and turn the ignition switch to OFF.
4) Insert the cartridge to Subaru Select Monitor.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON and Subaru Select Monitor switch to ON.
7) Select {Each System Check} in Main Menu.
8) Select {Engine} in Selection Menu.
9) Select {Current Data Display & Save} in Engine Control System Diagnosis.
10) Select {Data Display} in Data Display Menu.
11) Start the engine, and read the engine idle speed.
12) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, air conditioning, etc. OFF)

**Idle speed [No load and gears in neutral]:**

650 ± 50 rpm

13) Check the idle speed when loaded. (Turn the air conditioning switch to “ON” and operate the compressor for at least one minute before measurement.)

**Idle speed [A/C “ON”, and gears in neutral]:**

825 ± 50 rpm

NOTE:
Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted. If the idle speed is out of specifications, refer to General Diagnosis Table under “Engine Control System”. <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>
4. Ignition Timing

A: INSPECTION

1) Before checking the ignition timing, check the following:
   (1) Ensure the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
   (2) Ensure the malfunction indicator light does not illuminate.

2) Idle the engine.

3) Stop the engine, and turn the ignition switch to OFF.

4) Insert the cartridge to Subaru Select Monitor.

5) Connect the Subaru Select Monitor to data link connector.

6) Turn the ignition switch to ON and Subaru Select Monitor switch to ON.

7) Select {Each System Check} in Main Menu.

8) Select {Engine} in Selection Menu.

9) Select {Current Data Display & Save} in Engine Control System Diagnosis.

10) Select {Data Display} in Data Display Menu.

11) Start the engine and check the ignition timing at idle speed.

**Ignition timing [BTDC/rpm]:**

\[ 14 \pm 3^\circ/650 \]

If the timing is not correct, check the ignition control system. Refer to “Engine Control System”. <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>
5. Intake Manifold Vacuum

A: INSPECTION
1) Remove the collector cover.
2) Idle the engine.
3) Disconnect the brake vacuum hose from intake manifold, and then install the vacuum gauge.
4) Keep the engine at idle speed and read the vacuum gauge indication.

By observing the gauge needle movement, internal condition of the engine can be diagnosed as described below.

Vacuum pressure (at idling, A/C “OFF”):
−66.7 kPa (−500 mmHg, −19.70 inHg) or less

6. Engine Oil Pressure

A: INSPECTION

1) Remove the collector cover.
2) Remove the oil pressure switch from engine cylinder block. <Ref. to LU(H4DOTC)-16, REMOVAL, Oil Pressure Switch.>
3) Connect the oil pressure gauge hose to cylinder block.
4) Connect the battery ground cable to battery.

5) Start the engine, and measure the oil pressure.

Oil pressure:

**Standard:**
- 98 kPa (1.0 kgf/cm², 14 psi) or more (At 600 rpm)
- 588 kPa (6.0 kgf/cm², 85 psi) or more (At 6,000 rpm)

**CAUTION:**
- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H4DOTC)-18, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is turned to ON and oil pressure is within specification, replace the oil pressure switch. <Ref. to LU(H4DOTC)-18, INSPECTION, Engine Lubrication System Trouble in General.>

**NOTE:**
The specified value is based on an engine oil temperature of 80°C (176°F).

6) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(H4DOTC)-16, INSTALLATION, Oil Pressure Switch.>

**Tightening torque:**
- 25 N·m (2.5 kgf-m, 18.1 ft-lb)
7. Fuel Pressure

A: INSPECTION

WARNING:
Before removing the fuel pressure gauge, release the fuel pressure.

NOTE:
When the fuel pressure is out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.
1) Remove the collector cover.
2) Release the fuel pressure. <Ref. to FU(H4DOTC)-40, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Disconnect the fuel delivery hose and connect fuel pressure gauge.
5) Remove the fuse of fuel pump from main fuse box.
6) Start the engine.
7) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

Fuel pressure:
Standard: 284 — 314 kPa (2.9 — 3.2 kgf/cm², 41 — 46 psi)

8) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

Fuel pressure:
Standard: 230 — 260 kPa (2.35 — 2.65 kgf/cm², 33 — 38 psi)

NOTE:
The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kgf/cm², 1 to 3 psi) higher than standard values during high-altitude operations.
8. Valve Clearance

A: INSPECTION

Inspection and adjustment of valve clearance should be performed while engine is cold.
1) Lift-up the vehicle.
2) Remove the under cover.
3) Lower the vehicle.
4) Remove the collector cover.
5) Disconnect the ground cable from battery.
6) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
7) Remove a bolt which secures timing belt cover (RH).
8) Loosen the remaining bolts which secure timing belt cover (RH), then remove the timing belt cover.
9) When inspecting #1 and #3 cylinders:
   (1) Remove the air cleaner case. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
   (2) Disconnect the connector from ignition coil.
   (3) Remove the ignition coil.
   (4) Place a suitable container under the vehicle.
   (5) Disconnect the PCV hose from rocker cover (RH).
   (6) Remove the bolts, then remove the rocker cover (RH).
10) When inspecting #2 and #4 cylinders:
    (1) Disconnect the battery cable, and then remove the battery and battery carrier.
    (2) Disconnect the connector from ignition coil.
    (3) Remove the ignition coil.
    (4) Place a suitable container under the vehicle.
    (5) Disconnect the PCV hose from rocker cover (LH).
    (6) Remove the bolts, then remove the rocker cover (LH).
11) Turn the crank pulley clockwise until arrow mark on the cam sprocket is set to position shown in the figure.

NOTE:
Turn the crankshaft using a socket wrench.

12) Measure the #1 cylinder intake valve and #3 cylinder exhaust valve clearance by using thickness gauge (A).

NOTE:
- Insert the thickness gauge in as horizontal a direction as possible with respect to the valve lifter.
- Measure the exhaust valve clearances while lifting-up the vehicle.

Valve clearance

Intake:  
0.20^+0.04 −0.06 mm (0.0079^+0.0016 −0.0024 in)

Exhaust:  
0.35±0.05 mm (0.0138±0.0020 in)

- If the measured value is not within specification, take notes of the value in order to adjust the valve clearance later on.

13) If necessary, adjust the valve clearance. <Ref. to ME(H4DOTC)-28, ADJUSTMENT, Valve Clearance.>

14) Further turn the crank pulley clockwise and then measure the valve clearances again.
(1) Set the arrow mark on cam sprocket to the position shown in the figure, and measure the #2 cylinder exhaust valve and #3 cylinder intake valve clearances.

(2) Set the arrow mark on cam sprocket to the position shown in the figure, and measure the #2 cylinder intake valve and #4 cylinder exhaust valve clearances.

(3) Set the arrow mark on cam sprocket to the position shown in the figure, and measure the #1 cylinder exhaust valve and #4 cylinder intake valve clearances.

15) After inspection, install the related parts in the reverse order of removal.

B: ADJUSTMENT

CAUTION:
Adjustment of valve clearance should be performed while engine is cold.

1) Measure all valve clearances. <Ref. to ME(H4DOTC)-27, INSPECTION, Valve Clearance.>

NOTE:
Record each valve clearance after it has been measured.

2) Remove the camshaft. <Ref. to ME(H4DOTC)-53, REMOVAL, Camshaft.>
3) Remove the valve lifter.
4) Measure the thickness of valve lifter with a micrometer.

5) Select a valve lifter of suitable thickness based on the measured valve clearance and valve lifter thickness, by referring to the following table.

<table>
<thead>
<tr>
<th>Unit: (mm)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Intake valve: S = (V + T) − 0.20</td>
<td></td>
</tr>
<tr>
<td>Exhaust valve: S = (V + T) − 0.35</td>
<td></td>
</tr>
</tbody>
</table>

S: Valve lifter thickness required
V: Measured valve clearance
T: Valve lifter thickness to be used
6) Inspect all valves for clearance again at this stage. If the valve clearance is not correct, repeat the procedure over again from the first step.

7) After inspection, install the related parts in the reverse order of removal.

9. Engine Assembly

A: REMOVAL
1) Set the vehicle on a lift.
2) Open the front hood fully and support with a front food stay.
3) Collect the refrigerant from A/C system. <Ref. to AC-20, Refrigerant Recovery Procedure.>
4) Release the fuel pressure.
   (1) Remove the fuse of fuel pump from main fuse box.
   (2) Start the engine, and run until stalls.
   (3) After the engine stalls, crank it for 5 seconds more.
   (4) Turn the ignition switch to OFF.
5) Remove the fuel filler cap.
6) Remove the collector cover.
7) Disconnect the ground cable from battery.
8) Remove the radiator from vehicle. <Ref. to CO(H4DOTC)-19, REMOVAL, Radiator.>
9) Remove the coolant filler tank. <Ref. to CO(H4DOTC)-31, REMOVAL, Coolant Filler Tank.>
10) Disconnect the A/C pressure hoses from A/C compressor.
11) Repair the air intake system.
   (1) Remove the intercooler. (DOHC turbo model) <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
   (2) Remove the air cleaner element and air cleaner case. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
12) Disconnect the following connectors and cables.
   (1) Engine harness connectors
13) Disconnect the following hoses.
   (1) Brake booster vacuum hose
   (2) Heater inlet and outlet hoses
   (3) Remove the hose between intake manifold (A) and pressure regulator (B).

14) Remove the power steering pump from bracket.
   (1) Loosen the lock bolt and slider bolt, and remove the front side belt. <Ref. to ME(H4DOTC)-39, FRONT SIDE BELT, REMOVAL, V-belt.>
   (2) Disconnect the power steering switch connector.
   (3) Remove the power steering pump from engine.
   (4) Place the power steering pump on the right side wheel apron.

15) Remove the linear motion mounting. <Ref. to ME(H4DOTC)-37, REMOVAL, Linear Motion Mounting.>

16) Lift-up the vehicle.

17) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.>
18) Disconnect the oil flow control solenoid valve connector and ground cable.

19) Remove the nuts which hold lower side of the transmission to engine.

20) Remove the nuts which install front cushion rubber onto front crossmember.

21) Separate the torque converter clutch from drive plate.

(1) Lower the vehicle.
(2) Remove the service hole plug.
(3) Remove the bolts which hold torque converter clutch to drive plate.

(4) Remove other bolts while rotating the engine using a socket wrench.

22) Remove the pitching stopper.

23) Disconnect the fuel delivery hose, return hose and evaporation hose.

**CAUTION:**

- Collect fuel from the hose into container.
- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.

24) Support the engine with a lifting device and wire ropes.
25) Support the transmission with a garage jack.

**CAUTION:**
Doing this is very important because the transmission lowers for its own weight. This work is also of great importance for facilitating reinstallation.

26) Separation of engine and transmission.

1) Remove the starter. <Ref. to SC(H4SO 2.0)-6, REMOVAL, Starter.>
2) Install the ST to converter case.

ST 498277200 STOPPER SET

3) Remove the bolts which hold upper side of the transmission to engine.

27) Remove the engine from vehicle.

1) Slightly raise the engine.
2) Raise the transmission with garage jack.
3) Move the engine horizontally until main shaft is withdrawn from clutch cover.
4) Slowly move the engine away from engine compartment.

**NOTE:**
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

28) Remove the front cushion rubbers.

**B: INSTALLATION**

1) Install the front cushion rubbers to engine.

**Tightening torque:**
35 N·m (3.6 kgf-m, 25.8 ft-lb)

2) Install the engine onto transmission.
Position the engine in engine compartment and align it with transmission.

**NOTE:**
Be careful not to damage adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

3) Tighten the bolts which hold upper side of transmission to engine.

**Tightening torque:**
50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Remove the lifting device and wire ropes.

5) Remove the garage jack.
6) Install the pitching stopper.

**Tightening torque:**
- **T1:** 50 N·m (5.1 kgf-m, 36.9 ft-lb)
- **T2:** 58 N·m (5.9 kgf-m, 43 ft-lb)

7) Remove the ST from converter case.

**NOTE:**
Be careful not to drop the ST into the converter case when removing the ST.

**ST 498277200 STOPPER SET**

8) Install the starter. <Ref. to SC(H4SO 2.0)-6, INSTALLATION, Starter.>

9) Install the torque converter clutch to drive plate.
   - (1) Tighten the bolts which hold torque converter clutch to drive plate.
   - (2) Tighten other bolts while rotating the engine by using ST.

**CAUTION:**
Be careful not to drop bolts into the torque converter clutch housing.

**ST 499977400 CRANK PULLEY WRENCH**

**Tightening torque:**
- **25 N·m (2.5 kgf-m, 18.1 ft-lb)**

10) Install the linear motion mounting. <Ref. to ME(H4DOTC)-37, INSTALLATION, Linear Motion Mounting.>

11) Install the power steering pump on bracket.

(1) Install the power steering pump.

**Tightening torque:**
- **20.1 N·m (2.05 kgf-m, 14.8 ft-lb)**

(2) Connect the power steering switch connector.

(3) Install the front side belt and adjust it. <Ref. to ME(H4DOTC)-39, FRONT SIDE BELT, INSTALLATION, V-belt.>

12) Lift-up the vehicle.

13) Tighten the nuts which hold lower side of the transmission to engine.

**Tightening torque:**
- **50 N·m (5.1 kgf-m, 36.9 ft-lb)**

14) Tighten the nuts which install the front cushion rubber onto crossmember.

**Tightening torque:**
- **85 N·m (8.7 kgf-m, 62.7 ft-lb)**
NOTE:
Make sure the front cushion rubber mounting bolts and locator are securely installed.

15) Install the center exhaust pipe. 
<Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.>
16) Connect the oil flow control solenoid valve connector and ground cable of exhaust side.

17) Lower the vehicle.
18) Connect the following hoses.
   (1) Fuel delivery hose, return hose and evaporation hose
   (2) Heater inlet and outlet hoses
   (3) Brake booster vacuum hose
   (4) Pressure regulator hose
19) Connect the following connectors and terminals.
   (1) Engine ground terminals
   (2) Engine harness connectors
   (3) Generator connector and terminal
   (4) A/C compressor connector
20) Install the air intake system.

(1) Install the intercooler. (DOHC turbo model) 
<Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
(2) Install the air cleaner element and air cleaner case. <Ref. to IN(H4DOTC)-8, INSTALLATION, Air Cleaner Case.>
21) Install the A/C pressure hoses.
NOTE:
Use new O-rings.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

22) Install the radiator. <Ref. to CO(H4DOTC)-20, INSTALLATION, Radiator.>
23) Install the coolant filler tank. (DOHC turbo model) <Ref. to CO(H4DOTC)-31, INSTALLATION, Coolant Filler Tank.>
24) Install the window washer tank.
25) Install the battery to vehicle, and connect the battery ground terminal.
26) Fill engine coolant. 
<Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
27) Charge the A/C system with refrigerant. 
<Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>
28) Install the collector cover.
29) Remove the front hood stay, and close the front hood.
30) Take off the vehicle from a lift.

C: INSPECTION
1) Check pipes and hoses are connected firmly.
2) Check the engine coolant and ATF are at specified levels.
10. Engine Mounting

A: REMOVAL
1) Remove the engine assembly. <Ref. to ME(H4DOTC)-30, REMOVAL, Engine Assembly.>
2) Remove the engine mounting from engine assembly.

B: INSTALLATION
Install in the reverse order of removal.

_Tightening torque:_

_Engine mounting:_

35 N·m (3.6 kgf-m, 25.8 ft-lb)

C: INSPECTION
Make sure that cracks or other damages do not exist.
11. Linear Motion Mounting

A: REMOVAL
1) Remove the collector cover.
2) Remove the air cleaner case.
3) Remove the linear motion mounting bracket.
4) Remove the speed nut (A), and remove the dynamic damper (B).
5) Remove the linear motion mounting.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
33 N·m (3.4 kgf-m, 24.3 ft-lb)

Tightening torque:
30 N·m (3.1 kgf-m, 22.1 ft-lb)
12. Preparation for Overhaul

A: PROCEDURE

1) After removing the engine from body, secure it in the STs shown below.

- **ST1 498457000** ENGINE STAND ADAPTER RH
- **ST2 498457100** ENGINE STAND ADAPTER LH
- **ST3 499817000** ENGINE STAND

2) In this section the procedures described under each index are all connected and stated in order. It will be the complete procedure for overhauling of the engine itself when you go through all steps in the process. Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.
13. V-belt

A: REMOVAL

NOTE:
Perform the following procedures with the engine installed to the body.

1. FRONT SIDE BELT
1) Remove the collector cover.
2) Remove the V-belt covers.
3) Loosen the lock bolt (A).
4) Loosen the slider bolt (B).
5) Remove the front side belt (C).

2. REAR SIDE BELT
1) Loosen the lock nut (A).
2) Loosen the slider bolt (B).
3) Remove the A/C belt.

B: INSTALLATION

NOTE:
Wipe off any oil or water on the belt and pulley.

1. FRONT SIDE BELT
1) Install a V-belt (C), and tighten the slider bolt so as to obtain the specified belt tension. <Ref. to ME(H4DOTC)-40, INSPECTION, V-belt.>
2) Tighten the lock bolt (A).
3) Tighten the slider bolt (B).

Tightening torque:
Lock bolt (A):
\[ 25 \text{ N}\cdot\text{m} (2.5 \text{ kgf-m, 18.1 ft-lb}) \]
Slider bolt (B):
\[ 8 \text{ N}\cdot\text{m} (0.8 \text{ kgf-m, 5.9 ft-lb}) \]

2. REAR SIDE BELT
1) Remove the A/C belt tensioner.
2) Install a V-belt, and tighten the slider bolt (B) so as to obtain the specified belt tension.
<Ref. to ME(H4DOTC)-40, INSPECTION, V-belt.>
3) Tighten the lock nut (A).

**Tightening torque:**

- **Lock nut (A):**
  
  \[ 22.6 \text{ Nm} \ (2.3 \text{ kgf-m, 16.6 ft-lb}) \]

---

**C: INSPECTION**

1) Replace the belts, if crack, fraying or wear is found.
2) Check the V-belt tension and adjust it if necessary by changing the generator installing position and idler pulley installing position.

**Belt tension (with belt tension gauge)**

**(A)**

- **When installing new parts:**
  
  \[ 618 \text{ — 755 N (63 — 77 kgf, 139 — 170 lb)} \]

- **At inspection:**
  
  \[ 490 \text{ — 640 N (50 — 65 kgf, 110 — 144 lb)} \]

**(B)**

- **When installing new parts:**
  
  \[ 740 \text{ — 880 N (75 — 90 kgf, 166 — 198 lb)} \]

- **At inspection:**
  
  \[ 350 \text{ — 450 N (36 — 46 kgf, 78 — 101 lb)} \]

**Belt tension (without belt tension gauge)**

**(A)**

- **When installing new parts:**
  
  \[ 7 \text{ — 9 mm (0.276 — 0.354 in)} \]

- **At inspection:**
  
  \[ 9 \text{ — 11 mm (0.354 — 0.433 in)} \]

**(B)**

- **When installing new parts:**
  
  \[ 7.5 \text{ — 8.5 mm (0.295 — 0.335 in)} \]

- **At inspection:**
  
  \[ 9.0 \text{ — 10.0 mm (0.354 — 0.394 in)} \]
14. Crank Pulley

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley bolt. To lock the crankshaft, use ST.
   ST 499977400  CRANK PULLEY WRENCH
3) Remove the crank pulley.

B: INSTALLATION
1) Install the crank pulley.
2) Install the pulley bolt.
   To lock the crankshaft, use ST.
   ST 499977400  CRANK PULLEY WRENCH
   (1) Clean the crankshaft thread using compressed air.
   (2) Apply engine oil to the crank pulley bolt seat and thread.
   (3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf-m, 33 ft-lb).
   (4) Tighten the crank pulley bolts.

   Tightening torque:
   130 N·m (13.3 kgf-m, 95.9 ft-lb)
3) Confirm that the tightening angle of the crank pulley bolt is 45° or more. Perform the following procedures when less than 45°.

   CAUTION:
   If the tightening angle of crank pulley bolt is less than 45°, the bolt should be damaged. In this case, the bolt must be replaced.
   (1) Replace and clean the crank pulley bolts.

Crank pulley bolt:
   Part No. 12369AA011
   (2) Clean the crankshaft thread using compressed air.
   (3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf-m, 33 ft-lb).
   (4) Tighten the crank pulley bolts keeping them in an angle 45° — 60°.

NOTE:
Conduct the tightening procedures by confirming the turning angle of the crank pulley bolt referring to the gauge indicated on the timing belt cover.

4) Install the A/C belt tensioner.
5) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>

C: INSPECTION
1) Check the V-belt is not worn or otherwise damaged.
2) Check the tension of the belt. <Ref. to ME(H4DOTC)-40, INSPECTION, V-belt.>
15. Timing Belt Cover

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover (LH) (A).
4) Remove the timing belt cover (RH) (B).
5) Remove the front timing belt cover (C).

B: INSTALLATION
1) Install the front timing belt cover (C).
   
   **Tightening torque:**
   
   \[ 5 \text{ N} \cdot \text{m} \ (0.5 \text{ kgf} \cdot \text{m}, \ 3.6 \text{ ft-lb}) \]

2) Install the timing belt cover (RH) (B).

   **Tightening torque:**
   
   \[ 5 \text{ N} \cdot \text{m} \ (0.5 \text{ kgf} \cdot \text{m}, \ 3.6 \text{ ft-lb}) \]

3) Install the timing belt cover (LH) (A).

   **Tightening torque:**
   
   \[ 5 \text{ N} \cdot \text{m} \ (0.5 \text{ kgf} \cdot \text{m}, \ 3.6 \text{ ft-lb}) \]

4) Install the crank pulley. <Ref. to ME(H4DOTC)-41, INSTALLATION, Crank Pulley.>
5) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>

C: INSPECTION
Check the cover for damage.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

16. Timing Belt

A: REMOVAL

1. TIMING BELT

1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt guide.
5) If the alignment mark or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as shown in procedures below.
   1) Turn the crankshaft using ST, and align the alignment marks on crank sprocket, intake cam sprocket (LH), exhaust cam sprocket (LH), intake cam sprocket (RH) and exhaust cam sprocket (RH) with notches of timing belt cover and cylinder block.
   ST 499987500 CRANKSHAFT SOCKET

6) Remove the belt idler (A).

(2) Using white paint, put alignment and/or arrow marks on the timing belts in relation to the cam sprockets.

Z₁: 54.5 tooth length
Z₂: 51 tooth length
Z₃: 28 tooth length
7) Remove the timing belt.

CAUTION:
After the timing belt has been removed, never rotate the intake and exhaust cam sprocket. If the cam sprocket is rotated, the intake and exhaust valve heads strike together and valve stems are bent.

2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTMENT ASSEMBLY

1) Remove the belt idler (B) and (C).

