Engine Noise

## 26. Engine Noise

### A: INSPECTION

<table>
<thead>
<tr>
<th>Type of sound</th>
<th>Condition</th>
<th>Possible cause</th>
</tr>
</thead>
</table>
| Regular clicking sound | Sound increases as engine speed increases. | • Valve mechanism is defective.  
• Incorrect valve clearance  
• Worn valve rocker  
• Worn camshaft  
• Broken valve spring |
| Heavy and dull clank | Oil pressure is low. | • Worn camshaft main bearing  
• Worn connecting rod bearing (big end) |
| | Oil pressure is normal. | Damaged engine mounting |
| High-pitched clank | Sound is noticeable when accelerating with an overload. | • Ignition timing advanced  
• Accumulation of carbon inside combustion chamber  
• Wrong spark plug  
• Improper gasoline |
| Clank when engine speed is 1,000 to 2,000 rpm | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*) | • Worn crankshaft main bearing  
• Worn bearing at crankshaft end of connecting rod |
| Knocking sound when engine is operating under idling speed and engine is warm | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*) | • Worn cylinder liner and piston ring  
• Broken or stuck piston ring  
• Worn piston pin and hole at piston end of connecting rod |
| | Sound is not reduced if each fuel injector connector is disconnected in turn. (NOTE*) | • Unusually worn valve lifter  
• Worn cam gear  
• Worn camshaft journal bore in crankcase |
| Squeaky sound | — | • Insufficient generator lubrication |
| Rubbing sound | — | • Defective generator brush and rotor contact |
| Gear scream when starting engine | — | • Defective ignition starter switch  
• Worn gear and starter pinion |
| Sound like polishing glass with a dry cloth | — | • Loose drive belt  
• Defective water pump shaft |
| Hissing sound | — | • Loss of compression  
• Air leakage in air intake system, hoses, connections or manifolds |
| Timing belt noise | — | • Loose timing belt  
• Belt contacting with case/adjacent part |
| Valve tappet noise | — | • Incorrect valve clearance  
• Trouble of tappet |

NOTE*:
When disconnecting the fuel injector connector, the malfunction indicator light illuminates and DTC is stored in ECM memory. Therefore, carry out the clear memory mode <Ref. to EN(H6DO)(diag)-40, OPERATION, Clear Memory Mode.> and inspection mode <Ref. to EN(H6DO)(diag)-33, PROCEDURE, Inspection Mode.> after connecting the fuel injector connector.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

</table>
B: CAUTION
• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Be careful not to burn yourself, because each part on the vehicle is hot after running.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Front Exhaust Pipe

A: REMOVAL
1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.
3) Remove the under cover.
4) Disconnect the front oxygen (A/F) sensor connector (A) and rear oxygen sensor connector (B).

5) Separate the front exhaust pipe from rear exhaust pipe.

CAUTION:
Be careful, exhaust pipe is hot.

6) Remove the nuts which hold front exhaust pipe onto cylinder heads.

7) Remove the bolts which hold front exhaust pipe assembly to hanger bracket.

8) Remove the front exhaust pipe assembly from vehicle.

CAUTION:
- Be careful not to let the front exhaust pipe assembly fall off when removing, as it is quite heavy.
- After removing the front exhaust pipe assembly, do not apply excessive pulling force on the rear exhaust pipe.

9) Disconnect the front exhaust pipe (RH) from front exhaust pipe assembly.

10) Remove the front oxygen (A/F) sensor and rear oxygen sensor. <Ref. to FU(H6DO)-30, REMOVAL, Front Oxygen (A/F) Sensor.> <Ref. to FU(H6DO)-32, REMOVAL, Rear Oxygen Sensor.>
B: INSTALLATION
1) Install the front oxygen (A/F) sensor and rear oxygen sensor. <Ref. to FU(H6DO)-30, INSTALLATION, Front Oxygen (A/F) Sensor.> <Ref. to FU(H6DO)-32, INSTALLATION, Rear Oxygen Sensor.>
2) Install the front exhaust pipe (RH) to front exhaust pipe assembly.

NOTE:
Use a new gasket.

**Tightening torque:**
30 N·m (3.1 kgf-m, 22.4 ft-lb)

3) Install the front exhaust pipe assembly to vehicle.
4) Temporarily tighten the bolts which hold front exhaust pipe assembly to hanger bracket.

5) Install the nuts to cylinder head which hold front exhaust pipe.

**Tightening torque:**
30 N·m (3.1 kgf-m, 22.4 ft-lb)

7) Tighten the bolts which install the front exhaust pipe to rear exhaust pipe.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.0 ft-lb)

8) Tighten the bolts which hold the front exhaust pipe assembly to hanger bracket.

**Tightening torque:**
35 N·m (3.6 kgf-m, 26.0 ft-lb)

9) Connect the front oxygen (A/F) sensor connector (A) and rear oxygen sensor connector (B).

10) Lower the vehicle.

6) Install the under cover.
11) Connect the battery ground cable to battery.

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3. Rear Exhaust Pipe

A: REMOVAL
1) Separate the rear exhaust pipe from front exhaust pipe.

CAUTION:
Be careful, exhaust pipe is hot.

2) Separate the rear exhaust pipe from muffler.

CAUTION:
Be careful not to pull down the rear exhaust pipe.
- LH side

4) Remove the rear exhaust pipe bracket from cushion rubber.

B: INSTALLATION
1) Apply a coat of spray type lubricant to the mating area of cushion rubber.
2) Install the rear exhaust pipe bracket to cushion rubber.

3) Install the rear exhaust pipe to muffler.

NOTE:
Use a new gasket and self-locking nut.

Tightening torque:
48 N·m (4.9 kgf-m, 35.4 ft-lb)
- LH side
4) Install the rear exhaust pipe to center exhaust pipe.

**Tightening torque:**

18 N·m (1.8 kgf-m, 13.0 ft-lb)

C: **INSPECTION**

1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3) Make sure the cushion rubber is not worn or cracked.
4. Muffler

A: REMOVAL
1) Separate the muffler from rear exhaust pipe.

CAUTION:
Be careful, exhaust pipe is hot.
• LH side

2) Apply a coat of spray type lubricant to the mating area of cushion rubber.
• LH side

• RH side

3) Remove the front and rear cushion rubber, and then remove the muffler.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Use a new gasket and self-locking nut.

Tightening torque:
48 Nm (4.9 kgf-m, 35.4 ft-lb)
• LH side

• RH side

C: INSPECTION
1) Make sure there are no exhaust leaks from connections and welds.
2) Make sure there are no holes or rusting.
3) Make sure the cushion rubber is not worn or cracked.

2. Radiator Fan System

A: WIRING DIAGRAM

COOLING
B: RADIATOR FAN CONTROL OUTPUT WAVEFORM

C: INSPECTION
DETECTING CONDITION:
- Engine coolant temperature is more than 93°C (199°F).
- A/C switch is OFF.
- Vehicle speed is below 19 km/h (12 MPH).
TROUBLE SYMPTOMS:
Radiator main fan and sub fan do not rotate under the above conditions.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK MAIN FAN RELAY 1.  
1) Turn the ignition switch to OFF.  
2) Remove the main fan relay 1 from A/C relay holder.  
3) Measure the resistance of terminal in main fan relay 1 switch. | Is the resistance more than 1 MΩ? | Go to step 2. | Replace the main fan relay 1. |
| 2    | CHECK MAIN FAN RELAY 1.  
1) Connect the terminal of main fan relay 1 coil to battery.  
2) Measure the resistance between terminals of main fan relay 1 switch. | Is the resistance less than 1 Ω? | Go to step 3. | Replace the main fan relay 1. |
| 3    | CHECK POWER SUPPLY TO ECM.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from ECM.  
3) Turn the ignition switch to ON.  
4) Measure the voltage between ECM terminal and chassis ground.  
Connector & terminal (B135) No. 30 (+) — Chassis ground (-): | Is the voltage more than 10 V? | Go to step 4. | Repair the power supply line. |
### Radiator Fan System

  1) Connect the connector to ECM and radiator fan control unit.  
  2) Measure the resistance between radiator fan control unit connector and chassis ground.  
Connector & terminal  
(F106) No. 3 — Chassis ground: | Is the resistance less than 5 Ω? | Go to step 7. | Repair the open circuit in harness between radiator fan control unit connector and chassis ground. |
| 7    | CHECK FAN MOTOR.  
  1) Disconnect the connector from radiator fan control unit.  
  2) Connect the battery positive (+) terminal to terminal No. 1, and the ground (−) terminal to terminal No. 3 of radiator fan control unit. | Does the fan motor rotate? | Go to step 8. | Replace the fan motor which does not rotate. |
| 8    | CHECK ECM OUTPUT SIGNAL.  
  1) Turn the ignition switch to OFF.  
  2) Connect the test mode connector.  
  3) Turn the ignition switch to ON.  
  4) Using the oscilloscope, check the output signal. <Ref. to CO(H6DO)-7, RADIATOR FAN CONTROL OUTPUT WAVEFORM, Radiator Fan System.>  
Connector & terminal  
(B134) No. 31 (+) — Chassis ground (−): | Is the waveform output? | Replace the radiator fan control unit. <Ref. to CO(H6DO)-23, Radiator Fan Control Unit.> | Replace the ECM. <Ref. to FU(H6DO)-34, Engine Control Module (ECM).> |
3. Engine Coolant

A: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

1) Lift-up the vehicle.
2) Remove the under cover.
3) Remove the drain plug to drain engine coolant into container.

NOTE:
Remove the coolant filler tank cap so that engine coolant will drain faster.

4) Install the drain plug.

2. FILLING OF ENGINE COOLANT

1) Fill engine coolant into coolant filler tank up to the filler neck position.

Coolant capacity (fill up to “FULL” level):
Model with ATF warmer (LHD)
   Approx. 7.7 (8.1 US qt, 6.8 Imp qt)
Model with ATF warmer (RHD)
   Approx. 7.8 (8.2 US qt, 6.9 Imp qt)
Model without ATF warmer
   Approx. 7.2 (7.6 US qt, 6.3 Imp qt)

NOTE:
SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

2) Fill engine coolant into the reservoir tank up to “FULL” level.

3) Warm-up the engine completely for more than five minutes at 2,000 to 3,000 rpm.
4) If the engine coolant level drops in coolant filler tank, add engine coolant to filler neck position.
5) If the engine coolant level drops from “FULL” level of reservoir tank, add engine coolant to “FULL” level.
6) Attach the coolant filler tank cap and reservoir tank cap properly.

B: INSPECTION

1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

Concentration and safe operating temperature of SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.
If the coolant temperature is 25°C (77°F), its specific gravity is 1.054, the concentration is 45% (point A), the safe operating temperature is −14°C (7°F) (point B), and the freezing temperature is −20°C (−4°F) (point C).

2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%). The amount of coolant that should be replaced can be determined using the diagram.

[Example]
Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 2 (2.2 US qt, 1.8 Imp qt). Drain 2.1 2 (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 2 (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.
4. Water Pump

A: REMOVAL
1) Remove the radiator. <Ref. to CO(H6DO)-13, REMOVAL, Radiator.>
2) Remove the V-belts. 
   <Ref. to ME(H6DO)-33, REMOVAL, V-belt.>
3) Remove the front chain cover. 
   <Ref. to ME(H6DO)-43, REMOVAL, Front Chain Cover.>
4) Remove the timing chain assembly. 
   <Ref. to ME(H6DO)-45, REMOVAL, Timing Chain Assembly.>
5) Remove the water pump.

NOTE:
When the water pump cannot be removed easier, screw-in the bolts (A) to screw part to remove water pump.

B: INSTALLATION
1) Install the water pump to rear chain cover.

NOTE:
Apply engine coolant to O-ring.

Tightening torque
6.4 N.m (0.65 kgf-m, 4.7 ft-lb)

NOTE:
• Use new O-rings.
• Apply engine coolant to O-ring to install water pump easier.

C: INSPECTION
1) Check the water pump bearing for smooth rotation.
2) Check the water pump sprocket for abnormalities.

3) Install the front chain cover. 
   <Ref. to ME(H6DO)-43, INSTALLATION, Front Chain Cover.>
4) Install the V-belts. 
   <Ref. to ME(H6DO)-33, INSTALLATION, V-belt.>
5) Install the radiator. <Ref. to CO(H6DO)-14, INSTALLATION, RADIATOR.>
6) Fill with engine coolant. <Ref. to CO(H6DO)-9, FILLING OF ENGINE COOLANT, REPLACE- MENT, Engine Coolant.>
5. Thermostat

A: REMOVAL
1) Set the vehicle on a lift.
2) Lift-up the vehicle.
3) Remove the under cover.
4) Drain engine coolant completely. <Ref. to CO(H6DO)-9, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
5) Disconnect the radiator outlet hose from thermostat cover.

6) Remove the thermostat cover and then remove the thermostat.

B: INSTALLATION
1) Install the gasket to thermostat.

NOTE:
Use a new gasket.

2) Install the thermostat and thermostat cover.

NOTE:
The thermostat must be installed with the jiggle pin facing upward.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

3) Connect the radiator outlet hose to thermostat cover.
4) Install the under cover.
5) Lower the vehicle.
6) Fill with engine coolant. <Ref. to CO(H6DO)-9, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION
Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

- Inspection method
Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measurement should conform to the specification.

Starting temperature to open:
80 — 84 °C (176 — 183 °F)

Fully opens:
95 °C (203 °F)

Valve lift:
9.0 mm (0.354 in) or more

(A) Thermometer
(B) Thermostat
6. Radiator
A: REMOVAL

WARNING:
The radiator is pressurized. Wait until engine cools down before working on the radiator.

1) Set the vehicle on a lift.
2) Remove the collector cover.
3) Disconnect the ground cable from battery.

4) Lift-up the vehicle.
5) Remove the under cover.
6) Drain engine coolant completely.<Ref. to CO(H6DO)-9, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
7) Disconnect the outlet hose from radiator.

8) Disconnect the ATF cooler hose from radiator. (model without ATF warmer)

9) Lower the vehicle.

10) Remove the hood stay holder.

11) Remove the air intake duct. <Ref. to IN(H6DO)-8, REMOVAL, Air Intake Duct.>
12) Disconnect the connector from radiator fan control unit.

13) Remove the reservoir tank. <Ref. to CO(H6DO)-22, REMOVAL, Reservoir Tank.>
14) Disconnect the inlet hose from radiator.
15) Remove the radiator upper brackets.

16) Lift the radiator up and away from vehicle.
B: INSTALLATION
1) Attach the radiator lower cushions to holes on the vehicle.

2) Install the radiator to vehicle.

NOTE:
Make pins on the lower side of radiator be fitted into the radiator lower cushions on body side.

3) Install the radiator upper brackets and tighten the bolts.

**Tightening torque:**
12 N·m (1.2 kgf-m, 8.7 ft-lb)

4) Connect the radiator inlet hose.

5) Install the reservoir tank. <Ref. to CO(H6DO)-22, INSTALLATION, Reservoir Tank.>

6) Connect the connector to radiator fan control unit.

7) Install the air intake duct. <Ref. to IN(H6DO)-8, INSTALLATION, Air Intake Duct.>

8) Install the hood stay holder.

9) Lift-up the vehicle.

10) Connect the ATF cooler hoses. (model without ATF warmer)

11) Connect the radiator outlet hose.

12) Install the under cover.

13) Lower the vehicle.

14) Connect the battery ground cable to battery.
15) Fill with engine coolant.
<Ref. to CO(H6DO)-9, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
16) Check the ATF level.
<Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>
17) Install the collector cover.

C: INSPECTION

1) Remove the radiator cap, top off the radiator with coolant, and then attach the tester in place of cap.

2) Apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) to the radiator to check if:
- Engine coolant leaks at/around radiator.
- Engine coolant leaks at/around hoses or connections.

CAUTION:
- Engine should be turned off.
- Wipe engine coolant from check points in advance.
- Be careful to prevent engine coolant from spurting out when removing tester.
- Be careful not to deform the filler neck of radiator when installing or removing the tester.
7. Radiator Cap

A: INSPECTION

1) Attach the radiator cap to tester.

2) Increase pressure until the tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for five to six seconds.

*Standard pressure:*
  93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)

*Service limit pressure:*
  83 kPa (0.85 kg/cm², 12 psi)

**CAUTION:**
- Be sure to remove foreign matter and rust from the cap in advance, otherwise results of pressure test will be incorrect.
- Do not confuse the cap of coolant filler tank with cap of radiator.
8. Radiator Main Fan and Fan Motor

A: REMOVAL
1) Set the vehicle on a lift.
2) Remove the collector cover.
3) Disconnect the ground cable from battery.
4) Remove the hood stay holder.
5) Remove the air intake duct. <Ref. to IN(H6DO)-8, REMOVAL, Air Intake Duct.>
6) Disconnect the connector from radiator fan control unit.
7) Lift-up the vehicle.
8) Remove the under cover.
9) Drain engine coolant completely. <Ref. to CO(H6DO)-9, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
10) Disconnect the ATF hose from the clip of radiator main fan shroud. (model without ATF warmer)
11) Remove the radiator main fan motor harness from clip.
12) Lower the vehicle.
13) Remove the reservoir tank. <Ref. to CO(H6DO)-22, REMOVAL, Reservoir Tank.>
14) Disconnect the inlet hose from radiator.
15) Remove the radiator sub fan motor assembly.
16) Remove the radiator main fan motor assembly.

NOTE:
When removing the main fan assembly with lifting it up, the main fan shroud contacts to inlet part of engine coolant. To avoid contacting it, move the main fan assembly to sub fan assembly side before removal.
**B: INSTALLATION**
Install in the reverse order of removal.

_Tightening torque:_
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

---

**C: DISASSEMBLY**
1) Remove the nut which holds fan itself onto fan motor and shroud assembly.

2) Remove the screws which hold the fan motor onto shroud.

---

**D: ASSEMBLY**
Assemble in the reverse order of disassembly.

_Tightening torque:_
6.2 N·m (0.63 kgf-m, 4.6 ft-lb)

_Tightening torque:_
3.8 N·m (0.39 kgf-m, 2.8 ft-lb)

---

**E: INSPECTION**
1) Disconnect the connector from radiator fan control unit.

_NOTE:_
Do not remove the main fan motor harness connector.
2) Connect the battery to radiator fan control unit as shown in the figure.

3) Check the fan motor for operations. If it does not operate, replace the fan motor.
9. Radiator Sub Fan and Fan Motor

**A: REMOVAL**
1) Set the vehicle on a lift.
2) Remove the collector cover.
3) Disconnect the ground cable from battery.
4) Remove the hood stay holder.
5) Remove the air intake duct. *<Ref. to IN(H6DO)-8, REMOVAL, Air Intake Duct.>*
6) Disconnect the connector from radiator fan control unit.
7) Remove the bolts which hold sub fan shroud to radiator.
8) Lift-up the vehicle.
9) Remove the under cover.
10) Remove the radiator sub fan shroud through the under side of vehicle.

**B: INSTALLATION**
Install in the reverse order of removal.

*Tightening torque:*
7.5 N⋅m (0.76 kgf-m, 5.5 ft-lb)

**C: DISASSEMBLY**
1) Remove the nut which holds fan itself onto fan motor and shroud assembly.
2) Remove the screws which hold the fan motor onto shroud.

3) Remove the bolts which hold the radiator fan control unit onto shroud.

**D: ASSEMBLY**

Assemble in the reverse order of disassembly.

*Radiator fan control unit bolt tightening torque:*

\[ 5.4 \text{ N\cdot m (0.55 kgf-m, 4.0 ft-lb)} \]

*Tightening torque:*

\[ 3.8 \text{ N\cdot m (0.39 kgf-m, 2.8 ft-lb)} \]

*Tightening torque:*

\[ 6.2 \text{ N\cdot m (0.63 kgf-m, 4.6 ft-lb)} \]

**E: INSPECTION**

1) Disconnect the connector from radiator fan control unit.

*NOTE:*

Do not remove the main fan motor harness connector.

2) Connect the battery to radiator fan control unit as shown in the figure.

3) Check the fan motor for operations. If it does not operate, replace the fan motor.
10. Reservoir Tank

A: REMOVAL
1) Disconnect the overflow hose.
2) Pull out the reservoir tank to the direction of arrow while pushing the pawl (A).

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Make sure the engine coolant level is between “FULL” and “LOW”.
11. Radiator Fan Control Unit

A: SPECIFICATION
Radiator fan control unit forms a unit with radiator sub fan motor. Refer to “Radiator Sub Fan and Fan Motor” for removal and installation.
<Ref. to CO(H6DO)-20, REMOVAL, Radiator Sub Fan and Fan Motor.>
<Ref. to CO(H6DO)-20, INSTALLATION, Radiator Sub Fan and Fan Motor.>
<Ref. to CO(H6DO)-20, DISASSEMBLY, Radiator Sub Fan and Fan Motor.>
<Ref. to CO(H6DO)-21, ASSEMBLY, Radiator Sub Fan and Fan Motor.>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

Recommended oil

For the API specification SL and SJ, use the logo mark with "Energy Conserving" (If the SL, SJ grade is not available, use SH grade).

ACEA specification A1, A2 or A3

CCMC specification G4 or G5

New API specification mark (Star burst mark) label is on the container.

CAUTION:
When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API classification and SAE viscosity No. designated by SUBARU.

The proper viscosity helps the vehicle to get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.
General Description

C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

3. Engine Oil

A: INSPECTION
1) Park the vehicle on a level surface.
2) Extract the oil level gauge and wipe it clean.
3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and properly orientated.
4) Remove it again and check the reading. If the engine oil level is below “L” line, add oil to bring the level up to “F” line.
5) After turning off the engine, wait a few minutes for the oil to return to the oil pan before checking the level.
6) Just after driving or while the engine is warm, engine oil level show in the range between “F” line and the notch mark. This is caused by thermal expansion of the engine oil.

NOTE:
To prevent overfilling the engine oil, do not add oil above “F” line when the engine is cold.

B: REPLACEMENT
1) Open the engine oil filler cap for quick draining of the engine oil.
2) Lift-up the vehicle.
3) Drain engine oil by loosening the engine oil drain plug.

NOTE:
Prepare a container for draining of engine oil.

4) Tighten the engine oil drain plug after draining engine oil.

NOTE:
Use a new drain plug gasket.

Tightening torque:
44 N·m (4.5 kgf-m, 32.5 ft-lb)

5) Use the engine oil of proper quality and viscosity, fill engine oil through the oil filler duct to upper point on level gauge. Make sure that the vehicle is parked on a level surface when checking oil level.

Recommended oil:
Refer to “SPECIFICATION” for the recommended oil. <Ref. to LU(H6DO)-2, SPECIFICATION, General Description.>

Engine oil capacity (when replacing engine oil):
5.5 ℓ (5.8 US qt, 4.8 Imp qt)

6) Close the engine oil filler cap.
7) Start the engine and warm it up for a time.
8) After the engine stops, recheck the oil level. If necessary, add engine oil up to the upper level on level gauge.
4. Oil Pump

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Drain engine coolant. <Ref. to CO(H6DO)-9, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
6) Lower the vehicle.
7) Remove the radiator. <Ref. to CO(H6DO)-13, REMOVAL, Radiator.>
8) Remove the V-belts. <Ref. to ME(H6DO)-33, REMOVAL, V-belt.>
9) Remove the front chain cover. <Ref. to ME(H6DO)-43, REMOVAL, Front Chain Cover.>
10) Remove the timing chain. <Ref. to ME(H6DO)-45, REMOVAL, Timing Chain Assembly.>
11) Remove the crank sprocket.
12) Remove the oil pump cover.
13) Remove the inner rotor and outer rotor.

B: INSTALLATION
1) Apply a coat of engine oil to the whole area of inner rotor and outer rotor.
2) Set the inner rotor onto opening edge of crank shaft, and install the inner rotor, and then assemble the outer rotor.
3) Install the oil pump cover.
4) Tighten the bolts in the numerical order as shown in the figure.

CAUTION:
Ensure that the bolt is installed in correct position.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

5) Install the crank sprocket.
6) Install the timing chain. <Ref. to ME(H6DO)-46, INSTALLATION, Timing Chain Assembly.>
7) Install the front chain cover. <Ref. to ME(H6DO)-43, INSTALLATION, Front Chain Cover.>
8) Install the V-belts. <Ref. to ME(H6DO)-33, INSTALLATION, V-belt.>
9) Install the radiator. <Ref. to CO(H6DO)-14, INSTALLATION, Radiator.>
10) Install the under cover.

</table>
11) Fill engine coolant.  
<Ref. to CO(H6DO)-9, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

1. TIP CLEARANCE
Measure the tip clearance of rotors. If the clearance exceeds the limit, replace the rotors as a matched set.