2) Remove the belt idler No. 2.

3) Remove the automatic belt tension adjuster assembly.

B: INSTALLATION

1. AUTOMATIC BELT TENSION ADJUSTMENT ASSEMBLY AND BELT IDLER

1) Preparation for installation of automatic belt tension adjuster assembly.

CAUTION:
- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Be sure to move the adjuster rod down slowly applying a pressure of 294 N (30 kgf, 66 lb).
- Press-in the push adjuster rod gradually taking more than three minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into cylinder. Doing so may damage the cylinder.
- Do not release the press pressure until stopper pin is completely inserted.

(a) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.

(b) Slowly move the adjuster rod down with a pressure of 294 N (30 kgf, 66 lb) until the adjuster rod is aligned with the stopper pin hole in the cylinder.

(c) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (0.08 in) (nominal) dia. hex wrench inserted into the stopper pin hole in cylinder, secure the adjuster rod.
2) Install the automatic belt tension adjuster assembly.

*Tightening torque:*

\[
39 \, N \cdot m (4.0 \, \text{kgf-m}, \, 28.9 \, \text{ft-lb})
\]

3) Install the belt idler No. 2.

*Tightening torque:*

\[
39 \, N \cdot m (4.0 \, \text{kgf-m}, \, 28.9 \, \text{ft-lb})
\]

4) Install the belt idlers.

*Tightening torque:*

\[
39 \, N \cdot m (4.0 \, \text{kgf-m}, \, 28.9 \, \text{ft-lb})
\]

2. TIMING BELT

1) Preparation for installation of automatic belt tension adjuster assembly. <Ref. to ME(H4DOTC)-44, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

2) Crankshaft and cam sprocket alignment

(1) Align the mark (A) on crank sprocket with the mark on oil pump cover at cylinder block.

(2) Align single line mark (A) on the exhaust cam sprocket (RH) with notch (B) on timing belt cover.

(3) Align single line mark (A) on the intake cam sprocket (RH) with notch (B) on timing belt cover. (Ensure double lines (C) on intake and exhaust cam sprockets are aligned.)
(4) Align single line mark (A) on exhaust cam sprocket (LH) with notch (B) on timing belt cover by turning the sprocket counterclockwise (as viewed from front of engine).

(5) Align single line mark (A) on intake cam sprocket (LH) with notch (B) on timing belt cover by turning the sprocket clockwise (as viewed from front of engine). Ensure double lines (C) on intake and exhaust cam sprockets are aligned.

(6) Ensure that the cam and crank sprockets are positioned properly.

**CAUTION:**
- Intake and exhaust camshafts for this DOHC engine can be independently rotated with the timing belts removed. As can be seen from the figure, if the intake and exhaust valves are lifted simultaneously, their heads will interfere with each other, resulting in bent valves.

- When the timing belts are not installed, four camshafts are held at the “zero-lift” position, where all cams on camshafts do not push the intake and exhaust valves down. (Under this condition, all valves remain unlifted.)
- When the camshafts are rotated to install the timing belts, #2 intake and #4 exhaust cam of camshafts (LH) are held to push their corresponding valves down. (Under this condition, these valves are held lifted.) Camshafts (RH) are held so that their cams do not push valves down.
- Camshafts (LH) must be rotated from the “zero-lift” position to the position where the timing belt is to be installed with the smallest possible angle, in order to prevent mutual interference of intake and exhaust valve heads.
• Do not allow the camshafts to rotate in the direction shown in the figure as this causes both intake and exhaust valves to lift simultaneously, resulting in interference with their heads.

(A) Revolving direction

(B) Timing belt installation position
3) Installation of timing belt:
Align the alignment mark on the timing belt with marks on the sprockets in the alphabetical order shown in the figure. While aligning marks, position the timing belt properly.

**CAUTION:**
- Disengagement of more than one timing belt tooth may result in interference between valve and piston.
- Ensure the belt’s rotating direction is correct.

4) Install the belt idlers.

**Tightening torque:**
39 N·m (4.0 kgf-m, 28.9 ft-lb)

**NOTE:**
Make sure that the marks on the timing belt and sprockets are aligned.

5) After ensuring that the marks on the timing belt and sprockets are aligned, remove the stopper pin from tensioner adjuster.

6) Install the timing belt guide.

(1) Temporarily tighten the bolts.
(2) Check and adjust the clearance between timing belt and timing belt guide.

**Clearance:**
1.0±0.5 mm (0.039±0.020 in)
Tightening torque:  
10 N·m (1.0 kgf-m, 7.2 ft-lb)

7) Install the timing belt cover.  
<Ref. to ME(H4DOTC)-42, INSTALLATION, Timing Belt Cover.>
8) Install the crank pulley.  
<Ref. to ME(H4DOTC)-41, INSTALLATION, Crank Pulley.>
9) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>

C: INSPECTION

1. TIMING BELT

1) Check the timing belt teeth for breaks, cracks and wear. If any fault is found, replace the timing belt.
2) Check the condition of the backside of timing belt. If cracks are found, replace the timing belt.

CAUTION:
- Be careful not to let oil, grease or engine coolant contact the belt. Remove quickly and thoroughly if this happens.
- Do not bend the timing belt sharply.

In radial diameter h:  
60 mm (2.36 in) or more

2. AUTOMATIC BELT TENSION ADJUST-ER

1) Visually check the oil seals for leaks, and rod ends for abnormal wear and scratches. If necessary, replace the automatic belt tension adjuster assembly.

NOTE:  
Slight trace of oil at rod’s oil seal does not indicate a problem.
2) Check that the adjuster rod does not move when a pressure of 294 N (30 kgf, 66 lb) is applied to it. This is to check adjuster rod stiffness.
3) If the adjuster rod is not stiff and moves freely when applying 294 N (30 kgf, 66 lb), check it using the following procedures:
   1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this operation two to three times.
   2) With the adjuster rod moved all the way up, apply a pressure of 294 N (30 kgf, 66 lb) to it. Check the adjuster rod stiffness.
   3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

CAUTION:  
- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the push adjuster rod gradually taking more than three minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into cylinder. Doing so may damage the cylinder.
4) Measure the amount of rod protrusion beyond the body. If it is not within specifications, replace with a new one.

Amount of rod protrusion H:  
5.7±0.5 mm (0.224±0.020 in)

3. BELT TENSION PULLEY

1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the belt tension pulley if faulty.
2) Check the belt tension pulley for smooth rotation. Replace if noise or excessive play occurs.
3) Check the belt tension pulley for grease leakage.
4. BELT IDLER

1) Check the belt idler for smooth rotation. Replace if noise or excessive play occurs.
2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.
3) Check the belt idler for grease leakage.
17. Cam Sprocket

A: REMOVAL

1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt. <Ref. to ME(H4DOTC)-43, REMOVAL, Timing Belt.>
5) Remove the cam sprocket. To lock the camshaft, use ST.

ST 499977500 CAM SPROCKET WRENCH

B: INSTALLATION

1) Install the cam sprocket. To lock the camshaft, use ST.

Tightening torque:

Tighten to 29.5 N·m (3.0 kgf-m, 21.8 ft-lb) of torque, and then tighten further by 45°

2) Install the timing belt. <Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt.>
3) Install the timing belt cover. <Ref. to ME(H4DOTC)-42, INSTALLATION, Timing Belt Cover.>
4) Install the crank pulley. <Ref. to ME(H4DOTC)-41, INSTALLATION, Crank Pulley.>
5) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>

C: INSPECTION

1) Check the cam sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between cam sprocket and key.
3) Check the cam sprocket protrusion used for sensor for damage and contamination of foreign matter.
18. Crank Sprocket

A: REMOVAL
1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt. <Ref. to ME(H4DOTC)-43, REMOVAL, Timing Belt.>
5) Remove the cam sprocket. <Ref. to ME(H4DOTC)-51, REMOVAL, Cam Sprocket.>
6) Remove the crank sprocket.

B: INSTALLATION
1) Install the crank sprocket.
2) Install the cam sprocket. <Ref. to ME(H4DOTC)-51, INSTALLATION, Cam Sprocket.>
3) Install the timing belt. <Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt.>

A: REMOVAL

1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt. <Ref. to ME(H4DOTC)-43, REMOVAL, Timing Belt.>
5) Remove the cam sprocket. <Ref. to ME(H4DOTC)-51, REMOVAL, Cam Sprocket.>
6) Remove the crank sprocket. <Ref. to ME(H4DOTC)-52, REMOVAL, Crank Sprocket.>
7) Disconnect the oil flow control solenoid valve assembly connector.
8) Remove the tensioner bracket.
9) Remove the timing belt cover No. 2 (LH).
10) Remove the timing belt cover No. 2 (RH).
11) Remove the spark plug cords.
12) Remove the oil level gauge guide. (LH side)
13) Remove the rocker cover and gasket.
14) Remove the oil pipe.
15) Remove the camshaft position sensor on exhaust side.
16) Loosen the oil flow control solenoid valve assembly and intake camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.
17) Loosen the exhaust camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

18) Remove the oil flow control solenoid valve assembly, intake camshaft cap and camshaft.

19) Remove the exhaust camshaft caps and camshaft.

**NOTE:**
Arrange camshaft caps in order so that they can be installed in their original positions.

20) Similarly, remove the camshafts (RH) and related parts.

**B: INSTALLATION**

1) Camshaft installation:
Apply engine oil to the cylinder head at camshaft bearing location before installing the camshaft. Install the camshaft so that each valve is close to or in contact with "base circle" of cam lobe.

**NOTE:**
- When the camshafts are positioned as shown in the figure, camshafts need to be rotated at a minimum to align with the timing belt during installation.
- Camshaft (RH) need not be rotated when set at the position shown in the figure.

Intake camshaft (LH):
Rotate 80° clockwise.

Exhaust camshaft (LH):
Rotate 45° counterclockwise.

2) Camshaft cap and oil flow control solenoid valve assembly installation:

   (1) Apply small amount of liquid gasket to the cap mating surface.

**NOTE:**
Do not apply liquid gasket excessively. Otherwise, the excessive liquid gasket may come out and flow toward oil seal, resulting in oil leaks.

**Liquid gasket:**
Three Bond 1215 (Part No. 004403007) or equivalent

(2) Apply engine oil to the cap bearing surface, and install the cap on camshaft as shown by identification mark.
Gradually tighten the camshaft cap and oil control valve assembly in at least two stages in alphabetical sequence shown in the figure, and then tighten to the specified torque.

**Tightening torque:**
- \( T1: 10 \text{ N}\cdot\text{m} (1.0 \text{ kgf}\cdot\text{m}, 7.2 \text{ ft-lb}) \)
- \( T2: 20 \text{ N}\cdot\text{m} (2.0 \text{ kgf}\cdot\text{m}, 14.5 \text{ ft-lb}) \)

(4) After tightening the camshaft cap, ensure the camshaft rotates only slightly while holding it at “base circle”.

3) Install the camshaft position sensor on exhaust side.

**Tightening torque:**
- \( 6.4 \text{ N}\cdot\text{m} (0.65 \text{ kgf}\cdot\text{m}, 4.7 \text{ ft-lb}) \)

4) Camshaft oil seal installation:
Apply grease to the new oil seal lips and press onto the front end of camshaft by using ST1 and ST2.

**NOTE:**
Use a new oil seal.
- ST1 499587600 OIL SEAL INSTALLER
- ST2 499597200 OIL SEAL GUIDE

5) Rocker cover installation:
(1) Install the gasket on rocker cover. Install the peripheral gasket and ignition coil gasket.
(2) Apply liquid gasket to the designated point of cylinder head.

**Liquid gasket:**
- THREE BOND 1215 (Part No. 004403007) or equivalent

(3) Install the rocker cover on cylinder head. Ensure the gasket is properly positioned during installation.
(4) Tighten the rocker cover tightening bolt in alphabetical sequence shown in the figure, and then tighten to the specified torque.

**Tightening torque:**
- \( 6.4 \text{ N}\cdot\text{m} (0.65 \text{ kgf}\cdot\text{m}, 4.7 \text{ ft-lb}) \)
6) Install the oil pipe.

**Tightening torque:**

\[ 29 \text{ N\cdot m (3.0 kgf-m, 21.4 ft-lb)} \]

7) Connect the oil flow control solenoid valve connector.

8) Install the spark plug cord.

9) Similarly, install the parts on right-hand side.

10) Install the timing belt cover No. 2 (RH).

**Tightening torque:**

\[ 5 \text{ N\cdot m (0.5 kgf-m, 3.6 ft-lb)} \]

11) Install the timing belt cover No. 2 (LH).

**Tightening torque:**

\[ 5 \text{ N\cdot m (0.5 kgf-m, 3.6 ft-lb)} \]

12) Install the tensioner bracket.

**Tightening torque:**

\[ 25 \text{ N\cdot m (2.5 kgf-m, 18.1 ft-lb)} \]

13) Install the crank sprocket.

<Ref. to ME(H4DOTC)-52, INSTALLATION, Crank Sprocket.>

14) Install the cam sprocket.

<Ref. to ME(H4DOTC)-51, INSTALLATION, Cam Sprocket.>

15) Install the timing belt. <Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt.>

16) Install the timing belt cover.

<Ref. to ME(H4DOTC)-42, INSTALLATION, Timing Belt Cover.>

17) Install the crank pulley.

<Ref. to ME(H4DOTC)-41, INSTALLATION, Crank Pulley.>

18) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>
C: INSPECTION

1) Measure the bend, and repair or replace if necessary.

**Standard value:**

0.020 mm (0.0008 in) or less

2) Check the journal for damage and wear. Replace if faulty.

3) Measure the outside diameter of camshaft journal. If the journal diameter is not within specification, check the oil clearance.

<table>
<thead>
<tr>
<th>Camshaft journal</th>
<th>Front</th>
<th>Center, rear</th>

<tr>
<td>mm (in)</td>
<td>(1.4939 — 1.4946)</td>
<td>(1.1790 — 1.1796)</td>
</tr>
</tbody>
</table>

4) Measurement of the camshaft journal oil clearance:

- Clean the bearing caps and camshaft journals.
- Place the camshafts on cylinder head. (Without installing the valve rocker.)
- Place a plastigauge across each of the camshaft journals.
- Gradually tighten the cap in at least two stages in alphabetical sequence shown in the figure, and then tighten to the specified torque. Do not turn the camshaft.

**Tightening torque:**

- T1: 10 N·m (1.0 kgf·m, 7.2 ft-lb)
- T2: 20 N·m (2.0 kgf·m, 14.5 ft-lb)

5) Check the cam face condition, and remove the minor faults by grinding with oil stone. Measure the cam height H. If it exceeds the limit or has partial wear, replace it.

**Cam height H:**

- **Standard**
  - **Intake**
    - 45.85 — 45.95 mm (1.805 — 1.809 in)
  - **Exhaust**
    - 45.75 — 45.85 mm (1.801 — 1.805 in)

- **Cam base circle diameter A:**
  - 37.0 mm (1.457 in)

6) Measure the widest point of the plastigauge on each journal. If oil clearance exceeds the limit, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

**Standard:**

0.037 — 0.072 mm (0.0015 — 0.0028 in)

7) Completely remove the plastigauge.

5) Remove the bearing caps.
6) Measure the side clearance of camshaft with dial gauge. If the clearance exceeds the limit or has partial wear, replace the caps and cylinder head as a set. If necessary, replace the camshaft.

**Standard:**

0.068 — 0.116 mm (0.0027 — 0.0047 in)
20. Cylinder Head

A: REMOVAL

1) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
2) Remove the crank pulley. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>
3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-42, REMOVAL, Timing Belt Cover.>
4) Remove the timing belt. <Ref. to ME(H4DOTC)-43, REMOVAL, Timing Belt.>
5) Remove the cam sprocket. <Ref. to ME(H4DOTC)-51, REMOVAL, Cam Sprocket.>
6) Remove the intake manifold. <Ref. to FU(H4DOTC)-13, REMOVAL, Intake Manifold.>
7) Remove the bolt which installs the A/C compressor bracket on cylinder head.
8) Remove the camshaft. <Ref. to ME(H4DOTC)-53, REMOVAL, Camshaft.>
9) Remove the cylinder head bolts in alphabetical sequence shown in the figure. Leave the bolts (A) and (D) engaged by three or four threads to prevent the cylinder head from falling.

10) While tapping the cylinder head with a plastic hammer, separate it from cylinder block. Remove the bolts (A) and (D) to remove cylinder head.

11) Remove the cylinder head gasket.

CAUTION:
Be careful not to scratch the mating surface of cylinder head and cylinder block.

B: INSTALLATION

1) Install the cylinder head and gaskets on cylinder block.

CAUTION:
- Use new cylinder head gaskets.
- Be careful not to scratch the mating surface of cylinder head and cylinder block.

2) Tighten the cylinder head bolts.
   (1) Apply a coat of engine oil to washers and bolt threads.
   (2) Tighten all bolts to 29 N⋅m (3.0 kgf-m, 21.4 ft-lb) in alphabetical sequence.
   (3) Retighten all bolts to 69 N⋅m (7.0 kgf-m, 51 ft-lb) in alphabetical sequence.
   (4) Back off all bolts by 180° in the reverse order of installation, and back them off again by 180°.
   (5) Tighten all bolts to 49 N⋅m (5.0 kgf-m, 36 ft-lb) in alphabetical sequence.
   (6) Tighten all bolts by 80 — 90° in alphabetical sequence.
   (7) Tighten all bolts by 40 — 45° in alphabetical sequence.

CAUTION:
Do not tighten the bolts more than 45°.

(8) Further tighten the bolts (A) and (B) by 40 — 45°.

CAUTION:
Ensure the total “re-tightening angle” [in the former two steps], do not exceed 90°.

3) Install the camshaft. <Ref. to ME(H4DOTC)-54, INSTALLATION, Camshaft.>
4) Install the A/C compressor bracket on cylinder head.
5) Install the intake manifold. <Ref. to FU(H4DOTC)-15, INSTALLATION, Intake Manifold.>
6) Install the cam sprocket.  
<Ref. to ME(H4DOTC)-51, INSTALLATION, Cam Sprocket.>

8) Install the timing belt cover.  
<Ref. to ME(H4DOTC)-42, INSTALLATION, Timing Belt Cover.>

9) Install the crank pulley.  
<Ref. to ME(H4DOTC)-41, INSTALLATION, Crank Pulley.>

10) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>

C: DISASSEMBLY

1) Remove the valve lifter.

2) Compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.

   ST1  498267600  CYLINDER HEAD TABLE
   ST2  499718000  VALVE SPRING REMOVER

NOTE:
Keep all the removed parts in order for re-installing in their original positions.

CAUTION:
• Mark each valve to prevent confusion.
• Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve oil seals.
D: ASSEMBLY

(1) Exhaust valve
(2) Intake valve
(3) Cylinder head
(4) Valve spring seat
(5) Intake valve oil seal
(6) Valve spring
(7) Retainer
(8) Retainer key
(9) Valve lifter
(10) Exhaust valve oil seal
(11) Intake valve guide
(12) Exhaust valve guide
1) Installation of valve spring and valve:
   (1) Coat the stem of each valve with engine oil and insert the valve into valve guide.

   NOTE:
   When inserting the valve into valve guide, use special care not to damage the oil seal lip.
   (2) Set the cylinder head on ST1.
   (3) Install the valve spring and retainer using ST2.

   ST1 498267600 CYLINDER HEAD TABLE
   ST2 499718000 VALVE SPRING REMOVER

   NOTE:
   Be sure to install the valve spring with their close-coiled end facing the seat on the cylinder head.

   (4) Compress the valve spring and fit the valve spring retainer key.
   (5) After installing, tap the valve spring retainers lightly with a wooden hammer for better seating.

2) Apply oil to the surfaces of the valve lifter.
3) Install the valve lifter.

E: INSPECTION

1. CYLINDER HEAD
   1) Make sure that cracks or other damages do not exist. In addition to visual inspection, inspect important areas by means of red lead check.
   2) Measure the warping of the cylinder head surface that mates with crankcase using a straight edge (A) and thickness gauge (B). If the warping exceeds the limit, regrind the surface with a surface grinder.

   Warping limit:
   0.035 mm (0.0014 in)

   Grinding limit:
   0.3 mm (0.012 in)

   Standard height of cylinder head:
   127.5 mm (5.02 in)

   NOTE:
   Uneven torque for the cylinder head nuts can cause warping. When reinstalling, pay special attention to the torque so as to tighten evenly.

2. VALVE SEAT
   Inspect the intake and exhaust valve seats, and correct the contact surfaces with a valve seat cutter if they are defective or when valve guides are replaced.

   Valve seat width \( W \):
   - Intake
     Standard
     0.6 — 1.4 mm (0.024 — 0.055 in)
   - Exhaust
     Standard
     1.2 — 1.8 mm (0.047 — 0.071 in)

3. VALVE GUIDE
   1) Check the clearance between valve guide and stem. The clearance can be checked by measuring the outer diameter of valve stem and inner diameter of valve guide respectively with a micrometer.

   Clearance between the valve guide and valve stem:
   - Standard
     Intake
     0.030 — 0.057 mm (0.0012 — 0.0022 in)
     Exhaust
     0.040 — 0.067 mm (0.0016 — 0.0026 in)
2) If the clearance between valve guide and stem exceeds the standard value, replace the valve guide or valve itself whichever shows greater amount of wear or has abnormality such as scratch. See the following procedure for valve guide replacement.

Valve guide inner diameter:
6.000 — 6.012 mm (0.2362 — 0.2367 in)

Valve stem outer diameters:
Intake
5.955 — 5.970 mm (0.2344 — 0.2350 in)

Exhaust
5.945 — 5.960 mm (0.2341 — 0.2346 in)

(1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides fit the holes in ST1.

(2) Insert the ST2 into valve guide and press it down to remove the valve guide.

ST1 498267600 CYLINDER HEAD TABLE
ST2 499767200 VALVE GUIDE REMOVER

(3) Turn the cylinder head upside down and place the ST as shown in the figure.

ST 18251AA020 VALVE GUIDE ADJUSTER

(4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.

(5) Put a new valve guide, coated with sufficient oil, in cylinder, and insert the ST1 into valve guide. Press-in until the valve guide upper end is flush with the upper surface of ST2.

(6) Check the valve guide protrusion.

Valve guide protrusion L:
15.8 — 16.2 mm (0.622 — 0.638 in)

(7) Ream the inside of valve guide using ST. Put the reamer in valve guide, and rotate the reamer slowly clockwise pushing it lightly. Bring the reamer back while rotating it clockwise. After reaming, clean the valve guide to remove chips.

ST 499767400 VALVE GUIDE REAMER
NOTE:
• Apply engine oil to the reamer when reaming.
• If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
• If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

(8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace them if damaged, worn, deformed, or if "H" is exceed the standard value or if they have partial wear.

H:

Intake (A)
Standard
1.0 — 1.4 mm (0.039 — 0.055 in)

Exhaust (B)
Standard
1.3 — 1.7 mm (0.051 — 0.067 in)
Valve overall length:

Intake (A)  
104.4 mm (4.110 in)

Exhaust (B)  
104.65 mm (4.1201 in)

2) Put a small amount of grinding compound on the seat surface, and lap the valve and seat surface. Install a new intake valve oil seal after lapping.

5. VALVE SPRINGS

1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within the standard value presented in the table.

2) To measure the squareness of the valve spring, stand the spring on a surface plate and measure its deflection at the top of spring using a try square.

3) Measure the inner diameter of valve lifter mating part on cylinder head.

**Inner diameter:**

34.994 — 35.016 mm (1.3777 — 1.3786 in)

**NOTE:**
If difference between outer diameter of valve lifter and inner diameter of valve lifter mating part is over the standard or has partial wear in inner surface, replace the cylinder head.

**Standard:**

0.019 — 0.057 mm (0.0007 — 0.0022 in)

11) Remove the oil separator cover.

12) Remove the oil pump by using flat tip screwdriver.

CAUTION:
Be careful not to scratch the mating surface of cylinder block and oil pump.

ST 498497100 CRANKSHAFT STOPPER

13) Remove the water by-pass pipe for heater.

14) Remove the oil filter.

15) Removal of oil pan:
1) Place the cylinder block to face the #2 and #4 cylinder side upward.
2) Remove the bolts which secure oil pan to cylinder block.
3) Insert a oil pan cutter blade between cylinder block-to-oil pan clearance and remove the oil pan. Do not use a screwdriver or similar tools in place of oil pan cutter.

16) Remove the oil strainer stay.
17) Remove the oil strainer.
18) Remove the baffle plate.
19) Remove the water pipe.
20) Remove the water pump.
21) Remove the service hole cover and service hole plugs using a hexagon wrench [14 mm].

22) Rotate the crankshaft to bring #1 and #2 pistons to bottom dead center position, then remove the piston snap ring through service hole of #1 and #2 cylinders.

23) Draw out the piston pins from #1 and #2 pistons using ST.

NOTE:
Be careful not to confuse the original combination of piston, piston pin and cylinder.

24) Similarly remove the piston pins from #3 and #4 pistons.
25) Remove the bolts which connect cylinder block on the side of #2 and #4 cylinders.
26) Back off the bolts which connect cylinder block on the side of #1 and #3 cylinders two or three turns.
27) Place the cylinder block to face the #1 and #3 cylinder side upward, and remove cylinder block connecting bolts.
28) Separate the cylinder block (LH) and (RH).

NOTE:
When separating the cylinder block, do not allow the connecting rod to fall and damage the cylinder block.

29) Remove the rear oil seal.
30) Remove the crankshaft together with connecting rod.
31) Remove the crankshaft bearings from cylinder block using a hammer handle.

NOTE:
Do not confuse the combination of crankshaft bearings.
Press the bearing at the end opposite to locking lip.
32) Draw out each piston from cylinder block using a wooden bar or hammer handle.

NOTE:
Be careful not to confuse the original combination of piston and cylinder.
B: INSTALLATION

1) Remove oil on the mating surface of bearing and cylinder block before installation. Apply a coat of engine oil to crankshaft pins.

2) Position the crankshaft on the #2 and #4 cylinder block.

3) Apply liquid gasket to the mating surface of #1 and #3 cylinder block, and position it on #2 and #4 cylinder block.

*Liquid gasket:
THREE BOND 1215 (Part No. 004403007) or equivalent

*NOTE:
Do not allow liquid gasket to run over to O-ring grooves, oil passages, bearing grooves, etc.

4) Apply a coat of engine oil to washers and bolt threads.

5) Tighten the 10 mm cylinder block connecting bolts on LH side (A — D) in alphabetical sequence.

CAUTION:
- Ensure ring gaps do not face the same direction.
- Ensure ring gaps are not within the piston skirt area.

19) Install the snap ring.
   Install snap rings in the piston holes located opposite to the service holes in cylinder block, when positioning all pistons in the corresponding cylinders.
NOTE:
Use new snap rings.

20) Installation of piston:
   (1) Place the cylinder block to face the #1 and #2 cylinder side upward.
   (2) Using the ST1, turn the crankshaft so that #1 and #2 connecting rods are set at bottom dead center.

(4) Gasket

(6) Place the cylinder block to face the #3 and #4 cylinder side upward. Following the same procedures as used for #1 and #2 cylinders, install the pistons and piston pins.

22) Install the water pipe.
23) Install the baffle plate.

**Tightening torque:**

- 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

24) Install the oil strainer and O-ring.

**Tightening torque:**

- 10 N·m (1.0 kgf-m, 7.2 ft-lb)

25) Install the oil strainer stay.
26) Apply liquid gasket to mating surfaces and install the oil pan.

**Liquid gasket:**

THREE BOND 1207C (Part No. 004403012) or equivalent

27) Apply liquid gasket to mating surfaces and install the oil separator cover.

**NOTE:**

- Install them within 20 min. from applying liquid gasket.

**Liquid gasket:**

THREE BOND 1207C (Part No. 004403012) or equivalent
28) Install the drive plate.
To lock the crankshaft, use ST.
ST 498497100 CRANKSHAFT STOPPER

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

29) Installation of oil pump:
   (1) Install the front oil seal by using ST.
   ST 499587100 OIL SEAL INSTALLER
   NOTE:
   Use a new front oil seal.

   (2) Apply liquid gasket to the matching surface of oil pump.

Liquid gasket:
THREE BOND 1215 (Part No. 004403007) or equivalent

   (3) Apply a coat of engine oil to the inside of oil seal.

   (4) Install the oil pump on cylinder block. Be careful not to damage the oil seal during installation.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

CAUTION:
- Do not forget to install the O-ring and seal when installing the oil pump.
- Align the flat surface of oil pump’s inner rotor with crankshaft before installation.

30) Install the water pump and gasket.

Tightening torque:
First: 12 N·m (1.2 kgf-m, 8.7 ft-lb)
Second: 12 N·m (1.2 kgf-m, 8.7 ft-lb)
CAUTION:
• Be sure to use a new gasket.
• When installing the water pump, tighten the bolts in two stages in alphabetical sequence as shown in the figure.

31) Install the water by-pass pipe for heater.
32) Install the oil filter.
33) Install the water by-pass pipe between oil cooler and water pump.
34) Install the water pipe.

NOTE:
Always use new O-rings.
35) Install the cylinder head.
<Ref. to ME(H4DOTC)-59, INSTALLATION, Cylinder Head.>
36) Install the oil level gauge guide. (LH side)
37) Install the rocker cover.
38) Install the crank sprocket.
<Ref. to ME(H4DOTC)-52, INSTALLATION, Crank Sprocket.>
39) Install the cam sprocket.
<Ref. to ME(H4DOTC)-51, INSTALLATION, Cam Sprocket.>
40) Install the timing belt.
<Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt.>
41) Install the timing belt cover.
<Ref. to ME(H4DOTC)-42, INSTALLATION, Timing Belt Cover.>
42) Install the crank pulley.
<Ref. to ME(H4DOTC)-41, INSTALLATION, Crank Pulley.>
43) Install the generator and A/C compressor brackets on cylinder head.
44) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>
45) Install the intake manifold.
<Ref. to FU(H4DOTC)-15, INSTALLATION, Intake Manifold.>
C: DISASSEMBLY

1) Remove the connecting rod cap.
2) Remove the connecting rod bearing.

NOTE:
Arrange the removed connecting rod, connecting rod cap and bearing in order to prevent confusion.

3) Remove the piston rings using a piston ring expander.
4) Remove the oil ring by hand.

NOTE:
Arrange the removed piston rings in proper order to prevent confusion.

5) Remove the snap ring.

| (1) Connecting rod cap | (2) Connecting rod bearing | (3) Top ring | (4) Second ring | (5) Oil ring | (6) Snap ring |
D: ASSEMBLY

1) Apply oil to the surfaces of the connecting rod bearings. Install the connecting rod bearings on connecting rods and connecting rod caps.
2) Install the connecting rod on crankshaft.

NOTE:
Position each connecting rod with the side marked facing forward.

3) Install the connecting rod cap.
Ensure the arrow mark on connecting rod cap facing front during installation.

CAUTION:
- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

4) Install the oil ring spacer, upper rail and lower rail in this order by hand. Then install the second ring and top ring with a piston ring expander.

Tightening torque: \( N \cdot m \) (kgf-m, ft-lb)
\[ T: 45 \ (4.6, 33) \]
E: INSPECTION

1. CYLINDER BLOCK
   1) Visually check for cracks and damage. Especially, inspect the important parts by means of red lead check.
   2) Check the oil passages for clogging.
   3) Inspect the crankcase surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

Warping limit: 0.025 mm (0.00098 in)
Grinding limit: 0.1 mm (0.004 in)

Standard height of cylinder block: 201.0 mm (7.91 in)

2. CYLINDER AND PISTON
   1) The cylinder bore size is stamped on the cylinder block’s front upper surface.

NOTE:
• Measurement should be performed at a temperature of 20°C (68°F).
• Standard sized pistons are classified into two grades, “A” and “B”. These grades should be used as guide lines in selecting a standard piston.

Standard diameter:
A: 92.005 — 92.015 mm (3.6222 — 3.6226 in)
B: 91.995 — 92.005 mm (3.6219 — 3.6222 in)

2) How to measure the inner diameter of each cylinder:
Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights as shown in the figure, using a cylinder bore gauge.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Taper:
Standard
0.015 mm (0.0006 in)
3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:
Measure the outer diameter of each piston at the height as shown in the figure. (Thrust direction)

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Piston grade point H:
40.0 mm (1.57 in)

5) Calculate the clearance between cylinder and piston.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Cylinder to piston clearance at 20°C (68°F):
Standard
−0.010 — 0.010 mm (−0.00039 — 0.00039 in)

6) Boring and honing:
(1) If one of the values of taper, out-of-roundness, or cylinder-to-piston clearance exceeds the specified limit or is out of standard, or if there is any damage on the cylinder wall, rebore it to use an oversize piston.

CAUTION:
When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only. Nor use an oversize piston for one cylinder only.

NOTE:
Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks, and wear and the piston ring grooves for wear and damage. Replace if defective.
2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H4DOTC)-79, CYLINDER AND PISTON, INSPECTION, Cylinder Block.> If any of the clearances is out of specification, replace the piston or bore the cylinder to use an oversize piston.

3) Make sure that the piston pin can be inserted into the piston pin hole with your thumb at 20°C (68°F). Replace if defective.

**Standard clearance between piston pin and hole in piston:**

| Standard | 0.004 — 0.008 mm (0.0002 — 0.0003 in) |

4) Check the snap ring installation groove on the piston for burr (A). If necessary, remove burr from the groove so that the piston pin can lightly move.

5) Check the piston pin snap ring for distortion, cracks and wear.

### 4. PISTON RING

1) If the piston ring is broken, damaged or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

**CAUTION:**
- Marks are displayed on the end of top and second rings. When installing the rings to the piston, face those marks upward.
- Oil ring consists of the upper rail, expander and lower rail. When installing on piston, be careful of each rail’s direction.

2) Squarely place the piston ring and oil ring in cylinder, and measure the piston ring gap with a thickness gauge.

<table>
<thead>
<tr>
<th>Piston ring gap</th>
<th>Standard mm (in)</th>
</tr>
</thead>
</table>
| Top ring        | Outer circle side: 0.20 — 0.25 (0.0079 — 0.0098)  
                 | Inner circle side: 0.20 — 0.30 (0.0079 — 0.014) |
| Second ring     | 0.40 — 0.50 (0.016 — 0.020) |
| Oil ring rail   | 0.20 — 0.50 (0.0079 — 0.0197) |
NOTE:
Difference between outer and inner perimeters of top ring should be within 0.05 mm (0.0020 in).

3) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

NOTE:
Before measuring the clearance, clean the piston ring groove and piston ring.

5. CONNECTING ROD

1) Replace the connecting rod, if the large or small end thrust surface is damaged.
2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

3) Install the connecting rod fitted with bearing to crankshaft and measure the side clearance (thrust clearance). If side clearance exceeds the limit or has partial wear, replace the connecting rod.

Connecting rod side clearance:
Standard
0.070 — 0.330 mm (0.0028 — 0.0130 in)

4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.
5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within the specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)
Connecting rod oil clearance:

**Standard**

0.026 — 0.052 mm (0.0010 — 0.0020 in)

</tbody>
</table>

6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at the connecting rod small end.

**Clearance between piston pin and bushing:**

**Standard**

0 — 0.022 mm (0 — 0.0009 in)

7) Replacement procedure is as follows.

(1) Remove the bushing from connecting rod with ST and press.
(2) Press the bushing with ST after applying oil on the periphery of bushing.

6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely, and check it for cracks using red lead. Replace if defective.
2) Measure the bend of crankshaft. If it exceeds the limit, repair or replace it.

**NOTE:**

If a suitable V-block is not available, install #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings, and then measure the crankshaft bend using a dial gauge.

**Crankshaft bend limit:**

0.035 mm (0.0014 in)

3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and replace or recondition crankshaft as necessary. When grinding the crank journal or crank pin, finish them to the specified dimensions according to the undersize bearing to be used.
**Crank pin and crank journal:**

**Out-of-roundness**
0.005 mm (0.0002 in) or less

**Cylindricality**
0.006 mm (0.0002 in)

**Grinding limit (dia.)**
51.750 mm (2.0374 in)

4) Measure the thrust clearance of crankshaft at center bearing. If clearance exceeds the limit, replace the bearing.

**Crankshaft side clearance:**
- **Standard**
  - 0.030 — 0.115 mm (0.0012 — 0.0045 in)

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting, and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and replace or recondition the crankshaft as necessary.

**Crankshaft oil clearance:**
- **Standard**
  - 0.010 — 0.030 mm (0.00039 — 0.0012 in)

B: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Front Exhaust Pipe

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the under cover.
3) Remove the front exhaust pipe cover.
4) Remove the nuts which hold front exhaust pipe assembly onto turbocharger joint pipe.
5) While holding the front exhaust pipe assembly, remove the nuts which hold front exhaust pipe assembly to cylinder head exhaust port.
6) Remove the front exhaust pipe assembly.

B: INSTALLATION

NOTE:
Use a new gasket.
1) Install the front exhaust pipe assembly.

Tightening torque:
30 N·m (3.1 kgf·m, 22.1 ft-lb)

C: INSPECTION
1) Check the connections and welds for exhaust leaks.
2) Check the rear exhaust pipe for holes or rust.

2) Install the front exhaust pipe assembly to turbocharger joint pipe.

Tightening torque:
35 N·m (3.6 kgf·m, 26.0 ft-lb)
3. Center Exhaust Pipe

A: REMOVAL
1) Set the vehicle on a lift.
2) Remove the collector cover.
3) Disconnect the ground cable from battery.
4) Remove the intercooler. <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
5) Remove the intercooler bracket.

6) Lift-up the vehicle.
7) Remove the under cover.
8) Remove the universal joint bolts and then remove the universal joint.

CAUTION:
Scribe alignment marks on the universal joint so that it can be reassembled at the original serration.

9) Lower the vehicle.
10) Remove the linear motion mounting. <Ref. to ME(H4DOTC)-37, REMOVAL, Linear Motion Mounting.>
11) Remove the linear motion mounting bracket.

12) Remove the turbocharger cover.

13) Separate the center exhaust pipe from turbocharger.

14) Disconnect the connector from front oxygen (A/F) sensor.

15) Lift-up the vehicle.
16) Disconnect the connector from rear oxygen sensor.
17) Separate the center exhaust pipe from rear exhaust pipe.

18) Remove the bolt which holds center exhaust pipe bracket to transmission.

19) Remove the intercooler bracket.
20) Remove the bolt which holds center exhaust pipe to hanger bracket.

**CAUTION:**
Be careful not to pull down the center exhaust pipe.

21) Remove the center exhaust pipe.

**B: INSTALLATION**

**NOTE:**
Use a new gasket.
1) Install the center exhaust pipe and temporarily tighten the bolt which holds center exhaust pipe to hanger bracket.
2) Temporarily tighten the bolt which holds center exhaust pipe to transmission.

3) Connect the center exhaust pipe to turbocharger.

**Tightening torque:**
\[ 35 \text{ N·m (3.6 kgf-m, 26.0 ft-lb)} \]

4) Install the center exhaust pipe to rear exhaust pipe.

**Tightening torque:**
\[ 35 \text{ N·m (3.6 kgf-m, 26.0 ft-lb)} \]

5) Connect the connector to rear oxygen sensor.
6) Tighten the bolt which holds center exhaust pipe bracket to transmission.

*Tightening torque:*

30 N·m (3.1 kgf-m, 22.1 ft-lb)

7) Tighten the bolt which holds center exhaust pipe to hanger bracket.

*Tightening torque:*

35 N·m (3.6 kgf-m, 26.0 ft-lb)

8) Lower the vehicle.

9) Install the turbocharger cover.

10) Install the linear motion mounting bracket.

*Tightening torque:*

T1: 7.4 N·m (0.75 kgf-m, 5.4 ft-lb)
T2: 40 N·m (4.1 kgf-m, 29.5 ft-lb)

11) Install the linear motion mounting. <Ref. to ME(H4DOTC)-37, INSTALLATION, Linear Motion Mounting.>

12) Connect the connector of front oxygen (A/F) sensor.

13) Lift-up the vehicle.

14) Install the universal joint.

(1) Align the bolt hole on the long yoke side of universal joint with the cutout at the serrated section of shaft end, and then insert the universal joint.

(2) Align the bolt hole on the short yoke side of universal joint with the cutout at the serrated section of gearbox assembly. Lower the universal joint completely.

(3) Temporarily tighten the bolt of short yoke side. Raise the universal joint to make sure the bolt is properly passing through the cutout at the serrated section.

(4) Tighten the long yoke side bolt, and also tighten the short yoke side bolt.

*Tightening torque:*

24 N·m (2.4 kgf-m, 17.4 ft-lb)

**CAUTION:**

- Make sure the universal joint bolts are tightened through the shaft serration notches.
- Excessively large tightening torque of universal joint bolts may lead to heavy steering wheel operation.

*Standard clearance between gearbox and DOJ:*

15 mm (0.59 in) or more

15) Install the under cover.

16) Lower the vehicle.
17) Install the intercooler bracket.

18) Install the intercooler. <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
19) Install the collector cover.

C: INSPECTION
1) Check the connections and welds for exhaust leaks.
2) Check the rear exhaust pipe for holes or rust.
**4. Joint Pipe**

**A: REMOVAL**

1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Remove the front exhaust pipe cover.
6) Remove the nuts which hold front exhaust manifold to turbocharger joint pipe.
7) Remove the center exhaust pipe.  
   <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.>
8) Remove the turbocharger.  <Ref. to IN(H4DOTC)-14, REMOVAL, Turbocharger.>
9) Remove the joint pipe from the lower side of vehicle.

**B: INSTALLATION**

Install in the reverse order of removal.

*Tightening torque:*

\[ T: 35 \text{ N} \cdot \text{m} \ (3.6 \text{ kgf} \cdot \text{m}, 26.0 \text{ ft-lb}) \]

**C: INSPECTION**

1) Check the connections and welds for exhaust leaks.
2) Check the rear exhaust pipe for holes or rust.
5. Rear Exhaust Pipe

A: REMOVAL
1) Lift-up the vehicle.
2) Separate the rear exhaust pipe from center exhaust pipe.
3) Separate the rear exhaust pipe from both mufflers.

CAUTION:
Be careful not to pull down the rear exhaust pipe.

4) Remove the rear exhaust pipe.

B: INSTALLATION
NOTE:
Use a new gasket.
1) Install the rear exhaust pipe to both mufflers.

Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)

2) Install the rear exhaust pipe to center exhaust pipe.

C: INSPECTION
1) Check the connections and welds for exhaust leaks.
2) Check the rear exhaust pipe for holes or rust.
3) Check the cushion rubber for wear or crack.
6. Muffler

A: REMOVAL
1) Separate the muffler (RH) from rear exhaust pipe.

2) Remove the cushion rubbers, and detach the muffler.

**CAUTION:**
Be careful not to drop the muffler during removal.

**NOTE:**
To facilitate removal, apply a coat of spray type lubricant to the mating area of cushion rubbers in advance.

3) Perform the same procedure for muffler (LH).

B: INSTALLATION
Install in the reverse order of removal.

**NOTE:**
Always use a new gasket and self-locking nuts.

**Tightening torque:**
48 N·m (4.9 kgf-m, 35.4 ft-lb)

C: INSPECTION
1) Check the connections and welds for exhaust leaks.
2) Check the mufflers for holes or rust.
3) Check the cushion rubber for wear or crack.

### General Description

- **C: CAUTION**
  - Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
  - Remove contamination including dirt and corrosion before removal, installation or disassembly.
  - Keep the disassembled parts in order and protect them from dust and dirt.
  - Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
  - Be careful not to burn yourself, because each part on the vehicle is hot after running.
  - Be sure to tighten fasteners including bolts and nuts to the specified torque.
  - Place shop jacks or rigid racks at the specified points.
  - Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

B: INSPECTION  

DETECTING CONDITION:  
- Engine coolant temperature is more than 96°C (205°F).  
- Vehicle speed is below 19 km/h (12 MPH).

TROUBLE SYMPTOMS:  
Radiator main and sub fan do not rotate under the above conditions.

3. Engine Coolant

A: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

1) Lift-up the vehicle.
2) Remove the under cover.
3) Remove the drain plug to drain engine coolant into container.

NOTE:
Remove the coolant filler tank cap so that engine coolant will drain faster.

4) Install the drain plug.

2. FILLING OF ENGINE COOLANT

1) Remove the collector cover.
2) Fill engine coolant into coolant filler tank up to the filler neck position.

*Coolant capacity (fill up to “FULL” level):*

Approx. 7.3 .qt (7.7 US qt, 6.4 Imp qt)

CAUTION:
Do not confuse the cap of coolant filler tank and cap of radiator.

NOTE:
- When pouring the engine coolant, the radiator side cap must not be removed.
- The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crank-case. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.
3) Fill engine coolant into the reservoir tank up to “FULL” level.

4) Warm up the engine completely for more than five minutes at 2,000 to 3,000 rpm.
5) If the engine coolant level drops in coolant filler tank, add engine coolant to filler neck position.
6) If the engine coolant level drops from “FULL” level of reservoir tank, add engine coolant to “FULL” level.
7) Attach the coolant filler tank cap and reservoir tank cap properly.
8) Install the collector cover.
B: INSPECTION

1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

Concentration and safe operating temperature of SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054, the concentration is 45% (point A), the safe operating temperature is −14°C (7°F) (point B), and the freezing temperature is −20°C (−4°F) (point C).