*Tip clearance:*
*Standard value*
0.04 — 0.14 mm (0.0016 — 0.0055 in)

2. CASE CLEARANCE
Measure the clearance between the outer rotor and rear chain cover rotor housing. If the clearance exceeds the limit, replace the outer rotor.

*Case clearance:*
*Standard value*
0.110 — 0.175 mm (0.0043 — 0.0069 in)

3. SIDE CLEARANCE
Measure the clearance between oil pump inner rotor and rear chain cover. If the clearance exceeds the limit, replace rotors as a matched set.

*Side clearance:*
*Standard value*
0.020 — 0.046 mm (0.0008 — 0.0018 in)

4. OIL PUMP CASE
Check the worn shaft hole, clogged oil passage, crank and other parts for faults.
5. Oil Pump Relief Valve

A: REMOVAL

1. REAR CHAIN COVER SIDE
Oil pump relief valve is integrated into oil pump cover as one unit; therefore, refer to “Oil Pump” for removal procedure. <Ref. to LU(H6DO)-8, REMOVAL, Oil Pump.>

2. OIL PAN UPPER SIDE
1) Remove the oil pan. <Ref. to LU(H6DO)-11, REMOVAL, Oil Pan and Strainer.>
2) Remove the plug, relief valve spring and relief valve.

B: INSTALLATION

1. REAR CHAIN COVER SIDE
Oil pump relief valve is integrated into oil pump cover as one unit; therefore, refer to “Oil Pump” for installation procedure. <Ref. to LU(H6DO)-8, INSTALLATION, Oil Pump.>

2. OIL PAN UPPER SIDE
1) Install the relief valve, relief valve spring and plug.
   NOTE:
   Apply the engine oil to relief valve.

C: INSPECTION
Check the worn shaft hole of oil pump relief valve case, clogged oil passage, crank and other parts for faults.

Tightening torque:
T: 44 N·m (4.5 kgf-m, 33 ft-lb)
6. Oil Pan and Strainer

A: REMOVAL

NOTE:
Before removing the oil pan upper, remove the engine from vehicle. <Ref. to ME(H6DO)-34, REMOVAL, Engine Assembly.> <Ref. to ME(H6DO)-63, REMOVAL, Cylinder Block.>
1) Set the vehicle on a lift.
2) Lift-up the vehicle.
3) Remove the under cover.
4) Drain the engine oil. <Ref. to LU(H6DO)-7, REPLACEMENT, Engine Oil.>
5) Insert the oil pan cutter blade between oil pan upper and oil pan lower.

CAUTION:
Do not use a screwdriver or similar tool in place of oil pan cutter.
6) Remove the oil pan lower.

7) Remove the oil strainer.

B: INSTALLATION

CAUTION:
Before installing the oil pan, wipe clean the mating surface of oil pan lower and oil pan upper.
1) Install the oil strainer to oil pan upper.

NOTE:
Replace O-ring with new one.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

2) Apply liquid gasket to the mating surfaces and install the oil pan.

Liquid gasket
THREE BOND 1280B (Part No. K0877YA018)
Liquid gasket applying diameter
5.0±1.0 mm (0.197±0.039 in)

3) Tighten the oil pan lower installing bolts in the numerical order as shown in the figure.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

4) Install the under cover.
5) Fill engine oil. <Ref. to LU(H6DO)-7, INSPECTION, ENGINE OIL.>

C: INSPECTION

Visually check that the oil pan, oil strainer and oil strainer stay are not damaged.
7. Oil Pressure Switch

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Disconnect the terminal from oil pressure switch.
6) Remove the oil pressure switch.

B: INSTALLATION
1) Apply liquid gasket to the oil pressure switch threads.

C: INSPECTION
Make sure oil does not leak or seep from where the oil pressure switch is installed.

Liquid gasket
THREE BOND 1324 (Part No. 004403042) or equivalent

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)
8. Engine Oil Filter

A: REMOVAL
1) Drain the engine oil by removing engine oil drain plug.
2) Remove the under cover.
3) Remove the oil filter using ST.
   ST 4985447000 OIL FILTER WRENCH

B: INSTALLATION
1) Clean the oil filter installing surface of oil cooler.
2) Obtain a new oil filter and apply a thin coat of engine oil to the seal rubber.
3) Install the oil filter turning it by hand, being careful not to damage seal rubber.
4) Tighten more (approx. 3/4 turn) after the seal rubber contacts the oil cooler. Do not tighten excessively, or oil may leak.
5) Install the under cover.
6) Lower the vehicle.
7) Fill engine oil. <Ref. to LU(H6DO)-7, INSPECTION, ENGINE OIL.>

C: INSPECTION
1) After installing the oil filter, run engine and make sure that no oil is leaking around seal rubber.
   NOTE:
   The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.
2) Check the engine oil level. <Ref. to LU(H6DO)-7, INSPECTION, ENGINE OIL.>
9. Oil Cooler

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the under cover.
3) Drain the engine coolant. <Ref. to CO(H6DO)-9, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
4) Drain the engine oil. <Ref. to LU(H6DO)-7, REPLACEMENT, Engine Oil.>
5) Remove the bolts which hold the water pipe to engine.

6) Disconnect the water hose from oil cooler.

7) Remove the oil filter using ST. <Ref. to LU(H6DO)-13, REMOVAL, Engine Oil Filter.>

ST 498547000 OIL FILTER WRENCH

NOTE:
Set a container under the vehicle.

8) Remove the connector and remove oil cooler.

B: INSPECTION
1) Check that engine coolant passages are not clogged using an compressed air.
2) Check that the oil pan upper and O-ring installing surface of oil filter are not damaged.

C: INSTALLATION
1) Install the oil cooler to oil pan upper with connector pipe.

Tightening torque:
T: 54 N·m (5.5 kgf-m, 39.8 ft-lb)

NOTE:
Use new O-rings.

2) Install the oil filter using ST. <Ref. to LU(H6DO)-13, INSTALLATION, ENGINE OIL FILTER.>

(A) Connector
(B) Oil cooler
(C) O-ring
3) Connect the water hose.

4) Install the water pipe to engine.

**Tightening torque:**

$$6.4 \text{ N\cdot m (0.65 kgf-m, 4.7 ft-lb)}$$

5) Fill engine oil. <Ref. to LU(H6DO)-7, REPLACEMENT, Engine Oil.>

6) Fill engine coolant. <Ref. to CO(H6DO)-9, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

7) Check the engine oil level. <Ref. to LU(H6DO)-7, INSPECTION, ENGINE OIL.>
# General Diagnostic Table

**A: INSPECTION**

Before performing diagnosis, make sure that the engine oil level is correct and no oil leakage exists.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Warning light remains on.</td>
<td>1) Oil pressure switch failure (Cracked diaphragm or oil leakage within switch, Broken spring or seized contacts)</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>2) Low oil pressure (Clogging of oil filter, Malfunction of oil by-pass valve in oil filter, Malfunction of oil relief valve in oil pump, Clogged oil passage, Excessive tip clearance and side clearance of oil pump rotor and gear)</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>3) No oil pressure (Insufficient engine oil, Broken pipe of oil strainer, Stuck oil pump rotor)</td>
<td>Clean or replace.</td>
</tr>
<tr>
<td>2. Warning light does not come on.</td>
<td>1) Malfunction of combination meter</td>
<td>Replace.</td>
</tr>

B: COMPONENT

(1) Spark plug
(2) Ignition coil & ignitor ASSY

| T1 | 16 (1.6, 11.7) |
| T2 | 21 (2.1, 15.2) |
C: CAUTION
- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Spark Plug

A: REMOVAL

CAUTION:
All spark plugs installed on an engine must be of the same heat range.

Spark plug:
NGK: ILFR6B

1. RH SIDE

1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air cleaner case.
   <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.>
4) Remove the bracket.
5) Disconnect the connector from ignition coil.
6) Remove the ignition coil.

NOTE:
Turn the #5 ignition coil to remove it.

7) Remove the spark plug with a spark plug socket.

2. LH SIDE

1) Remove the collector cover.
2) Remove the battery and battery carrier.
3) Remove the bracket.
4) Disconnect the connector from ignition coil.
5) Remove the ignition coil.

NOTE:
Turn the #6 ignition coil to remove it.
Spark Plug

B: INSTALLATION

1. RH SIDE
Install in the reverse order of removal.

**Tightening torque (Spark plug):**
21 N·m (2.1 kgf-m, 15.2 ft-lb)

**Tightening torque (Ignition coil):**
16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:
The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

2. LH SIDE
Install in the reverse order of removal.

**Tightening torque (Spark plug):**
21 N·m (2.1 kgf-m, 15.2 ft-lb)

**Tightening torque (Ignition coil):**
16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:
The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

C: INSPECTION
Check the electrodes and inner and outer ceramic insulator of plugs, noting the type of deposits and the degree of electrode erosion.

1) Normal:
Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

(A) Spark plug gap
(B) Carbon accumulation or wear
(C) Crack
(D) Damage
(E) Damaged gasket
IGNITION

2) Carbon fouled:
Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in the city, weak ignition, too rich fuel mixture, dirty air cleaner, etc. It is advisable to replace with plugs having hotter heat range.

3) Oil fouled:
Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If the same condition remains after repair, use a hotter plug.

4) Overheating:
White or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating. Moreover, those appearance also result from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.

D: ADJUSTMENT
Clean the spark plugs using a wire brush. Clean and remove the carbon or oxide deposits. But do not wear away ceramic insulator at this time. If deposits are too stubborn, replace the spark plugs. After cleaning the spark plugs, correct the spark plug gap using a gap gauge.

NOTE:
Do not use a plug cleaner because the spark plugs are applied with iridium tip.

**Spark plug gap:**
\[0.7 \text{ — } 0.8 \text{ mm} \ (0.028 \text{ — } 0.031 \text{ in})\]

NOTE:
Replace with a new spark plug if the area (A) is worn to “ball” shape.
3. Ignition Coil & Ignitor ASSY

A: REMOVAL
Direct ignition type has been adopted. Refer to “Spark Plug” for removal procedure. <Ref. to IG(H6DO)-4, REMOVAL, Spark Plug.>

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:*
16 N·m (1.6 kgf-m, 11.7 ft-lb)

C: INSPECTION
For inspection procedure, refer to “Diagnostics for Engine Starting Failure”. <Ref. to EN(H6DO)(diag)-59, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. **Tightening torque: N m (kgf-m, ft-lb)**

T1: 4.7 (0.48, 3.5)
T2: 108 (11.0, 80)
C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
2. Starter

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber.
<Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Disconnect the connector and terminal from starter.
5) Remove the starter from transmission.

B: INSTALLATION
Install in the reverse order of removal.

*Tightening torque:*
50 N·m (5.1 kgf-m, 37 ft-lb)

C: DISASSEMBLY

1. STARTER ASSEMBLY
1) Loosen the nut which holds terminal M of switch assembly, and then disconnect the connector.
2) Remove the bolts which hold switch assembly, and then remove the switch assembly, plunger and plunger spring from starter as a unit.
3) Remove the nuts of both sides, and then remove rear cover set.

4) Remove the through-bolts and brush holder screws of both sides, and then detach the rear cover and brush holder assembly.

5) Remove the armature and yoke assembly from front bracket.

6) Remove the packing A, planetary gear and packing B.

7) Remove the plate.

8) Remove the shaft assembly and overrunning clutch from front bracket as a unit.

NOTE:
Check the following points before removal.
- Lever direction
- Position of internal gear assembly
9) Remove the overrunning clutch from shaft assembly as follows:
   (1) Remove the stopper from ring by lightly tapping the stopper with an appropriate tool (such as a fit socket wrench).
   (2) Remove the ring, stopper and clutch from shaft.

   (A) Socket wrench
   (B) Ring
   (C) Shaft
   (D) Stopper

D: ASSEMBLY

NOTE:
Apply grease to the following parts before assembly.
- Sleeve bearing
- Pinion shaft rotating part
- Shaft spline portion
- Inside of reduction system
- Lever fulcrum/Clutch rotating part
1) Install the overrunning clutch to shaft assembly.
2) Install the stopper to shaft assembly as follows.

   (1) Insert the ring into the shaft groove by lightly tapping it with an appropriate tool (such as a fit socket wrench).

   (2) Install the stopper to ring using a press.

   (A) Ring
   (B) Stopper

3) Install the shaft assembly to front bracket while taking care of the following points.
   (1) Lever direction

   (2) Internal gear position
4) Install the plate.

5) Install the planetary gear.
6) Install the packing A and B while taking care of installing positions.

7) Install the armature to yoke assembly.
8) Install the yoke to front bracket matching front bracket to the groove of yoke assembly.

9) Install the brush holder to yoke assembly as follows.

1) Press the brush down into brush holder, and then fix the brush in that position using an appropriate tool (such as a fit socket wrench).

2) Match the brush holder to groove of yoke, and then slide the brush holder into yoke assembly to install.

10) Install the rear cover matching it’s groove to brush holder assembly.
11) Install rear cover set.

12) Install the switch assembly to front bracket as follows.
   (1) Insert the plunger and plunger spring into switch assembly.
   (2) Hook the plunger protrusion on lever edge to install plunger to front bracket.

13) Connect the connector to terminal M of switch assembly.

**E: INSPECTION**

1. ARMATURE

1) Check the commutator for any sign of burns of rough surfaces or stepped wear. If wear is of a minor nature, correct it by using sand paper.
2) Run-out test
   Check the commutator for run-out, and then replace if it exceeds the limit.

**Commutator run-out:**
- Standard: 0.05 mm (0.0020 in)
- Service limit: Less than 0.10 mm (0.0039 in)

3) Depth of segment mold
   Check the depth of segment mold.

**Depth of segment mold:**
- 0.5 mm (0.020 in)
4) Armature short-circuit test
Check the armature for short-circuit by placing it on growler tester. Hold an iron sheet against the armature core while slowly rotating the armature. A short-circuited armature will cause the iron sheet to vibrate and to be attracted to core. If the iron sheet is attracted or vibrates, the armature, which is short-circuited, must be replaced or repaired.

5) Armature ground test
Using a circuit tester, touch one probe to the commutator segment and the other to shaft. There should be no continuity. If there is continuity, the armature is grounded. Replace the armature if it is grounded.

2. YOKE
Make sure the pole is set in position.

3. OVERRUNNING CLUTCH
Inspect the teeth of pinion for wear and damage. Replace if it is damaged. Rotate the pinion in the right direction of rotation (counterclockwise). It should rotate smoothly. But in the opposite direction, it should be locked.

CAUTION:
Do not clean the overrunning clutch with oil to prevent grease from flowing out.

4. BRUSH AND BRUSH HOLDER
1) Brush length
Measure the brush length, and then replace if it exceeds the service limit. Replace if abnormal wear or cracks are noticed.

Brush length:
Standard
12.3 mm (0.484 in)
Service limit
7.0 mm (0.276 in)

2) Brush movement
Be sure the brush moves smoothly inside brush holder.

3) Brush spring force
Measure the brush spring force with a spring scale. If it is less than the service limit, replace the brush holder.

Brush spring force:
Standard
15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lb) (when new)
Service limit
2.5 N (0.25 kgf, 0.56 lb)

5. SWITCH ASSEMBLY
Be sure there is continuity between the terminals S and M, and between terminal S and ground. Use a circuit tester (set in “ohm”). Also check to be sure there is no continuity between terminal M and B.
**6. SWITCH ASSEMBLY OPERATION**

1) Using a lead wire, connect the terminal S of switch assembly to positive terminal of battery, and starter body to ground terminal of battery. The pinion should be forced endwise on shaft.

**CAUTION:**

With the pinion forced endwise on shaft, starter motor can sometimes rotate because current flows, through pull-in coil, to motor. This is not a problem.

2) Disconnect the connector from terminal M. Then using a lead wire, connect the positive terminal of battery and terminal M and ground terminal to starter body.

In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.

**7. PERFORMANCE TEST**

The starter should be submitted to performance tests whenever it has been overhauled, to assure its satisfactory performance when installed on the engine.

Three performance tests, no-load test, load test, and lock test, are presented here; however, if the load test and lock test cannot be performed, carry out at least the no-load test.

For these performance tests, use the circuit shown in figure.

1) **No-load test**

With switch on, adjust the variable resistor to obtain 11 V, take the ammeter reading, and then measure the starter speed. Compare these values with the specifications.

**No-load test (standards):**

<table>
<thead>
<tr>
<th>Voltage/Current</th>
<th>MAX. 11 V/90 A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rotating speed</td>
<td>More than 2,000 rpm</td>
</tr>
</tbody>
</table>

2) **Load test**

Apply the specified braking torque to starter. The condition is satisfactory if the current draw and starter speed are within the specifications.

**Load test (standards):**

<table>
<thead>
<tr>
<th>Voltage/Load</th>
<th>7.7 V/16.7 N·m (1.70 kgf·m, 12.3 ft-lb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current/Speed</td>
<td>More than 400 A/710 rpm</td>
</tr>
</tbody>
</table>
3) Lock test
With the starter stalled, or not rotating, measure the torque developed and current draw when the voltage is adjusted to specified voltage.

*Lock test (standards):*

**Voltage/Current**
- *Less than 3.5 V/960 A*

**Torque**
- $31 \text{ N} \cdot \text{m (3.16 kgf-m, 22.9 ft-lb)}$
3. Generator

A: REMOVAL
1) Remove the collector cover.
2) Disconnect the ground cable from battery.
3) Disconnect the connector and terminal from generator.
4) Remove the V-belt.  
   <Ref. to ME(H6DO)-33, REMOVAL, V-belt.>
5) Remove the bolt (A) and loosen the bolt (B), and then remove the generator from bracket.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

CAUTION:
Check and adjust the V-belt tension.
<Ref. to ME(H6DO)-33, INSPECTION, V-belt.>

C: DISASSEMBLY
1) Remove the four through-bolts.
2) Heat the portion (A) of rear cover to 50°C (122°F) with a heater drier.
3) Then insert the tip of a flat-tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

4) Hold the rotor with a vise and remove pulley nut.

**CAUTION:**
When holding the rotor with a vise, place aluminum plates or wooden pieces on the vise jaws to prevent rotor from damage.

5) Remove the ball bearing as follows.
(1) Remove the bolt, and then remove the bearing retainer.
(2) Firmly install an appropriate tool (such as a fit socket wrench) to bearing inner race.
(3) Push the ball bearing off the front cover using a press.

6) Remove the bearing from rotor using a bearing puller.
7) Unsolder the connection between rectifier and stator coil to remove stator coil.

**CAUTION:**
Do not allow a 180 — 270 W soldering iron to contact the terminals for more than 5 seconds at once because the rectifier cannot withstand so much heat.

8) Remove the IC regulator as follows.
   (1) Remove the screws which secure IC regulator to rear cover.
   (2) Unsolder the connection between IC regulator and rectifier to remove IC regulator.

9) Remove the brush as follows.
   (1) Remove the cover A.
   (2) Remove the cover B.
   (3) Separate the brush from connection to remove.

10) Remove the rectifier as follows.
    (1) Remove the bolts which secure rectifier.
(2) Remove the cover of terminal B.

(3) Remove the nut of terminal B, and then remove the rectifier.

3) Press the bearing (rear side) into the rotor shaft using a press to install.
4) Heat the bearing box in rear cover [50 to 60°C (122 to 140°F)], and then press the rear bearing into rear cover.

CAUTION:
Grease should not be applied to rear bearing. Remove the oil completely if it is found on bearing box.
5) After reassembly, turn the pulley by hand to check that rotor turns smoothly.

E: INSPECTION

1. DIODE

CAUTION:
Never use a mega tester (designed for reading high voltage) or any other similar instrument for this test; otherwise, the diodes may be damaged.

1) Checking positive diode
Check for continuity between the diode lead and positive side heat sink. The positive diode is in good condition if resistance is 1 Ω or less only in the direction from the diode lead to heat sink.

2) Install the ball bearing.
   (1) Set the ball bearing on the front cover, and then securely install an appropriate tool (such as a fit socket wrench) to the bearing outer race.
   (2) Press the ball bearing into the specified position using a press.
   (3) Install the bearing retainer.

D: ASSEMBLY

Assemble in the reverse order of disassembly.
1) Pulling up brush
Before assembling, press the brush down into brush holder, and then fix them in that position by passing a [1 mm (0.08 in) dia. 40 to 50 mm (1.6 to 2.0 in) long] wire through the hole as shown in the figure.

CAUTION:
Be sure to remove the wire after reassembly.
2) Checking negative diode
Check for continuity between the negative side heat sink and diode lead. The negative diode is in good condition if resistance is 1 \(\Omega\) or less only in the direction from the heat sink to diode lead.

4) Insulation test
Check the continuity between slip ring and rotor core or shaft. If resistance is 1 \(\Omega\) or less, the rotor coil is grounded, and so replace the rotor assembly.

5) Ball bearing (rear side)
Check the rear ball bearing. Replace if it is noisy or if the rotor does not turn smoothly.

3. STATOR
1) Continuity test
Inspect the stator coil for continuity between each end of the lead wires. If resistance is 1 M\(\Omega\) or more, the lead wire is broken, and so replace the stator assembly.

2) Insulation test
Inspect the stator coil for continuity between stator core and each end of lead wire. If resistance is 1 \(\Omega\) or less, the stator coil is grounded, and so replace the stator assembly.
4. BRUSH

1) Measure the length of each brush. If wear exceeds the service limit, replace the brush. Each brush has the service limit mark (A) on it.

*Brush length:*

- **Service limit (1)**
  - 5.0 mm (0.197 in)
- **Standard (2)**
  - 18.5 mm (0.728 in)

2) Checking brush spring for proper pressure

Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.08 in). Then measure the pressure of brush spring. If the pressure is less than 2.2 N (224 g, 7.91 oz), replace the brush spring with a new one. The new spring must have a pressure of 4.8 to 6.0 N (489 to 612 g, 17.26 to 21.60 oz).

5. BEARING (FRONT SIDE)

Check the front ball bearing. If the resistance is felt while rotating, or if noise is heard, replace the ball bearing.
4. Battery

A: REMOVAL
1) Remove the battery cable holder from battery rod.
2) Disconnect the positive (+) terminal after disconnecting the negative (−) terminal of battery.
3) Remove the flange nuts from battery rods and take off battery holder.

4) Remove the battery.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

NOTE:
- Clean the battery cable terminals and apply grease to retard the formation of corrosion.
- Connect the positive (+) terminal, and then connect the negative (−) terminal of battery.
- Initial diagnosis of electronic control throttle is performed after battery installation. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.

C: INSPECTION

WARNING:
- Electrolyte has toxicity; be careful of handling the fluid.
- Avoid contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.
- Batteries produce explosive gases. Keep sparks, flame, cigarettes away.
- Ventilate when charging or using in enclosed space.
- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. Never lean over a battery.

- Do not let battery fluid contact eyes, skin, fabrics, or paint-work because battery fluid is corrosive acid.
- To lessen the risk of sparks, remove rings, metal watch-bands, and other metal jewelry. Never allow metal tools to contact the positive battery terminal and anything connected to it while you are at the same time in contact with any other metallic portion of the vehicle. This may cause short circuit.

1. EXTERNAL PARTS
Check the battery case, top cover, vent plugs, and terminal posts for dirt or cracks. If necessary, clean with water and wipe with a dry cloth. Apply a thin coat of grease on the terminal posts to prevent corrosion.

2. ELECTROLYTE LEVEL
Check the electrolyte level in each cell. If the level is below MIN level, bring the level to MAX level by pouring distilled water into the battery cell. Do not fill beyond MAX level.

3. SPECIFIC GRAVITY OF ELECTROLYTE
1) Measure specific gravity of electrolyte using a hydrometer and a thermometer. Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following equation:

\[ S_{20} = St + 0.0007 \times (t - 20) \]

- \( S_{20} \): Specific gravity corrected at electrolyte temperature of 20°C (68°F)
- \( St \): Measured specific gravity
- \( t \): Measured temperature (°C)

Determine whether or not battery must be charged, according to corrected specific gravity.

Standard specific gravity: 1.220 — 1.290 [20°C (68°F)]

2) Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between specific gravity and state of charge is as shown in the figure.
D: MEASUREMENT

WARNING:
Do not bring an open flame close to the battery at this time.

CAUTION:
• Prior to charging, corroded terminals should be cleaned with a brush and common caustic soda solution.
• Be careful since battery electrolyte overflows while charging the battery.
• Observe instructions when handling the battery charger.
• Before charging the battery on the vehicle, disconnect the battery ground terminal to prevent damage of generator diodes or other electrical units.