2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%). The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 2 (2.2 US qt, 1.8 Imp qt). Drain 2.1 2 (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 2 (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.
4. Water Pump

A: REMOVAL
1) Remove the collector cover.
2) Remove the radiator. <Ref. to CO(H4DOTC)-19, REMOVAL, Radiator.>
3) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
4) Remove the timing belt. <Ref. to ME(H4DOTC)-43, REMOVAL, Timing Belt.>
5) Remove the automatic belt tension adjuster (A).
6) Remove the belt idler (B).
7) Remove the belt idler No. 2 (C).
8) Remove the camshaft position sensor. <Ref. to FU(H4DOTC)-25, REMOVAL, Camshaft Position Sensor.>
9) Remove the cam sprocket (LH) using ST. <Ref. to ME(H4DOTC)-51, REMOVAL, Cam Sprocket.>
10) Remove the tensioner bracket.
11) Remove the belt cover No. 2 (LH).
12) Disconnect the hose from water pump.
13) Remove the water pump.

B: INSTALLATION
1) Install the water pump onto cylinder block (LH).

NOTE:
- Always use new gasket.
- When installing the water pump, tighten the bolts in two stages in alphabetical sequence as shown in the figure.

Tightening torque:
First:
12 N·m (1.2 kgf-m, 8.7 ft-lb)
Second:
12 N·m (1.2 kgf-m, 8.7 ft-lb)

2) Install the hose to water pump.
3) Install the belt cover No. 2 (LH).

Tightening torque:
5 N·m (0.5 kgf-m, 3.6 ft-lb)
4) Install the tensioner bracket.

_Tightening torque:_

\[ 25 \text{ N}\cdot\text{m (2.5 kgf-m, 18.1 ft-lb)} \]

5) Install the cam sprocket (LH) using ST. <Ref. to ME(H4DOTC)-51, INSTALLATION, Cam Sprocket.>

6) Install the camshaft position sensor. <Ref. to FU(H4DOTC)-25, INSTALLATION, Camshaft Position Sensor.>

7) Install the belt idler No. 2 (C).

8) Install the belt idler (B).

9) Install the automatic belt tension adjuster (A) which has a tension rod held by a pin. <Ref. to ME(H4DOTC)-44, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

_Tightening torque:_

\[ 39 \text{ N}\cdot\text{m (4.0 kgf-m, 28.9 ft-lb)} \]

10) Install the timing belt. <Ref. to ME(H4DOTC)-45, TIMING BELT, INSTALLATION, Timing Belt.>

11) Install the V-belts. <Ref. to ME(H4DOTC)-39, INSTALLATION, V-belt.>

12) Install the radiator. <Ref. to CO(H4DOTC)-20, INSTALLATION, Radiator.>

13) Install the collector cover.

---

**C: INSPECTION**

1) Check the water pump bearing for smooth rotation.

2) Check the water pump pulley for abnormalities.

3) Make sure the impeller is not deformed or damaged.

4) Inspect the clearance between impeller and pump case.

_Clearance between impeller and pump case:_

_Standard value_

\[ 0.5 — 1.5 \text{ mm (0.020 — 0.059 in)} \]

5) After water pump installation, check the pulley shaft for engine coolant leaks and noise. If leaks or noise are noted, replace the water pump assembly.
5. Thermostat

A: REMOVAL
1) Set the vehicle on a lift.
2) Lift-up the vehicle.
3) Remove the under cover.
4) Drain engine coolant completely.
<Ref. to CO(H4DOTC)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

5) Disconnect the radiator outlet hose from the thermostat cover.

6) Remove the thermostat cover, and then remove the gasket and thermostat.

B: INSTALLATION
1) Install the gasket to thermostat, and install the thermostat and gasket to water pump as a unit. Then, install the thermostat cover.

NOTE:
• When reinstalling the thermostat, use a new gasket.
• The thermostat must be installed with the jiggle pin facing upward.
Thermostat

**Tightening torque:**
12 N·m (1.2 kgf-m, 8.7 ft-lb)

**Valve lift:**
9.0 mm (0.354 in) or more

2) Connect the radiator outlet hose to thermostat cover.
3) Install the under cover.
4) Lower the vehicle.
5) Fill with engine coolant. <Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

**C: INSPECTION**
Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

- Inspection method
Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measurement should be to the specification.

**Starting temperature to open:**
76 — 80 °C (169 — 176 °F)

**Fully opens:**
91 °C (196 °F)
6. Radiator

A: REMOVAL

WARNING:
The radiator is pressurized. Wait until engine cools down before working on the radiator.

1) Set the vehicle on a lift.
2) Remove the collector cover.
3) Disconnect the ground cable from battery.

4) Lift-up the vehicle.
5) Remove the under cover.
6) Remove the heat shield cover from radiator.

7) Drain engine coolant completely.  
   <Ref. to CO(H4DOTC)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

8) Disconnect the connectors of radiator main fan motor (A) and sub fan motor (B).

9) Disconnect the ATF cooler hoses from ATF pipes.  
   Plug the ATF pipe to prevent ATF leaks.

10) Disconnect the radiator outlet hose from thermostat cover.

11) Lower the vehicle.
12) Remove the air intake duct.  <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
13) Disconnect the over flow hose.
14) Remove the reservoir tank. <Ref. to CO(H4DOTC)-30, REMOVAL, Reservoir Tank.>
15) Disconnect the radiator inlet hose (A) from radiator.
16) Remove the hood stay holder (B).

17) Disconnect the two coolant filler tank hoses from radiator.

18) Remove the radiator upper brackets.

19) While lifting the radiator up, slide it to the left.
20) Lift the radiator up and away from vehicle.

B: INSTALLATION
1) Attach the radiator lower cushions to holes on the radiator lower bracket.

2) Install the radiator to vehicle.

NOTE:
Make pins on the lower side of radiator be fitted into the radiator lower cushions on body side.
3) Install the radiator upper brackets and tighten the bolts.

**Tightening torque:**
\[ 18 \text{ N·m (1.8 kgf·m, 13.0 ft-lb)} \]

4) Connect the two coolant filler tank hoses to radiator.

5) Connect the radiator inlet hose (A).
6) Install the hood stay holder (B).

7) Install the reservoir tank. <Ref. to CO(H4DOTC)-30, INSTALLATION, Reservoir Tank.>
8) Connect the over flow hose.
9) Install the air intake duct. <Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.>
10) Lift-up the vehicle.
11) Connect the ATF cooler hoses.

12) Connect the radiator outlet hose.

13) Connect the connectors to radiator main fan motor (A) and sub fan motor (B).

14) Install the heat shield cover.

15) Install the under cover.
16) Lower the vehicle.
17) Connect the battery ground cable to battery.

18) Fill engine coolant. <Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
19) Check the ATF level. <Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>
20) Install the collector cover.
C: INSPECTION

1) Remove the coolant filler tank cap and fill engine coolant to coolant filler tank, then attach the tester to radiator in place of cap.

2) Apply a pressure of 122 kPa (1.2 kg/cm², 18 psi) to the radiator to check if:
   • Engine coolant leaks at or around radiator.
   • Engine coolant leaks at/around hoses or connections.

CAUTION:
   • Inspection must be carried out at the side of coolant filler tank, not at the side of radiator.
   • Engine should be turned off.
   • Wipe engine coolant from check points in advance.
   • Be careful to prevent engine coolant from spurting out when removing tester.
   • Be careful not to deform the filler neck of coolant filler tank when installing or removing the tester.
7. Radiator Cap

A: INSPECTION
1) Attach the radiator cap to tester.

2) Increase pressure until the tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for five to six seconds.

Coolant filler tank side
Standard pressure:
93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)
Service limit pressure:
83 kPa (0.85 kg/cm², 12 psi)

Radiator side
Standard pressure:
122 — 152 kPa (1.24 — 1.55 kg/cm², 18 — 22 psi)
Service limit pressure:
112 kPa (1.14 kg/cm², 16 psi)

CAUTION:
• Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.
• Not to confuse the cap of coolant filler tank and cap of radiator.
8. Radiator Main Fan and Fan Motor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Disconnect the main fan motor connector (A).
6) Remove the heat shield cover from radiator.
7) Drain the coolant about 1 l (1.06 US qt, 0.88 Imp qt). <Ref. to CO(H4DOTC)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
8) Remove the ATF hose from the clip of radiator main fan motor assembly.
9) Lower the vehicle.
10) Remove the air intake duct.
11) Disconnect the over flow hose.
12) Remove the over flow pipe.
13) Remove the reservoir tank. <Ref. to CO(H4DOTC)-30, REMOVAL, Reservoir Tank.>
14) Remove the mounting bolts from radiator main fan motor assembly.
15) Disconnect the radiator inlet hose (A) from radiator.
16) Remove the hood stay holder (B).
17) Remove the radiator main fan motor assembly from vehicle.
B: INSTALLATION

1) Install the radiator main fan motor assembly to vehicle.
2) Connect the radiator inlet hose (A) to radiator.
3) Install the hood stay holder (B).
4) Install the mounting bolts of radiator main fan motor assembly.

5) Install the reservoir tank. <Ref. to CO(H4DOTC)-30, INSTALLATION, Reservoir Tank.>
6) Install the over flow pipe.
7) Connect the over flow hose.
8) Install the air intake duct.
9) Lift-up the vehicle.
10) Attach the ATF hose to the clip of radiator main fan motor assembly.
11) Install the heat shield cover to radiator.
12) Connect the main fan motor connector (A).
13) Install the under cover.
14) Lower the vehicle.
15) Connect the battery ground cable to battery.
16) Fill engine coolant. <Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
17) Install the collector cover.
C: DISASSEMBLY
1) Remove the clip which holds fan motor connector onto shroud.
2) Remove the nut which holds fan itself onto fan motor and shroud assembly.
3) Remove the bolts which hold fan motor onto shroud.

D: ASSEMBLY
Assemble in the reverse order of disassembly.

Tightening torque:
4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

Tightening torque:
3.4 N·m (0.35 kgf-m, 2.5 ft-lb)
9. Radiator Sub Fan and Fan Motor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Disconnect the sub fan motor connector (B).
6) Remove the heat shield cover from radiator.
7) Drain the coolant about \( \frac{1}{2} \) (1.06 US qt, 0.88 Imp qt). <Ref. to CO(H4DOTC)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
8) Remove the ATF hose from the clip of radiator sub fan motor assembly.
9) Lower the vehicle.
10) Remove the air intake duct.
11) Disconnect the over flow hose.
12) Remove the over flow pipe.
13) Remove the reservoir tank. <Ref. to CO(H4DOTC)-30, REMOVAL, Reservoir Tank.>
14) Remove the mounting bolts of radiator sub fan motor assembly.
15) Disconnect the radiator inlet hose (A) from radiator.
16) Remove the hood stay holder (B).
17) Remove the radiator sub fan motor assembly from vehicle.

B: INSTALLATION
1) Install the radiator sub fan motor assembly to vehicle.
2) Connect the radiator inlet hose (A) to radiator.
3) Install the hood stay holder (B).
15) Connect the battery ground cable to battery.

16) Fill engine coolant. <Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

17) Install the collector cover.

**C: DISASSEMBLY**

1) Remove the clip which holds fan motor connector onto shroud.
2) Remove the nut which holds fan itself onto fan motor and shroud assembly.
3) Remove the bolts which hold fan motor onto shroud.

---

4) Install the mounting bolts of radiator sub fan motor assembly.

5) Install the reservoir tank. <Ref. to CO(H4DOTC)-30, INSTALLATION, Reservoir Tank.>
6) Install the over flow pipe.
7) Connect the over flow hose.
8) Install the air intake duct.
9) Lift-up the vehicle.
10) Attach the ATF hose to the clip of radiator sub fan motor assembly.
11) Install the heat shield cover to radiator.

12) Connect the sub fan motor connector (B).

13) Install the under cover.
14) Lower the vehicle.

---

13) Install the under cover. CO-00250
14) Lower the vehicle. CO-00252
D: ASSEMBLY
Assemble in the reverse order of disassembly.

* Tightening torque:*
  4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

* Tightening torque:*
  3.4 N·m (0.35 kgf-m, 2.5 ft-lb)
10. Reservoir Tank

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the overflow hose (A).
3) Pull out the reservoir tank to the arrow direction while pushing the claw (B).

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Make sure the engine coolant level is between “FULL” and “LOW”.
11. Coolant Filler Tank

A: REMOVAL

WARNING:
The radiator is pressurized. Wait until engine cools down before working on the radiator.

1) Remove the collector cover.
2) Drain the coolant about $3.0 \ell$ (3.2 US qt, 2.6 Imp qt). <Ref. to CO(H4DOTC)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
3) Disconnect the engine coolant hoses from coolant filler tank.
4) Remove the bolts which install the coolant filler tank.
5) Disconnect the engine coolant hose which connects the under side of coolant filler tank.
6) Remove the coolant filler tank.

B: INSTALLATION

1) Install in the reverse order of removal.

**Tightening torque:**

$16 \text{ N\cdot m (1.6 kgf-m, 11.8 ft-lb)}$

2) Fill with engine coolant. <Ref. to CO(H4DOTC)-13, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

2) Remove the combination meter.  
3) Measure the resistance of combination meter.  
Terminals  
No. 4 — No. 15:  
No. 3 — No. 15: | Is the resistance less than 10 Ω? | Replace the harness connector between combination meter and oil pressure switch. | Repair or replace the combination meter. <Ref. to IDI-3, INSPECTION, Combination Meter System.> |
3. Engine Oil

A: INSPECTION
1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe it clean.
3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and properly orientated.
4) Remove it again and check the engine oil level. If the engine oil level is below “L” line, add oil to bring the level up to “F” line.
5) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the level.
6) Just after driving or while the engine is warm, engine oil level show in the range between “F” line and notch mark. This is caused by thermal expansion of the engine oil.

NOTE:
To prevent overfilling the engine oil, do not add oil above “F” line when the engine is cold.

B: REPLACEMENT
1) Open the engine oil filler cap for quick draining of engine oil.
2) Lift-up the vehicle.
3) Drain engine oil by loosening the engine oil drain plug.
4) Tighten the engine oil drain plug after draining engine oil.

NOTE:
Use a new metal gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb)

5) Use the engine oil of proper quality and viscosity, fill engine oil through the oil filler duct to upper point on level gauge. Make sure that the vehicle is parked on a level surface when checking oil level.

Recommended oil:
<Ref. to LU(H4DOTC)-2, SPECIFICATION, General Description.>

Engine oil capacity:
Upper level
4.0 l (4.2 US qt, 3.5 Imp qt)

Lower level
3.0 l (3.2 US qt, 2.6 Imp qt)

6) Close the engine oil filler cap.
7) Start the engine and warm it up for a time.
8) After the engine stops, recheck the oil level. If necessary, add engine oil up to the upper level on level gauge.
4. Oil Pump

A: REMOVAL

1) Remove the collector cover.
2) Disconnect the ground cable from battery.

3) Lift-up the vehicle.
4) Remove the under cover.
5) Remove the radiator. <Ref. to CO(H4DOTC)-19, REMOVAL, Radiator.>
6) Remove the crankshaft position sensor.

7) Remove the V-belts. <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.>
8) Remove the rear side V-belt tensioner.

9) Remove the crank pulley by using ST. <Ref. to ME(H4DOTC)-41, REMOVAL, Crank Pulley.>

10) Remove the water pump. <Ref. to CO(H4DOTC)-15, REMOVAL, Water Pump.>
11) Remove the timing belt guide.

12) Remove the crank sprocket.

13) Remove the bolts which hold oil pump onto cylinder block.

14) Remove the oil pump by using flat bladed screwdriver.
CAUTION:
Be careful not to scratch mating surfaces of cylinder block and oil pump.

B: INSTALLATION
Install in the reverse order of removal.
Perform the following.
1) Apply liquid gasket to the matching surfaces of oil pump.

Liquid gasket:
THREE BOND 1215 (Part No. 004403007) or equivalent

2) Replace the O-ring (A) with a new one.
3) Apply a coat of engine oil to the inside of oil seal.

4) Position the oil pump, aligning the notched area with crankshaft, and push the oil pump straight.

CAUTION:
• Make sure the oil seal lip is not folded.
• Be careful not to scratch oil seal when installing oil pump on cylinder block.
5) Install the oil pump.

Tightening torque: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

C: DISASSEMBLY
Remove the screws which secure oil pump cover and then disassemble oil pump. Inscribe alignment marks on the inner and outer rotors so that they can be replaced in their original positions during reassembly.

CAUTION:
Before disassembling the oil pump, remove the relief valve.
**D: ASSEMBLY**

1) Install the front oil seal by using ST.
   ST 499587100 OIL SEAL INSTALLER

**NOTE:**
Use a new oil seal.

2) Apply a coat of engine oil to the inner and outer rotors.
3) Install the inner and outer rotors in their original positions.
4) Install the oil relief valve and relief valve spring and plug.

**NOTE:**
Use a new gasket.

5) Install the oil pump cover.

**Tightening torque:**
- **T1:** 5.4 N·m (0.55 kgf-m, 4.0 ft-lb)
- **T2:** 44 N·m (4.5 kgf-m, 32.5 ft-lb)

**E: INSPECTION**

1. **TIP CLEARANCE**

   Measure the tip clearance of rotors. If the clearance exceeds the standard value, replace the rotors as a matched set.

   **Tip clearance:**
   - **Standard value**
     - 0.04 — 0.14 mm (0.0016 — 0.0055 in)

2. **CASE CLEARANCE**

   Measure the clearance between outer rotor and oil pump rotor housing. If the clearance exceeds the standard value, replace the oil pump case.

   **Case clearance:**
   - **Standard value**
     - 0.10 — 0.175 mm (0.0039 — 0.0069 in)
3. SIDE CLEARANCE

Measure the clearance between oil pump inner rotor and pump cover. If the clearance exceeds the standard value, replace the rotor or pump body.

Side clearance:
Standard value
0.02 — 0.07 mm (0.0008 — 0.0028 in)

4. OIL RELIEF VALVE

Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

Relief valve spring:
Free length
73.7 mm (2.902 in)
Installed length
54.7 mm (2.154 in)
Load when installed
93.1 N (9.49 kgf, 20.88 lb)

5. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, worn rotor chamber, cracks and other faults.

6. OIL SEAL

Check the oil seal lips for deformation, hardening, wear, etc. and replace if defective.
5. Oil Pan and Strainer

A: REMOVAL
1) Set the vehicle on a lift.
2) Remove the front wheels.
3) Remove the collector cover.
4) Disconnect the ground cable from battery.
5) Disconnect the connector from mass airflow sensor.
6) Remove the air intake boot and air cleaner upper cover.
7) Remove the intercooler.  
   <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
8) Remove the pitching stopper.
9) Remove the linear motion mounting.  
   <Ref. to ME(H4DOTC)-37, REMOVAL, Linear Motion Mounting.>
10) Remove the radiator upper brackets.
11) Support the engine with a lifting device and wire ropes.
12) Lift-up the vehicle.
   CAUTION:  
   When lifting up the vehicle, raise up wire ropes at the same time.
13) Remove the under cover.
14) Drain engine oil.
15) Remove the front exhaust pipe.  
   <Ref. to EX(H4DOTC)-5, REMOVAL, Front Exhaust Pipe.>
16) Remove the nuts which install front cushion rubber onto front crossmember.
17) Remove the bolts which install oil pan on cylinder block with the engine raised up.
18) Insert the oil pan cutter blade into the clearance between cylinder block and oil pan.  
   CAUTION:  
   Do not use a screwdriver or similar tool in place of oil pan cutter.
19) Remove the oil strainer.
20) Remove the baffle plate.

3) Apply liquid gasket to the mating surfaces and install the oil pan.

**Liquid gasket:**

THREE BOND 1207C (Part No. 004403012) or equivalent

4) Tighten the bolts which install oil pan onto engine block.

**Tightening torque:**

5 N·m (0.5 kgf-m, 3.6 ft-lb)

---

**B: INSTALLATION**

**CAUTION:**
Before installing the oil pan, wipe clean the oil pan and the mating face of engine block.

1) Install the baffle plate.

**Tightening torque:**

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

2) Install the oil strainer onto baffle plate.

**NOTE:**
Replace O-ring with new one.

**Tightening torque:**

10 N·m (1.0 kgf-m, 7.2 ft-lb)

5) Lower the engine onto front crossmember.

6) Tighten the nuts which hold front cushion rubber onto front crossmember.
**Tightening torque:**
83 N·m (8.5 kgf-m, 61 ft-lb)

7) Install the front exhaust pipe.
<Ref. to EX(H4DOTC)-5, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
8) Install the under cover.
9) Lower the vehicle.

**CAUTION:**
When lowering the vehicle, lower the lift-up device and wire ropes at the same time.
10) Remove the lifting device and wire ropes.

11) Install the pitching stopper.
**Tightening torque:**
\[ T_1: 50 \text{ N·m (5.1 kgf-m, 36.9 ft-lb)} \]
\[ T_2: 58 \text{ N·m (5.9 kgf-m, 42.8 ft-lb)} \]

12) Install the linear motion mounting.
<Ref. to ME(H4DOTC)-37, INSTALLATION, Linear Motion Mounting.>

13) Install the radiator upper brackets.

14) Install the intercooler. <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
15) Install the air intake boot and air cleaner upper cover.
16) Connect the connector to mass air flow sensor.

17) Install the front wheels.
18) Install the collector cover.
19) Connect the battery ground cable to battery.

20) Fill engine oil. <Ref. to LU(H4DOTC)-8, INSPECTION, Engine Oil.>

**C: INSPECTION**
Visually check that the oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.
6. Oil Pressure Switch

A: REMOVAL
1) Remove the collector cover.
2) Remove the generator from bracket.
<Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.>
3) Disconnect the terminal from oil pressure switch.

B: INSTALLATION
1) Apply liquid gasket to the oil pressure switch threads.

Liquid gasket: THREE BOND 1324 (Part No. 004403007) or equivalent

2) Install the oil pressure switch onto engine block.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Connect the terminal to oil pressure switch.

4) Install the generator to bracket.
<Ref. to SC(H4SO 2.0)-14, INSTALLATION, Generator.>
5) Install the collector cover.