1. JUDGMENT OF BATTERY IN CHARGED CONDITION

1) Specific gravity of electrolyte should be held within the specific range from 1.250 to 1.290 for more than one hour.
2) Voltage per battery cell should be held at a specific value in a range from 2.5 to 2.8 volts for more than one hour.

2. CHECK HYDROMETER FOR STATE OF CHARGE

<table>
<thead>
<tr>
<th>Hydrometer indicator</th>
<th>Charge battery</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Above 65%</td>
<td>Load test</td>
</tr>
<tr>
<td>Dark</td>
<td>Below 65%</td>
<td>Charge battery</td>
</tr>
<tr>
<td>Clear</td>
<td>Low electrolyte</td>
<td>Replace battery* (If cranking is difficult)</td>
</tr>
</tbody>
</table>

* Check electrical system before replacement.

3. NORMAL CHARGING

Charge the battery at the current value specified by manufacturer or at approximately 1/10 of battery’s ampere-hour rating.

4. QUICK CHARGING

Quick charging is a method that the battery is charged in a short period of time with a relatively large current by using a quick charger. Since a large current flow raises electrolyte temperature, the battery is subject to damage if the large current is used for prolonged time. For this reason, the quick charging must be carried out within a current range that will not increase the electrolyte temperature above 40°C (104°F).

Also the quick charging is a temporary means to bring battery voltage up to a fair value and, as a rule, a battery should be charged slowly with a low current.

CAUTION:
• Observe the items in 3. NORMAL CHARGING.
• Never use more than 10 A when charging the battery because it will shorten the battery life.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

### Basic Diagnostic Procedure

#### A: PROCEDURE

##### 1. ENGINE

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK ENGINE START FAILURE.  
   1) Ask the customer when and how the trouble occurred using the interview check list.  
   <Ref. to EN(H6DO)(diag)-3, CHECK, Check List for Interview.>  
   2) Start the engine. | Does the engine start? | Go to step 2. | Inspection using "Diagnostics for Engine Start Failure". <Ref. to EN(H6DO)(diag)-52, Diagnostics for Engine Starting Failure.> |
| 2    | CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT. | Does check malfunction indicator light illuminate? | Go to step 3. | Inspection using "General Diagnostic Table". <Ref. to EN(H6DO)(diag)-265, INSPECTION, General Diagnostic Table.> |
| 3    | CHECK INDICATION OF DTC ON DISPLAY.  
   1) Turn the ignition switch to OFF.  
   2) Connect the Subaru Select Monitor to data link connector.  
   3) Turn the ignition switch to ON, and the Subaru Select Monitor switch to ON.  
   NOTE: If DTC is not shown on display although the malfunction indicator light illuminates, perform the diagnostics of malfunction indicator light circuit or combination meter. <Ref. to EN(H6DO)(diag)-43, Malfunction Indicator Light.> |
| 4    | PERFORM THE DIAGNOSIS.  
   1) Perform clear memory mode. <Ref. to EN(H6DO)(diag)-40, Clear Memory Mode.>  
   2) Perform the inspection mode. <Ref. to EN(H6DO)(diag)-33, Inspection Mode.> | Is DTC displayed on the Subaru Select Monitor? | Check on "Diagnostic Procedure with Diagnostic Trouble Code (DTC)" <Ref. to EN(H6DO)(diag)-72, Diagnostic Procedure with Diagnostic Trouble Code (DTC)>. | Finish the diagnosis. |
## Check List for Interview

### A: CHECK

#### 1. CHECK LIST No. 1

Check the following items when problem has occurred.

**NOTE:**

Use copies of this page for interviewing customers.

<table>
<thead>
<tr>
<th>Customer’s name</th>
<th>Engine No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date of sale</td>
<td>Fuel brand</td>

3. General Description

A: CAUTION
1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

CAUTION:
• All airbag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the Airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.
   • The ECM will be destroyed instantly.
   • The fuel injector and other part will be damaged.
3) Do not disconnect the battery terminals while the engine is running.
   A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM, etc.
4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn the ignition switch to OFF. Perform the clear memory mode after connecting the connectors.
5) Poor contact has been identified as a primary cause of this problem. Measure the voltage or resistance of individual sensor or all electrical control modules using a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.
6) Remove the ECM from the located position after disconnecting two cables on battery. Otherwise, the ECM may be damaged.

CAUTION:
When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on the fuel injection system.

7) Connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts as the grounding point to chassis when measuring voltage and resistance inside the passenger compartment.

9) Use engine grounding terminal or engine proper as the grounding point to chassis when measuring voltage and resistance in the engine compartment.

10) Use TCU mounting stud bolts as the body side grounding point to chassis when measuring voltage and resistance inside the passenger compartment.

11) Every MFI-related part is a precision part. Do not drop them.
12) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:
• The antenna must be kept as far apart as possible from the control unit. (The ECM is located under the steering column, inside of the instrument panel lower trim panel.)
General Description

- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of the ECM.

13) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

14) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes (engine, electrical control system, transmission) must be distinguished clearly when performing diagnostics.

15) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer’s complaint, and distinguish between the three causes (engine, electrical control system, transmission).

16) In AT models, do not continue the stall for more than five seconds at a time. (from closed throttle, fully open throttle to stall speed reading, and then decrease engine speed.).

17) On the model with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

1. BATTERY

1) Measure battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: Above 1.260**

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUND

Make sure the engine grounding terminal is properly connected to the engine.

C: NOTE

1. GENERAL DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.
- The OBD system incorporated with the vehicles within this engine family complies with Section 1968.1, California Code of Regulations (OBD-II regulation). The OBD system monitors the components and the system malfunction listed in Engine Section which affects on emissions.
- When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a diagnostic DTC and a freeze frame engine conditions are stored into on-board computer.
- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction first.
- If the OBD system detects the various malfunctions including the fault of fuel trim or misfire, the OBD system first stores freeze frame engine conditions about the fuel trim or misfire.
- When the malfunction does not occur again for three consecutive driving cycles, malfunction indicator light is turned off, but DTC remains at on-board computer.
- The OBD-II system is capable of communication with a general scan tool (OBD-II general scan tool) formed by ISO 9141 CARB.
The OBD-II diagnostics procedure is different from the usual diagnostics procedure. When troubleshooting OBD-II vehicles, connect Subaru Select Monitor or the OBD-II general scan tool to the vehicle.

2. ENGINE AND EMISSION CONTROL SYSTEM

The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.

Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.
- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

</tr>
</tbody>
</table>

Measuring condition:
- After engine is warmed-up.
- Gear position is in “N” or “P” range.
- Turn the A/C to OFF.
- Turn all accessory switches to OFF.
7. Data Link Connector

A: NOTE
This connector is used for Subaru Select Monitor.

CAUTION:
Do not connect any scan tools other than the Subaru Select Monitor and the OBD-II general scan tools, because the circuit for the Subaru Select Monitor may be damaged.

8. OBD-II General Scan Tool

A: OPERATION

1. HOW TO USE OBD-II GENERAL SCAN TOOL

1) Prepare a general scan tool (OBD-II general scan tool) required by SAE J1978.
2) Open the cover and connect the OBD-II general scan tool to the data link connector located in the lower portion of the instrument panel (on the driver’s side).

3) Using the OBD-II general scan tool, call up DTC and freeze frame data.

OBD-II general scan tool functions consist of:

1) MODE $01: Current powertrain diagnostic data
2) MODE $02: Powertrain freeze frame data
3) MODE $03: Emission-related powertrain DTC
4) MODE $04: Clear/Reset emission-related diagnostic information

Read out data according to repair procedures. (For detailed operation procedures, refer to the OBD-II General Scan Tool Operation Manual.)

NOTE:
For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>

2. MODE $01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refers to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

<table>
<thead>
<tr>
<th>PID</th>

<td>V and %</td>
</tr>
<tr>
<td>1C</td>
<td>On-board diagnostic system</td>
<td></td>
</tr>
</tbody>
</table>

NOTE:
Refer to OBD-II general scan tool manufacturer’s instruction manual to access generic OBD-II PIDs (MODE $01).
3. MODE $02 (POWERTRAIN FREEZE FRAME DATA)

Refers to data denoting the operating condition when trouble is sensed by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

<table>
<thead>
<tr>
<th>PID</th>
<th>Data</th>
<th>Unit of measure</th>

NOTE:
Refer to OBD-II general scan tool manufacturer’s instruction manual to access freeze frame data (MODE $02).

4. MODE $03 (EMISSION-RELATED POWERTRAIN DTC)

Refer to “Read Diagnostic Trouble Code” for information about data denoting emission-related powertrain DTC. <Ref. to EN(H6DO)(diag)-32, Read Diagnostic Trouble Code (DTC).>

5. MODE $04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refers to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

NOTE:
Refer to OBD-II general scan tool manufacturer’s instruction manual to clear or reset emission-related diagnostic information (MODE $04).
9. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector. (1) Data link connector located in the lower portion of the instrument panel (on the driver’s side).

5) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

6) Using the Subaru Select Monitor, call up DTC and data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTC. <Ref. to EN(H6DO)(diag)-32, Read Diagnostic Trouble Code (DTC).>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (OBD MODE)

Refer to “Read Diagnostic Trouble Code (DTC)” for information about how to indicate DTC. <Ref. to EN(H6DO)(diag)-32, Read Diagnostic Trouble Code (DTC).>
4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type has been displayed.
4) On the «Engine Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
6) Using the scroll key, scroll the display screen up or down until the desired data is shown.

NOTE:
For detailed operation procedures, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
10. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)
   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
   3) Press the [YES] key after the information of engine type has been displayed.
   4) On the «Engine Diagnosis» screen, select the {DTC Display}, and then press the [YES] key.
   5) On the «Diagnostic Code(s) Display» screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

NOTE:
- For detailed operation procedures, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>

2. SUBARU SELECT MONITOR (OBD MODE)
   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
   3) Press the [YES] key after the information of engine type was displayed.
   4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
   5) On the «OBD Menu» display screen, select the {DTC Display} and press the [YES] key.
   6) Make sure DTC is shown on the screen.

NOTE:
- For detailed operation procedures, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>

3. OBD-II GENERAL SCAN TOOL

Refers to data denoting emission-related power-train DTC.
For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>

NOTE:
Refer to OBD-II general scan tool manufacturer’s instruction manual to access power train DTC (MODE $03).
11. Inspection Mode

### A: PROCEDURE
When performing the diagnose without the “List of Diagnostic Trouble Code (DTC)”, refer the item of drive cycle. <Ref. to EN(H6DO)(diag)-38, Drive Cycle.>

## Inspection Mode

1. **PREPARATION FOR THE INSPECTION MODE**

1) Check battery voltage is more than 12 V and fuel remains half [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) Lift-up the vehicle using a garage jack and place it on rigid racks or drive the vehicle onto free rollers.

**WARNING:**
- Before lifting-up the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front or rear towing hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when the engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

2. SUBARU SELECT MONITOR

1) After clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H6DO)(diag)-40, Clear Memory Mode.>
2) Idle the engine.
3) Prepare the Subaru Select Monitor kit. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>
4) Connect the diagnosis cable to Subaru Select Monitor.
5) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>
6) Connect the test mode connector (A) located at the lower portion of glove box.
7) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver’s side).

CAUTION: Do not connect the scan tools except for Subaru Select Monitor or OBD-II general scan tool.
8) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.

9) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

10) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.

11) Press the [YES] key after the information of engine type was displayed.

12) On the «Engine Diagnosis» screen, select the {D Check} and press the [YES] key.

13) When the “Perform D Check?” is shown on the screen, press the [YES] key.

14) Perform subsequent procedures as instructed on the display screen.
   - If trouble still remains in the memory, the corresponding DTC appears on the display screen.

NOTE:
- For detailed operation procedures, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC).
  <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>
- Release the parking brake.
- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

3. OBD-II GENERAL SCAN TOOL

1) After performing the diagnostics and clearing the memory, check for any remaining unresolved trouble data: <Ref. to EN(H6DO)(diag)-40, Clear Memory Mode.>

2) Idle the engine.

3) Connect the test mode connector (A) located at the lower portion of glove box.

4) Connect the OBD-II general scan tool to its data link connector in the lower portion of the instrument panel (on the driver’s side).

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor or OBD-II general scan tool.

5) Start the engine.

NOTE:
- Ensure the select lever is placed in the “P” position before starting. (AT model)
- Depress the clutch pedal when starting the engine. (MT model)

6) Using the select lever or shift lever, turn the “P” position switch and the “N” position switch to ON.

7) Depress the brake pedal to turn the brake switch ON. (AT model)

8) Keep the engine speed in the 2,500 — 3,000 rpm range for 40 seconds.

9) Shift the select lever or shift lever in the “D” range (AT model) or “1st” gear (MT model) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:
- On AWD vehicles, release the parking brake.
- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

10) Using the OBD-II general scan tool, check for DTC and record the result(s).
NOTE:
- For detailed operation procedures, refer to the OBD-II General Scan Tool Operation Manual.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC).
<Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).>
12. Drive Cycle

A: PROCEDURE
For the troubleshooting, there are three driving patterns. By driving the vehicle with specified pattern, following trouble items could be diagnosed. After the repair of following trouble items, be sure to drive the vehicle with specified patterns to check the trouble was repaired correctly.

1. PREPARATION FOR DRIVE CYCLE
1) Check battery voltage is more than 12 V and fuel remains half [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)].
2) After performing the diagnostics and clearing the memory, check for any remaining unresolved trouble data: <Ref. to EN(H6DO)(diag)-40, Clear Memory Mode.>
3) Separate the test mode connector.

NOTE:
• Perform the diagnosis after warming up the engine except the engine coolant temperature was specified at engine start.
• Perform the diagnosis twice if the DTC marked with *. After completing the first diagnosis, stop the engine and perform second diagnosis in same condition.

2. DRIVE THE VEHICLE WITH 80 KM/H (50 MPH) FOR 20 MINUTES, AND THEN IDLE THE ENGINE FOR A MINUTE.

<table>
<thead>
<tr>
<th>DTC</th>
<th>Item</th>
<th>On condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>*P0125</td>
<td>Insufficient Coolant Temperature For Closed Loop Fuel Control</td>
<td>Engine coolant temperature at engine start is 20°C (68°F) or less.</td>

</tr>
</tbody>
</table>
4. DRIVE THE VEHICLE WITH FOLLOWING DRIVE PATTERNS

(A) Idle the engine for more than 10 seconds.
(B) Accelerate the vehicle to 97 km/h (60 MPH) within 20 seconds.
(C) Drive the vehicle at 97 km/h (60 MPH) for 20 seconds.
(D) Decelerate the vehicle to 64 km/h (40 MPH) with throttle fully closed.
(E) Drive the vehicle at 64 km/h (40 MPH) for 20 seconds.
(F) Accelerate the vehicle to 97 km/h (60 MPH) within 10 seconds.
(G) Stop the vehicle with throttle fully closed.
(H) Vehicle speed km/h (MPH)
(I) Sec.

Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type was displayed.
4) On the «Engine Diagnosis» display screen, select the {Memory Clear} and press the [YES] key.
5) When the “Done” and “Turn Ignition Switch OFF” are shown on the display screen, turn the ignition switch to OFF and then Subaru Select Monitor switch to OFF.

NOTE:
• Initial diagnosis of electronic control throttle is performed after memory clearance. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.
• For detailed operation procedures, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. SUBARU SELECT MONITOR (OBD MODE)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
3) Press the [YES] key after the information of engine type was displayed.
4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
5) On the «OBD Menu» display screen, select the {DTC Clear} and press the [YES] key.
6) When the “Perform Diagnostic Code(s) Clear?” is shown on the screen, press the [YES] key.
7) Turn the ignition switch to OFF and then turn off the Subaru Select Monitor.

NOTE:
• Initial diagnosis of electronic control throttle is performed after memory clearance. For this reason, start the engine after 10 seconds or more have elapsed since the ignition switch was turned to ON.
• For detailed operation procedures, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

3. OBD-II GENERAL SCAN TOOL

For clear memory procedures using the OBD-II general scan tool, refer to the OBD-II General Scan Tool Instruction Manual.
Compulsory Valve Operation Check Mode

A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) located at the lower portion of glove box.

5) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver’s side).

6) Turn ignition switch to ON (engine OFF) and turn on the Subaru Select Monitor switch.

7) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.

9) Press the [YES] key after the information of engine type was displayed.

10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.

11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.

12) Select the desired actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.

13) Pressing the [NO] key completes the compulsory valve operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.
Compulsory Valve Operation Check Mode

- A list of the support data is shown in the following table.

<table>

15. Malfunction Indicator Light

A: PROCEDURE

1. Activation of malfunction indicator light. <Ref. to EN(H6DO)(diag)-43, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>

2. Malfunction indicator light does not come on. <Ref. to EN(H6DO)(diag)-45, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

3. Malfunction indicator light does not go off. <Ref. to EN(H6DO)(diag)-47, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF., Malfunction Indicator Light.>

B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine off), the malfunction indicator light (A) in the combination meter illuminates.

NOTE: If the malfunction indicator light does not illuminate, perform the diagnosis of malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H6DO)(diag)-45, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or the emission control system is malfunctioning.

3) Turn the ignition switch to OFF and connect the test mode connector.

   1) When the ignition switch is turned to ON (engine OFF), the malfunction indicator light illuminates.
   2) After the engine starts, malfunction indicator light blinks in a cycle of 0.5 Hz. (During diagnosis)
(3) After the diagnosis is completed, malfunction indicator light does not blink at a cycle of 3 Hz if there is no fault. Malfunction indicator light illuminates when the trouble occurs.

(1) ON
(2) OFF
(3) Ignition switch ON
(4) 1 second
C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

DIAGNOSIS:
The malfunction indicator light circuit is open or shorted.

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not come on.

WIRING DIAGRAM:

<table>

F: MALFUNCTION INDICATOR LIGHT REMAINS BLINKING.

DIAGNOSIS:
Test mode connector circuit is shorted.

TROUBLE SYMPTOM:
Malfunction indicator light blinks without test mode connector connected.

WIRING DIAGRAM:

<table>
<thead>

## Diagnostics for Engine Starting Failure

### CHECK INPUT VOLTAGE OF STARTER RELAY.
1. Turn the ignition switch to OFF.
2. Disconnect the connector from starter relay.
3. Connect the connector to ignition switch.
4. Measure the input voltage between starter relay connector and chassis ground while turning the ignition switch to START position.

**Connector & terminal**

**LHD model**
- (B225) No. 13 (+) — Chassis ground (−):
- (B225) No. 15 (+) — Chassis ground (−):

**RHD model**
- (B225) No. 14 (+) — Chassis ground (−):
- (B225) No. 16 (+) — Chassis ground (−):

- Is the voltage more than 10 V? Go to step 9.
- Repair the open circuit in harness between starter relay and ignition switch.

### CHECK STARTER RELAY.
1. Connect the battery to starter relay terminals No. 15 and No. 16.
2. Measure the resistance between starter relay terminals.

**Terminals**
- No. 13 — No. 14:

- Is the resistance less than 1 Ω? Go to step 10.
- Replace the starter relay.

### CHECK INPUT VOLTAGE FROM ECM.
1. Turn the ignition switch to OFF.
2. Connect the connector to starter relay.
3. Disconnect the connectors from ECM.
4. Measure the voltage between ECM and chassis ground.

**Connector & terminal**

**LHD model**
- (B135) No. 32 (+) — Chassis ground (−):
- (B137) No. 8 (+) — Chassis ground (−):

- Is the voltage more than 10 V? Replace the ECM. <Ref to FU(H6DO)-34, Engine Control Module (ECM).>
- Repair the open or ground short circuit in harness between ECM and starter relay.
Diagnostics for Engine Starting Failure

C: CHECK POWER SUPPLY AND GROUND LINE OF ENGINE CONTROL MODULE (ECM)

CAUTION:
After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)(diag)-40, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)(diag)-33, PROCEDURE, Inspection Mode.>.

## Diagnostics for Engine Starting Failure

### ENGINE (DIAGNOSTICS)

### 2 CHECK POWER SUPPLY TO EACH FUEL INJECTOR.

1. Turn the ignition switch to OFF.
2. Disconnect the connector from fuel injector.
3. Turn the ignition switch to ON.
4. Measure the power supply voltage between fuel injector terminal and engine ground.

**Connector & terminal**
- #1 (E5) No. 2 (+) — Engine ground (−):
- #2 (E16) No. 2 (+) — Engine ground (−):
- #3 (E6) No. 2 (+) — Engine ground (−):
- #4 (E17) No. 2 (+) — Engine ground (−):
- #5 (E43) No. 2 (+) — Engine ground (−):
- #6 (E44) No. 2 (+) — Engine ground (−):

   - Is the voltage more than 10 V? Go to step 3.
   - Repair the harness and connector.

   **NOTE:**
   In this case repair the following:
   - Open circuit in harness between main relay and fuel injector connector
   - Poor contact in main relay connector
   - Poor contact in coupling connector
   - Poor contact in fuel injector connector

### 3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.

1. Disconnect the connector from ECM.
2. Measure the resistance of harness between ECM and fuel injector connector.

**Connector & terminal**
- #1 (B136) No. 6 — (E5) No. 1:
- #2 (B136) No. 5 — (E16) No. 1:
- #3 (B136) No. 4 — (E6) No. 1:
- #4 (B136) No. 3 — (E17) No. 1:
- #5 (B136) No. 2 — (E43) No. 1:
- #6 (B136) No. 1 — (E44) No. 1:

   - Is the resistance less than 1 Ω? Go to step 4.
   - Repair the harness and connector.

   **NOTE:**
   In this case repair the following:
   - Open circuit in harness between ECM and fuel injector connector
   - Poor contact in coupling connector

### 4 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.

Measure the resistance of harness between ECM and fuel injector connector.

**Connector & terminal**
- #1 (B136) No. 6 — Chassis ground:
- #2 (B136) No. 5 — Chassis ground:
- #3 (B136) No. 4 — Chassis ground:
- #4 (B136) No. 3 — Chassis ground:
- #5 (B136) No. 2 — Chassis ground:
- #6 (B136) No. 1 — Chassis ground:

   - Is the resistance more than 1 MΩ? Go to step 5.
   - Repair the ground short circuit in harness between ECM and fuel injector connector.

### 5 CHECK EACH FUEL INJECTOR.

1. Turn the ignition switch to OFF.
2. Measure the resistance between each fuel injector terminals.

**Terminals**
- No. 1 — No. 2:

   - Is the resistance 5 — 20 Ω? Go to step 6.
   - Replace the faulty fuel injector.

### 6 CHECK POOR CONTACT.

Check poor contact in ECM connector.

- Is the poor contact in ECM connector? Repair the poor contact in ECM connector.

**Inspection using "General Diagnostics Table", <Ref. to EN(H6DO)(diag)-265, INSPECTION, General Diagnostic Table.>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0011 “A” CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

DTC DETECTING CONDITION:
Two consecutive driving cycles with fault

TROUBLE SYMPTOM:
- Engine stalls.
- Erroneous idling

CAUTION:
After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)(diag)-40, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)(diag)-33, Inspection Mode.>.

| **1** | CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.  
1) Start the engine, and warm-up the engine.  
2) Turn the ignition switch to OFF.  
3) Disconnect the connectors from ECM and front oxygen (A/F) sensor.  
4) Measure the resistance of harness between ECM and front oxygen (A/F) sensor connector.  
**Connector & terminal**  
(B134) No. 2 — (E47) No. 1:  
(B134) No. 3 — (E47) No. 1: | Is the resistance less than 1 Ω? | Go to step **2**. | Repair the open circuit in harness between ECM and front oxygen (A/F) sensor connector. |
| **2** | CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.  
Measure the resistance of harness between ECM and front oxygen (A/F) sensor connector.  
**Connector & terminal**  
(B134) No. 26 — (E47) No. 4:  
(B134) No. 33 — (E47) No. 3: | Is the resistance less than 1 Ω? | Go to step **3**. | Repair the open circuit in harness between ECM and front oxygen (A/F) sensor connector. |
| **3** | CHECK HARNESS BETWEEN MAIN RELAY AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.  
Measure the resistance of harness between main relay and front oxygen (A/F) sensor connector.  
**Connector & terminal**  
(B47) No. 3 — (E47) No. 2: | Is the resistance less than 1 Ω? | Go to step **4**. | Repair the open circuit in harness between main relay and front oxygen (A/F) sensor connector. |
| **4** | CHECK FRONT OXYGEN (A/F) SENSOR.  
Measure the resistance between front oxygen (A/F) sensor connector terminals.  
**Terminals**  
No. 2 — No. 1: | Is the resistance less than 5 Ω? | Go to step **5**. | Replace the front oxygen (A/F) sensor. <Ref. to FU(H6DO)-30, Front Oxygen (A/F) Sensor.> |
| **5** | CHECK POOR CONTACT.  
Check poor contact in ECM and front oxygen (A/F) sensor connector. | Is there poor contact in ECM or front oxygen (A/F) sensor connector? | Repair the poor contact in ECM or front oxygen (A/F) sensor connector. | Replace the front oxygen (A/F) sensor. <Ref. to FU(H6DO)-30, Front Oxygen (A/F) Sensor.> |
D: DTC P0031 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

DTC DETECTING CONDITION:
Immediately at fault recognition

CAUTION:
After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)(diag)-40, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)(diag)-33, PROCEDURE, Inspection Mode.>.