C: INSPECTION
Make sure oil does not leak or seep from where the oil pressure switch is installed.
7. Engine Oil Filter

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the under cover.
3) Remove the oil filter using STs.
   ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))
   ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

B: INSTALLATION
1) Clean the oil filter installation surface on cylinder block or oil cooler.
2) Obtain a new oil filter and apply a thin coat of engine oil to seal rubber.
3) Install the oil filter, turning it by hand, being careful not to damage seal rubber.
4) Tighten more after the seal rubber contacts oil cooler.
   NOTE:
   • In case of oil filter in diameter 68 mm (2.68 in), tighten by approx. one turn.
   • In case of oil filter in diameter 65 mm (2.56 in), tighten by approx. 2/3 to 3/4 turn.
   • Over-tightening may cause oil leak.
5) Install the under cover.
6) Lower the vehicle.

C: INSPECTION
1) After installing the oil filter, run the engine and make sure that no oil is leaking around seal rubber.
   NOTE:
The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.
2) Check the engine oil level.
   <Ref. to LU(H4DOTC)-8, INSPECTION, Engine Oil.>
## 8. Engine Lubrication System Trouble in General

### A: INSPECTION

Before performing diagnosis, make sure that the engine oil level is correct and no oil leakage exists.

B: COMPONENT

(1) Spark plug
(2) Ignition coil & ignitor ASSY

Tightening torque: Nm (kgf-m, ft-lb)

T1: 21 (2.1, 15.2)
T2: 16 (1.6, 11.7)
C: CAUTION
• Wear work clothing, including a cap, protective goggle and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Spark Plug

A: REMOVAL

CAUTION:
All spark plugs installed on an engine must be of the same heat range.

Spark plug:
<Ref. to IG(H4DOTC)-2, SPECIFICATION, General Description.>

1. RH SIDE

1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air cleaner case.
<Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
4) Disconnect the connector from ignition coil.
5) Remove the ignition coil.

NOTE:
Turn the #3 ignition coil by 180° to remove it.
6) Remove the spark plug with a spark plug socket.

2. LH SIDE

1) Remove the collector cover.
2) Remove the battery and battery carrier.
3) Disconnect the connector from ignition coil.
4) Remove the ignition coil.

NOTE:
Turn the #4 ignition coil by 180° to remove it.

5) Remove the spark plug with a spark plug socket.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15.2 ft-lb)

Tightening torque (Ignition coil):
16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:
The above torque should only be applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

2. LH SIDE

Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15.2 ft-lb)

Tightening torque (Ignition coil):
16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:
The above torque should only be applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.
C: INSPECTION
Check the electrodes and inner and outer ceramic insulator of plugs, noting the type of deposits and the degree of electrode erosion.

1) Normal:
Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

2) Carbon fouled:
Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in the city, weak ignition, too rich fuel mixture, dirty air cleaner, etc. It is advisable to replace with plugs having hotter heat range.

3) Oil fouled:
Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If the same condition remains after repair, use a hotter plug.

4) Overheating:
White or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.
D: ADJUSTMENT
Clean the spark plugs using a wire brush.
Clean and remove the carbon or oxide deposits.
But do not wear away ceramic insulator.
If deposits are too stubborn, replace the plugs.
After cleaning the spark plugs, correct the spark plug gap using a gap gauge.

NOTE:
Do not use a plug cleaner because the spark plugs are applied with iridium tip.

Spark plug gap: L
0.7 — 0.8 mm (0.028 — 0.031 in)

NOTE:
Replace with a new spark plug if this area (A) is worn to “ball” shape.
3. Ignition Coil & Ignitor ASSY

A: REMOVAL
Direct ignition type has been adopted. Refer to “Spark Plug” for removal procedure. <Ref. to IG(H4DOTC)-4, REMOVAL, Spark Plug.>

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:*
16 Nm (1.6 kgf-m, 11.7 ft-lb)

C: INSPECTION
For inspection procedure, refer to “Diagnostics for Engine Starting Failure”. <Ref. to EN(H4DOTC)(diag)-48, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

CAUTION:
• All airbag system wiring harnesses and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity. The ECM will be destroyed instantly. The fuel injector and other parts will be damaged.

3) Do not disconnect the battery terminals while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn the ignition switch to OFF.

5) Poor contact has been identified as a primary cause of this problem. Measure the voltage or resistance of individual sensor or all electrical control modules using a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Remove the ECM from the located position after disconnecting two cables on battery. Otherwise, the ECM may be damaged.

CAUTION:
When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on the fuel injection system.

NOTE:
Immobilizer system must be registered when installing the ECM of the model with immobilizer. For doing so, all ignition keys and ID cards should be prepared. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

7) Connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts as the grounding point to the body when measuring voltage and resistance inside the passenger compartment.

9) Use engine grounding terminal or engine proper as the grounding point to the body when measuring voltage and resistance in the engine compartment.

10) Every MFI-related part is a precision part. Do not drop them.

11) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:
• The antenna must be kept as far apart as possible from the control unit. (The ECM is located under the steering column, inside of the instrument panel lower trim panel.)
• The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
• Carefully adjust the antenna for correct matching.
• When mounting a large power type radio, pay special attention to the three items above mentioned.
• Incorrect installation of the radio may affect the operation of the ECM.

12) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.
General Description

13) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer’s complaint, and distinguish between the three causes.

14) On the model with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis function.

B: INSPECTION
Before performing diagnostics, check the following items which might affect engine problems:

1. BATTERY
   1) Measure battery voltage and specific gravity of electrolyte.

   **Standard voltage: 12 V**

   **Specific gravity: Above 1.260**

   2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUND
Make sure the engine grounding terminal is properly connected to the engine.

3. SELF-DIAGNOSIS FUNCTION
When detecting a malfunction by self-diagnosis function on ECM, malfunction indicator light illuminates and malfunction occurrence is displayed. Calling the self-diagnosis result is performed by Subaru Select Monitor.

8. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.
   (1) Data link connector is located in the lower portion of the instrument panel (on the driver’s side).

5) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

6) Using the Subaru Select Monitor, call up DTC and data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTC. <Ref. to EN(H4DOTC)(diag)-27, Read Diagnostic Trouble Code (DTC).>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (OBD MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTC. <Ref. to EN(H4DOTC)(diag)-27, Read Diagnostic Trouble Code (DTC).>
4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type was displayed.
4) On the «Engine Diagnosis» screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» screen, select the {Data Display} and press the [YES] key.
6) Using the scroll key, move the display screen up or down until the desired data is shown.

For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL.”
9. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type was displayed.
4) On the «Engine Diagnosis» screen, select the {DTC Display}, and then press the [YES] key.
5) On the «Diagnostic Code(s) Display» screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

NOTE:
- For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOTC)(diag)-55, List of Diagnostic Trouble Code (DTC).>

2. SUBARU SELECT MONITOR (OBD MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type was displayed.
4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
5) On the «OBD Menu» display screen, select the {DTC Display} and press the [YES] key.
6) Make sure DTC is shown on the screen.

NOTE:
- For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOTC)(diag)-55, List of Diagnostic Trouble Code (DTC).>
10. Inspection Mode

A: PROCEDURE

1. PREPARATION FOR THE INSPECTION MODE

1) Check battery voltage is more than 12 V and fuel remains half [20 to 40  ℓ (5.3 to 10.6 US gal, 4.4 to 8.8 Imp gal)].
2) Lift-up the vehicle using a garage jack and place it on rigid racks, or drive the vehicle onto free rollers.

WARNING:
- Before lifting-up the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front or rear towing hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when the engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

2. SUBARU SELECT MONITOR

1) After clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H4DOTC)(diag)-30, Clear Memory Mode.>
2) Idle the engine.
3) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>
4) Connect the diagnosis cable to Subaru Select Monitor.
5) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>
6) Connect the test mode connector (A) located at the lower portion of glove box.

(A) Rigid rack
(B) Free rollers
7) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

8) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

9) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
10) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
11) Press the [YES] key after the information of engine type was displayed.
12) On the «Engine Diagnosis» screen, select the {D Check} and press the [YES] key.
13) When the “Perform D Check?” is shown on the screen, press the [YES] key.
14) Perform subsequent procedures as instructed on the display screen.
   • If trouble still remains in the memory, the corresponding DTC appears on the display screen.

NOTE:
• For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
• For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC).
<Ref. to EN(H4DOTC)(diag)-55, List of Diagnostic Trouble Code (DTC).>
11. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
   3) Press the [YES] key after the information of engine type was displayed.
   4) On the «Engine Diagnosis» display screen, select the {Memory Clear} and press the [YES] key.
   5) When the “Done” and “Turn Ignition Switch OFF” are shown on the display screen, turn the ignition switch to OFF and then Subaru Select Monitor to OFF.

   NOTE:
   For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

2. SUBARU SELECT MONITOR (OBD MODE)

   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
   3) Press the [YES] key after the information of engine type was displayed.
   4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
   5) On the «OBD Menu» display screen, select the {DTC Clear} and press the [YES] key.
   6) When the “Perform Diagnostic Code(s) Clear?” is shown on the screen, press the [YES] key.
   7) Turn the ignition switch to OFF and then turn the Subaru Select Monitor switch to OFF.

   NOTE:
   For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
12. Compulsory Valve Operation Check Mode

A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) located at the lower portion of glove box.

5) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver's side).

6) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

7) On the «Main Menu» display screen, select the (Each System Check) and press the [YES] key.

8) On the «System Selection Menu» display screen, select the (Engine) and press the [YES] key.

9) Press the [YES] key after the information of engine type was displayed.

10) On the «Engine Diagnosis» display screen, select the (System Operation Check Mode) and press the [YES] key.

11) On the «System Operation Check Mode» screen, select the (Actuator ON/OFF Operation) and press the [YES] key.

12) On the «Actuator ON/OFF Operation» screen, select the desired compulsory actuator and press the [YES] key.

13) Pressing the [NO] key completes the compulsory valve operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light (A) in the combination meter illuminates.

NOTE:
If the malfunction indicator light does not illuminate, perform the diagnosis of malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H4DOTC)(diag)-35, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or the emission control system is malfunctioning.

3) Turn the ignition switch to OFF and connect the test mode connector.

(1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light illuminates.

(2) Malfunction indicator light blinks at a cycle of 0.5 Hz after starting the engine. (During diagnosis)

(3) Malfunction indicator light blinks at a cycle of 3 Hz after diagnosis if there is no trouble. Malfunction indicator light illuminates if faulty.

C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

DIAGNOSIS:
The malfunction indicator light circuit is open or shorted.

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not come on.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### Step 1: Check Any Other DTC on Display.
- **Check:** Is any other DTC displayed?
- **Yes:** Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOTC)(diag)-55, List of Diagnostic Trouble Code (DTC).>
- **No:** Go to step 2.

### Step 2: Check Rear Oxygen Sensor Data.
1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and keep the engine speed at 2,000 rpm to 3,000 rpm for 2 minutes.
2) Read the data of rear oxygen sensor signal using Subaru Select Monitor.
**NOTE:** For detailed operation procedure, refer to "READ CURRENT DATA SHOWN ON DISPLAY FOR ENGINE". <Ref. to EN(H4DOTC)(diag)-21, Subaru Select Monitor.>
- **Check:** Does the value fluctuate?
- **Yes:** Go to step 6.
- **No:** Go to step 3.

### Step 3: Check Rear Oxygen Sensor Data.
- **Check:** Is the voltage 0.2 — 0.4 V?
- **Yes:** Go to step 4.
- **No:** Replace the rear oxygen sensor. <Ref. to FU(H4DOTC)-34, Rear Oxygen Sensor.>

### Step 4: Check Harness Between ECM and Rear Oxygen Sensor Connector.
1) Turn the ignition switch to OFF.
2) Disconnect the connector from ECM and rear oxygen sensor.

   - **No:** Go to step 5.

### Step 5: Check Harness Between Rear Oxygen Sensor and ECM Connector.
1) Turn the ignition switch to OFF.
2) Disconnect the connector from rear oxygen sensor.
3) Turn the ignition switch to ON.
4) Measure the voltage between rear oxygen sensor harness connector and chassis ground.
   - **Connector & terminal:** (T6) No. 4 (+) — Chassis ground (−):
   - **Check:** Is the voltage more than 0.2 V?
   - **Yes:** Repair the rear oxygen sensor. <Ref. to FU(H4DOTC)-34, Rear Oxygen Sensor.>
   - **No:** Repair the harness and connector.
   **NOTE:** In this case, repair the following:
   - Open circuit in harness between rear oxygen sensor and ECM connector
   - Poor contact in rear oxygen sensor connector
   - Poor contact in ECM connector

**CHECK EXHAUST SYSTEM.**
- Check exhaust system parts.

**NOTE:**
- Check the following items:
  - Loose part of exhaust system and incomplete installation
  - Damage (crack, hole etc.) of parts
  - Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor

**Check**
- Is there a fault in exhaust system?

**Yes**
- Repair or replace the faulty part.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

**Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

1. **Check HARNESS BETWEEN FUEL PUMP CONTROL UNIT AND ECM CONNECTOR.**
   1. Turn the ignition switch to OFF.
   2. Disconnect the connector from ECM.
   3. Measure the resistance in harness between fuel pump control unit and ECM connector.

   **Connector & terminal**
   - (R122) No. 9 — (B137) No. 28:
   - (R122) No. 8 — (B135) No. 27:

   Is the resistance less than 1 Ω?

   **Check** | **Step** | **Yes** | **No**
   --- | --- | --- | ---
   Is the resistance less than 1 Ω? | Go to step 6. | Repair the harness and connector.
   **NOTE:** In this case, repair the following:
   - Open circuit between fuel pump control unit and ECM
   - Poor contact in fuel pump control unit and ECM connector

2. **Check HARNESS BETWEEN FUEL PUMP CONTROL UNIT AND ECM CONNECTOR.**
   Measure the resistance of harness between fuel pump control unit and chassis ground.

   **Connector & terminal**
   - (R122) No. 9 — Chassis ground:
   - (R122) No. 8 — Chassis ground:

   Is the resistance more than 1 MΩ?

   **Check** | **Step** | **Yes** | **No**
   --- | --- | --- | ---
   Is the resistance more than 1 MΩ? | Go to step 7. | Repair the ground short circuit between fuel pump control unit and ECM.

3. **Check POOR CONTACT.**
   Check poor contact in ECM and fuel pump control unit connector.

   Is there poor contact in ECM and fuel pump control unit connector?

   **Check** | **Step** | **Yes** | **No**
   --- | --- | --- | ---
   Is there poor contact in ECM and fuel pump control unit connector? | Repair the poor contact in ECM and fuel pump control unit. | Go to step 8.

4. **Check EXPERIENCE OF RUNNING OUT OF FUEL.**
   Did the vehicle experience running out of fuel?

   **Check** | **Step** | **Yes** | **No**
   --- | --- | --- | ---
   Did the vehicle experience running out of fuel? | Finish the diagnosis. | Replace the fuel pump control unit.
   **NOTE:**
   - DTC record may be conducted as a result of fuel pump idling while running out of fuel.
   - Replace the fuel pump control unit.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

2. Throttle Body

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.

3) Remove the air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Disconnect the connectors from throttle position sensor.

5) Disconnect the engine coolant hoses (A) from throttle body.
6) Remove the bolts (B) which secure throttle body to intake manifold.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Use a new O-ring.

 Tightening torque:
  8 N·m (0.8 kgf-m, 5.8 ft-lb)
3. Intake Manifold

A: REMOVAL
1) Remove the collector cover.
2) Release the fuel pressure.<Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Disconnect the ground cable from battery.
5) Remove the air cleaner case and air intake chamber. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.> <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
6) Disconnect the connector (A) and (B).
7) Disconnect the engine coolant hoses from throttle body.
8) Disconnect the PCV hose.
9) Disconnect the brake booster hose.
10) Disconnect the fuel hoses from fuel pipe.
11) Remove the EGR pipe from EGR valve. (Except for KA model)
CAUTION:
Be careful not to drop gaskets.
12) Disconnect the connector from EGR valve. (Except for KA model)
13) Remove the fuel pipe protector LH.

14) Remove the bolts, which hold fuel injector pipe LH onto cylinder head.

15) Remove the fuel pipe protector RH.

16) Remove the bolts, which hold fuel injector pipe RH onto cylinder head.

17) Remove bolts which hold intake manifold onto cylinder heads.

18) Remove the intake manifold.

B: INSTALLATION

1) Install the intake manifold onto cylinder heads.

**NOTE:**
Use a new O-ring.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

• RH side
2) Install the bolts, which hold fuel injector pipe RH onto cylinder head.

*Tightening torque:*

19 N·m (1.9 kgf-m, 14 ft-lb)

3) Install the fuel pipe protector RH.

*Tightening torque:*

19 N·m (1.9 kgf-m, 14 ft-lb)

4) Install the bolts which hold fuel injector pipe LH onto cylinder head.

5) Install the fuel pipe protector LH.

*Tightening torque:*

19 N·m (1.9 kgf-m, 14 ft-lb)

6) Connect the connector to EGR valve. (Except for KA model)

7) Install the EGR pipe to EGR valve. (Except for KA model)

*NOTE:*

Always use new gasket.

*Tightening torque:*

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
8) Connect the fuel hoses to fuel pipe.

9) Connect the brake booster hose.

10) Connect the PCV hose.

11) Connect the engine coolant hoses to throttle body.

12) Connect the connector (A) and (B).

13) Install the air cleaner case and air intake chamber. <Ref. to IN(H6DO)-6, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>

14) Install the fuse of fuel pump to main fuse box.

15) Connect the battery ground cable to battery.

16) Install the collector cover.

C: DISASSEMBLY

1) Remove the throttle body. <Ref. to FU(H6DO)-11, REMOVAL, Throttle Body.>

2) Remove the EGR valve. <Ref. to FU(H6DO)-25, REMOVAL, EGR Valve.>

3) Disconnect the pressure regulator vacuum hose from intake manifold.

4) Remove the manifold absolute pressure sensor. <Ref. to FU(H6DO)-23, REMOVAL, Manifold Absolute Pressure Sensor.>

5) Remove the purge control solenoid valve. <Ref. to EC(H6DO)-7, REMOVAL, Purge Control Solenoid Valve.>
6) Loosen the clamp which holds fuel injector pipe to fuel hose, and then disconnect the pipe from fuel hose.

7) Remove the bolts which install fuel pipes on intake manifold.

---

**D: ASSEMBLY**

NOTE: When assembling the nipple, apply liquid gasket.

**Liquid gasket:**

*THREE BOND 1105 (Part No. 004403010)*

1) Tighten the bolts which install fuel pipes on intake manifold.

2) Connect the fuel injector pipe to fuel hose, and tighten the clamp screw.

**Tightening torque:**

5 N·m (0.5 kgf-m, 3.6 ft-lb)

3) Install the purge control solenoid valve. <Ref. to EC(H6DO)-7, INSTALLATION, Purge Control Solenoid Valve.>

4) Install the manifold absolute pressure sensor. <Ref. to FU(H6DO)-23, INSTALLATION, Manifold Absolute Pressure Sensor.>
5) Connect the pressure regulator vacuum hose to intake manifold.

6) Install the EGR valve. <Ref. to FU(H6DO)-25, INSTALLATION, EGR Valve.>

7) Install the throttle body to intake manifold. <Ref. to FU(H6DO)-11, INSTALLATION, Throttle Body.>

**E: INSPECTION**

Make sure the fuel pipe and fuel hoses are not damaged and the connections are tightened firmly.
4. Engine Coolant Temperature Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Disconnect the connector from engine coolant temperature sensor.
4) Remove the engine coolant temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
16 N·m (1.6 kgf-m, 12 ft-lb)
5. Crankshaft Position Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Remove the service hole cover.
5) Remove the crankshaft position sensor.
6) Disconnect the connector from crankshaft position sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
6. Camshaft Position Sensor

**A: REMOVAL**
- 1) Remove the collector cover.
- 2) Disconnect the ground cable from battery.

- 3) Remove the generator harness from fuel pipe protector LH.
- 4) Remove the fuel pipe protector LH.

- 5) Disconnect the connector from camshaft position sensor LH.

- 6) Remove the camshaft position sensor LH.

- 7) Remove the camshaft position sensor RH in the same procedure as LH.

**B: INSTALLATION**
Install in the reverse order of removal.

**Tightening torque:**
- Camshaft position sensor
  - 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
- Fuel pipe protector
  - 19 N·m (1.9 kgf-m, 14 ft-lb)
7. Knock Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.

3) Remove the intake manifold. <Ref. to FU(H6DO)-12, REMOVAL, Intake Manifold.>
4) Disconnect the knock sensor connector.
5) Remove the knock sensor from cylinder block.

B: INSTALLATION
1) Install the knock sensor to cylinder block.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18 ft-lb)

NOTE:
For the knock sensor’s installation angle, refer to the figure below.

2) Connect the knock sensor connector.

3) Install the intake manifold. <Ref. to FU(H6DO)-13, INSTALLATION, Intake Manifold.>
4) Connect the battery ground cable to battery.

5) Install the collector cover.
8. Throttle Position Sensor

A: SPECIFICATION
Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body. Refer to “Throttle Body” for removal and installation procedure. <Ref. to FU(H6DO)-11, REMOVAL, Throttle Body.> <Ref. to FU(H6DO)-11, INSTALLATION, Throttle Body.>
9. Manifold Absolute Pressure Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Disconnect the connector from manifold absolute pressure sensor (A), and remove the filter assembly (B) from intake manifold.
4) Remove the manifold absolute pressure sensor from intake manifold.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
6.4 N·m (0.65 kgf·m, 4.7 ft-lb)
Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow and intake air temperature sensor.

3) Remove the mass air flow and intake air temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
1.0 N-m (0.10 kgf-m, 0.74 ft-lb)
11. EGR Valve

A: REMOVAL

NOTE:
Model except for KA is equipped with EGR valve.
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Remove the starter. <Ref. to SC(H6DO)-6, REMOVAL, Starter.>
5) Remove the EGR pipe from the EGR valve and cylinder head.
6) Remove the EGR valve from intake manifold.
7) Disconnect the connector from EGR valve.

B: INSTALLATION

Install in the reverse of removal.

NOTE:
Replace the old gaskets with new ones.

Tightening torque:
- EGR valve
  19 N·m (1.9 kgf-m, 14 ft-lb)
- EGR pipe
  6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
12. Fuel Injector

A: REMOVAL

1. RH SIDE
1) Remove the collector cover.
2) Release the fuel pressure.
<Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Disconnect the ground cable from battery.
5) Remove the air cleaner case. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.>
6) Remove the fuel pipe protector RH.
7) Disconnect the connectors from fuel injector.
8) Remove the engine harness from fuel injector pipe RH.
9) Remove the bolts which hold fuel injector pipe onto intake manifold.
10) Remove the fuel injector while lifting up the fuel injector pipe.

2. LH SIDE
1) Remove the collector cover.
2) Release the fuel pressure.
<Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Remove the battery.
5) Remove the generator harness from fuel pipe protector LH.
6) Remove the fuel pipe protector LH.
7) Disconnect the connectors from fuel injector.
8) Remove the engine harness from fuel injector pipe LH.
9) Remove the bolts which hold fuel injector pipe onto intake manifold.