### ENGINE (DIAGNOSTICS)

**Check Front Oxygen (A/F) Sensor.**

1. Turn the ignition switch to OFF.
2. Measure the resistance between front oxygen (A/F) sensor connector terminals.

   **Terminals**
   - No. 2 — No. 1:

   **Check:** Is the resistance less than 10 Ω?

   **Yes:** Repair the harness and connector.
   - **NOTE:** In this case repair the following:
     - Open or ground short circuit in harness between front oxygen (A/F) sensor and ECM connector
     - Poor contact in front oxygen (A/F) sensor connector
     - Poor contact in ECM connector
     - Poor contact in coupling connector

   **No:** Replace the front oxygen (A/F) sensor. <Ref. to FU(H6DO)-30, Front Oxygen (A/F) Sensor.>

<td>CHECK FUEL PRESSURE. Is fuel pressure 333 — 363 kPa (3.4 — 3.7 kg/cm², 48 — 53 psi)?</td>
<td>Go to step 7.</td>
<td></td>
</tr>
</tbody>
</table>

Repair the following items.
Fuel pressure is too high:
• Clogged fuel return line or bent hose
Fuel pressure is too low:
• Improper fuel pump discharge
• Clogged fuel supply line

Warning:
• Place “NO FIRE” signs near the working area.
• Be careful not to spill fuel.
  1) Release the fuel pressure.
     1) Disconnect the connector from fuel pump relay.
     2) Start the engine and run it until it stalls.
     3) After the engine stalls, crank it for five more seconds.
     4) Turn the ignition switch to OFF.
  2) Connect the connector to fuel pump relay.
  3) Disconnect the fuel delivery hose, and connect the fuel pressure gauge.
  4) Install the fuel filler cap.
  5) Start the engine and idle while gear position is neutral.
  6) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold.

Warning:
Release fuel pressure before removing the fuel pressure gauge.

NOTE:
If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again.

EN(H6DO)(diag)-164
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

**Step 7**
**CHECK FUEL PRESSURE.**

After connecting the pressure regulator vacuum hose, measure fuel pressure.

**Warning:**

Release fuel pressure before removing the fuel pressure gauge.

**NOTE:**
- If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again.
- If out of specification as measured at this step, check or replace pressure regulator and pressure regulator vacuum hose.

<table>
<thead>
<tr>

|      | • Poor contact in oil temperature sensor connector  
|      | • Poor contact in ECM connector  
|      | • Poor contact in coupling connector  
|      | • Poor contact in joint connector |
| 4    | CHECK HARNESS BETWEEN OIL TEMPERATURE SENSOR AND ECM CONNECTOR.  
|      | 1) Turn the ignition switch to OFF.  
|      | 2) Measure the resistance of harness between oil temperature sensor connector and engine ground.  
|      | **Connector & terminal**  
|      | **(E75) No. 1 — Engine ground:**  
|      | Is the resistance less than 5 Ω?  
|      | Replace the oil temperature sensor. [Ref. to FU(H6DO)-29, Oil Temperature Sensor.]  
|      | Repair the harness and connector.  
|      | **NOTE:** In this case repair the following:  
|      | • Open circuit in harness between ECM and oil temperature sensor connector  
|      | • Poor contact in oil temperature sensor connector  
|      | • Poor contact in ECM connector  
|      | • Poor contact in coupling connector  
|      | • Poor contact in joint connector |
Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**AU:DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH “B” CIRCUIT LOW INPUT**

**DTC DETECTING CONDITION:**
Immediately at fault recognition

**TROUBLE SYMPTOM:**
- Erroneous idling
- Poor driving performance
- Engine stalls.

**WIRING DIAGRAM:**

</table>
| 1    | CHECK SENSOR OUTPUT.  
1) Turn the ignition switch to ON.  
2) Read the data of sub throttle sensor signal using Subaru Select Monitor. | Is the voltage more than 0.8 V? | Go to step 2. Go to step 3. |
| 2    | CHECK POOR CONTACT.  
Check the poor contact in connector between ECM and electronic throttle control. | Is there poor contact? | Repair the poor contact. Temporary poor contact occurred, but it is normal at present. |
| 3    | CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from ECM.  
3) Disconnect the connector from the electronic throttle control.  
4) Measure the resistance between ECM connector and electronic throttle control connector.  
**Connector & terminal**  
(B136) No. 29 — (E57) No. 4:  
(B136) No. 16 — (E57) No. 5: | Is the resistance less than 1 Ω? | Go to step 4. Repair the open circuit of harness connector. |
| 4    | CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.  
Measure the resistance between ECM connector and chassis ground.  
**Connector & terminal**  
(B136) No. 29 — Chassis ground:  
(B136) No. 16 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 5. Repair the chasis short circuit of harness. |
| 5    | CHECK SENSOR POWER SUPPLY.  
1) Connect the ECM connector.  
2) Turn the ignition switch to ON.  
3) Measure the voltage between electronic throttle control connector and engine ground.  
**Connector & terminal**  
(E57) No. 5 (+) — Engine ground (-): | Is the voltage 4.5 — 5.5 V? | Go to step 6. Repair the poor contact repair the poor contact in ECM connector. Replace the ECM if defective. <Ref. to FU(H6DO)-34, Engine Control Module (ECM).> |
| 6    | CHECK SHORT CIRCUIT IN ECM.  
1) Turn the ignition switch to OFF.  
2) Measure the resistance between electronic throttle control connector and engine ground.  
**Connector & terminal**  
(E57) No. 4 — Engine ground: | Is the resistance more than 10 Ω? | Repair the poor contact in electronic throttle control connector. Replace the electronic throttle control if defective. Repair the poor contact in ECM connector. Replace the ECM if defective. <Ref. to FU(H6DO)-34, Engine Control Module (ECM).> |

| 22   | ONLY ONE CYLINDER. | Is there any fault in that cylinder? | Repair or replace the faulty part.  
NOTE:  
Check the following items:  
• Spark plug  
• Fuel injector  
• Compression ratio  
Inspect the DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)."  
<Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).> | |
| 23   | GROUP OF #1 AND #2 CYLINDERS. | Is there any fault in #1 and #2 cylinders? | Repair or replace the faulty part.  
NOTE:  
• Check the following items:  
• Spark plug  
• Fuel injector  
• Ignition coil  
• Compression ratio  
• If no abnormal is discovered, check for "IGNITION CONTROL SYSTEM" of #1 and #2 cylinders side.  
<Ref. to EN(H6DO)(diag)-59, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.> | Inspect the DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)."  
<Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).> |
| Step | GROUP OF #3 AND #4 CYLINDERS. | Is there any fault in #3 and #4 cylinders? | Repair or replace the faulty part. 

**NOTE:**
- Check the following items:
  - Spark plug
  - Fuel injector
  - Ignition coil
  - If no abnormal is discovered, check for "IGNITION CONTROL SYSTEM" of #3 and #4 cylinders side. 
  <Ref. to EN(H6DO)(diag)-59, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.> |
  <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).> |
|---|---|---|---|
| 25 | GROUP OF #5 AND #6 CYLINDERS. | Is there any fault in #5 and #6 cylinder? | Repair or replace the faulty part. 

**NOTE:**
- Check the following items:
  - Spark plug
  - Fuel injector
  - Ignition coil
  - Compression ratio
  - If no abnormal is discovered, check for "IGNITION CONTROL SYSTEM" of #5 and #6 cylinders side. 
  <Ref. to EN(H6DO)(diag)-59, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.> |
  <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).> |
| 26 | GROUP OF #1, #3 AND #5 CYLINDERS. | Is there any fault in #1, #3 and #5 cylinders? | Repair or replace the faulty part. 

**NOTE:**
- Check the following items:
  - Spark plug
  - Fuel injector
  - Skipping timing chain teeth |
  <Ref. to EN(H6DO)(diag)-66, List of Diagnostic Trouble Code (DTC).> |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

#### 6 CHECK HARNESS BETWEEN EGR SOLENOID VALVE AND ECM CONNECTOR.
1) Turn the ignition switch to OFF.
2) Detach the connector from EGR solenoid valve and ECM.
3) Measure the resistance of harness between EGR solenoid valve and ECM connector.

**Connector & terminal**
- (B134) No. 8 — (E18) No. 6:
- (B134) No. 10 — (E18) No. 1:
- (B134) No. 9 — (E18) No. 4:
- (B134) No. 11 — (E18) No. 3:

Is the resistance less than 1Ω? **Yes** | **No**
--- | ---
Go to step 7. | Repair the open circuit in harness between ECM and EGR solenoid valve connector.

#### 7 CHECK HARNESS BETWEEN EGR SOLENOID VALVE AND ECM CONNECTOR.
Measure the resistance of harness between EGR solenoid valve and chassis ground.

**Connector & terminal**
- (B134) No. 8 — Chassis ground:
- (B134) No. 9 — Chassis ground:
- (B134) No. 10 — Chassis ground:
- (B134) No. 11 — Chassis ground:

Is the resistance more than 1MΩ? **Yes** | **No**
--- | ---
Go to step 8. | Repair the short circuit in harness between main relay and EGR solenoid valve connector.

#### 8 CHECK POOR CONTACT.
Check the poor contact in ECM and EGR solenoid valve connector.

Is there poor contact in ECM or EGR solenoid valve connector? **Yes** | **No**
--- | ---
Repair the poor contact repair the poor contact in ECM and EGR solenoid valve connector. | Even if the malfunction indicator light illuminates, the circuit has returned to a normal condition at this time.
**BL: DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)**

**DTC DETECTING CONDITION:**
Two consecutive driving cycles with fault

**TROUBLE SYMPTOM:**
- Engine stalls.
- Idle mixture is out of specifications.

**CAUTION:**
After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)(diag)-40, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)(diag)-33, PROCEDURE, Inspection Mode.>.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK OUTPUT SIGNAL FROM ECM.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between ECM and chassis ground.  
Connector & terminal  
(B134) No. 14 (+) — Chassis ground (−): | Is the voltage more than 10 V? | Even if the malfunction indicator light illuminates, the circuit has returned to a normal condition at this time. | Go to step 2. |
| 2    | CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connectors from purge control solenoid valve and ECM.  
3) Measure the resistance of harness between purge control solenoid valve connector and engine ground.  
Connector & terminal  
(E4) No. 2 — Engine ground: | Is the resistance more than 1 MΩ? | Go to step 3. | Repair the ground short circuit in harness between ECM and purge control solenoid valve connector. |
| 3    | CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR.  
Measure the resistance of harness between ECM and purge control solenoid valve of harness connector.  
Connector & terminal  
(B134) No. 14 — (E4) No. 2: | Is the resistance less than 1 Ω? | Go to step 4. | Repair the open circuit in harness between ECM and purge control solenoid valve connector.  
NOTE: In this case repair the following:  
• Open circuit in harness between ECM and purge control solenoid valve connector  
• Poor contact in coupling connector |
| 4    | CHECK PURGE CONTROL SOLENOID VALVE.  
1) Remove the purge control solenoid valve.  
2) Measure the resistance between purge control solenoid valve terminals.  
Terminals  
No. 1 — No. 2: | Is the resistance 10 — 100 Ω? | Go to step 5. | Replace the purge control solenoid valve.  <Ref. to EC(H6DO)-7, Purge Control Solenoid Valve.> |
| 5    | CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between purge control solenoid valve and engine ground.  
Connector & terminal  
(E4) No. 1 (+) — Engine ground (−): | Is the voltage more than 10 V? | Go to step 6. | Repair the open circuit in harness between main relay and purge control solenoid valve connector. |
| 6    | CHECK POOR CONTACT.  
Check poor contact in purge control solenoid valve connector. | There is poor contact in purge control solenoid valve connector? | Repair the poor contact in purge control solenoid valve connector. | Replace the ECM.  
<Ref. to FU(H6DO)-34, Engine Control Module (ECM).> |

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Engine (Diagnostics)

**17**  **CHECK HARNESS BETWEEN ECM AND ACCELERATOR POSITION SENSOR.**
1) Turn the ignition switch to OFF.
2) Disconnect the connector from ECM.
3) Measure the resistance between ECM connectors.
   
   **Connector & terminal**
   
   (B136) No. 17 — (B136) No. 15:
   (B136) No. 17 — (B136) No. 16:
   (B136) No. 28 — (B136) No. 15:
   (B136) No. 28 — (B136) No. 16:

   Is the resistance more than 1 M\(\Omega\)?
   
   **Check**
   
   **Yes**
   **No**
   
   Go to step 18.
   
   Repair the short circuit to sensor power supply.

**18**  **CHECK HARNESS BETWEEN ECM AND ACCELERATOR POSITION SENSOR.**
1) Turn the ignition switch to OFF.
2) Disconnect the connector from ECM.
3) Disconnect the connector from the accelerator position sensor.
4) Measure the resistance between connector terminals of accelerator position sensor.

   **Connector & terminal**
   
   (B315) No. 5 — (B315) No. 2:

   Is the resistance more than 1 M\(\Omega\)?
   
   **Check**
   
   **Yes**
   **No**
   
   Repair the poor contact in ECM connector.
   Replace the ECM if defective. <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>
   Repair the short circuit in harness between ECM connector and accelerator position sensor connector.
### General Diagnostic Table

*1: Check ignition coil & ignitor ASSY and spark plug.
*2: Indicate the symptom occurring only in cold temperatures.
*3: Ensure the secure installation.
*4: Check the fuel injector and fuel pressure regulator.
*5: Inspect air leak in air intake system.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION
• Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
• Remove contamination including dirt and corrosion before removal, installation or disassembly.
• Keep the disassembled parts in order and protect them from dust and dirt.
• Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
• Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease etc. with that of another grade or from other manufacturers.
• Be sure to tighten fasteners including bolts and nuts to the specified torque.
• Place shop jacks or rigid racks at the specified points.
• Apply grease onto sliding or revolution surfaces before installation.
• Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
• Before securing a part in a vice, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and vice.
• Before disconnecting electrical connectors, be sure to disconnect the negative terminal from battery.
2. Select Lever

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Shift the select lever to “N” range.
4) Lift-up the vehicle.
5) Remove the rear exhaust pipe and muffler.
   • SOHC model
     <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
   • DOHC non-turbo model
     <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
   • DOHC turbo model
     <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
6) Remove the heat shield cover.
7) Remove the cable from arm assembly.
8) Raise the pawl of clamp to remove cable.
9) Lower the vehicle.
10) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
11) Remove the harness clips from bracket.
12) Disconnect the connectors, and then remove the four bolts to take out the select lever assembly from vehicle body.

B: INSTALLATION
1) Set the select lever to vehicle body.
2) Tighten the four bolts to install the select lever to vehicle body, and then connect the connector.
   (1) Temporarily tighten the bolt A.
   (2) Tighten the bolt B.
   (3) Tighten the bolt A.
   (4) Tighten the bolts C and D.
CONTROL SYSTEMS

Select Lever

Tightening torque:
18 N-m (1.8 kgf-m, 13.3 ft-lb)

3) Install the harness clips to bracket.

4) Install the console box. <Ref. to EI-53, INSTALLATION, Console Box.>
5) Shift the select lever to “N” range.
6) Lift-up the vehicle.
7) Shift the range select lever to “N” range.
8) Fix the cable to bracket. <Ref. to CS-13, INSTALLATION, Select Cable.>
9) Adjust the select cable position. <Ref. to CS-15, ADJUSTMENT, Select Cable.>
10) After the completion of adjustment, confirm that the select lever operates properly at all range positions.
11) Install the heat shield cover.
12) Install the rear exhaust pipe and muffler.
   • SOHC model
     <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
   • DOHC non-turbo model
     <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>
   • DOHC turbo model
     <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>
13) Inspect the following items. When malfunctions are found in the inspection, adjust the select cable and inhibitor switch.

NOTE:
Inhibitor switch for 5AT model is not adjustable. <Ref. to CS-15, ADJUSTMENT, Select Cable.> <Ref. to 4AT-52, ADJUSTMENT, Inhibitor Switch.>
(1) Engine starts when the select lever is in “P” and “N” range, but not in other range.
(2) Back-up light illuminates when the select lever is in “R” range, but not in other range.
(3) Select lever and indicator positions are matched.

C: DISASSEMBLY
1) Remove the packing and plate.
2) Remove the grip.
3) Insert a flat-tip screwdriver with thin tip under the connector to disconnect each connector from plate assembly.

CS-8
4) Remove the indicator cover.

5) Remove the blind.

6) Remove the bolts, and then remove the guide plate.

7) Remove the clamp, spring, rod, packing and bushing.

8) Remove the bracket.

9) Remove the detent spring.

10) Remove the detent plate.

11) Remove the shift lock solenoid assembly.

(A) Clamp
(B) Spring
(C) Rod
(D) Bushing
(E) Plate
12) Raise the connector pawl.

13) Use a flat-tip screwdriver with thin tip to disconnect the connectors from terminals of SPORT mode switch, shift lock solenoid assembly.

14) Remove the grommet.

15) Remove the spring pin.

16) Pull out the arm assembly, and then remove the select lever assembly to remove the arm bracket and bushing.

17) Remove the rod and spring from arm bracket.

D: ASSEMBLY
1) Clean all the parts before assembly.
2) Apply grease [SUNLIGHT 2 (Part No. 003602010) or equivalent] to each parts. <Ref. to CS-2, AT SELECT LEVER, COMPONENT, General Description.>
3) Assemble in the reverse order of disassembly.

NOTE:
- When installing the guide plate, shift the select lever to “D” range (normal mode position), care should be taken in the following points.
- Insert the protrusion (B) of guide plate into the hole of shift lock solenoid assembly (A).
• Insert the link (D) of shift lock release into the link (C) of shift lock solenoid assembly.

• Connect the switch and solenoid terminal to connector.

(A) Shift lock solenoid (Color code: Blue and Red)
(B) Shift lock solenoid (Color code: Black)
(C) SPORT mode switch (Color code: White)
(D) SPORT mode switch (Color code: Black)

4) After completion of installation, shift the select lever from “P” range to “D” range, then check whether the indicator and select lever matches, whether the pointer and position mark matches and what the operating force is.

E: INSPECTION
1) Inspect the removed parts by comparing with new ones for deformation, damage and wear. Repair or replace if defective.
2) Confirm the select lever operating condition before assembly. Normal if it operates smoothly.
3. Select Cable

**A: REMOVAL**

1) Set the vehicle on a lift.
2) Shift the select lever to “N” range.
3) Disconnect the ground cable from battery.
4) Lift-up the vehicle.
5) Remove the front, center and rear exhaust pipes and muffler. (SOHC and DOHC non-turbo model)
   - SOHC model
     <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-10, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
   - DOHC non-turbo model
     <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
6) Remove the center and rear exhaust pipe and muffler. (DOHC turbo model)
   <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
7) Remove the heat shield cover.
8) Remove the snap pin and washer from range select lever.

**B: INSTALLATION**

1) Install the heat shield cover.
2) Install the snap pin and washer onto range select lever.
3) Install the center and rear exhaust pipe and muffler. (DOHC turbo model)
   <Ref. to EX(H4DOTC)-6, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>
4) Install the front, center and rear exhaust pipes and muffler. (SOHC and DOHC non-turbo model)
   - SOHC model
     <Ref. to EX(H4SO 2.0)-7, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-10, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
   - DOHC non-turbo model
     <Ref. to EX(H6DO)-5, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>

9) Install the plate assembly from transmission case.

**C: DESCRIPTION**

- **4AT**
- **5AT**

**D: TROUBLE SHOOTING**

- **4AT**
- **5AT**
10) Disconnect the cable from arm assembly.

11) Raise the pawl of clamp to remove the cable from bracket.

12) Remove the select cable from plate assembly.

**B: INSTALLATION**

1) Install the select cable to plate assembly.

**Tightening torque:**

18 N·m (1.8 kgf-m, 13.3 ft-lb)

2) Install the select cable to range select lever.

3) Install the plate assembly to transmission.

**Tightening torque:**

T: 24.5 N·m (2.5 kgf-m, 18.1 ft-lb)
5) Install a new clump paying attention to the installing direction.

6) Insert the tip of inner cable into connector hole of the select lever, and fix the cable to bracket.

7) Shift the select lever to “N” range, and then adjust the select cable position. <Ref. to CS-15, ADJUSTMENT, Select Cable.>

8) Install the heat shield cover.

9) Install the front, center and rear exhaust pipes and muffler. (SOHC and DOHC non-turbo model)

- SOHC model
  <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-10, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>

- DOHC non-turbo model
  <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>

10) Install the center and rear exhaust pipe and muffler. (DOHC turbo model)

  <Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>

C: INSPECTION

Check the removed cable and replace or adjust if damaged, rusty or malfunctioning.

1) Check for smooth operation of the cable.
2) Check the inner cable for damage and rust.
3) Check the outer cable for damage, bends and cracks.
4) Check the boot for damage, cracks and deterioration.
5) Move the select lever from “P” to “D” range. Check the existence of feel to contact the detents in each range. If the detents cannot be felt or the position pointer is improperly aligned, adjust the cable.
6) Check if the starter motor rotates when the select lever is set to “P” range.
7) Check the back-up light illumination when the select lever is in “R” range.
8) Check the parking lock operation when the select lever is in “P” range.
D: ADJUSTMENT
1) Shift the select lever to “N” range.
2) Remove the rear exhaust pipe and muffler.
   • SOHC model
     <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.>
     <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
   • DOHC non-turbo model
     <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.>
     <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
   • DOHC turbo model
     <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.>
     <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
3) Remove the heat shield cover.
4) Loosen the adjusting nuts on both sides.
5) Turn the adjusting nut B until it lightly touches the connector.
   (A) Forward side
   (B) Select lever
   (C) Connector
   (D) Adjusting nut B
   (E) Contact point
   (F) Adjusting nut A
6) Set a spanner wrench to adjusting nut B so that it does not rotate, and then tighten the adjusting nut A.
   **Tightening torque:**
   7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
7) After the completion of adjustment, confirm that the select lever operates normally at all ranges.
8) Install in the reverse order of removal.
4. **AT Steering Shift Switch**

**A: REMOVAL**

1) Disconnect the ground cable from battery.
2) Set the tire to the straight-ahead position.
3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>

**WARNING:**
With the airbag module equipped, always refer to “Airbag System” when performing the airbag module repair service. <Ref. to AB-14, INSPECTION, Driver’s Airbag Module.>

4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the cover from steering wheel.
6) Remove each one of AT steering shift switch mounting screw from the LH and RH side.

7) Remove the steering shift switch.

**B: INSTALLATION**

1) Clean all parts before installation.
2) Install in the reverse order of removal.
3) After completion of installation, set the select lever to SPORT shift side and confirm that manual mode “1” illuminates on the combination meter.
4) Operate the steering shift switch and confirm that the “2” illuminates on combination meter.
## AT Steering Shift Switch

### C: INSPECTION

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** | **SHIFT-UP SWITCH CONTINUITY CHECK.**  
1) Press the shift-up switch.  
2) Measure the resistance between shift switch connector terminals.  
*Terminals*  
*No. 4 — No. 3:* | Is the resistance less than 10 Ω? | Go to step 2. | Replace the steering shift switch. |
| **2** | **SHIFT-DOWN SWITCH CONTINUITY CHECK.**  
1) Press the shift-down switch.  
2) Measure the resistance between shift switch connector terminals.  
*Terminals*  
*No. 3 — No. 2:* | Is the resistance less than 10 Ω? | Go to step 3. | Replace the steering shift switch. |
| **3** | **CHECK SHIFT SWITCH INSULATION.**  
1) Not to operate the shift switch.  
2) Measure the resistance between shift switch connector terminals.  
*Terminals*  
*No. 3 — No. 2:*  
*No. 3 — No. 4:* | Is the resistance 1 MΩ? | Steering shift switch is normal. | Replace the steering shift switch. |
5. Shift Lock Solenoid

A: REMOVAL
1) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
2) Disconnect the connector.
3) Shift the select lever to “N” range.
4) Remove the grip.
5) Remove the indicator cover.
6) Remove the blind.
7) Remove the bolts, and then remove the guide plate.
8) Remove the connector from the plate assembly using a flat-tip screwdriver.
9) Press the select lever backward while lifting up the detent spring and remove the shift lock solenoid assembly.
10) Raise the connector pawl.
11) Use a flat-tip screwdriver with thin tip to disconnect the connectors from terminals of “P” range switch and shift lock solenoid assembly.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
- Refer to COMPONENT for each tightening torque. <Ref. to CS-2, COMPONENT, General Description.>
- When installing the guide plate, shift the select lever to “D” range (normal mode position), care should be taken in the following points.
• Insert the protrusion (B) of guide plate into the hole of shift lock solenoid assembly (A).
• Insert the link (D) of shift lock release into the link (C) of shift lock solenoid assembly.

• Connect the switch and solenoid terminal to connector.

(A) Shift lock solenoid (Color code: Blue and Red)
(B) Shift lock solenoid (Color code: Black)
## C: INSPECTION

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | **CHECK SHIFT LOCK SOLENOID.** Measure the resistance of shift lock solenoid connector terminals.  
     *Terminals*  
     No. 4 — No. 3: | Is the resistance 7 — 18 Ω?  
     Go to step 2. | Replace the shift lock solenoid. |
| 2    | **CHECK SHIFT LOCK SOLENOID.** Connect the battery to shift lock solenoid connector terminal, and then operate the solenoid.  
     *Terminals*  
     No. 3 (+) — No. 4 (−): | Does the shift lock solenoid operate normally?  
     Normal operation | Replace the shift lock solenoid. |
6. MT Gear Shift Lever

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Remove the gear shift knob.
4) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
5) Remove the clamp.
6) Remove the boot and insulator assembly.
7) Remove the harness clamp from plate.
8) Remove the plate assembly from vehicle body.
9) Lift-up the vehicle.
10) Remove the rear exhaust pipe and muffler.
    - SOHC model
      <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
    - DOHC non-turbo model
      <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
    - DOHC turbo model
      <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-10, REMOVAL, Joint Pipe.>
11) Remove the heat shield cover.
12) Remove the stay from transmission bracket.
13) Remove the rod from joint.
14) Remove the cushion rubber from vehicle body.

15) Extract the spring pin and remove the joint.

16) Lower the vehicle.
17) Remove the gear shift lever.

NOTE:
Insert the rod and the stay, and then temporarily set them onto transmission mount.

3) Lift-up the vehicle.
4) Mount the cushion rubber on the vehicle body.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.3 ft-lb)

5) Using new self-locking nuts, connect the rod to the joint.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.3 ft-lb)

6) Using new self-locking nuts, connect the stay to transmission bracket.

B: INSTALLATION
1) Install the joint to transmission and secure with spring pin.
2) Insert the gear shift lever from the room side.
**MT Gear Shift Lever**

**Control Systems**

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.3 ft-lb)

7) Install the heat shield cover.

8) Install the rear exhaust pipe and muffler.
   - SOHC model
     <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.>
     <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
   - DOHC non-turbo model
     <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.>
     <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>
   - DOHC turbo model
     <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.>
     <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>
9) Install the plate assembly to vehicle body.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.3 ft-lb)

1) Remove the lock wires.

2) Temporarily tighten the bolt (A).

3) Tighten the bolt (B).

4) Tighten the bolt (A).

5) Tighten the bolts (C) and (D).

10) Install the harness clamp to plate.
11) Install the boot and insulator assembly, and secure them with clamp.

12) Install the console box. <Ref. to EI-53, INSTALLATION, Console Box.>

**C: Disassembly**

1) Remove the lock wires.

(A) Lock wire
2) Remove the rod from lever.

3) Separate the rod and inner boot.
4) Remove the snap ring from the stay.

5) Separate the gear shift lever and the stay.

6) Remove the boot, bushing and snap ring from gear shift lever.

7) Remove the spring pin, and then remove the bushing and snap ring.

8) Remove the boss from the joint.
9) Remove the bushing and spacer from boss.

10) Remove the bushing and cushion rubber from the stay.

D: ASSEMBLY

NOTE:
- Clean all the parts before assembly.
- Apply grease [SUNLIGHT 2 (Part No. 003602010) or equivalent] to each part.

1) Mount the bushing and cushion rubber on the stay.

2) Install the bushing and spacer to boss.

3) Using new self-locking nuts, install the boss to the joint.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)

4) Install the snap ring to gear shift lever and install the bushing.

NOTE:
Apply grease to the bushing.
5) Apply grease to the bushing and O-ring, and then install to the gear shift lever.

6) Apply sufficient grease into boss, and then install the gear shift lever to the stay.

7) Install the washer and snap ring.

8) Insert the gear shift lever and rod into boot hole.

9) Install the rod.

10) Install a new lock wire.

**NOTE:**
- Install the lock wire to the stay groove.

**Tightening torque:**
12 N·m (1.2 kgf-m, 8.9 ft-lb)
MT Gear Shift Lever

E: INSPECTION

1) Check the parts (bushing, cushion rubber, spacer, boot, stay and rod, etc.) for deformation, damage and wear. If necessary, repair or replace faulty parts. Compare the removed parts with new ones to judge if there are damages or not.

2) Check the swing torque of rod linked with the gear shift lever.
If the torque exceeds the specifications, replace the bushing or retighten nuts.

**Swing torque:**
*Less than 3.7 N (0.38 kgf, 0.84 lb)*
7. MT Drive Select Lever

A: REMOVAL
1) Place the drive select lever in HI position.
2) Push the both sides of knob, and remove the cover. (Rubber type)
3) Insert a screwdriver with thin tip into the both sides of knob, and push to remove the cover. (Leather type)
4) Remove the bolt, and then remove the knob.
5) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
6) Remove the drive select lever from vehicle body.
7) Remove the flange nut and clip, and then remove the drive select cable.

B: INSTALLATION
1) Secure the drive select cable to the lever with clip, and temporary tighten the flange nut.
2) Install the drive select lever to vehicle.

Tightening torque:
18 N·m (1.8 kgf-m, 13.3 ft-lb)
3) Adjust the drive select cable. <Ref. to CS-31, ADJUSTMENT, Drive Select Cable.>
4) Install in the reverse order of removal.

C: DISASSEMBLY
1) Remove the bolt and nut.
2) Remove the lever and spring.
3) Remove the bushing and spacer from plate assembly.

![Diagram of MT Drive Select Lever with labels (A) Bushing and (B) Spacer]

4) Remove the bushing from plate assembly.

D: ASSEMBLY
1) Assemble in the reverse order of disassembly.

_Tightening torque:_

\[12 \, N\cdot m \,(1.2 \, kgf\cdot m, \, 8.9 \, ft\cdot lb)\]

NOTE:
Refer to “COMPONENT” for greasing points. <Ref. to CS-2, COMPONENT, General Description.>

2) Check the select lever for smooth operation.

E: INSPECTION
1) Check the select lever for smooth operation. If not, check the transmission and drive select lever.
2) Transmission gear switches between HI and LO positions normally. If not, adjust the drive select cable, and inspect the transmission.
3) Check that the drive select lever is not damaged. Repair or replace if it is damaged.
8. Drive Select Cable

A: REMOVAL

1) Set the vehicle on a lift.
2) Place the drive select lever in HI position.
3) Push the both sides of knob, and remove the cover. (Rubber type)
4) Insert a screwdriver with thin tip into the both sides of knob, and push to remove the cover. (Leather type)
5) Remove the bolt, and then remove the knob.
6) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
7) Loosen the flange nut.
8) Remove the clamp, and remove the drive select cable from plate assembly.
9) Remove the boot and insulator assembly.
10) Remove the air intake chamber and air intake duct. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.> <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
11) Remove the snap pin and clevis pin.
12) Loosen the nut, and remove the cable from cable bracket.

13) Lift-up the vehicle, and then remove the cable under vehicle.

B: INSTALLATION
1) Install in the reverse order of removal.

NOTE:
• Adjust the drive select cable. <Ref. to CS-31, ADJUSTMENT, Drive Select Cable.>
• Refer to “COMPONENT” for tightening torque. <Ref. to CS-2, COMPONENT, General Description.>
• Correctly insert the cable end bolt to slit of lever arm.

C: INSPECTION
1) Check the transmission is set in HI or LO position according to the operation of drive select lever. <Ref. to CS-31, ADJUSTMENT, Drive Select Cable.>
2) Check the cable for damage.
3) Check the cable for smooth operation. Replace the cable if it does not operate smoothly.

D: ADJUSTMENT
1) Place the drive select lever in HI position.
2) Push the both sides of knob, and remove the cover. (Rubber type)

3) Insert a screwdriver with thin tip into the both sides of knob, and push to remove the cover. (Leather type)
4) Remove the bolt, and then remove the knob.
5) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
6) Loosen the flange nut.

7) Verify the transmission gear is set in HI position. If not, pull the cable to set it in HI position.
8) Verify the select lever is set in HI position.
9) Tighten the flange nut with cable fixed.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.3 ft-lb)
10) Install in the reverse order of removal.
## General Diagnostic Table

### A: INSPECTION

<table>
<thead>
<tr>
<th>Symptom</th>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

### 7. HYDRAULIC CONTROL AND LUBRICATION

| **Type** | Electronic hydraulic control  
| [Four forward speed changes by electrical signals of vehicle speed and accelerator (throttle) opening] |
| **Fluid** | SUBARU ATF or Idemitsu “Apolloil ATF HP”, Castrol “Transmax J”  
| **NOTE:**  
| If the ATFs above are not available, use Dexron III. |
| **Fluid capacity** | 8.4 — 8.7 (US qt, Imp qt)  
| (8.9 — 9.2, 7.4 — 7.7) |
| **Lubrication system** | Forced feed lubrication with oil pump |
| **Oil** | Automatic transmission fluid (above mentioned) |

### 8. COOLING AND HARNESS

| **Cooling System** | Liquid-cooled cooler |
| **Inhibitor switch** | 12 poles |
| **Transmission harness** | 20 poles |

### 9. TRANSFER

| **Model** | 2.0 L | 2.5 L without vehicle dynamics control (VDC) | 2.5 L with vehicle dynamics control (VDC) |
| **Transfer type** | Multi-plate transfer (MPT) | Variable torque distribution (VTD) |
| **Drive & driven plate number of transfer clutch** | 4 | 5 | 3 |
| **Control method** | Electronic hydraulic type |
| **Lubricant** | The same Automatic transmission fluid used in automatic transmission |
| **Reduction gear ratio** | 1.000 (53/53) |

### 10. FINAL REDUCTION

| **Model** | Except for OUTBACK | OUTBACK |
| **Front final reduction gear ratio** | 4.111 (37/9) | 4.444 (40/9) |

### 11. RECOMMENDED GEAR OIL

| **Lubrication oil** |  |
| **Front differential oil capacity** | 1.1 — 1.3 (1.2 — 1.4, 1.0 — 1.1) |

(1) Pitching stopper
(2) Rear cushion rubber
(3) Crossmember
(4) Stopper

Tightening torque: $N \cdot m$ (kgf·m, ft-lb)
- $T1$: 35 (3.6, 26)
- $T2$: 40 (4.1, 30)
- $T3$: 50 (5.1, 37)
- $T4$: 58 (5.9, 43)
- $T5$: 70 (7.1, 51)
C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the oil pan with its inner side facing upward until it is installed so as to prevent foreign matter intrusion into valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil or ATF onto sliding or revolution surfaces before installation in view of components usage.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of ATF to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vice.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove the old seal.

## General Description

### Automatic Transmission

#### General Description

**STOPPER SET**
- Used for removing and installing automatic transmission assembly to engine.

**PULLER ASSY**
- Used for removing extension case roller bearing.
- Used for removing extension oil seal.
- Used for removing front differential side retainer bearing outer race.
- Used for removing front differential side retainer oil seal.

**INSTALLER**
- Used for installing extension oil seal.

**ENGINE SUPPORT ASSY**
- Used for supporting engine.
  1. ENGINE SUPPORT BRACKET (41099AC010)
  2. ENGINE SUPPORT (41099AC020)

Troubleshooting for electrical system.
- English: 22771AA030 (Without printer)
- German: 22771AA070 (Without printer)
- French: 22771AA080 (Without printer)
- Spanish: 22771AA090 (Without printer)

Depth gauge Used for measuring transmission end play.

Thickness gauge Used for measuring clearance of clutch, brake and oil pump.

Micro meter Used for measuring thickness of drive pinion.

Spring balance Used for measuring starting torque of drive pinion.

Circuit tester Used for measuring resistance and voltage.

TORX® T70 Used for removing and installing differential gear oil drain plug.

Push/pull gauge Used for measuring clutch piston stroke.
2. Automatic Transmission Fluid

A: INSPECTION

NOTE:
The level of ATF varies with fluid temperature. Pay attention to the ATF temperature when checking ATF level.

1) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 — 80°C (158 — 176°F) on Subaru Select Monitor. <Ref. to 4AT(diag)-17, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

2) Park the vehicle on a level surface.

3) After selecting all positions (P, R, N, D), set the select lever in “P” range. Measure the ATF level with engine idling for one or two minutes.

4) Make sure that ATF level is above the center of upper level and lower level at HOT side.

5) If the ATF level is below the center between upper level and lower level, replenish a recommended ATF until the fluid level exceeds the center between upper level and lower level.

CAUTION:
- Use care not to exceed the upper limit level.
- Be sure that the replenishment of ATF to the upper level with the transmission cold will cause overfilling of ATF and result in a transmission failure.

6) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 — 80°C (158 — 176°F) on Subaru Select Monitor. <Ref. to 4AT(diag)-17, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

7) Check the ATF for leaks.

5) Lower the vehicle.

6) Pour ATF from the oil charge pipe.

Recommended fluid:
- SUBARU ATF (Part No. K0410Y0700) or Idemitsu “Apolloil ATF HP”, Castrol “Transmax J”.

NOTE:
If the ATFs above are not available, use Dexron III.

Capacity:
- Fill the same amount of ATF drained.

Capacity when transmission is overhauled:
- 2.0 L model 8.4 — 8.7 ① (8.9 — 9.2 US qt, 7.4 — 7.7 Imp qt)
- 2.5 L model 9.3 — 9.6 ① (9.8 — 10.1 US qt, 8.2 — 8.4 Imp qt)

7) Bleed the air of control valve.

8) Check the level and leaks of ATF.

B: REPLACEMENT

1) Lift-up the vehicle.

2) Remove the ATF drain plug to drain ATF.

CAUTION:
Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.

3) Check the condition of ATF. <Ref. to 4AT-32, CONDITION CHECK, Automatic Transmission Fluid.>

4) Tighten the ATF drain plug.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf·m, 18.1 ft·lb)
C: CONDITION CHECK

NOTE: When replacing ATF, check the inside condition of the transmission body by inspecting the drained ATF.

<table>

3. Differential Gear Oil

A: INSPECTION
1) Park the vehicle on a level surface.
2) Remove the oil level gauge and wipe it clean.
3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
4) Remove the level gauge again and note the reading. If the differential gear oil level is below the “L” line, add oil to bring the level up to the “F” line.

NOTE:
To prevent overfilling the differential gear oil, do not add oil above the “F” line.

B: REPLACEMENT
1) Lift-up the vehicle.
2) Remove the differential gear oil drain plug using TORX® BIT T70, and drain the differential gear oil completely.

CAUTION:
• Directly after the engine has been running, the differential gear oil is hot. Be careful not to burn yourself.
• Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.
3) Tighten the differential gear oil drain plug using TORX® BIT T70.

NOTE:
Use a new gasket.

4) Lower the vehicle.
5) Pour gear oil into the gauge hole.

Recommended gear oil:
<Ref. to 4AT-3, RECOMMENDED GEAR OIL, SPECIFICATION, General Description.>

Differential gear oil capacity:
1.1 — 1.3 qt (1.2 — 1.4 US qt, 1.0 — 1.1 Imp qt)

6) Check the level of the differential gear oil.
<Ref. to 4AT-33, INSPECTION, Differential Gear Oil.>

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
4. Road Test

A: INSPECTION

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of the automatic transmission.

NOTE:
When performing the test, do not exceed posted speed limit.

2. D RANGE SHIFT FUNCTION

Check shifting between 1st ←→ 2nd ←→ 3rd ←→ 4th while driving on general city streets.

3. D RANGE SHIFT SHOCK

Check the shock level when shifting up during normal driving.

4. KICK-DOWN FUNCTION

Check kick-down for each gear. Also check the kick-down shock level.

5. ENGINE BRAKE OPERATION

- Check the 3rd gear engine brake when shifting down from 4th to 3rd range while driving in 4th gear of manual mode [50 — 60 km/h (31 — 37 MPH)].
- Check the 2nd gear engine brake when shifting down from 3rd to 2nd range while driving in 3rd gear of manual mode [40 — 50 km/h (25 — 31 MPH)].
- Check the 1st gear engine brake when shifting down from 2nd to 1st range while driving in 2nd gear of manual mode [20 — 30 km/h (12 — 19 MPH)].

6. LOCK-UP FUNCTION

- Check that rpm does not change sharply when the axle pedal is lightly depressed while driving on flat roads at normal speed in “D” range.
- Check slip lock-up with following procedure. Subaru Select Monitor is needed for checking. Before start checking, check that no DTC is displayed using Subaru Select Monitor. When DTC is displayed, perform the collective action with DTC and check that any more DTC is displayed, and then start the checking.
  1) Perform the check on flat and straight road or free roller.

NOTE:
- Slip lock-up does not operate when the vehicle is lifted up, because of not occurring surface resistance.
- Also when checking on the free roller, check with depressing the foot brake lightly to make the checking easier, because the surface resistance will be deficient.

2) Connect the Subaru Select Monitor.
3) Check the ATF temperature using Subaru Select Monitor.

NOTE:
- ATF temperature is between 50 — 100°C (122 — 212°F).
- When the temperature is low, warm-up the ATF by running the vehicle or etc.

4) Start the engine, so that the lock-up duty can be read on data display of Subaru Select Monitor.
5) Drive the vehicle at a constant speed of 35 — 40 km/h (22 — 25 MPH).
6) Read the lock-up duty while vehicle is running.

Standard value:
25 — 45%

NOTE:
The value may be lower on the free roller.
- Slip lock-up control is not operating when the lock-up duty is less than 5%, or when the lock-up duty goes down immediately after starts rising. On these cases, improper ATF or deterioration of ATF may be the cause. Check the amount of ATF or replace them, and then recheck it.

7. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to “P” range. Check that the vehicle does not move when the parking brake is released.

8. NOISE AND VIBRATION

Check for noise and vibration while driving and during shifting.

9. CLIMBING CONTROL FUNCTION

- Check that the gear remains in 3rd when going up a grade.
- Check that the gear remains in 3rd when applying the brakes while going down a grade.

10. TRANSFER CLUTCH

Check tight corner braking when the vehicle started with steering fully turned.

11. OIL LEAKS

After the driving test, inspect for oil leaks.
5. **Stall Test**

**A: INSPECTION**

**NOTE:**

The stall test is of extreme importance in diagnosing the condition of the automatic transmission and the engine. It should be conducted to measure the engine stall speeds in “R” and 2nd of manual mode.

**Purposes of the stall test:**
- To check the operation of the automatic transmission clutch.
- To check the operation of the torque converter clutch.
- To check engine performance.

1) Check that the throttle valve opens fully.
2) Check that the engine oil level is correct.
3) Check that the coolant level is correct.
4) Check that the ATF level is correct.
5) Check that the differential gear oil level is correct.
6) Increase ATF temperature to 70 — 80°C (158 — 176°F) by idling the engine for approximately 30 minutes (with select lever set to “N” or “P”).
7) Place the wheel chocks at the front and rear of all wheels and engage the parking brake.
8) Move the manual linkage to ensure it operates properly, and then set to the 2nd on manual mode.
9) While forcibly depressing the foot brake pedal, gradually depress the accelerator pedal until the engine operates at full throttle.
10) When the engine speed is stabilized, record that speed quickly and release the accelerator pedal.
11) Shift the select lever to “N” range, and cool down the engine by idling it for more than one minute.
12) If the stall speed in the 2nd of manual mode is higher than specifications, low clutch slipping and 2-4 brake slipping may occur. To identify it, conduct the same test as above in “R” range.
13) Perform the stall tests with the select lever in “D” range.

**NOTE:**
- Do not continue the stall test for more than five seconds at a time (from closed throttle, fully open throttle to stall speed reading). Failure to follow this instruction causes the engine oil and ATF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute after each stall test with the select lever set in “P” or “N” range and with the idle speed lower than 1,200 rpm.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the automatic transmission from sustaining damage.

(A) Brake pedal
(B) Accelerator pedal
### Stall Test

#### Stall speed (at sea level):
- **2.0 L model:**
  - 2,300 — 2,700 rpm
- **2.5 L model:**
  - 2,600 — 2,900 rpm

<table>
<thead>
<tr>
<th>Stall speed (at sea level)</th>
<th>Range</th>
<th>Cause</th>
</tr>
</thead>
</table>
| Less than standard        | 2nd on manual mode, R | • Throttle valve not fully open  
• Erroneous engine operation  
• Torque converter clutch's one-way clutch slipping |
| More than standard        | D                | • Line pressure is too low  
• Low clutch slipping  
• One-way clutch malfunctioning |
|                           | R                | • Line pressure is too low  
• Reverse clutch slipping  
• Low & reverse brake slipping |
|                           | 2nd on manual mode | • Line pressure is too low  
• Low clutch slipping  
• 2-4 brake slipping |
6. Time Lag Test

A: INSPECTION

NOTE:
If the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before the shock can be felt. This is used for checking the condition of the low clutch, reverse clutch, low & reverse brake and one-way clutch.

• Perform the test at normal operation fluid temperature 70 — 80°C (158 — 176°F).
• Be sure to allow a one minute interval between tests.
• Make three measurements and take the average value.

1) Fully apply the parking brake.
2) Start the engine.
Check the idling speed (A/C OFF).
3) Shift the select lever from “N” to “D” range.
Using a stop watch, measure the time it takes from shifting the lever until the shock is felt.
Time lag: Less than 1.2 seconds
If “N” → “D” time lag is longer than specified:
• Line pressure too low
• Low clutch worn
• One-way clutch not operating properly
• D-ring worn
4) In the same manner, measure the time lag for “N” → “R”.
Time lag: Less than 1.5 seconds
If “N” → “R” time lag is longer than specified:
• Line pressure too low
• Reverse clutch worn
• Low & reverse brake worn
• D-ring worn
7. Line Pressure Test

A: MEASUREMENT

NOTE:
If the clutch or the brake shows a sign of slippage or shifting sensation is not correct, the line pressure should be checked.
- Excessive shocks during upshifting or shifting takes place at a higher point than under normal circumstances, may be due to the line pressure being too high.
- Slippage or inability to operate the vehicle may, in most cases, be due to loss of oil pressure for the operation of the clutch, brake or control valve.

1) Line pressure measurement (under no load):
   (1) Before measuring line pressure, jack-up all the wheels.
   (2) Maintain the temperature of ATF at approx. 70 — 80°C (158 — 176°F) during measurement. (ATF will reach the above-mentioned temperature after idling the engine for approx. 30 minutes with the select lever in “N” or “P”.)

2) Line pressure measurement (under heavy load):
   (1) Before measuring line pressure, apply both the foot and parking brakes with all wheels chocked (Same as for “stall” test conditions).
   (2) Measure the line pressure when the select lever is in “R” or 2nd of manual mode with engine under stall conditions.
   (3) Measure the line pressure within 5 seconds after shifting the select lever to each position. (If the line pressure needs to be measured again, allow the engine to idle and cool it down more than 1 minute.)
   (4) Maintain the ATF temperature at approx. 70 — 80°C (158 — 176°F) during measurement. (ATF will reach the above-mentioned temperature after idling the engine for approx. 30 minutes with the select lever in “N” or “P”.)

3) Remove the test plug and install the ST instead.

4) Connect the ST1 with ST2.
   ST1  498897200  OIL PRESSURE GAUGE ADAPTER
   ST2  498575400  OIL PRESSURE GAUGE ASSY

5) Check for duty ratio changes by adjusting the acceleration pedal position using Subaru Select Monitor.

(A) Test plug
8. Transfer Clutch Pressure Test

A: INSPECTION

Check the transfer clutch pressure in accordance with the following chart in the same manner as with line pressure. <Ref. to 4AT-38, Line Pressure Test.>

NOTE:
• Before setting in FWD mode, install the spare fuse on FWD mode switch. (MPT model)
  • MTP model
  • VTD model

If no oil pressure is produced or if it does not change in AWD mode, the control valve body may be malfunctioning. If oil pressure is produced in FWD mode, the same problem as AWD mode occurs.