10) Remove the fuel injector while lifting up the fuel injector pipe.

B: INSTALLATION

1. RH SIDE
Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
19 N·m (1.9 kgf-m, 13.7 ft-lb)

2. LH SIDE
Install in the reverse order of removal.

NOTE:
Use new O-rings.

Tightening torque:
19 N·m (1.9 kgf-m, 13.7 ft-lb)
13. Variable Valve Lift Diagnosis Oil Pressure Switch

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Disconnect the connector from variable valve lift diagnosis oil pressure switch.
5) Remove the variable valve lift diagnosis oil pressure switch.
   • LH side
   • RH side

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
 Apply liquid gasket to the thread of variable valve lift diagnosis oil pressure switch.

Liquid gasket:
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
17 N·m (1.7 kgf-m, 12.5 ft-lb)
14. Oil Temperature Sensor

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Disconnect the connector from oil temperature sensor.
5) Remove the oil temperature sensor.

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:*

18 N·m (1.8 kgf-m, 13.3 ft-lb)
15. Front Oxygen (A/F) Sensor

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Disconnect the connector of front oxygen (A/F) sensor.
   • LH side
   • RH side
5) Apply spray-type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
6) Remove the front oxygen (A/F) sensor.

CAUTION:
When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION
1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound: SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.
2) Install the front oxygen (A/F) sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)
• LH side
Front Oxygen (A/F) Sensor

• RH side

3) Connect the connector of front oxygen (A/F) sensor.

• LH side

4) Lower the vehicle.
5) Connect the battery ground cable to battery.
16. Rear Oxygen Sensor

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Disconnect the connector from rear oxygen sensor.
   • LH side
5) Remove the clip holding harness.
6) Apply spray-type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
7) Remove the rear oxygen sensor.

CAUTION:
When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION
1) Before installing rear oxygen sensor, apply anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

Anti-seize compound:
SS-30 JET LUBE

CAUTION:
Never apply anti-seize compound to the protector of rear oxygen sensor.
2) Install the rear oxygen sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)

• LH side
Rear Oxygen Sensor

**FUEL INJECTION (FUEL SYSTEMS)**

- RH side

3) Hold the harness with clip.
4) Connect the connector to rear oxygen sensor.

- LH side

5) Lower the vehicle.
6) Connect the battery ground cable to battery.
17. Engine Control Module (ECM)

**A: REMOVAL**

1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger’s side. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

3) Detach the floor mat of front passenger seat.

4) Remove the protect cover.

5) Remove the nuts (A) which hold ECM to bracket.

6) Remove the clip (B) from bracket.

7) Disconnect the ECM connectors, and take out the ECM.

**B: INSTALLATION**

Install in the reverse order of removal.

**CAUTION:**

- When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage to fuel injection system.
- When replacing the ECM, be careful not to damage the harnesses and connectors.

- When replacing the ECM, immobilizer system must be registered. For doing so, all ignition keys and ID cards should be prepared. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

18. Main Relay

**A: REMOVAL**

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>

3) Remove the harness cover (A).

4) Disconnect the connector from main relay.

**B: INSTALLATION**

Install in the reverse order of removal.
19. Fuel Pump Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>

3) Remove the harness cover (A).

4) Disconnect the connector from fuel pump relay.

B: INSTALLATION

Install in the reverse order of removal.
20. Electronic Throttle Control Relay

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the harness cover (A).

4) Disconnect the connector from electronic throttle control relay.

B: INSTALLATION

22. Fuel

A: PROCEDURE

1. RELEASING OF FUEL PRESSURE

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Remove the fuse of fuel pump from main fuse box.
2) Start the engine and run until it stalls.
3) After the engine stalls, crank it for five more seconds.
4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Lift-up the vehicle.
5) Remove the fuel tank protector.
6) Set a container under the vehicle, and remove the drain plugs from fuel tank to drain the fuel from fuel tank.
7) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

Tightening torque:
- 26 N·m (2.65 kgf-m, 19.2 ft-lb)

8) Install the fuel tank protector.

NOTE:
Use a new nut.

Tightening torque:
- Nut
  - 9.0 N·m (0.92 kgf-m, 6.6 ft-lb)
- Bolt
  - 17.5 N·m (1.78 kgf-m, 12.9 ft-lb)
23. Fuel Tank

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Set the vehicle on a lift.
2) Release the fuel pressure.
   \(<\text{Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.}>\)
3) Drain fuel from fuel tank.
   \(<\text{Ref. to FU(H6DO)-39, DRAINING FUEL, PROCEDURE, Fuel.}>\)
4) Remove the rear seat.
5) Remove the service hole cover from fuel pump.
   - (1) Remove the bolts (A).
   - (2) Push the grommet (B) down under the body and remove the service hole cover.
6) Disconnect the connector from fuel pump.
7) Remove the service hole cover from fuel sub level sensor.
   - (1) Remove the bolts (A).
8) Disconnect the connector (A) from fuel sub level sensor.
9) Disconnect the quick connector from the fuel delivery (B) and return hose (C).
   \(<\text{Ref. to FU(H6DO)-54, REMOVAL, Fuel Delivery, Return and Evaporation Lines.}>\)
10) Remove the rear wheels.
11) Remove the bolts which secure the rear brake hose installation bracket.
12) Remove the rear brake caliper and tie it to the side of vehicle body.

13) Remove the parking brake cable from parking brake assembly. <Ref. to PB-7, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
14) Lift-up the vehicle.
15) Remove the rear exhaust pipe. <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.>
16) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
17) Remove the heat shield cover.
18) Disconnect the connector from rear ABS wheel speed sensor.

19) Remove the bolts which install parking brake cable clamp.

20) Remove the rear suspension assembly.

**CAUTION:**
A helper is required to perform this work.

1) Support the rear differential with transmission jack.
2) Remove the bolt which installs rear shock absorber to rear suspension arm.
(3) Remove the bolts which secure rear suspension assembly to body.

(4) Remove the rear suspension assembly.  
21) Disconnect the two-way valve hose (A) from two-way valve, and then remove the two-way valve from bracket.

22) Loosen the clamp, and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.

23) Support the fuel tank with transmission jack, remove the bolts from fuel tank bands, and dismount the fuel tank from vehicle.  

**WARNING:**
A helper is required to perform this work.

**B: INSTALLATION**
1) Support the fuel tank with transmission jack, set the fuel tank, and then temporarily tighten the bolts of fuel tank band.

**WARNING:**
A helper is required to perform this work.
2) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

3) Install the two-way valve to bracket, and connect the two-way valve hose (A) to two-way valve.

4) Tighten the bolts of fuel tank band.

5) Install the rear suspension assembly.

**CAUTION:**
A helper is required to perform this work.

   1) Support the rear differential with transmission jack.
   2) Support the rear suspension assembly, and then tighten the bolts which secure rear suspension assembly to body.

**Tightening torque:**
- **T1:** 125 N\(\cdot\)m (12.7 kgf\(-\)m, 92.2 ft\(-\)lb)
- **T2:** 65 N\(\cdot\)m (6.2 kgf\(-\)m, 48 ft\(-\)lb)
- **T3:** 175 N\(\cdot\)m (17.8 kgf\(-\)m, 129 ft\(-\)lb)

6) Tighten the bolts which install parking brake cable clamp.
7) Connect the connector to ABS wheel speed sensor.

8) Install the heat shield cover.

9) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>

10) Install the rear exhaust pipe. <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.>

11) Lower the vehicle.

12) Connect the parking brake cable to parking brake assembly. <Ref. to PB-8, INSTALLATION, Parking Brake Assembly (Rear Disc Brake).>

13) Install the rear brake caliper.

14) Tighten the bolt which secures rear brake hose installation bracket.

15) Install the rear wheels.

16) Lower the vehicle.

17) Connect the connector (A) to fuel sub level sensor.

18) Connect the quick connector of the fuel delivery (B) and return hose (C). <Ref. to FU(H6DO)-55, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

NOTE:
Be careful not to misconnect the delivery side and return side.

19) Install the service hole cover of fuel sub level sensor.
20) Connect the connector to fuel pump.

21) Install the service hole cover of fuel pump.

22) Install the rear seat.
23) Install the fuse of fuel pump to main fuse box.

C: INSPECTION
1) Check that the fuel tank is not holed, cracked, or otherwise damaged.
2) Make sure that the fuel hoses and fuel pipes are not cracked and those connections are tight.
Fuel Filler Pipe

24. Fuel Filler Pipe
A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Release the fuel pressure.
   <Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Open the fuel filler flap lid, and remove the filler cap.
3) Disconnect the ground cable from battery.

4) Remove the screws which secure packing.

5) Lift-up the vehicle.
6) Remove the rear wheel RH.

7) Set a container under the vehicle, and remove the drain plug from fuel tank to drain the fuel from fuel tank.

8) Tighten the fuel drain plug.

NOTE:
Use a new gasket.

**Tightening torque:**
26 N\(\cdot\)m (2.65 kgf\(\cdot\)m, 19.2 ft-lb)

9) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
10) Remove the rear sub frame. <Ref. to RS-23, REMOVAL, Rear Sub Frame.>
11) Remove the bolts which hold fuel filler pipe bracket on the body.

12) Loosen the clamp and disconnect the fuel filler hose (A) and vent hose (B) from fuel filler pipe.

13) Remove the fuel filler pipe to under side of the vehicle.
B: INSTALLATION

1) Open the fuel filler flap lid.
2) Set the fuel saucer (A) with rubber packing (C), and insert the fuel filler pipe into hole from the inner side of apron.
3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

NOTE:
If the edges of rubber packing are folded toward the inside, straighten it with a flat tip screwdriver.

4) Correctly insert the fuel filler hose (A) and vent hose (B) to specified position, and then tighten the clamp.

5) Tighten the bolts which hold fuel filler pipe bracket on the body.

**Tightening torque:**
7.5 N m (0.75 kgf-m, 5.4 ft-lb)

6) Install the rear sub frame. <Ref. to RS-23, INSTALLATION, Rear Sub Frame.>
7) Install the mud guard. <Ref. to EI-29, INSTALLATION, Mud Guard.>
8) Install the rear wheel RH.

9) Lower the vehicle.
10) Install the fuse of fuel pump to main fuse box.
11) Connect the battery ground cable to battery.

(2) Clip or clamp
(3) Pipe
25. Fuel Pump

A: REMOVAL

**WARNING:**
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

**NOTE:**
Fuel pump assembly consists of fuel pump and fuel level sensor.

1) Release the fuel pressure.  
<Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Drain the fuel.  
<Ref. to FU(H6DO)-39, DRAINING FUEL, PROCEDURE, Fuel.>

3) Remove the rear seat.

4) Remove the service hole cover.
   - (1) Remove the bolts (A).
   - (2) Push the grommet (B) down under the body and remove service hole cover.

5) Disconnect the connector from fuel pump.

6) Disconnect the quick connector, and then disconnect the fuel delivery hose, return hose and jet pump hose.  
<Ref. to FU(H6DO)-54, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

7) Remove the nuts which install fuel pump assembly onto fuel tank.

8) Take off the fuel pump assembly from fuel tank.

B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**
Use a new gasket.

- (1) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (2) Tighten the nuts to specified torque in the order as shown in the figure.

**Tightening torque:**

\[ 4.4 \text{ N m (0.45 kgf-m, 3.3 ft-lb)} \]

C: INSPECTION

Connect the lead harness to the connector terminal of fuel pump, and apply the battery power supply to check whether the pump operates.

**WARNING:**
- Wipe off the fuel completely.
- Keep battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply to ON and OFF on the battery side.
Do not run fuel pump for a long time under non-load condition.
26. Fuel Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:
Fuel level sensor is built in fuel pump assembly.
1) Remove the fuel pump assembly. <Ref. to FU(H6DO)-48, REMOVAL, Fuel Pump.>
2) Disconnect the connector from fuel pump bracket.
3) Remove the fuel level sensor.

B: INSTALLATION
Install in the reverse order of removal.
27. Fuel Sub Level Sensor

A: REMOVAL

WARNING:
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel in the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

1) Drain the fuel. <Ref. to FU(H6DO)-39, DRAIN-ING FUEL, PROCEDURE, Fuel.>
2) Remove the rear seat.
3) Remove the service hole cover.
   (1) Remove the bolts (A).
   (2) Push the grommet (B) down under the body and remove the service hole cover.
4) Disconnect the connector from fuel sub level sensor.
5) Disconnect the quick connector, and then disconnect the fuel delivery hose, return hose and jet pump hose. <Ref. to FU(H6DO)-54, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
6) Remove the nuts and bolts which install fuel sub level sensor on fuel tank.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Use a new gasket.
(1) Ensure the sealing portion is free from fuel or foreign particles before installation.
(2) Tighten the nuts and bolts to specified torque in the order as shown in the figure.

Tightening torque:
4.4 N·m (0.45 kgf-m, 3.3 ft-lb)
**28. Fuel Filter**

**A: SPECIFICATION**

Fuel filter forms a unit with fuel pump. Refer to “Fuel Pump” for removal and installation.

<Ref. to FU(H6DO)-48, REMOVAL, Fuel Pump.>
<Ref. to FU(H6DO)-48, INSTALLATION, Fuel Pump.>
29. Fuel Bypass Valve

A: REMOVAL
1) Release the fuel pressure.
   <Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
2) Disconnect the pressure regulator vacuum hose.
3) Disconnect the fuel delivery line and return line from fuel bypass valve.
4) Remove the fuel bypass valve from vehicle body.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.53 ft-lb)
30. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL

1) Set the vehicle on a lift.
2) Release the fuel pressure. <Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
3) Open the fuel filler flap lid, and remove the fuel filler cap.
4) Remove the floor mat. <Ref. to EI-73, REMOVAL, Floor Mat.>
5) Disconnect the fuel delivery pipes and hoses, and then disconnect the fuel return pipes and hoses, evaporation pipes and hoses.

6) In the engine compartment, disconnect the fuel delivery hoses, return hoses and evaporation hose.

9) Separate the quick connector on fuel line.
   (1) Clean the pipe and connector, if they are covered with dust.
   (2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag, etc.

7) Lift-up the vehicle.
8) Remove the fuel tank. <Ref. to FU(H6DO)-40, REMOVAL, Fuel Tank.>

(FU-02181)

(A) Fuel delivery hose
(B) Evaporation hose

(FU-02148)

(3) Hold the connector and push retainer down.
(4) Pull out the connector from retainer.
Fuel Delivery, Return and Evaporation Lines

CAUTION:
Always use a new retainer.

B: INSTALLATION
1) Connect the quick connector on fuel line.

CAUTION:
- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

(1) Set the new retainer to connector.
(2) Push the pipe into the connector completely.

2) Connect the fuel delivery hose to the pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).
Type A: When the amount of inserting is specified.
Type B: When the amount of inserting is not specified.

\[ \ell : 2.5 \pm 1.5 \text{ mm (0.098} \pm 0.059 \text{ in)} \]
\[ L : 22.5 \pm 2.5 \text{ mm (0.886} \pm 0.098 \text{ in)} \]

3) Connect the return hose and evaporation hose to the pipe by approx. 15 mm (0.59 in) from the hose end.

Fuel return hose:
\[ L = 22.5 \pm 2.5 \text{ mm (0.885} \pm 0.098 \text{ in)} \]
Fuel evaporation hose:
\[ L = 17.5 \pm 2.5 \text{ mm (0.689} \pm 0.098 \text{ in)} \]
CAUTION:
Be sure to inspect the hoses and their connections for fuel leakage.

1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
2) Make sure that the fuel pipe and fuel hose connections are tightened firmly.

(1) Hose
(2) Clip
(3) Pipe

C: INSPECTION
1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
2) Make sure that the fuel pipe and fuel hose connections are tightened firmly.

NOTE:
- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent this problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent at the time when the fuel reduced at half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain water from both the fuel filter and fuel tank or use a water removing agent in the fuel tank.
- Before using water removing agent, follow the cautions noted on the bottle.

1. General Description

A: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Front Catalytic Converter

A: REMOVAL
The front and rear catalytic converters are integrated into front exhaust pipe as one unit; therefore, refer to “Front Exhaust Pipe” for removal procedure. <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>

B: INSTALLATION
The front and rear catalytic converters are integrated into front exhaust pipe as one unit; therefore, refer to “Front Exhaust Pipe” for installation procedure. <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3. Rear Catalytic Converter

A: REMOVAL
The front and rear catalytic converters are integrated into front exhaust pipe as one unit; therefore, refer to “Front Exhaust Pipe” for removal procedure. <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>

B: INSTALLATION
The front and rear catalytic converters are integrated into front exhaust pipe as one unit; therefore, refer to “Front Exhaust Pipe” for installation procedure. <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
4. EGR Valve

A: SPECIFICATION
Refer to “EGR valve” for removal and installation.
<Ref. to FU(H6DO)-25, EGR Valve.>
5. Canister

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the rear wheel LH.
3) Remove the mud guard LH.
4) Remove the protector. (Sedan model)
5) Disconnect the quick connector (A).
6) Remove the canister (B) from body.

 Tightening torque: 8.3 N·m (0.85 kgf-m, 6.1 ft-lb)

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure there are no damage or dust on the connection of quick connector. If necessary, clean the seal surface of pipe.

C: INSPECTION
Make sure the canister and canister hoses are not cracked or loose.
6. Purge Control Solenoid Valve

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Disconnect the connector and hoses of purge control solenoid valve, and then remove the purge control solenoid valve.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
19 N·m (1.9 kgf-m, 14.0 ft-lb)

C: INSPECTION
Make sure the hoses are not cracked or loose.

NOTE:
Connect the evaporation hose as shown in the figure.

(A) To fuel pipe (Evaporation line)
(B) To intake manifold
7. Two-way Valve

A: REMOVAL
1) Lift-up the vehicle.
2) Disconnect the evaporation hoses from two-way valve.
3) Remove the two-way valve as a unit with bracket from body.
4) Remove the two-way valve from bracket.

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:*
\[ 7.5 \text{ N}\cdot\text{m} (0.76 \text{ kgf-m}, 5.5 \text{ ft-lb}) \]

C: INSPECTION
Make sure the hoses are not cracked or loose.
8. PCV Valve

A: REMOVAL

1) Disconnect the PCV hose.

2) Remove the PCV valve from rocker cover.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Apply liquid gasket to the bolt threads of PCV valve.

Liquid gasket:
THREE BOND 1105 (Part No. 004403010)

Tightening torque:

- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

2. Air Cleaner Element

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow and intake air temperature sensor.

3) Remove the clip (A) from the upper side of air cleaner case.

4) Pull the air cleaner case (rear) to the rearward of vehicle, and then remove the air cleaner element.

   NOTE:
   Be careful that the power steering hose is secured to the under side of air cleaner case (rear).

B: INSTALLATION
Install in the reverse order of removal.

   NOTE:
   Fasten with a clip after inserting the lower tab of the case.

C: INSPECTION
Replace if excessively damaged or dirty.
3. Air Cleaner Case

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the air intake duct. <Ref. to IN(H6DO)-8, REMOVAL, Air Intake Duct.>

3) Disconnect the connector from mass air flow and intake air temperature sensor.

4) Loosen the clamp (A) which connects air cleaner case to intake duct.

5) Remove the clip (B) from the upper side of air cleaner case.

6) Remove the air cleaner case (rear) and air cleaner element.

7) Remove the bolt (A) and nut (B) which hold air cleaner case on the body.

8) Remove the air cleaner case (front).
**INTAKE (INDUCTION)**

**Air Cleaner Case**

**B: INSTALLATION**
Install in the reverse order of removal.

*Tightening torque:*
- **Bolt (A):** 6.0 N·m (0.6 kgf-m, 4.4 ft-lb)
- **Nut (B):** 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

![Diagram of air cleaner case installation](IN-00208)

**NOTE:**
Fasten with a clip after inserting the lower tab of the case.

![Diagram of air cleaner case](IN-00207)

**C: INSPECTION**
Check for cracks or loose connection.
4. Air Intake Chamber

A: REMOVAL
1) Remove the collector cover.
2) Loosen the clamp (A) which connects air intake chamber to throttle body.
3) Loosen the clamp (B) which connects intake duct to air intake chamber.
4) Remove the bolt (C) which secures air intake chamber to the stay.

5) Disconnect one part of blow-by hose, and remove the air intake chamber.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
- Clamp (A), (B)
  \[3.0 \text{ N}\cdot\text{m (0.3 kgf-m, 2.2 ft-lb)}\]
- Bolt (C)
  \[6.4 \text{ N}\cdot\text{m (0.65 kgf-m, 4.7 ft-lb)}\]

C: INSPECTION
1) Check for cracks or loose connections.
2) Inspect that no foreign objects in the air intake chamber.
5. Air Intake Duct

A: REMOVAL
1) Remove the clips which install air intake duct on the front side of body.
2) Remove the air intake duct.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Check for cracks or loose connections.
2) Inspect that no foreign objects in the air intake duct.
6. Resonator Chamber

A: REMOVAL
Refer to “Air Cleaner Case” for removal procedure because the resonator chamber forms a single unit with air cleaner case. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.>

B: INSTALLATION
Refer to “Air Cleaner Case” for installation procedure because the resonator chamber forms a single unit with air cleaner case. <Ref. to IN(H6DO)-6, INSTALLATION, Air Cleaner Case.>

C: INSPECTION
Check for cracks or loose connections.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be reinstalled in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools, or not to stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following: Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

#### E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- Camshaft
- Cylinder head
2. Compression
A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

1) After warming-up the engine, turn the ignition switch to OFF.
2) Make sure that the battery is fully charged.
3) Release the fuel pressure.
   <Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
4) Remove all the spark plugs. <Ref. to IG(H6DO)-4, REMOVAL, Spark Plug.>
5) Check the starter motor for satisfactory performance and operation.
6) Hold the compression gauge tight against the spark plug hole.

NOTE:
When using a screw-in type compression gauge, the screw (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

7) Fully open the throttle valve.
8) Crank the engine by means of the starter motor, and read the maximum value on the gauge when the pointer is steady.

9) Perform at least two measurements per cylinder, and make sure that the values are correct.

Compression (350 rpm and fully open throttle):
Standard:
   1,275 — 1,471 kPa (13.0 — 15.0 kg/cm², 185 — 213 psi)
Service limit:
   1, 128 kPa (11.5 kgf/cm², 164 psi)
3. Idle Speed

A: INSPECTION
1) Before checking the idle speed, check the following:
   (1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
   (2) Ensure the malfunction indicator light does not illuminate.