9. Automatic Transmission Assembly

A: REMOVAL

1) Set the vehicle on a lift.
2) Fully open the front hood and support with hood stay.
3) Disconnect the ground cable from battery.
4) Remove the air intake duct.
   <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
5) Remove the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
6) Remove the air cleaner case stay.
7) Disconnect the following connectors.
   (1) Transmission harness connectors
   (2) Transmission ground terminal
8) Remove the starter.
   <Ref. to SC(H4SO 2.0)-6, REMOVAL, Starter.>
9) Remove the pitching stopper.
10) Separate the torque converter clutch from drive plate.
    (1) Remove the V-belt covers.
    (2) Remove the service hole plug.
    (3) Remove the bolts which hold torque converter clutch to drive plate.
    (4) Insert the wrench to crank pulley bolt, and then remove all the bolts with slightly rotating crank pulley.

CAUTION:
Be careful not to drop bolts into torque converter clutch housing.

11) Install the ST to converter case.

ST 498277200 STOPPER SET

12) Remove the ATF level gauge.

NOTE:
Plug the opening to prevent entry of foreign particles into transmission fluid.

13) Remove the throttle body. <Ref. to FU(H4SO 2.0)-10, REMOVAL, Throttle Body.>
14) Drain the engine coolant by approx. 2 l (2.1 US qt, 1.8 Imp qt). (Model with ATF cooler with warmer function)
15) Disconnect the ATF cooler inlet and outlet hoses from ATF cooler pipes.
16) Disconnect each hose from warmer cock assembly.
17) Remove the ATF cooler with warmer function from transmission body, and then secure it to vehicle body by wire, etc.. Select the place not to prevent transmission from being replaced. (Model with ATF cooler with warmer function)
18) Remove the warmer cock assembly. (Model with ATF cooler with warmer function)
19) Remove the bracket for warmer cock assembly. (Model with ATF cooler with warmer function)
20) Remove the pitching stopper bracket.
21) Set the ST.
22) Remove the bolts which hold upper side of transmission to engine.
23) Lift-up the vehicle.
24) Remove the under cover.
25) Remove the front, center and rear exhaust pipes and muffler.
<Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
26) Remove the heat shield cover.

27) Remove the ATF drain plug to drain ATF.

28) Disconnect the ATF cooler hoses from pipes of transmission side, and remove the oil charge pipe.
(Model without ATF cooler with warmer function)

29) Remove the propeller shaft.
<Ref. to DS-10, REMOVAL, Propeller Shaft.>
30) Remove the shift select cable.
<Ref. to CS-12, REMOVAL, Select Cable.>
31) Remove the brackets (two) which hold front stabilizer.

32) Remove the bolt securing ball joint of front arm to housing.

33) Pull out the front drive shaft from transmission.
(1) Using a tire lever or a pinch bar, etc., pull out the front drive shaft until its joint facing to transmission can move smoothly.

NOTE: Place cloth between tire lever or pinch bar and transmission in order to avoid damaging the side retainer of transmission.
(2) Hold the transmission side joint portion of front drive shaft by hand and extract the housing from the transmission by pressing it outside so as not to stretch the boot.

34) Remove the bolts which hold the clutch housing cover.
35) Remove the bolts which hold lower side of transmission to engine.

36) Place the transmission jack under transmission.
NOTE: Make sure that the support plates of transmission jack don’t touch the oil pan.
37) Remove the transmission rear crossmember from the vehicle.

38) Fully contract the engine support while lowering the transmission jack gradually, and tilt the engine backward.

NOTE:
Contract the support until the clearance between front crossmember and torque converter case becomes approx. 10 mm (0.39 in).

39) Remove the transmission.

CAUTION:
Remove the transmission and torque converter as a unit from engine.

40) Remove the rear cushion rubber from transmission assembly.

B: INSTALLATION

1) Replace the differential side oil seal with a new one.

NOTE:
When a new oil seal has been installed, the replacement is not required.

2) Install the rear cushion rubber to transmission assembly.

Tightening torque:
39 N·m (4.0 kgf-m, 29 ft-lb)

3) Install the ST to converter case.

4) Install the transmission onto engine.
   (1) Lift up the transmission gradually using a transmission jack.

   (2) Engage them at splines.
   (3) Turn the screws of engine support while raising the transmission jack gradually, and tilt the engine forward.

5) Install the transmission rear crossmember.

Tightening torque:
T1: 35 N·m (3.6 kgf-m, 26 ft-lb)
T2: 70 N·m (7.1 kgf-m, 51 ft-lb)

6) Take off the transmission jack.

7) Tighten the bolts which hold the lower side of transmission to engine.
8) Screw the bolts for the clutch housing cover.
9) Lower the lift.
10) Connect the engine and transmission.
   (1) Remove the ST from converter case.

**NOTE:**
When removing the ST, be careful not to drop it into converter case.
ST 498277200 STOPPER SET
(2) Install the starter.
<Ref. to SC(H4SO 2.0)-6, INSTALLATION, Starter.>
(3) Tighten the bolts which hold the upper side of transmission to engine.

**Tightening torque:**
50 N·m (5.1 kgf-m, 36.9 ft-lb)

11) Install the torque converter clutch to drive plate.
   (1) Tighten the bolts which hold torque converter clutch to drive plate.
   (2) Insert the wrench to crank pulley bolt, and then tighten all bolts while slightly rotating the crank pulley.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

13) Install the warmer cock assembly bracket.
(Model with ATF cooler with warmer function)

**Tightening torque:**
16 N·m (1.6 kgf-m, 11.6 ft-lb)

14) Install the warmer cock assembly. (Model with ATF cooler with warmer function)
15) Connect each hose to warmer cock assembly. (Model with ATF cooler with warmer function)

16) Install the pitching stopper bracket and bracket (Model with ATF cooler with warmer function).

**Tightening torque:**
- **T1**: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
- **T2**: 15 N·m (1.5 kgf-m, 10.8 ft-lb)

17) Install the ATF cooler with warmer function to transmission body. (Model with ATF cooler with warmer function)

18) Connect the ATF cooler inlet and outlet hoses to ATF cooler pipes. (Model with ATF cooler with warmer function)

**Tightening torque:**
- **T1**: 41 N·m (4.2 kgf-m, 30.4 ft-lb)

19) Install the throttle body. <Ref. to FU(H4SO 2.0)-10, INSTALLATION, Throttle Body.>

20) Install the pitching stopper.

**Tightening torque:**
- **T1**: 50 N·m (5.1 kgf-m, 37 ft-lb)
- **T2**: 58 N·m (5.9 kgf-m, 43 ft-lb)
21) Lift-up the vehicle.
22) Replace the snap ring of front drive shaft with a new one.
23) Apply grease to the oil seal lips.
24) Install the ST to side retainer.
ST 28399SA010 OIL SEAL PROTECTOR

25) Align the spline of front differential shaft to that of differential bevel gear for insertion, and remove them using ST.
ST 28399SA010 OIL SEAL PROTECTOR
26) Insert the front drive shaft into transmission securely by pressing the front housing from outside.

27) Install the ball joint into housing.
28) Tighten the attachment bolts.
Tightening torque:
50 N·m (5.1 kgf-m, 36.9 ft-lb)

29) Install the stabilizer to crossmember.
NOTE:
• Install the bushing (on front crossmember side) while aligning it with the paint mark on stabilizer.

• Ensure the bushing and stabilizer have the same identification colors when installing.

30) Always tighten the rubber bushing location when wheels are in full contact with the ground and vehicle is curb weight.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

31) Install the shift select cable onto select lever.<Ref. to CS-13, INSTALLATION, Select Cable.>
32) Install the oil charge pipe, and connect the ATF cooler hoses to pipe. (Model without ATF cooler with warmer function)

33) Install the oil charge pipe. (Model with ATF cooler with warmer function)
34) Install the propeller shaft.<Ref. to DS-11, INSTALLATION, Propeller Shaft.>
35) Install the heat shield cover.

36) Install the rear exhaust pipe and muffler assembly.
37) Install the front and center exhaust pipe.
38) Install the under cover.
39) Lower the lift.
40) Install the ATF level gauge.

41) Connect the following connectors.
   (1) Transmission harness connectors
   (2) Transmission ground terminal

42) Install the air cleaner case stay.

_Tightening torque:_

\[16 \text{ N}\cdot\text{m (1.6 kgf-m, 11.6 ft-lb)}\]

43) Install the air intake chamber.
44) Install the air intake duct.
45) Using a gauge hole, add the ATF until the fluid level is found at the center between upper and lower levels of level gauge “COLD” side. 
46) Take off the vehicle from a lift.
47) Check the level of differential gear oil.

48) Check the select lever operation.
49) Bleed the air of control valve.
50) Check the ATF level.
51) Execute the learning control promotion.
52) Perform the road test.
TRANSMISSION SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition.

When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

Transmission Mounting System

10. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

1) Remove the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Remove the pitching stopper.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

2) Install the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

2. TRANSMISSION REAR CROSSMEMBER & REAR CUSHION RUBBER

1) Disconnect the ground cable from battery.
2) Jack-up the vehicle and support it with study racks.
3) Remove the front, center, rear, exhaust pipes and muffler.
   <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
   <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.>
   <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
4) Remove the heat shield cover.
5) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.
6) Remove the transmission rear crossmember.
7) Remove the rear cushion rubber.

2) Install the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

2. TRANSMISSION REAR CROSSMEMBER & REAR CUSHION RUBBER

1) Install the rear cushion rubber.
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

Tightening torque:
   T1: 50 N·m (5.1 kgf·m, 37 ft-lb)
   T2: 58 N·m (5.9 kgf·m, 43 ft-lb)

2) Install the crossmember.
   <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

Tightening torque:
   T1: 35 N·m (3.6 kgf·m, 26 ft-lb)
   T2: 70 N·m (7.1 kgf·m, 51 ft-lb)

3) Remove the transmission jack.
4) Install the heat shield cover.
5) Install the front, center and rear exhaust pipes and muffler.
   <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
   <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.>
   <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
C: INSPECTION
Repair or replace parts if the results of the inspection below are not satisfied.

1. PITCHING STOPPER
Make sure that the pitching stopper is not bent or damaged. Ensure there are no cracks, hardening, or damage on rubbers.

2. TRANSMISSION REAR CROSSMEMBER & REAR CUSHION RUBBER
Make sure that the crossmember is not bent or damaged. Ensure there are no cracks, hardening, or damage on cushion rubbers.
# Extension Case Oil Seal

## A: INSPECTION

Make sure that the ATF does not leak from the joint of transmission and propeller shaft. If so, replace the oil seal. <Ref. to 4AT-50, REPLACEMENT, Extension Case Oil Seal.>

## B: REPLACEMENT

1. Lift-up the vehicle.
2. Clean the transmission exterior.
3. Remove the ATF drain plug to drain ATF.

**CAUTION:**

Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.

4. Tighten the ATF drain plug.

**NOTE:**

Use a new gasket.

**Tightening torque:**

25 N·m (2.5 kgf-m, 18.1 ft-lb)

5. Remove the rear exhaust pipe and muffler.

6. Remove the heat shield cover.

7. Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>

8. Using the ST, remove the oil seal.

   **ST 398527700 PULLER ASSY**

9. Using the ST, install the oil seal.

   **ST 498057300 INSTALLER**

10. Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>

11. Install the heat shield cover.

12. Install the rear exhaust pipe and muffler.

13. Pour ATF into the oil charge pipe.

**Recommended fluid:**

   SUBARU ATF (Part No. K0410Y0700) or Idemitsu “Apolloil ATF HP”, Castrol “Transmax J”.

**NOTE:**

If the ATFs above are not available, use Dexron III.

**Capacity:**

   **Fill the same amount of ATF drained.**

14. Bleed the air of control valve.

   <Ref. to 4AT-63, Air Bleeding of Control Valve.>

15. Check the level and leaks of ATF. <Ref. to 4AT-31, Automatic Transmission Fluid.>
12. Differential Side Retainer Oil Seal

A: INSPECTION
Check the leakage of gear oil from differential side retainer oil seal part. If there is oil leakage, replace the oil seal.

B: REPLACEMENT
1) Lift-up the vehicle.
2) Remove the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
3) Remove the differential gear oil drain plug using TORX® BIT T70, and drain the differential gear oil.

CAUTION:
- Directly after the engine has been running, the differential gear oil is hot. Be careful not to burn yourself.
- Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.

4) Tighten the differential gear oil drain plug.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
5) Separate the front drive shaft from transmission. <Ref. to DS-22, REMOVAL, Front Drive Shaft.>
6) Remove the differential side retainer oil seal using a driver wrapped with vinyl tape or etc.

7) Using the ST, install the differential side retainer by slightly tapping with hammer.

ST  18675AA000  DIFFERENTIAL SIDE OIL SEAL INSTALLER

8) Apply gear oil to the oil seal lips.
9) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>
10) Install the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
11) Lower the vehicle.
12) Pour the gear oil into the gauge hole.

Recommended gear oil:
<Ref. to 4AT-3, RECOMMENDED GEAR OIL, SPECIFICATION, General Description.>

Differential gear oil capacity:
1.1 — 1.3 US qt, 1.0 — 1.1 Imp qt

13) Check the level of differential gear oil. <Ref. to 4AT-33, INSPECTION, Differential Gear Oil.>
13. Inhibitor Switch

A: INSPECTION
When the driving condition or starter motor operation is erroneous, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.
1) Disconnect the inhibitor switch connector.
2) Check continuity in inhibitor switch circuits with the select lever moved to each position.

NOTE:
• Also check that continuity in ignition circuit does not exist when the select lever is in “R” and “D” ranges.
• If the inhibitor switch is inoperative, check for poor contact of connector on transmission side.

<table>
<thead>
<tr>
<th>Signal sent to TCM</th>
<th>Range</th>
<th>Pin No.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>P</td>
<td>4 — 3</td>
</tr>
<tr>
<td></td>
<td>R</td>
<td>4 — 2</td>
</tr>
<tr>
<td></td>

<td>Back-up light circuit</td>
<td>R</td>
<td>10 — 9</td>
</tr>
</tbody>
</table>

3) Check there is continuity at equal points when the select lever is turned 1.5° in both directions from “N” range.
If there is continuity in one direction or in other points, adjust the inhibitor switch. <Ref. to 4AT-52, ADJUSTMENT, Inhibitor Switch.>

B: ADJUSTMENT
1) Set the select lever to “N” range.
2) Loosen the three inhibitor switch securing bolts.
3) Insert the ST as vertical as possible into the holes in the inhibitor switch lever and switch body.

ST 499267300 STOPPER PIN

4) Repeat the above checks. If there are abnormalities, adjust the select cable. <Ref. to CS-15, ADJUSTMENT, Select Cable.>

4AT-52
4) Disconnect the inhibitor switch connector.

5) Remove the inhibitor switch connector from stay.
6) Lift-up the vehicle.
7) Remove the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
8) Remove the snap pin and washers from range select lever.

9) Remove the plate assembly from transmission case.

10) Remove the three bolts which secure inhibitor switch.

11) Shift the range select lever to parking position (left side).

12) Remove the inhibitor switch from transmission.

13) Disconnect the inhibitor switch harness connector from inhibitor switch.

D: INSTALLATION
1) Connect the inhibitor switch harness connector to inhibitor switch.
2) Install the inhibitor switch to transmission case.

3) Move the range select lever to neutral position.

4) Tighten the three inhibitor switch securing bolts using ST.

   **ST 499267300 STOPPER PIN**

   **Tightening torque:**
   
   $3.5 \text{ N} \cdot \text{m (0.36 kgf-m, 2.6 ft-lb)}$

5) Install the select cable to range select lever.

6) Install the plate assembly to transmission.

   **Tightening torque:**
   
   $T: 25 \text{ N} \cdot \text{m (2.5 kgf-m, 18.1 ft-lb)}$

7) Install the snap pin washers to range select lever.

8) Install the front and center exhaust pipe.
   <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>

9) Lower the vehicle.

10) Install the inhibitor switch connector to the stay.

11) Connect the inhibitor switch connector.

12) Install the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

13) Inspect the inhibitor switch. <Ref. to 4AT-52, INSPECTION, Inhibitor Switch.>
14. Front Vehicle Speed Sensor

A: REMOVAL

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Remove the air intake chamber. 
   <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
4) Disconnect the transmission connector.
5) Remove the pitching stopper. <Ref. to 4AT-48, REMOVAL, Transmission Mounting System.>
6) Remove the transmission connector from the stay.
7) Lift-up the vehicle.
8) Clean the transmission exterior.
9) Remove the ATF drain plug to drain ATF.

CAUTION:
Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.
10) Tighten the ATF drain plug.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

11) Remove the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
12) Remove the shield cover.
13) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
14) Place the transmission jack under transmission.

NOTE:
Make sure that the support plates of transmission jack does not touch the oil pan.
15) Remove the transmission rear crossmember bolt.

16) Lower the transmission jack.

NOTE:
Do not separate the transmission jack and transmission.

17) Remove the oil cooler inlet and outlet pipes.

NOTE:
When removing the outlet pipe, be careful not to lose the ball and spring used with retaining screw.

18) Remove the front vehicle speed sensor and torque converter turbine speed sensor.
Front Vehicle Speed Sensor

19) Disconnect the connector from rear vehicle speed sensor.
   - MPT model

![Diagram of Rear Vehicle Speed Sensor](AT-02207)

(A) Rear vehicle speed sensor

- VTD model

![Diagram of Rear Vehicle Speed Sensor](AT-00117)

(A) Rear vehicle speed sensor

20) Remove the oil pan.

21) Disconnect the harness connector and transmission ground terminal.

![Diagram of Harness Connector and Transmission Ground](AT-00050)

(A) Transmission ground
(B) Harness connector

22) Remove the harness assembly.

B: INSTALLATION

1) Pass the harness assembly through the hole in transmission case.

![Diagram of Harness Assembly](AT-00048)

2) Connect the harness connector and transmission ground.

**Tightening torque:**
8 N·m (0.8 kgf-m, 5.8 ft-lb)

![Diagram of Transmission Ground](AT-00051)

(A) Transmission ground
(B) Harness connector

3) Apply proper amount of liquid gasket to the entire oil pan mating surface.

**Liquid gasket:**
THREE BOND 1217B (Part No. K0877YA020)

4) Apply liquid gasket fully to the three holes other than screw holes on the transmission case.
5) Install the oil pan.

**Liquid gasket:**

THREE BOND 1217B (Part No. K0877YA020)

6) Install the front vehicle speed sensor and torque converter turbine speed sensor.

**Tightening torque:**

5 N·m (0.5 kgf-m, 3.6 ft-lb)

7) Connect the connector to rear vehicle speed sensor.

8) Install the oil cooler pipe.

**NOTE:**

Use a copper washer.

**Tightening torque:**

7 N·m (0.7 kgf-m, 5.1 ft-lb)

9) Install the transmission rear crossmember bolt.

**Tightening torque:**

70 N·m (7.1 kgf-m, 51 ft-lb)

10) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>

11) Install the shield cover.

12) Install the front, center and rear exhaust pipes and muffler. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>

13) Lower the vehicle.

14) Install the transmission connector to the stay.

15) Install the pitching stopper. <Ref. to 4AT-48, INSTALLATION, Transmission Mounting System.>

16) Install the air intake chamber. <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

17) Fill the same amount of ATF drained.

18) Bleed the air of control valve. <Ref. to 4AT-63, Air Bleeding of Control Valve.>

19) Check the level of ATF. <Ref. to 4AT-31, Automatic Transmission Fluid.>

20) Execute the learning control promotion. <Ref. to 4AT(diag)-19, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>
15. Rear Vehicle Speed Sensor

A: REMOVAL
1) Set the vehicle on a lift, and then lift-up the vehicle.
2) Disconnect the connector from rear vehicle speed sensor.
   • MPT model

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Replace O-ring with a new one.

Tightening torque:
7 N·m (0.7 kgf-m, 5.1 ft-lb)
16. Torque Converter Turbine Speed Sensor

A: REMOVAL
For removal procedure of torque converter turbine speed sensor, refer to “Front Vehicle Speed Sensor”. <Ref. to 4AT-55, REMOVAL, Front Vehicle Speed Sensor.>

B: INSTALLATION
For installation procedure of torque converter turbine speed sensor, refer to “Front Vehicle Speed Sensor”. <Ref. to 4AT-56, INSTALLATION, Front Vehicle Speed Sensor.>
17. Control Valve Body

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Clean the transmission exterior.
5) Remove the ATF drain plug to drain ATF.

CAUTION:
Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.

6) Tighten the ATF drain plug.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf·m, 18.1 ft-lb)

7) Remove the oil pan.

CAUTION:
Be sure to prevent the entering of dust and other foreign matters into oil pan.

8) Remove the magnet.

9) Clean the magnet.

10) Completely remove the remaining liquid gasket on transmission case and oil pan.

11) Disconnect the control valve connector.

12) Remove the oil cooler pipe.

13) Remove the control valve body.

NOTE:
Replace the control valve body as assembly, because it is non-disassemble part.

B: INSTALLATION
1) Check that the dust and other foreign matters are not on control valve body.
2) Temporarily install the control valve body to transmission.
3) Install the oil cooler pipe.
Control Valve Body

**Tightening torque:**
8 N·m (0.8 kgf-m, 5.8 ft-lb)

4) Tighten the bolts equally.

**Tightening torque:**
8 N·m (0.8 kgf-m, 5.8 ft-lb)

5) Connect the control valve connector.

---

6) Attach the magnet at the specified position of oil pan.

7) Apply liquid gasket to the oil pan.

**Liquid gasket:**
THREE BOND 1217B (Part No. K0877YA020)

---

8) Fill liquid gasket to the holes except for bolt holes (three) of transmission case.

**Liquid gasket:**
THREE BOND 1217B (Part No. K0877YA020)

---

9) Install the oil pan with equally tighten the bolts.

**Tightening torque:**
5 N·m (0.5 kgf-m, 3.6 ft-lb)

10) Fill ATF from oil charge pipe.

**Recommended fluid:**
SUBARU ATF (Part No. K0410Y0700) or Idemitsu “Apolloil ATF HP”, Castrol “Transmax J”.

**NOTE:**
If the ATFs above are not available, use Dexron III.
Control Valve Body

Capacity:

*Fill the same amount of ATF drained.*

11) Bleed the air of control valve. <Ref. to 4AT-63, Air Bleeding of Control Valve.>
12) Check the ATF level. <Ref. to 4AT-31, Automatic Transmission Fluid.>
13) Execute the learning control promotion. <Ref. to 4AT(diag)-19, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>

C: INSPECTION

Check that the holes, damages or other foreign matters are not on each parts.
18. Air Bleeding of Control Valve

A: PROCEDURE

1) Lift-up the vehicle with setting the select lever to “P” range and applying the parking brake.
2) Connect the Subaru Select Monitor to the vehicle.
3) Using Subaru Select Monitor, check that the DTC is not output.
4) Using Subaru Select Monitor, check that the ATF temperature is less than 60°C (140°F). [Ref. to 4AT(diag)-17, OPERATION, Subaru Select Monitor.]
5) Turn the Subaru Select Monitor switch to OFF.
6) Release the manual mode, and then turn the ignition switch to OFF.
7) Set the select lever to “R” range.
8) Depress the brake pedal fully until the air bleeding is completed.
9) Turn the ignition switch to ON.
10) Set the select lever to “P” range, and then wait for more than 3 seconds.
11) Set the select lever to “R” range, and then wait for more than 3 seconds.
12) Set the select lever to “N” range, and then wait for more than 3 seconds.
13) Set the select lever to “D” range, and then wait for more than 3 seconds.
14) Set the select lever to “N” range, and then wait for more than 3 seconds.
15) Slowly depress the accelerator pedal fully.
16) Slowly release the accelerator pedal fully.
17) Start the engine.
18) Set the select lever to “D” range.
19) Turn the Subaru Select Monitor switch to ON.
20) Select (Each System Check) in «Main Menu» of Subaru Select Monitor.
21) On the «System Selection Menu» display screen, select “Transmission”. Air bleeding of control valve starts on transmission. At this time, the SPORT indicator light in combination meter blinks at 2 Hz. When the SPORT indicator light does not blink, repeat the procedures from step 4).
22) Air bleeding of control valve is finished when blinking of SPORT indicator light in combination meter goes off from 2 Hz.

NOTE:
When blinking of SPORT indicator light changes from 2 Hz to 4 Hz during air bleeding, repeat the procedure from step 4).
23) Set the select lever to “N” range, and then turn the ignition switch to OFF.
24) Set the select lever to “P” range, and then finish the air bleeding.
AUTOMATIC TRANSMISSION

19. ATF Filter

A: REMOVAL

NOTE:
The ATF filter is maintenance free.
1) Lift-up the vehicle.
2) Using the ST, remove the ATF filter.

ST 498545400 OIL FILTER WRENCH

(B) ATF filter

B: INSTALLATION

1) Apply a thin coat of ATF to the oil seal part of new ATF filter.
2) Install the ATF filter. Turn it by hand, being careful not to damage oil seal.
3) Tighten the ATF filter using ST.
Calculate the ATF filter tightening torque using following formula.

\[ T_2 = \frac{L_2}{L_1 + L_2} \times T_1 \]

[T1: 14 N-m (1.4 kgf-m, 10.1 ft-lb)
[Required torque setting]
T2: Tightening torque
L1: ST length 78 mm (3.07 in)
L2: Torque wrench length

Example:

<table>
<thead>
<tr>
<th>Torque wrench length mm (in)</th>
<th>Tightening torque N-m (kgf-m, ft-lb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 (3.94)</td>
<td>7.7 (0.79, 5.7)</td>
</tr>
<tr>
<td>150 (5.91)</td>
<td>9.0 (0.92, 6.7)</td>
</tr>
<tr>
<td>200 (7.87)</td>
<td>10 (1.0, 7.2)</td>
</tr>
</tbody>
</table>

NOTE:
Install the ST straightly to converter case.

ST 498545400 OIL FILTER WRENCH

4) Fill the ATF.
5) Inspect the level of ATF. <Ref. to 4AT-31, Automatic Transmission Fluid.>

C: INSPECTION

Check for rust, hole, ATF leaks, and other damage.
Transmission Control Module (TCM)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the lower cover and the connector.
3) Replace the body integrated unit. <Ref. to SL-46, REMOVAL, Body Integrated Unit.>
4) Disconnect the connector from TCM.
   • LHD model
5) Remove the TCM.

B: INSTALLATION
1) Install the TCM.
   • LHD model
   
   **Tightening torque:**
   7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

   ![Diagram of LHD model]

Install in the reverse order of removal.
• LHD model

**Tightening torque:**
- **T1:** 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
- **T2:** 24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

![LHD model installation diagram](AT-02181)
22. ATF Cooler Pipe and Hose

A: REMOVAL

1. MODEL WITHOUT ATF COOLER WITH WARMER FUNCTION

1) Set the vehicle on a lift.
2) Remove the battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Remove the radiator under cover.

6) Disconnect the ATF cooler hose from radiator.

NOTE:
- Do not use a screwdriver or other pointed tools.
- When hard to remove the hose, wrap the hose with cloth to prevent from damaging, and then turn with pliers and pull out with hand straightly.

7) Disconnect the ATF cooler hoses from pipes.

NOTE:
- Do not use a screwdriver or other pointed tools.

- When hard to remove the hose, wrap the hose with cloth to prevent from damaging, and then turn with pliers and pull out with hand straightly.

8) Disconnect the ATF cooler pipe from frame.

9) Remove the oil cooler inlet and outlet pipes.
NOTE:
When disconnecting the outlet pipe, be careful not to lose the ball and spring used with retaining screw.

2. MODEL WITH ATF COOLER WITH WARMER FUNCTION

1) Set the vehicle on a lift.
2) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Disconnect the transmission harness connector and remove it from stay.
4) Remove the harness bracket.
5) Disconnect the inlet and outlet hoses.
6) Remove the ATF cooler assembly from transmission body, and put it aside.

7) Remove the oil charge pipe. <Ref. to 4AT-79, REMOVAL, Oil Charge Pipe.>
8) Remove the air breather hose. <Ref. to 4AT-78, REMOVAL, Air Breather Hose.>
9) Remove the oil cooler inlet and outlet pipes. 

**CAUTION:**
When disconnecting the outlet pipe, be careful not to lose the ball and spring used with retaining screw.

**B: INSTALLATION**

1. **MODEL WITHOUT ATF COOLER WITH WARMER FUNCTION**

1) Install the oil cooler inlet pipe and outlet pipe with new washer.

*Tightening torque:*

- **T1:** 25 N·m (2.5 kgf-m, 18.1 ft-lb)
- **T2:** 44 N·m (4.5 kgf-m, 32.5 ft-lb)

2) Install the ATF cooler pipe to frame.

3) Connect the ATF cooler hose to pipe on transmission side.

**NOTE:**
- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

4) Connect the ATF cooler hose to pipe on radiator side.

**NOTE:**
- Install so that the hose is not folded over, excessively bent, or twisted.
AUTOMATIC TRANSMISSION

ATF Cooler Pipe and Hose

• Be careful to insert the hose to the specified position.

5) Install the radiator under cover.

Tightening torque:

\[
4.9 \text{ N m (0.5 kgf-m, 3.6 ft-lb)}
\]

6) Install the under cover.
7) Install the battery.
8) Fill the ATF. <Ref. to 4AT-31, Automatic Transmission Fluid.>

NOTE:
Make sure there are no ATF leaks in joints between the transmission, radiator, pipes, and hoses.

2. MODEL WITH ATF COOLER WITH WARNER FUNCTION

1) Install the ATF cooler inlet pipe and outlet pipe.

NOTE:
Use new washers.

Tightening torque:

\[
\begin{align*}
T1: & \quad 25 \text{ N m (2.5 kgf-m, 18.1 ft-lb)} \\
T2: & \quad 21 \text{ N m (2.1 kgf-m, 15.5 ft-lb)} \\
T3: & \quad 41 \text{ N m (4.2 kgf-m, 30.4 ft-lb)} \\
T4: & \quad 45 \text{ N m (4.6 kgf-m, 33.2 ft-lb)}
\end{align*}
\]
2) Install the ATF cooler assembly to transmission.

**Tightening torque:**
23 N·m (2.3 kgf-m, 16.6 ft-lb)

3) Install the oil charge pipe. <Ref. to 4AT-79, INSTALLATION, Oil Charge Pipe.>

4) Connect the inlet and outlet hoses.

5) Install the harness bracket.

**Tightening torque:**
- T1: 16 N·m (1.6 kgf-m, 11.6 ft-lb)
- T2: 36 N·m (3.6 kgf-m, 26.0 ft-lb)

6) Install the inhibitor switch and transmission harness connector to the stay, and then connect the harness connector.

7) Install the air breather hose. <Ref. to 4AT-78, INSTALLATION, Air Breather Hose.>

8) Install the air intake chamber. <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

9) Check the ATF level. <Ref. to 4AT-31, INSPECTION, Automatic Transmission Fluid.>

**C: INSPECTION**

Repair or replace any defective hoses, pipes, clamps, and washers found in the inspection below.

1) Check for ATF leaks in joints between the transmission, radiator, pipes, and hoses.

2) Check for deformed clamps.

3) Lightly bend the hose and check for cracks in the surface and other damage.

4) Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.

5) Check for peeling, cracks and deformation at the tip of the hose.
23. ATF Cooler (with warmer function)

A: REMOVAL
1) Drain the engine coolant. <Ref. to CO(H4SO 2.0)-13, REPLACEMENT, Engine Coolant.>
2) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
3) Disconnect the engine harness, and then remove the engine harness connector from engine harness bracket.
4) Remove the engine harness bracket.

5) Disconnect the ATF cooler hose from the pipe on transmission side.

6) Disconnect the engine coolant outlet hose from warmer cock assembly.

7) Disconnect the engine coolant inlet hose from cylinder block.

8) Remove the ATF cooler assembly from transmission.
B: INSTALLATION
1) Install the ATF cooler assembly to transmission.

_Tightening torque:_

\[ 23 \text{ N} \cdot \text{m} (2.3 \text{ kgf} \cdot \text{m}, 16.6 \text{ ft-lb}) \]

2) Connect the engine coolant inlet hose to cylinder block.

3) Connect the engine coolant outlet hose to warmer cock assembly.

4) Connect the ATF cooler hose to pipe on transmission side.

5) Install the engine harness bracket.

_Tightening torque:_

\[ T1: 16 \text{ N} \cdot \text{m} (1.6 \text{ kgf} \cdot \text{m}, 11.6 \text{ ft-lb}) \]

\[ T2: 36 \text{ N} \cdot \text{m} (3.6 \text{ kgf} \cdot \text{m}, 26.0 \text{ ft-lb}) \]

6) Install the harness connector to bracket, and then connect the harness.

7) Install the air intake chamber. <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

8) Fill the engine coolant. <Ref. to CO(H4SO 2.0)-13, REPLACEMENT, Engine Coolant.>

9) Check the ATF level. <Ref. to 4AT-31, INSPECTION, Automatic Transmission Fluid.>
C: DISASSEMBLY
1) Remove each hose from ATF cooler.

2) Remove the bracket from ATF cooler.
3) Remove the clip from bracket.

D: ASSEMBLY
1) Install the clip to bracket.
2) Install the bracket.

*Tightening torque: 23 N·m (2.3 kgf-m, 16.6 ft-lb)*
3) Install each hose to ATF cooler.

NOTE:
Pay attention to the orientation of hose.

![Diagram of ATF Cooler](AT-02174)

- (A) ATF cooler inlet hose
- (B) ATF cooler outlet hose
- (C) Engine coolant inlet hose
- (D) Engine coolant outlet hose

**E: INSPECTION**

Repair or replace any defective hoses, pipes, clamps and washers found from the inspection below.

1) Check each connection for ATF or engine coolant leakage.
2) Check the clamp for deformation.
3) Lightly bend the hose and check for cracks in the surface and other damage.
4) Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
5) Check the end of each hose for peeling, cracks and deformation.
6) Check the ATF cooler for damage.
24. Warmer Cock

A: REMOVAL
1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Remove all hoses from warmer cock.
3) Remove the warmer cock.
4) Remove the throttle body as necessary, and then remove the bracket.

B: INSTALLATION
1) Install the bracket, and then install the throttle body.

* Tightening torque:*

   * 16 N·m (1.6 kgf-m, 11.6 ft-lb)*

2) Install the warmer cock.

* Tightening torque:*

   - T1: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
   - T2: 15 N·m (1.5 kgf-m, 10.8 ft-lb)

3) Connect the hoses to warmer cock.
4) Install the air intake chamber. <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
C: DISASSEMBLY
Remove the bolt on warmer cock, and remove the thermostat.

D: ASSEMBLY
Assemble in the reverse order of disassembly.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

E: INSPECTION
Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

Inspection method
Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measurement should conform to the specification.

Starting temperature to open:
69 — 73°C (156 — 163°F)

Fully opens:
84°C (183°F)

Valve lift:
8.0 mm (0.315 in) or more
25. Air Breather Hose

A: REMOVAL
1) Remove the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Disconnect the air breather hose.

B: INSTALLATION
1) Install the air breather hose.

C: INSPECTION
Make sure the hose is not cracked or clogged.
26. Oil Charge Pipe

A: REMOVAL
1) Remove the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Remove the oil charge pipe, and then remove the O-ring from flange side.
   • Model with ATF cooler with warmer function

(B) Oil charge pipe

B: INSTALLATION
1) Install the oil charge pipe with a new O-ring applied with ATF.
   • Model with ATF cooler with warmer function
   **Tightening torque:**
   41 N·m (4.2 kgf-m, 30.4 ft-lb)

2) Install the air intake chamber.
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

C: INSPECTION
Make sure the oil charge pipe is not deformed or damaged.
27. Torque Converter Clutch Assembly

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter clutch and oil pump shaft horizontally.

NOTE:
Be sure not to scratch the inside of bushing in oil pump shaft.

3) Remove the input shaft.

NOTE:
When removing the torque converter clutch assembly, the input shaft is also removed.

4) Remove the oil pump shaft from the torque converter clutch as necessary.

B: INSTALLATION
1) Install the shaft to the converter case when oil pump shaft is removed.
2) Install the oil pump shaft to torque converter clutch, and then make sure that the clip is secured on groove.
3) Apply ATF to O-ring and insert the input shaft with rotating it by hand lightly.

Normal protrusion A:
50 — 55 mm (1.97 — 2.17 in)

4) With holding the torque converter clutch assembly by hands, carefully install to the converter case. Take care not to damage the bushing. Do not contact the oil pump shaft bush with starter shaft part of oil pump cover inappropriately.
5) Lightly rotating the shaft by hands to engage the spline securely, and then check it is within the dimension A.

Dimension A:
2.0 L model
1.1 — 1.3 mm (0.043 — 0.051 in)
2.5 L model
2.7 — 2.9 mm (0.106 — 0.114 in)

6) Install the transmission assembly into vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

**C: INSPECTION**

Make sure the ring gear and protrusion of torque converter clutch end are not deformed or damaged.
28. Extension Case

A: REMOVAL
1) Remove the transmission assembly.  
<Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor.
   - MPT model
   - VTD model

3) Separate the transmission case and extension case part.

B: INSTALLATION
1) Attach the selected thrust needle bearing to the end surface of reduction drive gear with vaseline.
   NOTE: Install the thrust needle bearing in correct direction.
2) Install a new gasket.
3) Install the extension case to transmission case.

4) Tighten bolts to secure extension case.

   Tightening torque:  
   25 N·m (2.5 kgf-m, 18.1 ft-lb)

5) Install the rear vehicle speed sensor.

   Tightening torque:  
   7 N·m (0.7 kgf-m, 5.1 ft-lb)
   - MPT model
   - VTD model

6) Install the transmission assembly.  
<Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>
Extension Case

C: DISASSEMBLY

1. MPT MODEL

1) Take out the transfer clutch by lightly tapping the end of rear drive shaft.

NOTE:
Be careful not to damage the oil seal of extension case.

2) Remove the transfer clutch pipe without deforming the pipe.

3) Remove the dust cover from extension case.

4) Remove the oil seal from extension case.

2. VTD MODEL

1) Remove the snap ring using ST1, ST2, ST3 and a press.

<table>
<thead>
<tr>
<th>ST1</th>

</tbody>
</table>

2) Remove the test plug.

3) Remove the clutch piston using compressed air.
4) Remove transfer clutch pipe without deforming the pipe.

5) Remove the dust cover from extension case.
6) Remove the oil seal from extension case.

D: ASSEMBLY

1. MPT MODEL
   1) Press-fit new oil seal using ST and press.
      ST 498057300 INSTALLER
   2) Press-fit the dust cover.
   3) Install the transfer clutch pipe to extension case without deforming the pipe.

   4) Install the transfer clutch assembly to the case.

   NOTE:
   • Be careful not to damage the seal ring.

   • Press-fit the clutch assembly to bottom of bearing shoulder completely.

2. VTD MODEL
   1) Press new oil seal using ST and press.
      ST 498057300 INSTALLER
   2) Press-fit the dust cover.
   3) Install the transfer clutch pipe to extension case without deforming the pipe.

   4) Apply ATF to a new O-ring and install the test plug.

   **Tightening torque:**
   \[ 13 \text{ N\cdot m} \] (1.3 kgf\cdot m, 9.4 ft-lb)
5) Insert the multi-plate clutch, drive plates, driven plates, and spring retainer.

![Diagram](AT-00126)

- (A) Spring retainer
- (B) Multi-plate clutch (LSD) piston assembly

6) Install the snap ring using special tools 1, 2, and 3.

**E: INSPECTION**

- Spray compressed air, and make sure the transfer pipe and extension case routes are not clogged and have no leaks.
- Measure the extension end play and adjust it to within specifications.

  - **MPT model**
    - [Ref. to 4AT-89, MPT MODEL, ADJUSTMENT, Transfer Clutch.]
  - **VTD model**
    - [Ref. to 4AT-90, VTD MODEL, ADJUSTMENT, Transfer Clutch.]
29. Transfer Clutch

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case, and then remove the transfer clutch. <Ref. to 4AT-82, REMOVAL, Extension Case.> <Ref. to 4AT-83, DISASSEMBLY, Extension Case.>

B: INSTALLATION
1) Select the thrust needle bearing. <Ref. to 4AT-89, ADJUSTMENT, Transfer Clutch.>
2) Install the transfer clutch assembly to the case.
3) Tighten the bolts to secure the case.
Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)
4) Install the transmission assembly into vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY
1) Remove the seal ring.
2) Remove the ball bearing using ST and press.
ST 498077600 REMOVER
3) Remove the snap ring, and then take out the pressure plate, drive plate and driven plate.
4) Using the ST1, ST2 and ST3, remove the snap ring, and then take out the return spring and transfer clutch piston seal.
Transfer Clutch

D: ASSEMBLY

1) Install the transfer clutch piston.

2) Install the return spring to transfer clutch piston.

3) Apply ATF to the lip of transfer clutch piston seal and install it.

4) Install the ST to the rear drive shaft.

ST  399893600  PLIERS
ST2  398673600  COMPRESSOR
ST3  398623600  SEAT

---

(A) Snap ring
(B) Transfer piston seal

5) Apply compressed air to the rear drive shaft to remove transfer clutch piston.

(A) Return spring
(B) Rear drive shaft

(A) Transfer clutch piston seal
(B) Rear drive shaft

(A) Transfer clutch piston
(B) Rear drive shaft

(A) Transfer clutch
5) Install the snap ring to ST.
   ST  499257300  SNAP RING OUTER GUIDE

6) Install the snap ring to rear drive shaft using ST1 and ST2.
   ST1  499257300  SNAP RING OUTER GUIDE
   ST2  499247400  INSTALLER

7) Install the driven plate, drive plate, pressure plate and snap ring.

8) Apply compressed air to see if the assembled parts move smoothly.

9) Check clearance between snap ring and pressure plate. <Ref. to 4AT-89, INSPECTION, Transfer Clutch.>

10) Press-fit new ball bearing using ST.
    ST  899580100  INSTALLER

11) Apply vaseline to a new seal ring and attach to the seal ring groove of the shaft.
    NOTE: While installing the seal ring, not to expand the seal ring excessively.
12) Install the transfer clutch assembly without damaging seal ring.

(A) Transfer clutch
(B) Extension case

E: INSPECTION
- Inspect the drive plate facing for wear and damage.
- Inspect the snap ring for wear, return spring for permanent distortion, breakage and deformation.
- Inspect the D-ring for damage.
- Inspect the extension end play and adjust it to within specifications. <Ref. to 4AT-89, ADJUSTMENT, Transfer Clutch.>

1) Check clearance between snap ring and pressure gauge.
2) Before measuring clearance, place the same thickness of shim on both sides to prevent pressure plate from tilting.
3) If the clearance is not within specification, adjust it by selecting a suitable pressure plate on transfer clutch piston side.

Initial standard:
0.7 — 1.1 mm (0.028 — 0.043 in)

Limit thickness:
1.6 mm (0.063 in)

4) Check that the tight corner braking does not occur when the vehicle is started with steering wheel held at fully turned position. If tight corner braking occurs, perform the following procedures.

(1) With the steering wheel held at fully turned position, drive the vehicle in “D” range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for approx. ten times each, while repeating acceleration and braking intermittently.
(2) If the tight corner braking still persists, drive the vehicle again in a circle for several laps.

F: ADJUSTMENT

1. MPT MODEL

1) Measure the distance “A” from the end of extension case to rear drive shaft using ST.

ST 398643600 GAUGE

2) Measure the distance “B” from the transmission case mating surface to the reduction drive gear end surface using ST1 and ST2.

ST1 398643600 GAUGE
ST2 499577000 GAUGE

Pressure plate

<table>
<thead>
<tr>
<th>Part number</th>
<th>Thickness mm (in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>31593AA151</td>
<td>3.3 (0.130)</td>
</tr>
<tr>
<td>31593AA161</td>
<td>3.7 (0.146)</td>
</tr>
<tr>
<td>31593AA171</td>
<td>4.1 (0.161)</td>
</tr>
<tr>
<td>31593AA181</td>
<td>4.5 (0.177)</td>
</tr>
</tbody>
</table>
3) Calculation formula:

NOTE:
Calculate “T”:

\[ T = A - B + 35.4 \text{ mm} \]

\[ T = A - B + 1.3937 \text{ in} \]

T: Thrust needle bearing thickness
A: Distance from end of extension case to end of rear drive shaft
B: Distance from end of transmission case to end of reduction drive gear

Example:
When, \( A = 33.6 \text{ mm (1.3228 in)}, B = 65.05 \text{ mm (2.5610 in)} \)

\[ T = 33.6 - 65.05 + 35.4 = 3.95 \]

\[ T = 1.3228 - 2.5610 + 1.3937 = 0.1555 \]

After calculation, the value of “T” becomes 3.95, therefore select bearing thickness of 3.8 mm (0.150 in).

NOTE:
Calculation formula for “T” is applied when measuring using ST (398643600 GAUGE, 499577000 GAUGE). When not using ST, apply

\[ T = (A - \alpha + 0.45 \text{ mm}) - (B - \beta) - H \]

\[ T = (A - \alpha + 0.0177 \text{ in}) - (B - \beta) - H \]

T: Thrust needle bearing thickness
A: Distance from end of extension case to end of reduction drive shaft
B: Distance from end of transmission case to end of rear drive shaft
\( \alpha \): Collar thickness used when measuring “A”
\( \beta \): Collar thickness used when measuring “B”
0.45: Gasket thickness (mm)
0.0177: Gasket thickness (in)
H: Shim clearance

<table>
<thead>

2. VTD MODEL

1) Insert the rear drive shaft into the reduction drive gear and center differential assembly.

![Diagram of VTD Model](AT-02211)

- (A) Rear drive plate
- (B) Center differential carrier

2) Using the ST, measure the distance “A” between the mating surface of extension case and the surface of rear drive shaft ball bearing outer race.

![Diagram with measurement](AT-01031)

A: Measured value

3) Using the ST, measure the distance “B” between the mating surface of transmission case and rear drive shaft ball bearing.

![Diagram with measurement](AT-01032)

B: Measured value
4) Formula:

NOTE:

- Calculation of “T”:

When clearances are 0.05 mm (0.0020 in), select up to four adjusting shims from the table, suitable for clearance value.

When clearances are 0.05 mm (0.0020 in)

\[ T = A - B + 0.40 \text{ mm} \]
\[ [T = A - B + 0.0157 \text{ in}] \]

When clearances are 0.25 mm (0.0098 in)

\[ T = A - B + 0.20 \text{ mm} \]
\[ [T = A - B + 0.0079 \text{ in}] \]

A: Distance between extension case edge and rear driveshaft edge

B: Distance between transmission case edge and reduction drive gear edge

T: Shim thickness

0.05 — 0.25 mm (0.0020 — 0.0098 in)

Example:

When, \( A = 90.50 \text{ mm (3.5630 in)} \), \( B = 90.35 \text{ mm (3.5571 in)} \)

Calculation for 0.05 mm (0.0020 in) of clearance

\[ T = 90.50 - 90.35 + 0.4 = 0.55 \]
\[ [T = 3.5630 - 3.5571 + 0.0157 = 0.0216 \text{ in}] \]

Calculation when clearance is 0.25 mm (0.0098 in)

\[ T = 90.50 - 90.35 + 0.2 = 0.35 \]
\[ [T = 3.5630 - 3.5571 + 0.0079 = 0.0138 \text{ in}] \]

- Calculation formula for “T” is applied when measuring using ST (398643600 GAUGE). When not using ST, apply

\[ T = (A - \alpha + 0.45 \text{ mm}) - (B - \beta) - H \]
\[ [T = (A - \alpha + 0.0177 \text{ in}) - (B - \beta) - H] \]

A: Distance from end of extension case to end of surface of rear drive shaft ball bearing outer race

B: Distance from end of transmission case to end of rear drive shaft ball bearing

\( \alpha \): Collar thickness used when measuring “A”

\( \beta \): Collar thickness used when measuring “B”

0.45: Gasket thickness (mm)

H: Shim clearance

After calculation, the value of “T” becomes between 0.35 mm (0.0138 in) and 0.55 mm (0.0216 in), therefore select two shims with thickness of 0.2 mm (0.010 in) or one shim with thickness of 0.5 mm (0.020 in).

<table>
<thead>
<tr>
<th>Adjusting shim</th>

</tbody>
</table>
30. Multi-plate Clutch

A: REMOVAL
Remove the multi-plate clutch following the same instructions as for the extension case. <Ref. to 4AT-82, REMOVAL, Extension Case.>

B: INSTALLATION
Install the multi-plate clutch following the same instructions as for the extension case. <Ref. to 4AT-82, INSTALLATION, Extension Case.>

C: INSPECTION
- Inspect the drive plate facing for wear and damage.
- Make sure the snap ring is not worn and the return spring has no permanent distortion, damage, or deformation.
- Inspect the lathe cut seal ring for damage.
- Measure the multi-plate clutch clearance and adjust it to within the specification range. <Ref. to 4AT-92, ADJUSTMENT, Multi-plate Clutch.>

D: ADJUSTMENT
1) Remove the drive plate and driven plate from center differential carrier.
2) Using the ST, measure the distance “A” from the extension case joining surface to the multi-plate clutch piston.