2) Idle the engine.
3) Stop the engine, and turn the ignition switch to OFF.
4) Insert the cartridge to the Subaru Select Monitor.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON and Subaru Select Monitor switch to ON.
7) Select {Each System Check} in Main Menu.
8) Select {Engine} in Selection Menu.
9) Select {Current Data Display & Save} in Engine Control System Diagnosis.
10) Select {Data Display} in Data Display Menu.
11) Start the engine, and read engine idle speed.
12) Check the idle speed when no-loaded. (Headlight, heater fan, rear defroster, radiator fan, A/C, etc. are OFF.)

**Idle speed [No load and gears in neutral]:**

   \( 650 \pm 50 \text{ rpm} \)

13) Check the idle speed when loaded. (Turn the air conditioning switch to “ON” and operate the compressor for at least one minute before measurement.)

**Idle speed [A/C “ON”, and gears in neutral]:**

   \( 770 \pm 50 \text{ rpm} \)

NOTE:
Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted. If the idle speed is out of specifications, refer to General Diagnosis Table under “Engine Control System”.<Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>
4. Ignition Timing

A: INSPECTION

CAUTION:
After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.

1. WITH SUBARU SELECT MONITOR

1) Before checking the ignition timing speed, check the following:
   (1) Ensure the air cleaner element is free from clogging, spark plugs are in good condition, and hoses are connected properly.
   (2) Ensure the malfunction indicator light does not illuminate.
2) Idle the engine.
3) Stop the engine, and turn the ignition switch to OFF.
4) Insert the cartridge to the Subaru Select Monitor.
5) Connect the Subaru Select Monitor to data link connector.
6) Turn the ignition switch to ON and Subaru Select Monitor switch to ON.
7) Select {Each System Check} in Main Menu.
8) Select {Engine} in Selection Menu.
9) Select {Current Data Display & Save} in Engine Control System Diagnosis.
10) Select {Data Display} in Data Display Menu.
11) Start the engine and check the ignition timing at the idle speed.

**Ignition timing [BTDC/rpm]:**

15° ± 8°/650 rpm

If the timing is not correct, check the ignition control system. Refer to “Engine Control System”. <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>
5. Intake Manifold Vacuum

A: INSPECTION

1) Idle the engine.
2) Disconnect the brake vacuum hose from the intake manifold, and then install the vacuum gauge.
3) Keep the engine at the idle speed and read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of the engine can be diagnosed as described below.

Vacuum pressure (at idling, A/C “OFF”):
−60.0 kPa (−450 mmHg, −17.72 inHg) or less

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td>1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.</td>
<td>Leakage around intake manifold gasket, disconnection or damaged vacuum hose</td>
</tr>
<tr>
<td>2. When engine speed is reduced slowly from higher speed, needle stops temporarily when it is lowering or becomes steady above normal position.</td>
<td>Exhaust pressure is too high, or exhaust system is clogged.</td>
</tr>
<tr>
<td>3. Needle intermittently drops to position lower than normal position.</td>
<td>Leakage around cylinder</td>
</tr>
<tr>
<td>4. Needle drops suddenly and intermittently from normal position.</td>
<td>Valve anchoring</td>
</tr>
<tr>
<td>5. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.</td>
<td>Weak or broken valve springs</td>
</tr>
<tr>
<td>6. Needle vibrates above and below normal position in narrow range.</td>
<td>Defective ignition system or throttle chamber idle adjustment</td>
</tr>
</tbody>
</table>
6. Engine Oil Pressure

A: INSPECTION
1) Remove the oil pressure switch from cylinder block. <Ref. to LU(H6DO)-12, REMOVAL, Oil Pressure Switch.>
2) Connect the oil pressure gauge hose to cylinder block.
3) Connect the battery ground cable to battery.
4) Start the engine, and measure oil pressure.

**OIL PRESSURE (at oil temperature of 80°C (176°F)):**
- **Standard:**
  - 135 kPa (1.4 kg/cm², 20 psi) or more (at 600 rpm)
  - 500 kPa (5.1 kg/cm², 73 psi) or more (at 5,000 rpm)

**CAUTION:**
- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H6DO)-16, INSPECTION, General Diagnostic Table.>
- If the oil pressure warning light come on and oil pressure is in specification, replace the oil pressure switch. <Ref. to LU(H6DO)-16, INSPECTION, General Diagnostic Table.>

5) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(H6DO)-12, INSTALLATION, Oil Pressure Switch.>

**Tightening torque:**
- 25 N·m (2.5 kgf-m, 18.1 ft-lb)
7. Fuel Pressure

A: INSPECTION

WARNING:
Before removing the fuel pressure gauge, release fuel pressure.

NOTE:
When the fuel pressure is out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.

1) Release the fuel pressure.
<Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Open the fuel filler flap lid, and remove the fuel filler cap.

3) Disconnect the fuel delivery hose and connect fuel pressure gauge.

4) Remove the fuse of fuel pump from main fuse box.

5) Start the engine.

6) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

Fuel pressure:
Standard: 333 — 363 kPa (3.4 — 3.7 kgf/cm², 48 — 53 psi)

7) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

Fuel pressure:
Standard: 279 — 309 kPa (2.85 — 3.15 kgf/cm², 40 — 45 psi)

NOTE:
The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kgf/cm², 1 to 3 psi) higher than standard values during high-altitude operations.
8. Valve Clearance

A: INSPECTION
Inspection and adjustment of valve clearance should be performed while engine is cold.
1) Set the vehicle on a lift.
2) Remove the collector cover.
3) Disconnect the ground cable from battery.
4) Lift-up the vehicle.
5) Remove the under cover.
6) Lower the vehicle.
7) When inspecting RH side cylinders:
   (1) Remove the air intake duct and air cleaner case. <Ref. to IN(H6DO)-8, REMOVAL, Air Intake Duct.> <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.>
   (2) Remove the fuel tank protector (RH).
   (3) Remove the fuel injectors. <Ref. to FU(H6DO)-26, REMOVAL, Fuel Injector.>
   (4) Disconnect the connector of oil pressure switch.
   (5) Remove the ignition coil. <Ref. to IG(H6DO)-7, REMOVAL, Ignition Coil & Ignitor ASSY.>
   (6) Remove the rocker cover (RH).
8) When inspecting LH side cylinders:
   (1) Disconnect the battery cable, and then remove the battery and battery carrier.
   (2) Disconnect the PCV hose and blow-by hose from rocker cover (LH).
   (3) Remove the fuel pipe protector (LH).
   (4) Remove the fuel injectors. <Ref. to FU(H6DO)-26, REMOVAL, Fuel Injector.>
   (5) Remove the ignition coil. <Ref. to IG(H6DO)-7, REMOVAL, Ignition Coil & Ignitor ASSY.>
   (6) Remove the rocker cover (LH).
9) Turn the crankshaft clockwise until the cam is set to position shown in the figure.

10) Measure the clearance of intake valve and exhaust valve using thickness gauge (A).

NOTE:
- Measure it within the range of ±30° that shown in the figure.
- Measure it in low lift cam for intake side.
- Insert the thickness gauge in as horizontal a direction as possible with respect to the valve lifter.

**Valve clearance**

**Intake:**

\[ 0.20^{+0.04}_{-0.06} \text{ mm} (0.0079^{+0.0016}_{-0.0024} \text{ in}) \]

**Exhaust:**

\[ 0.35^{+0.05}_{-0.05} \text{ mm} (0.0138^{+0.0020}_{-0.0020} \text{ in}) \]

11) If necessary, adjust the valve clearance. <Ref. to ME(H6DO)-29, ADJUSTMENT, VALVE CLEARANCE.>

12) Further turn the crank pulley clockwise and then measure the valve clearances again.

13) After inspection, install the related parts in the reverse order of removal.

**B: ADJUSTMENT**

1. **INTAKE SIDE**

**CAUTION:**
- Adjustment of valve clearance should be performed while engine is cold.
- Do not wear gloves during removal and installation of valve lifter.
- Do not use a valve lifter which got high impact due to drop, etc.
- When installing the valve lifter, align the anti-rotation of valve lifter with groove on cylinder head, and then insert the valve lifter.

1) Measure all valve clearances. <Ref. to ME(H6DO)-28, INSPECTION, Valve Clearance.>

NOTE:
Record each valve clearance after it has been measured.

2) Remove the camshaft. <Ref. to ME(H6DO)-54, REMOVAL, Camshaft.>

3) Remove the valve lifter.

4) Measure the thickness of shim with a micrometer.

5) Select a shim of suitable thickness using measured valve clearance and shim thickness, by referring to the following table.

<table>
<thead>
<tr>
<th>Unit: (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>S = (V + T) – 0.20</td>
</tr>
<tr>
<td>S: Required shim thickness</td>

### 2. EXHAUST SIDE

**CAUTION:**
Adjustment of valve clearance should be performed while engine is cold.

1) Measure all valve clearances.  
<Ref. to ME(H6DO)-28, INSPECTION, Valve Clearance.>

**NOTE:**
Record each valve clearance after it has been measured.

2) Remove the camshaft.  <Ref. to ME(H6DO)-54, REMOVAL, Camshaft.>
3) Remove the valve lifter.
4) Measure the thickness of valve lifter with a micrometer.

9. V-belt

A: REMOVAL
1) Install the tool to belt tension adjuster assembly installation bolt.
2) Rotate the tool clockwise and loosen the V-belt to remove.
3) Remove the V-belt covers.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Replace the V-belt, if cracks, fraying or wear is found.
2) Check that the V-belt automatic belt tension indicator (A) is within the range (D).

10. Engine Assembly

A: REMOVAL
1) Set the vehicle on a lift.
2) Open the front hood fully and support with the front food stay.
3) Remove the collector cover.
4) Collect the refrigerant from A/C system. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
5) Release the fuel pressure. <Ref. to FU(H6DO)-39, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
6) Remove the fuel filler cap.
7) Disconnect the ground cable from battery.

8) Remove the air intake duct, air cleaner case and air intake chamber. <Ref. to IN(H6DO)-8, REMOVAL, Air Intake Duct.> <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.> <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
9) Remove the radiator from vehicle. <Ref. to CO(H6DO)-13, REMOVAL, Radiator.>
10) Remove the V-belts. <Ref. to ME(H6DO)-33, REMOVAL, V-BELT.>
11) Disconnect the A/C pressure hoses from A/C compressor. <Ref. to AC-38, REMOVAL, Hose and Tube.>
12) Disconnect the following connectors:
   (1) Engine ground terminals
   (2) Engine harness connectors
   (3) Generator connector, terminal and A/C compressor connector
   (4) Power steering switch connector
13) Disconnect the following hoses.
   (1) Brake booster vacuum hose
   (2) Heater inlet and outlet hoses
   (3) Pressure regulator vacuum hose
14) Remove the power steering pump from bracket.

NOTE:
Do not disconnect the hose and pipe from pump body.
(1) Place the power steering pump on the right side wheel apron.

15) Lift-up the vehicle.
16) Remove the under cover.
17) Remove the front exhaust pipe.
   <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>
   **NOTE:**
   Be careful not to let the front exhaust pipe interfere with water pipes on engine side.
18) Remove the ground cable.

19) Remove the nuts which hold lower side of transmission to engine.

20) Remove the nuts which install front cushion rubber onto front crossmember.

21) Separate the torque converter clutch from drive plate.
   (1) Lower the vehicle.
   (2) Remove the service hole plug (A).
   (3) Remove the bolts which hold torque converter clutch to drive plate.
   (4) Remove other bolts while rotating the engine using a socket wrench.

22) Remove the pitching stopper.
MECHANICAL

23) Disconnect the fuel delivery hose and evaporation hose.

CAUTION:
- Catch fuel from the hose into container.
- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.

24) Support the engine with a lifting device and wire ropes.

25) Support the transmission with a garage jack.

CAUTION:
Doing this is very important because the transmission lowers for its own weight. This work is also of great importance for facilitating reinstallation.

26) Separation of engine and transmission:
   (1) Remove the starter. <Ref. to SC(H6DO)-6, REMOVAL, Starter.>
   (2) Remove the bolts which hold upper side of transmission to engine.

27) Set the ST to torque converter clutch case.
   ST 498277200 STOPPER SET

28) Remove the engine from vehicle.
   (1) Slightly raise the engine.
   (2) Raise the transmission with garage jack.
   (3) Move the engine horizontally until main shaft is withdrawn from clutch cover.
   (4) Slowly move the engine away from engine compartment.

NOTE:
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

29) Remove the front cushion rubbers.

(A) Transmission
(B) Garage jack

CAUTION:
Before removing the engine away from transmission, check to be sure no work has been overlooked.
### B: INSTALLATION

1) Install the front cushion rubbers.

**Tightening torque:**

\[ 35 \text{ N} \cdot \text{m (3.6 kgf-m, 25.8 ft-lb)} \]

2) Position the engine in engine compartment and align it with transmission.

**NOTE:**
Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

3) Tighten the bolts which hold upper side of transmission to engine.

**Tightening torque:**

\[ 50 \text{ N} \cdot \text{m (5.1 kgf-m, 36.9 ft-lb)} \]

4) Remove the lifting device and wire ropes.

7) Remove the ST from torque converter clutch case.

**NOTE:**
Be careful not to drop the ST into the torque converter clutch case when removing the ST.

ST 498277200 STOPPER SET

8) Install the starter. <Ref. to SC(H6DO)-6, INSTALLATION, Starter.>

9) Install the torque converter clutch to drive plate.

   1) Tighten the bolts which hold torque converter clutch to drive plate.

   2) Tighten other bolts while rotating the engine using a socket wrench.

**NOTE:**
Be careful not to drop the ST into the torque converter clutch case when removing the ST.

**Tightening torque:**

\[ 25 \text{ N} \cdot \text{m (2.5 kgf-m, 18.1 ft-lb)} \]

5) Remove the garage jack.

6) Install the pitching stopper.
(3) Install the service hole plug to prevent foreign matters from being mixed.
10) Install the power steering pump on bracket.

**Tightening torque:**
20.1 N·m (2.05 kgf·m, 14.8 ft-lb)

11) Lift-up the vehicle.
12) Tighten the nuts which hold lower side of transmission to the engine.

**Tightening torque:**
50 N·m (5.1 kgf·m, 36.9 ft-lb)

13) Tighten the nuts which install the front cushion rubber onto crossmember.

**Tightening torque:**
85 N·m (8.7 kgf·m, 63 ft-lb)

**NOTE:**
Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

14) Install the front exhaust pipe.  
<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

**NOTE:**
- Be care not to let the front exhaust pipe interfere with water pipes and crossmember on engine side.
- Be care not to scratch the flange surface of front exhaust pipe with stud bolt on engine.
15) Connect the ground cable.

16) Install the under cover.
17) Lower the vehicle.
18) Connect the following hoses.
   (1) Fuel delivery hose and evaporation hose
   (2) Heater inlet and outlet hoses
   (3) Brake booster vacuum hose
   (4) Pressure regulator vacuum hose
19) Connect the following connectors:
   (1) Engine ground terminals

**Tightening torque:**
14 N·m (1.4 kgf·m, 10.1 ft-lb)

(2) Engine harness connectors

(3) Generator connector and terminal
(4) A/C compressor connector
(5) Power steering switch connector
20) Install the A/C pressure hoses.  
<Ref. to AC-38, INSTALLATION, Hose and Tube.>
21) Install the V-belts.  <Ref. to ME(H6DO)-33, INSTALLATION, V-BELT.>
22) Install the radiator to vehicle.  <Ref. to CO(H6DO)-14, INSTALLATION, Radiator.>
23) Install the air intake duct, air cleaner case and air intake chamber.  <Ref. to IN(H6DO)-8, INSTALLATION, Air Intake Duct.>  <Ref. to IN(H6DO)-6, INSTALLATION, Air Cleaner Case.>  <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>
24) Install the battery in the vehicle, and connect cables.
<Ref. to CO(H6DO)-9, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
26) Check the ATF level and replenish it if necessary.  
<Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>
27) Charge the A/C system with refrigerant.  <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>
28) Install the collector cover.
29) Remove the front hood stay, and close the front hood.
30) Take off the vehicle from a lift.

**C: INSPECTION**
1) Check pipes and hoses are installed firmly.
2) Check the engine coolant and ATF are at specified levels.
11. Engine Mounting

A: REMOVAL
1) Remove the engine assembly. <Ref. to ME(H6DO)-34, REMOVAL, Engine Assembly.>
2) Remove the engine mounting from engine assembly.

B: INSTALLATION
Install in the reverse order of removal.

_Tightening torque:_

*Engine mounting:*
35 N·m (3.6 kgf-m, 25.8 ft-lb)

C: INSPECTION
Make sure that there are no cracks or other damages.
12. Preparation for Overhaul

A: REMOVAL

1) Remove the engine assembly. <Ref. to ME(H6DO)-34, REMOVAL, ENGINE ASSEMBLY.>

2) Set the engine on ST1.

ST 18232AA000 ENGINE STAND

3) Before servicing overhaul, remove the sensor, pipe and hose that installed to engine.

   (11) Remove the engine coolant temperature sensor. <Ref. to FU(H6DO)-18, REMOVAL, Engine Coolant Temperature Sensor.>
   (12) Remove the oil pressure switch. <Ref. to LU(H6DO)-12, REMOVAL, Oil Pressure Switch.>
   (13) Remove the oil filter. <Ref. to LU(H6DO)-13, REMOVAL, Engine Oil Filter.>
   (14) Remove the oil cooler. <Ref. to LU(H6DO)-14, REMOVAL, Oil Cooler.>
13. Crank Pulley

A: REMOVAL
1) Remove the crank pulley cover.
2) Remove the crank pulley bolt. To lock the crankshaft, use ST.
   ST 499977100 CRANK PULLEY WRENCH
3) Remove the crank pulley.

B: INSTALLATION
1) Install the crank pulley.
2) Install the crank pulley bolt. To lock the crankshaft, use ST.
   ST 499977100 CRANK PULLEY WRENCH
   (1) Clean the crank pulley thread using compressed air.
   (2) Apply engine oil to the crank pulley bolt seat and thread.
   (3) Tighten the crank pulley bolts.
   
   **Tightening torque:**
   178 N·m (18.1 kgf-m, 131 ft-lb)

C: INSPECTION
1) Check the crank pulley cover for oil and air leakage.
2) Check crank pulley for looseness.
3) Install the crank pulley cover.
   
   **NOTE:**
   Attach the O-ring to crank pulley cover.
   
   **Tightening torque:**
   6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
14. Front Chain Cover

A: REMOVAL
1) Remove the crank pulley. <Ref. to ME(H6DO)-42, REMOVAL, CRANK PULLEY.>
2) Remove the front chain cover.

NOTE:
Chain cover installation bolt has three different sizes. To prevent the confusion in installation, keep these bolts on container individually.

B: INSTALLATION
1) Remove the used liquid gasket from mating surface, and degrease it.
2) Apply liquid gasket to the matching surface of front chain cover.

Liquid gasket
THREE BOND 1280B (Part No. K0877YA018)

Applying liquid gasket diameter
2.5 ± 0.5 mm (0.098 ± 0.020 in)

3) Install the front chain cover. Temporarily tighten the bolts.

CAUTION:
Do not install the bolts in wrong place.

4) Tighten the bolts in the numerical order as shown in the figure.

(A) M6 × 16
(B) M6 × 30
(C) M6 × 45
*: Sealing washer

**Tightening torque:**

6.6 N·m (0.67 kgf·m, 4.8 ft-lb)

5) Install the crank pulley. <Ref. to ME(H6DO)-42, INSTALLATION, CRANK PULLEY.>

**C: INSPECTION**

Check the cover surface for scratch and damage.
Check for oil leakage on cover mating surface and installation part of crank pulley.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

15. Timing Chain Assembly

A: REMOVAL
1) Remove the crank pulley. <Ref. to ME(H6DO)-42, REMOVAL, CRANK PULLEY.>
2) Remove the front chain cover. <Ref. to ME(H6DO)-43, REMOVAL, FRONT CHAIN COVER.>
3) Remove the chain tensioner (RH).
   NOTE:
   Be careful not to come out the plunger (A).

4) Remove the chain guide (RH: between cams).

5) Remove the chain guide (RH).
6) Remove the chain tensioner lever (RH).

7) Remove the timing chain (RH).

8) Remove the chain tensioner (LH).
   NOTE:
   Be careful not to come out the plunger.

9) Remove the chain tensioner lever (LH).

10) Remove the chain guide (LH: between cams).

11) Remove the chain guide (LH).
12) Remove the chain guide (CTR).

13) Remove the idler sprocket (upper).

14) Remove the timing chain (LH).
15) Remove the idler sprocket (lower).

B: INSTALLATION

NOTE:
- Be careful that the foreign matter is not into or onto assembled component during installation.
- Apply engine oil to the chain guide, chain tensioner lever and idler sprocket when installing.

1) Preparation for chain tensioner installation
   (1) Insert the screw, spring pin and tension rod into tensioner body.
   (2) While depressing the tensioner onto rubber mat, twist it to shorten tension rod. Then insert the thin pin into the hole between tension rod and tension body to keep shortened.

2) Using ST, align the “Top mark” on crank sprocket to 9 o’clock position as shown in the figure
   ST  18252AA000  CRANKSHAFT SOCKET

3) Using ST, align the key groove on exhaust cam sprocket to 12 o’clock position as shown in the figure
4) Align the intake cam sprocket as shown in the figure.

5) Turn the crank sprocket clockwise, align the “Top mark” to 12 o’clock position (Piston #1 is in TDC position)

NOTE:
Do not rotate the crank shaft and cam sprocket until the timing chain routing was completed.

6) Install the idler sprocket (lower).

**Tightening torque:**
69 N·m (7.0 kgf-m, 50.6 ft-lb)

7) Install the timing chain (LH).

   (1) Align the timing mark (B) on the crank sprocket with mark (A) on the timing chain (LH).

   (2) Set the routing of timing chain (LH) on idler sprocket (lower), water pump, exhaust cam sprocket (LH) and intake cam sprocket (LH).

   NOTE:
   Check that the mark on timing chain (A) and cam sprocket (B) is aligned as same as aligned on crank sprocket.

   (3) Install the chain idler (upper).

   **Tightening torque:**
   69 N·m (7.0 kgf-m, 50.6 ft-lb)

   (4) Install the chain guide (LH: between cams).

   **Tightening torque:**
   6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
NOTE: Use a new installing bolt.

(5) Install the chain guide (LH).

**Tightening torque:**
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(6) Install the chain tensioner lever (LH).

**Tightening torque:**
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(7) Install the chain tensioner (LH).

**Tightening torque:**
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(8) Install the timing chain (RH).

1. Align the marks of timing chain LH and RH on the idler sprocket (lower).

(A) Idler sprocket (lower)
(B) Timing chain (RH)
(C) Timing chain (LH)
(D) Dark blue

2. Set the routing of timing chain (RH) on intake cam sprocket, and then set the routing on exhaust cam sprocket.
NOTE:
Check that the mark on timing chain (A) and cam sprocket (B) is aligned as same as aligned on crank sprocket.

(3) Install the chain guide (RH).
(4) Install the chain tensioner lever (RH).

_Tightening torque:_
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(5) Install the chain guide (RH: between cams).

_Tightening torque:_
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

NOTE: Use a new installing bolt.

(6) Install the chain tensioner (RH).

_Tightening torque:_
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(7) Adjust the clearance between chain guide (RH) and chain guide (CTR) within 8.4 — 8.6 mm (0.331 — 0.339 in). Install the chain guide (CTR).

_Tightening torque:_
7.8 N·m (0.8 kgf-m, 5.8 ft-lb)

NOTE: Use a new installing bolt.

(8) Check that each mark on the sprocket and timing chain is matched, and then draw out the stopper pin from chain tensioner.
16. Cam Sprocket

A: REMOVAL
1) Remove the crank pulley. <Ref. to ME(H6DO)-42, REMOVAL, CRANK PULLEY.>
2) Remove the front chain cover. <Ref. to ME(H6DO)-43, REMOVAL, FRONT CHAIN COVER.>
3) Remove the timing chain assembly. <Ref. to ME(H6DO)-45, REMOVAL, TIMING CHAIN ASSEMBLY.>
4) Remove the cam sprocket. To lock the crankshaft, use the ST.

B: INSTALLATION
1) Install the cam sprocket. To lock the crankshaft, use the ST.

Tightening torque:
29.5 N·m (3.0 kgf-m, 21.8 ft-lb)
2) Further tighten the bolt.

Tightening angle:
Intake
45°±5°
Exhaust
25°±5°

C: INSPECTION
1) Check the cam sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between cam sprocket and key.
17. Crank Sprocket

**A: REMOVAL**
1) Remove the crank pulley. <Ref. to ME(H6DO)-42, REMOVAL, CRANK PULLEY.>
2) Remove the front chain cover. <Ref. to ME(H6DO)-43, REMOVAL, FRONT CHAIN COVER.>
3) Remove the timing chain assembly. <Ref. to ME(H6DO)-45, REMOVAL, TIMING CHAIN ASSEMBLY.>
4) Remove the cam sprocket. <Ref. to ME(H6DO)-50, REMOVAL, CAM SPROCKET.>
5) Remove the crank sprocket (A).

**B: INSTALLATION**
1) Install the crank sprocket (A).
2) Install the cam sprocket. <Ref. to ME(H6DO)-50, INSTALLATION, CAM SPROCKET.>
3) Install the timing chain assembly. <Ref. to ME(H6DO)-46, INSTALLATION, TIMING CHAIN ASSEMBLY.>
4) Install the front chain cover. <Ref. to ME(H6DO)-43, INSTALLATION, FRONT CHAIN COVER.>
5) Install the crank pulley. <Ref. to ME(H6DO)-42, INSTALLATION, CRANK PULLEY.>

**C: INSPECTION**
1) Check the crank sprocket teeth for abnormal wear and scratches.
2) Make sure there is no free play between crank sprocket and key.
18. Rear Chain Cover

A: REMOVAL

1) Remove the crank pulley. <Ref. to ME(H6DO)-42, REMOVAL, CRANK PULLEY.>
2) Remove the front chain cover. <Ref. to ME(H6DO)-43, REMOVAL, FRONT CHAIN COVER.>
3) Remove the timing chain. <Ref. to ME(H6DO)-45, REMOVAL, TIMING CHAIN ASSEMBLY.>
4) Remove the cam sprocket. <Ref. to ME(H6DO)-50, REMOVAL, CAM SPROCKET.>
5) Remove the crank sprocket.
6) Remove the oil pump. <Ref. to LU(H6DO)-8, REMOVAL, Oil Pump.>
7) Remove the water pump. <Ref. to CO(H6DO)-11, REMOVAL, Water Pump.>
8) Remove the rear chain cover.

NOTE:
Installation bolt has seven different sizes. To prevent the confusion in installation, keep these bolts on container individually.

---

B: INSTALLATION

1) Remove the used liquid gasket from mating surface, and degrease it.
2) Apply liquid gasket to the matching surface of rear chain cover.

(B) $3.0 \pm 1.0 \text{ mm} (0.118 \pm 0.039 \text{ in})$

3) Install the O-ring.

NOTE:
- Do not reuse the O-ring.
- Do not install the O-ring in wrong place.

4) Temporarily tighten the rear chain cover.
NOTE:
Do not install the bolts in wrong place.

5) Tighten the bolts in the numerical order as shown in the figure.

6) Remove the rear chain cover. <Ref. to ME(H6DO)-52, REMOVAL, Rear Chain Cover.>
7) Disconnect the oil valve.

10) Loosen the camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

11) Remove the camshaft caps and camshaft (LH).

NOTE:
Arrange camshaft caps in order so that they can be installed in their original positions.

12) Similarly, remove the camshafts (RH) and related parts.

B: INSTALLATION
1) Apply engine oil to camshaft journals, and install the camshaft.
2) Install the camshaft cap.
   (1) Apply liquid gasket sparingly to back side of front camshaft cap as shown in the figure. CAUTION:
   Do not apply fluid packing excessively. Failure to do so may cause excess gasket to come out and flow toward cam journal, resulting in engine burnt.

<Ref. to ME(H6DO)-43, INSTALLATION, FRONT CHAIN COVER.>
11) Install the crank pulley.
<Ref. to ME(H6DO)-42, INSTALLATION, Crank Pulley.>

C: INSPECTION
1) Check the camshaft for bend, and repair or replace if necessary.

2) Check the journal for damage and wear. Replace if faulty.
3) Measure the outside diameter of camshaft journal. If the journal diameter is not within specifications, check the oil clearance.

4) Measurement of the camshaft journal oil clearance:
   (1) Clean the bearing caps and camshaft journals.
   (2) Place the camshafts on the cylinder head. (Without installing the valve rocker.)
   (3) Place a plastigauge across each of the camshaft journals.
   (4) Install the bearing cap.

NOTE:
Do not turn the camshaft.
(5) Remove the bearing caps.
(6) Measure the widest point of the plastigauge on each journal. If oil clearance exceeds the limit, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

Standard:
0.037 — 0.072 mm (0.0015 — 0.0028 in)

(7) Completely remove the plastigauge.
5) Check the cam face condition; remove the minor faults by grinding with oil stone. Measure the cam height H. If it exceeds the limit, replace it.

Cam height: H:

Standard:
Intake
HIGH: 42.09 — 42.19 mm (1.6571 — 1.6610 in)
LOW1: 38.14 — 38.24 mm (1.5016 — 1.5055 in)

32.0 mm (1.2598 in)
6) Measure the side clearance of camshaft with dial gauge. If the side clearance exceeds the limit or offset wearing is emitted, replace the caps and cylinder head as a set. If necessary, replace the camshaft.

**Standard:**

- **Intake**
  - 0.075 — 0.135 mm (0.0030 — 0.0053 in)

- **Exhaust**
  - 0.030 — 0.090 mm (0.0012 — 0.0035 in)

5) Remove the crank sprocket. <Ref. to ME(H6DO)-51, REMOVAL, Crank Sprocket.>
6) Remove the rear chain cover. <Ref. to ME(H6DO)-52, REMOVAL, Rear Chain Cover.>
7) Remove the camshaft. <Ref. to ME(H6DO)-54, REMOVAL, Camshaft.>

8) Tighten the cylinder head bolts in the numerical order as shown in the figure. Leave bolts (2) and (4) engaged by three or four threads to prevent the cylinder head from falling.

9) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.

10) Remove the bolts (2) and (4) to remove the cylinder head.

CAUTION:

Be careful not to scratch the mating surface of cylinder head and cylinder block.

11) Remove the cylinder head gasket.

**B: INSTALLATION**

1) Install the cylinder head and gaskets on cylinder block.

CAUTION:

- Use new cylinder head gaskets.
- Be careful not to scratch the mating surface of cylinder head and cylinder block.

2) Tighten the cylinder head bolts.

   1. Apply a coat of engine oil to washers and cylinder head bolt threads.
   2. Install the cylinder head to cylinder block, and then tighten the bolts with torque of 20 N-m (2.0 kgf-m, 14 ft-lb) in numerical sequence as shown in the figure.
   3. Tighten the bolts with torque of 50 N-m (3.0 kgf-m, 37 ft-lb) in numerical sequence as shown in the figure.
   4. Back off all bolts by 180° in reverse order of installation, and back them off again by 180°.
   5. Tighten the bolts with torque of 20 N-m (2.0 kgf-m, 14 ft-lb) in numerical sequence as shown in the figure.
   6. Tighten the bolts (1) and (4) with torque of 48 N-m (3.5 kgf-m, 35.4 ft-lb) in numerical sequence.
   7. Tighten the bolts (5) and (8) with torque of 44 N-m (4.5 kgf-m, 32.5 ft-lb) in numerical sequence.
   8. Tighten the bolts 90° in the numerical order as shown in the figure.
   9. Tighten the bolt (1) — (4) 45° in the numerical order.

3) Install the camshaft. <Ref. to ME(H6DO)-54, INSTALLATION, CAMSHAFT.>
4) Install the rear chain cover. <Ref. to ME(H6DO)-52, INSTALLATION, Rear Chain Cover.>
5) Install the crank sprocket. <Ref. to ME(H6DO)-51, INSTALLATION, Crank Sprocket.>
6) Install the cam sprocket. <Ref. to ME(H6DO)-50, INSTALLATION, Cam Sprocket.>
7) Install the timing chain assembly.
<Ref. to ME(H6DO)-46, INSTALLATION, TIMING CHAIN ASSEMBLY.>
8) Install the front chain cover.
<Ref. to ME(H6DO)-43, INSTALLATION, FRONT CHAIN COVER.>
9) Install the crank pulley.

C: DISASSEMBLY
1) Set the cylinder head on ST.
ST 18250AA010 CYLINDER HEAD TABLE
2) Remove the valve lifter.
3) Set the ST on valve spring retainer. Compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.
ST 499718000 VALVE SPRING REMOVER
NOTE:
Keep all the removed parts in order for re-installing in their original positions.

CAUTION:
- Mark each valve to prevent confusion.
- Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve oil seals.

D: ASSEMBLY
1) Installation of valve spring and valve:
   (1) Set the cylinder head on ST.
ST 18250AA010 CYLINDER HEAD TABLE
   (2) Coat the stem of each valve with engine oil and insert the valve into valve guide.
NOTE:
When inserting the valve into valve guide, use special care not to damage the oil seal lip.
   (3) Install the valve spring and retainer.
NOTE:
- Be sure to install the valve springs with their close-coiled end facing the seat on the cylinder head.
- Install the valve spring with the painted side facing to retainer.

2) Apply oil to the surface of the valve lifter and valve shim.
3) Install the valve lifter and valve shim.

E: INSPECTION
1. VALVE SPRING
1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within the standard value presented in the table.

2) To measure the squareness of the valve spring, stand the spring on a surface plate and measure its deflection at the top of spring using a try square.

2. INTAKE AND EXHAUST VALVE OIL SEAL

Replace the oil seal with a new one, if the lip is damaged or spring is out of place, or when the surfaces of intake valve and valve seat are reconditioned or intake valve guide is replaced.

1) Set the cylinder head on ST1.
2) Press-fit the oil seal to the specified dimension indicated in the figure using ST2.

ST1 18250AA010 CYLINDER HEAD TABLE
ST2 499585500 VALVE OIL SEAL GUIDE

NOTE:
- Apply engine oil to oil seal before force-fitting.
- When press-fitting the oil seal, do not use a hammer or strike in.

3) Measure the inner diameter of valve lifter hole of cylinder head.

Inner diameter:
32.994 — 33.016 mm (1.2990 — 1.2998 in)

NOTE:
If difference between outer diameter of valve lifter and inner diameter of valve lifter hole is out of the standard or offset wearing is emitted, replace the cylinder head.

Standard:
0.019 — 0.057 mm (0.0007 — 0.0022 in)

F: ADJUSTMENT

1. CYLINDER HEAD

1) Make sure that no crack or other damages do not exist. In addition to visual inspection, inspect important areas by means of red lead check. Check that there are no marks of gas leaking or water leaking on gasket installing surface.
2) Set the cylinder head on ST.

ST 18250AA010 CYLINDER HEAD TABLE

3) Measure the flatness of the cylinder head surface that mates with crankcase using a straight edge (A) and thickness gauge (B).

Flatness:
Standard
0.02 mm (0.0008 in)

Standard height of cylinder head:
124±0.05 mm (4.88±0.0020 in)
NOTE:
Uneven torque for the cylinder head nuts can cause warping. When reinstalling, pay special attention to the torque so as to tighten evenly.

2. VALVE SEAT
Inspect the intake and exhaust valve seats, and correct the contact surfaces with a valve seat cutter if they are defective or when valve guides are replaced.

Valve seat width W:

<tbody>
<tr>
<td>Standard</td>
<td>1.0 mm (0.039 in)</td>
<td>1.5 mm (0.059 in)</td>
</tr>
</tbody>
</table>

3. VALVE GUIDE
1) Check the clearance between valve guide and stem. The clearance can be checked by measuring respectively the outer diameter of valve stem and inner diameter of valve guide with a micrometer.

Clearance between the valve guide and valve stem:

<table>
<thead>
<tr>
<th></th>
<th>Intake</th>
<th>Exhaust</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>0.030 — 0.057 mm (0.0012 — 0.0022 in)</td>
<td>0.040 — 0.067 mm (0.0016 — 0.0026 in)</td>
</tr>
</tbody>
</table>

2) If the clearance between valve guide and stem is out of standard, replace the valve guide or valve itself whichever shows greater amount of wear or damaged and etc. See the following procedure for valve guide replacement.

Valve guide inner diameter: 5.500 — 5.512 mm (0.2165 — 0.2170 in)

Valve stem outer diameters:

<table>
<thead>
<tr>

(6) Check the valve guide protrusion.

Valve guide protrusion L:
11.4 — 11.8 mm (0.449 — 0.465 in)

(7) Ream the inside of valve guide using ST. Put the reamer in valve guide, and rotate the reamer slowly clockwise while pushing it lightly. Bring the reamer back while rotating it clockwise. After reaming, clean the valve guide to remove chips.

ST 499765900 VALVE GUIDE REAMER

NOTE:
- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

(8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace if damaged, worn or deformed, or if “H” exceeds the standard value or offset wearing is emitted.

H:

10) Remove the crankshaft position sensor plate.

11) Remove the crankshaft position sensor bracket.

12) Rotate the engine to set oil pan upper.
13) Remove the bolts which secure oil pan lower to oil pan upper.

14) Insert a oil pan cutter blade between cylinder block-to-oil pan clearance and remove the oil pan.

CAUTION:
Do not use a screwdriver or similar tools in place of oil pan cutter.

15) Remove the oil strainer.
16) Remove the bolts which install oil pan upper onto cylinder block.

NOTE:
Installation bolts have five different sizes. To prevent the confusion in installation, keep these bolts on container individually.

17) Remove the service hole cover and service hole plugs using a hexagon wrench.

18) Rotate the crankshaft to bring #1 and #2 pistons to bottom dead center position, then remove the piston snap ring through service hole of #1 and #2 cylinders using ST.

NOTE:
Be careful not to confuse the original combination of piston, piston pin and cylinder.

20) Similarly remove the piston pins from #3, #4, #5 and #6 pistons.

21) Remove the bolts which secure the cylinder block.

22) Separate the cylinder block (LH) and (RH).

NOTE:
When separating the cylinder block, do not allow the connecting rod to fall and damage the cylinder block.

23) Remove the rear oil seal.

24) Remove the crankshaft together with connecting rod.

25) Remove the crankshaft bearings from cylinder block using a hammer handle.

NOTE:
- Do not confuse the combination of crankshaft bearings.
- Press the bearing at the end opposite to locking lip.

26) Draw out each piston from cylinder block using a wooden bar or hammer handle.

NOTE:
Be careful not to confuse the original combination of piston and cylinder.
B: INSTALLATION

1) After setting the cylinder block to ST, install the crankshaft bearing.
   ST 18232AA000  ENGINE STAND

NOTE:
Remove oil on the mating surface of bearing and cylinder block before installation. Apply a coat of engine oil to crankshaft pins.

2) Position the crankshaft and connecting rod on the #2, #4 and #6 cylinder block.

3) Apply liquid gasket to the mating surface of #1, #3 and #5 cylinder block, and position it on #2, #4 and #6 cylinder block.

CAUTION:
• Ensure ring gaps do not face the same direction.
• Ensure ring gaps are not within the piston skirt area.
• Ensure R mark faces to top side of piston.

15) Install the snap ring. Install snap rings in the piston holes located opposite to the service holes in cylinder block, when positioning all pistons in the corresponding cylinders.
NOTE:
Use new snap rings.

16) Installing the piston:
(1) Using ST1, turn the crankshaft so that #3 and #4 connecting rods small end are set on the service hole (A).

C: DISASSEMBLY

1) Remove the connecting rod cap.
2) Remove the connecting rod bearing.

NOTE:
Arrange the removed connecting rod, connecting rod cap and bearing in order, to prevent confusion.

3) Remove the piston rings using the piston ring expander.
4) Remove the oil ring by hand.

NOTE:
Arrange the removed piston rings in proper order, to prevent confusion.

5) Remove the snap ring.
**D: ASSEMBLY**

1. Apply oil to the surfaces of the connecting rod bearings. Install the connecting rod bearings on connecting rods and connecting rod caps.
2. Install the connecting rod on crankshaft.

**NOTE:**
Position each connecting rod with the side marked facing forward.

3. Install the connecting rod cap.
Ensure the arrow on connecting rod cap faces the front during installation.

**CAUTION:**
- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

4. Install the oil ring spacer, upper rail and lower rail in this order by hand. Then install the second ring and top ring with a piston ring expander.

**E: INSPECTION**

1. **CYLINDER BLOCK**
   1) Visually check for cracks and damage. Especially, inspect the important parts by means of red lead check.
   2) Check the oil passages for clogging.
   3) Inspect the crankcase surface that mates with cylinder head for warping by using a straight edge.

   **Standard height of cylinder block:**
   202 mm (7.95 in)

2. **CYLINDER AND PISTON**
   1) The cylinder bore size is stamped on the cylinder block's front upper surface.

   **NOTE:**
   - Measurement should be performed at a temperature of 20°C (68°F).
   - Standard sized pistons are classified into two grades, “A” and “B”. These grades should be used as guide lines in selecting a standard piston.
**Standard diameter:**

A: 89.205 — 89.215 mm (3.5120 — 3.5124 in)
B: 89.195 — 89.205 mm (3.5116 — 3.5120 in)

**Cylindricality:**

Standard
0.030 mm (0.0012 in)

**Out-of-roundness:**

Standard
0.010 mm (0.0004 in)

2) How to measure the inner diameter of each cylinder:

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights as shown in the figure, using a cylinder bore gauge.

**NOTE:**

Measurement should be performed at a temperature of 20°C (68°F).

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:

Measure the outer diameter of each piston at the height as shown in the figure. (Thrust direction)

**NOTE:**

Measurement should be performed at a temperature of 20°C (68°F).
Cylinder Block

Piston grade point H:
37.3 mm (1.4685 in)

Piston outer diameter:
Standard
A: 89.205 — 89.215 mm (3.5120 — 3.5124 in)
B: 89.195 — 89.205 mm (3.5116 — 3.5220 in)
0.25 mm (0.0098 in) oversize
89.445 — 89.465 mm (3.5215 — 3.5222 in)
0.50 mm (0.0197 in) oversize
89.695 — 89.715 mm (3.5313 — 3.5321 in)

5) Calculate the clearance between cylinder and piston.

NOTE:
Measurement should be performed at a temperature of 20°C (68°F).

Cylinder to piston clearance at 20°C (68°F):
Standard
−0.010 — 0.010 mm (−0.00039 — 0.00039 in)

6) Boring and honing:
(1) If the value of cylindricity, out-of-roundness, or cylinder-to-piston clearance measured is out of standard or if there is any damage on the cylinder wall, rebore it to use an oversize piston.

CAUTION:
When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only. Nor use an oversize piston for one cylinder only.

(2) If the cylinder inner diameter exceeds 89.715 mm (3.5321 in) after boring and honing, replace the crankcase.

NOTE:
Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks and wear, and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H6DO)-71, CYLINDER AND PISTON, INSPECTION, CYLINDER BLOCK.> If any of the clearances is not within specification, replace the piston or bore the cylinder to use an oversize piston.

3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

Standard clearance between piston pin and hole in piston:
Standard
0.004 — 0.008 mm (0.0002 — 0.0003 in)

4) Check the snap ring installation groove (A) on the piston for burr. If necessary, remove burr from the groove so that the piston pin can lightly move.

5) Check the piston pin snap ring for distortion, cracks and wear.
4. PISTON RING

1) If the piston ring is broken, damaged, or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

CAUTION:
- Mark is displayed on the end of top and second rings. When installing the rings to the piston, face this mark upward.
- Oil ring consists of the upper rail, expander and lower rail. When installing on piston, be careful of each rail’s direction.

2) Squarely place the piston ring and oil ring in cylinder, and measure the piston ring gap with a thickness gauge.

NOTE:
Before measuring the clearance, clean the piston ring groove and piston ring.

5. CONNECTING ROD

1) Replace the connecting rod, if the large or small end thrust surface is damaged.
2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if it has the bend or twist.

3) Install the connecting rod fitted with bearing to crankshaft and measure the side clearance (thrust clearance). If side clearance exceeds the limit or offset wearing is emitted, replace the connecting rod.

### Connecting rod side clearance:
**Standard**

\[

6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at the connecting rod small end.

### Clearance between piston pin and bushing:
**Standard**

\[
0 — 0.022 \text{ mm (0 — 0.0009 in)}
\]
7) Replacement procedure is as follows.
   (1) Remove the bushing from connecting rod with ST and press.
   (2) Press the bushing with ST after applying oil on the periphery of bushing.
   ST 18350AA000 CONNECTING ROD BUSHING REMOVER AND INSTALLER

(3) Make two 3 mm (0.12 in) holes in bushing. Ream the inside of bushing.
(4) After completion of reaming, clean the bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely, and check it for cracks using red lead. Replace if defective.
2) Check the crankshaft for bend, and repair or replace if needed.

NOTE:
If a suitable V-block is not available, install #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings, and then check the crankshaft for bend using a dial gauge.

3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and replace or recondition crankshaft as necessary. When grinding the crank journal or crank pin, finish them to the specified dimensions according to the undersize bearing to be used.

Crank pin and crank journal:
Out-of-roundness
0.005 mm (0.0002 in)
Cylindricality