ST 398643600 GAUGE

3) Using the ST, measure the height “B” from the transmission case joining edge to the center differential clutch drum edge.

4) Calculation formula
T = A – B + 0.45 mm
[T = A – B + 0.0177 in]

NOTE:
- Calculation formula for “T” is applied when measuring using ST (398643600 GAUGE, 398744300 GAUGE). When not using ST, apply
T = (A – α + 0.45 mm) – (B – β)
[T = (A – α + 0.0177 in) – (B – β)].

T: Thrust needle bearing thickness
A: Distance from end of extension case to end of reduction drive shaft
B: Distance from end of transmission case to end of rear drive shaft
α: Collar thickness used when measuring “A”
β: Collar thickness used when measuring “B”
0.45: Gasket thickness (mm)
- Measure the multi-plate clutch (LSD) driven and drive plate thickness to find the clearance between measurement value and “T”.

Initial standard:
0.2 — 0.6 mm (0.008 — 0.024 in)

Limit thickness:
1.6 mm (0.063 in)

If the clearance exceeds the limit thickness, replace the plate set (drive and driven plate). Select a multi-plate clutch (LSD) piston driven plate that will bring clearance within the standard value.

31.Rear Drive Shaft

A: REMOVAL

1) Remove the transmission assembly. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear wheel speed sensor, and separate the extension case from transmission case. <Ref. to 4AT-82, REMOVAL, Extension Case.>
3) Pull out the rear driveshaft from center differential assembly.

4) Remove the drive plate and driven plate.

B: INSTALLATION

1) Select the appropriate shim. <Ref. to 4AT-90, VTD MODEL, ADJUSTMENT, Transfer Clutch.>
2) Install the drive plate and driven plate.
3) Insert the rear driveshaft into center differential assembly.
4) Combine the transmission case and extension case. Install the rear wheel speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>
5) Install the transmission assembly. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Using a press, remove the revolution gear.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:
- Use a new revolution gear and ball bearings.
- Make sure the clutch hub is in the correct direction.

E: INSPECTION

- Inspect the parts to make sure there are no holes, cuts, and that they are not dusty.
- Inspect the extension end play, and adjust it to within the standard value. <Ref. to 4AT-90, VTD MODEL, ADJUSTMENT, Transfer Clutch.>
32. Reduction Driven Gear

A: REMOVAL

1. MPT MODEL

1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor, and then separate the extension case from transmission case. <Ref. to 4AT-82, REMOVAL, Extension Case.>
3) Set the select lever to “P” range.
4) Remove the caulking part, and then remove the lock nut.
5) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737000 PULLER
ST2 899524100 PULLER SET

2. VTD MODEL

1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove rear vehicle speed sensor, and separate the extension case from transmission case. <Ref. to 4AT-82, REMOVAL, Extension Case.>
3) Remove the rear drive shaft. <Ref. to 4AT-93, REMOVAL, Rear Drive Shaft.>
4) Set the range select lever to “P”.
5) Straighten the staked portion, and remove the lock nut.
6) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737000 PULLER
ST2 899524100 PULLER SET
7) Pull out the center differential assembly. <Ref. to 4AT-98, REMOVAL, Center Differential Carrier.>

B: INSTALLATION

1. MPT MODEL

1) Set the select lever to “P” range.
2) Using a plastic hammer, install the reduction driven gear assembly and new washer, and tighten new drive pinion lock nut.

Tightening torque: 100 N·m (10.2 kgf-m, 73.8 ft-lb)

3) After tightening, stake the lock nut securely.
4) Combine the transmission case with extension case, and then install the rear vehicle speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>
5) Install the transmission assembly into vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>
Reduction Driven Gear

2. VTD MODEL

1) Set the select lever to “P” range.
2) Using a plastic hammer, install the reduction driven gear assembly.
3) Using a plastic hammer, install the center differential assembly.
4) Install a new self-lock nut and a washer.

*Tightening torque:*

\[ 100 \text{ N\cdotm} (10.2 \text{ kgf\cdotm, 73.8 ft-lb}) \]

5) After tightening, stake the lock nut securely.
6) Insert the rear drive shaft assembly. <Ref. to 4AT-93, INSTALLATION, Rear Drive Shaft.>
7) Combine the transmission case with extension case, and install the rear vehicle speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>
8) Install the transmission assembly to vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the snap ring from reduction driven gear.

2) Remove the ball bearing from reduction driven gear using ST.

\[ \text{ST 498077600 \ REMOVER} \]

3) Remove the snap ring from reduction driven gear.

D: ASSEMBLY

1) Install the snap ring to reduction driven gear.
2) Install the new ball bearing to reduction driven gear using press.

E: INSPECTION

Make sure the ball bearing and gear is not deformed or damaged.
33. Reduction Drive Gear

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor, and then separate the extension case from transmission case. <Ref. to 4AT-82, REMOVAL, Extension Case.>
3) Remove the reduction driven gear. <Ref. to 4AT-94, REMOVAL, Reduction Driven Gear.>
4) Using the ST, extract the reduction drive gear.
   ST1 499737100 PULLER
   ST2 899524100 PULLER SET

B: INSTALLATION
1) Install the reduction drive gear assembly.
   NOTE:
   Press-fit it to the bottom of bearing shoulder completely.
2) Install the reduction driven gear. <Ref. to 4AT-94, INSTALLATION, Reduction Driven Gear.>
3) Using the press, remove the reduction drive gear.

C: DISASSEMBLY
1) Take out the seal ring.
2) Remove the ball bearing using ST.
   ST 498077600 REMOVER

D: ASSEMBLY
1) Press-fit the reduction drive gear to shaft.
2) Press-fit the new ball bearing into reduction drive gear.
3) Apply vaseline to the outer surface of seal ring and shaft groove.
4) Apply ATF to new seal rings and install them.

(A) Seal ring
(B) Reduction drive shaft

E: INSPECTION
- Rotate the bearing by hand, make sure it rotates smoothly.
- Check that the holes, damages or other foreign matters are not on each parts.
- Measure the extension end play and adjust it to within specifications. <Ref. to 4AT-89, ADJUSTMENT, Transfer Clutch.>
34. Center Differential Carrier

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear wheel speed sensor, and separate the extension case from transmission case. <Ref. to 4AT-82, REMOVAL, Extension Case.>
3) Pull out the rear driveshaft. <Ref. to 4AT-93, REMOVAL, Rear Drive Shaft.>
4) Using the STs, pull out the center differential carrier assembly.
   ST1 499737100 PULLER
   ST2 899524100 PULLER SET

5) Pull out the shim(s) from transmission case.

B: INSTALLATION
1) Install the center differential assembly with the shim(s).

   NOTE:
   Insert the center differential assembly and shim(s) completely into bearing shoulder bottom.

2) Insert the rear driveshaft. <Ref. to 4AT-93, INSTALLATION, Rear Drive Shaft.>
3) Connect the transmission case and extension case, and install the rear wheel speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>
4) Install the transmission assembly onto vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY
1) Remove the seal rings.

2) Using a press and the ST, remove the ball bearing.
   ST 498077600 REMOVER

3) Remove the snap ring, and pull out the shaft from center differential assembly.
4) Remove the thrust washers, pinion gears, and washers from center differential assembly.

![Image](AT-00169)

(A) Pinion gear

5) Pull out the intermediate shaft and thrust bearing.

**D: ASSEMBLY**

1) Install the thrust washer onto intermediate shaft.
2) Install the thrust bearing onto the intermediate shaft.
3) Install the pinion gears and washers.
4) Insert the shaft into center differential assembly.
5) Install the snap ring.
6) Using a press, install a new ball bearing into center differential assembly.
7) Apply vaseline onto the seal ring outer surface and shaft grooves.
8) Install new seal rings.

**E: INSPECTION**

- Check all the parts for hole, score, or dirt.
- Check the play of the extension end, and if necessary, adjust it. <Ref. to 4AT-90, VTD MODEL, ADJUSTMENT, Transfer Clutch.>
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.
# AUTOMATIC TRANSMISSION

35. Parking Pawl

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor, and then separate the extension case from transmission case. <Ref. to 4AT-82, REMOVAL, Extension Case.>
3) Remove the reduction drive gear. <Ref. to 4AT-96, REMOVAL, Reduction Drive Gear.>
4) Remove the parking pawl, return spring and shaft.

B: INSTALLATION
1) Install the parking pawl, return spring and shaft.
2) Install the reduction drive gear. <Ref. to 4AT-96, INSTALLATION, Reduction Drive Gear.>
3) Install the extension case and rear vehicle speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>
4) Install the transmission assembly into the vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION
Make sure that the tab of parking pawl on reduction gear is not worn or otherwise damaged.
36. Converter Case

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter clutch assembly. <Ref. to 4AT-80, REMOVAL, Torque Converter Clutch Assembly.>
3) Remove the input shaft.
4) Lift-up the lever on the rear side of connector, and then disconnect it from the stay.
5) Disconnect the inhibitor switch connector from the stay.
6) Remove the oil charge pipe. <Ref. to 4AT-79, REMOVAL, Oil Charge Pipe.>
7) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-67, REMOVAL, ATF Cooler Pipe and Hose.>
8) Remove the converter case aligning bolt, and then separate the transmission case and converter case by lightly tapping with plastic hammer.

NOTE:
- Be careful not to damage the oil seal and bush inside the converter case by the oil pump cover.

9) Remove the seal pipe.

10) Remove the differential assembly. <Ref. to 4AT-113, REMOVAL, Front Differential Assembly.>

B: INSTALLATION

1) Check the appearance of each component and clean them.
2) Press-fit the oil seal to converter case using ST. ST 398437700 DRIFT
3) Install the differential assembly to case. <Ref. to 4AT-113, INSTALLATION, Front Differential Assembly.>
4) Install the left and right side retainers. <Ref. to 4AT-117, ADJUSTMENT, Front Differential Assembly.>
5) Install the new seal pipe to converter case.

6) Install the rubber seal to converter case.

7) Apply proper amount of liquid gasket to the entire matching surface of converter case.

   **Liquid gasket:**
   
   THREE BOND 1215 (Part No. 004403007)

8) Install the converter case assembly without damaging bushing and oil seal.

   **Tightening torque:**
   
   41 N·m (4.2 kgf-m, 30.4 ft-lb)

9) Insert the inhibitor switch and transmission connector to the stay.

10) Install the air breather hose. <Ref. to 4AT-78, INSTALLATION, Air Breather Hose.>

11) Install the oil cooler pipe. <Ref. to 4AT-69, INSTALLATION, ATF Cooler Pipe and Hose.>

12) Install the oil charge pipe with O-ring. <Ref. to 4AT-79, INSTALLATION, Oil Charge Pipe.>

13) Insert the input shaft with rotating it by hand lightly, and then check the protrusion amount.

   **Normal protrusion A:**
   
   50 — 55 mm (1.97 — 2.17 in)

14) Install the torque converter clutch assembly. <Ref. to 4AT-80, INSTALLATION, Torque Converter Clutch Assembly.>

15) Install the transmission assembly into vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

**C: INSPECTION**

Measure the backlash, and then adjust it within specification. <Ref. to 4AT-110, ADJUSTMENT, Drive Pinion Shaft Assembly.>
37. Oil Pump Housing

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter clutch assembly. <Ref. to 4AT-80, REMOVAL, Torque Converter Clutch Assembly.>
3) Remove the input shaft.
4) Lift-up the lever on the rear side of transmission harness connector, and then remove it from stay.
5) Remove the inhibitor switch connector from stay.
6) Remove the oil charge pipe. <Ref. to 4AT-79, REMOVAL, Oil Charge Pipe.>
7) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-67, REMOVAL, ATF Cooler Pipe and Hose.>
8) Separate the converter case and transmission case part. <Ref. to 4AT-101, REMOVAL, Converter Case.>
9) Separate the transmission case and extension case part. <Ref. to 4AT-82, REMOVAL, Extension Case.>
10) Remove the reduction drive gear. <Ref. to 4AT-96, REMOVAL, Reduction Drive Gear.>
11) Remove the reduction driven gear. <Ref. to 4AT-94, REMOVAL, Reduction Driven Gear.>
12) Loosen the oil pump housing mounting bolts.
13) Place two wooden blocks on the workbench, and stand the transmission case with its rear end facing down.

NOTE:
- Be careful not to scratch the rear mating surface of transmission case.
- Note that the parking rod and drive pinion protrudes from mating surface.

B: INSTALLATION

1) Secure the oil pump housing with two nuts and a bolt.

Tightening torque: 42 N·m (4.3 kgf-m, 31 ft-lb)
2) Install the converter case assembly into transmission case assembly. <Ref. to 4AT-80, INSTALLATION, Torque Converter Clutch Assembly.>

3) Install the reduction driven gear. <Ref. to 4AT-94, INSTALLATION, Reduction Driven Gear.>

4) Install the reduction drive gear. <Ref. to 4AT-96, INSTALLATION, Reduction Drive Gear.>

5) Combine the transmission case with extension case, and then install the rear vehicle speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>

6) Insert the inhibitor switch and transmission connector to the stay.

7) Install the oil cooler pipe. <Ref. to 4AT-69, INSTALLATION, ATF Cooler Pipe and Hose.>

8) Install the oil charge pipe with a O-ring. <Ref. to 4AT-79, INSTALLATION, Oil Charge Pipe.>

9) Insert the input shaft with rotating it by hand lightly, and then check the protrusion amount.

**Normal protrusion A:**

50 — 55 mm (1.97 — 2.17 in)

10) Install the torque converter clutch assembly. <Ref. to 4AT-80, INSTALLATION, Torque Converter Clutch Assembly.>

11) Install the transmission assembly into vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

---

**C: DISASSEMBLY**

1. **OIL PUMP COVER**

1) Remove four seal rings.

2) Remove the cover by lightly tapping the end of stator shaft.

3) Remove the inner and outer rotor.

---

4AT-104
2. OIL SEAL RETAINER

1) Remove the oil seal retainer.

![Diagram of Oil Seal Retainer](AT-00183)

(A) Oil seal retainer
(B) Drive pinion shaft

2) Remove the O-ring.

![Diagram of O-ring](AT-00186)

(A) O-ring

3) Remove the oil seal from oil seal retainer.

![Diagram of Oil Seal](AT-00185)

(A) Oil seal
(B) Oil seal retainer

D: ASSEMBLY

1. OIL PUMP COVER

1) Install the oil pump rotor assembly to oil pump housing.

![Diagram of Oil Pump Cover](AT-01036)

(A) Inner rotor
(B) Outer rotor

2) Align both pivots with the pivot holes of cover, and then install the oil pump cover being careful not to apply excessive force to the pivots.

**Tightening torque:**

25 N·m (2.5 kgf·m, 18.1 ft-lb)

3) After assembling, turn the oil pump shaft to check the smooth rotation of rotor.

![Diagram of Oil Pump Housing](AT-00190)

(A) Oil pump cover
(B) Oil pump housing
4) Apply vaseline to the oil seal retainer and new seal rings, and install them. After installing, adjust the tooth contact and backlash of drive pinion. <Ref. to 4AT-107, ADJUSTMENT, Oil Pump Housing.>

3) Install the oil seal and secure it using three bolts being careful not to damage oil seal lip.

**Tightening torque:**
7 Nm (0.7 kgf-m, 5.1 ft-lb)

---

### 2. OIL SEAL RETAINER

1) Apply ATF to new oil seals (two), and install them to the oil seal retainer in proper direction using ST.

ST 499247300 INSTALLER

2) Apply ATF to a new O-ring and install it to the oil seal retainer. Install the seal to oil pump housing bore.

**Tip clearance:**
0.02 — 0.15 mm (0.0008 — 0.0059 in)

---

### E: INSPECTION

1) Check the seal ring and oil seal for breaks and damages.
2) Check other parts for dents or abnormalities.
3) Selection of oil pump rotor assembly
   1) Tip clearance
      Install the inner rotor and outer rotor to oil pump. With rotor gears facing each other, measure the crest-to-crest clearance.

**Tip clearance:**
0.02 — 0.15 mm (0.0008 — 0.0059 in)
(2) Side clearance
Set a depth gauge to oil pump housing, then measure the oil pump housing-to-rotor clearance.

**Side clearance:**
0.02 — 0.04 mm (0.0008 — 0.0016 in)

(A) Depth gauge
(B) Inner rotor
(C) Outer rotor

(3) If the depth and/or side clearance are not within the specifications, replace the rotor assembly.

Measure the total end play and adjust it within specifications. <Ref. to 4AT-107, ADJUSTMENT, Oil Pump Housing.>

**F: ADJUSTMENT**

1) Using the ST, measure the length “L”, which is from the mating surface of transmission to the recessed portion of high clutch drum.

ST 398643600 GAUGE

2) Using the ST, measure the length from oil pump housing mating surface to the top surface of oil pump cover with thrust needle bearing.

3) Calculation of total end play
Select the suitable bearing race from among those listed in this table so that clearance C to be within 0.25 to 0.55 mm (0.0098 to 0.0217 in).

\[
C = (L + G) - L
\]

<table>

</tbody>
</table>

4) After completing the end play adjustment, insert the bearing race in recess of the high clutch. Install the thrust needle bearing to oil pump cover using vaseline.

5) After correctly install the new gasket to the case mating surface, carefully install the oil pump housing assembly. Be careful to avoid hitting the drive pinion against the inside of case.

6) Install both parts with dowel pins aligned. Make sure no clearance at mating surface.
Drive Pinion Shaft Assembly

38.Drive Pinion Shaft Assembly

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter clutch assembly. <Ref. to 4AT-80, REMOVAL, Torque Converter Clutch Assembly.>
3) Remove the input shaft.
4) Lift-up the lever on rear side of transmission harness connector, and then disconnect it from the stay.
5) Disconnect the inhibitor switch connector from the stay.
6) Disconnect the air breather hose. <Ref. to 4AT-78, REMOVAL, Air Breather Hose.>
7) Remove the oil charge pipe. <Ref. to 4AT-79, REMOVAL, Oil Charge Pipe.>
8) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-67, REMOVAL, ATF Cooler Pipe and Hose.>
9) Separate the converter case and transmission case part. <Ref. to 4AT-101, REMOVAL, Converter Case.>
10) Separate the transmission case and extension case part. <Ref. to 4AT-82, REMOVAL, Extension Case.>
11) Remove the reduction drive gear. <Ref. to 4AT-96, REMOVAL, Reduction Drive Gear.>
12) Remove the reduction driven gear. <Ref. to 4AT-94, REMOVAL, Reduction Driven Gear.>
13) Remove the drive pinion shaft mounting bolt and remove the drive shaft assembly from oil pump housing.

B: INSTALLATION
1) Assemble the drive pinion assembly to oil pump housing.

NOTE:
- Be careful not to bend the shim.
- Be careful not to press-fit the pinion into housing bore.

 Tightening torque: 40 N·m (4.0 kgf-m, 30 ft-lb)
2) Combine the torque converter case with transmission case. <Ref. to 4AT-101, INSTALLATION, Converter Case.>
3) Install the reduction driven gear. <Ref. to 4AT-94, INSTALLATION, Reduction Driven Gear.>
4) Install the reduction drive gear. <Ref. to 4AT-96, INSTALLATION, Reduction Drive Gear.>
5) Combine the transmission case with the extension case, and then install the rear vehicle speed sensor. <Ref. to 4AT-82, INSTALLATION, Extension Case.>
6) Insert the inhibitor switch and transmission connector to the stay.
7) Install the oil cooler inlet and outlet pipes. <Ref. to 4AT-69, INSTALLATION, ATF Cooler Pipe and Hose.>
8) Install the oil charge pipe with O-ring.
9) Insert the input shaft with rotating it by hand lightly, and then check the protrusion amount.
Normal protrusion A:  
50 — 55 mm (1.97 — 2.17 in)

10) Install the torque converter clutch assembly.  
<Ref. to 4AT-80, INSTALLATION, Torque Converter Clutch Assembly.>

11) Install the transmission assembly into vehicle.  
<Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY
1) Remove the caulking part of lock nut, and then remove the lock nut with holding the rear spline part of shaft using ST1 and ST2. Pull out the drive pinion collar.

ST1  498937110  HOLDER  
ST2  499787700  WRENCH  
ST3  499787500  ADAPTER

2) Remove the O-ring.
3) Separate the roller bearing and outer race from shaft using press.

D: ASSEMBLY
1) Measure the dimension “A” of drive pinion shaft

ST  398643600  GAUGE

2) Using a press, press-fit the new roller bearing into specified position.

NOTE:  
If excessive force is applied to roller bearing, the roller bearing will not turn easily.

3) After applying ATF to a new O-ring and fitting it to the shaft, attach the drive pinion collar to shaft.
4) Install the lock washer to drive pinion shaft in proper direction.
5) Tighten the new lock nuts using ST1, ST2 and ST3.

Calculate the lock washer and lock nut specifications using following formula.

\[ T_2 = \frac{L_2}{L_1 + L_2} \times T_1 \]

- \( T_1: 116 \text{ N-m (11.8 kgf-m, 85.3 ft-lb)} \)
- \( \text{[Required torque setting]} \)
- \( T_2: \text{Tightening torque} \)
- \( L_1: \text{ST2 length 0.072 m (2.83 in)} \)
- \( L_2: \text{Torque wrench length} \)

Example:

<table>
<thead>
<tr>
<th>Torque wrench length (m)</th>
<th>Tightening torque (N-m [kgf-m, ft-lb])</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.4 (15.75)</td>
<td>98 (10.0, 72)</td>
</tr>
<tr>
<td>0.45 (17.72)</td>
<td>100 (10.2, 73.8)</td>
</tr>
<tr>
<td>0.5 (19.69)</td>
<td>101 (10.3, 74.5)</td>
</tr>
<tr>
<td>0.55 (21.65)</td>
<td>102 (10.4, 75)</td>
</tr>
</tbody>
</table>

ST1 498937110 HOLDER
ST2 499787700 WRENCH
ST3 499787500 ADAPTER

NOTE: Install the ST2 to torque wrench as straight as possible.

6) Measure the starting torque of bearing. Make sure the starting torque is within the specified range. If the torque is not within specified range, replace the roller bearing.

**Starting torque:**

\[ 7.6 — 38.1 \text{ N (0.776 — 3.88 kgf, 1.7 — 8.6 lb)} \]

7) Stake the lock nut at two points.
8) Measure the dimension “B” of drive pinion shaft

9) Calculate the thickness “t” (mm) of drive pinion shim.

\[ t = 6.5 \pm 0.0625 - (B - A) \]

10) Select three or less shims from following table.

<table>
<thead>
<tr>
<th>Drive pinion shim</th>
<th>Thickness (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>31451AA050</td>
<td>0.150 (0.0059)</td>

</tbody>
</table>

E: INSPECTION
- Make sure that all component parts are free of harmful cut, gouges, and other faults.
- Adjust the teeth alignment. <Ref. to 4AT-110, ADJUSTMENT, Drive Pinion Shaft Assembly.>

F: ADJUSTMENT
1) Remove the liquid gasket completely.
2) Install the oil pump housing assembly to converter case, and secure them with tightening four bolts evenly.

NOTE:
Use an old gasket or an aluminum washer so as not to damage the mating surface of housing.

**Tightening torque:**

\[ 41 \text{ N-m (4.2 kgf-m, 30.4 ft-lb)} \]
4) Adjust backlash between drive pinion and crown gear. <Ref. to 4AT-117, ADJUSTMENT, Front Differential Assembly.>
5) Apply red lead evenly to the surfaces of three or four teeth on crown gear. Rotate the drive pinion in the forward and reverse directions for several times. Remove the oil pump housing, and check the tooth contact pattern.
If the tooth contact is improper, readjust the backlash or shim thickness. <Ref. to 4AT-117, ADJUSTMENT, Front Differential Assembly.>
- Correct tooth contact
  **Checking item:** Tooth contact pattern is slightly shifted toward toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]
- Flank contact
  **Checking item:** Backlash is too small.
  Corrective action: Reduce thickness of pinion height adjusting washer in order to bring drive pinion away from driven gear.

**Face contact**

**Checking item:** Backlash is too large.
Corrective action: Increase thickness of pinion height adjusting washer in order to bring drive pinion close to driven gear.
Drive Pinion Shaft Assembly

- Toe contact (inside end contact)
  **Checking item: Contact area is small.**
  Contact pattern

  Corrective action: Reduce thickness of pinion height adjusting washer in order to bring drive pinion away from driven gear.

- Heel contact (outside end contact)
  **Checking item: Contact area is small.**
  Contact pattern

  Corrective action: Increase thickness of pinion height adjusting washer in order to bring drive pinion close to driven gear.

6) If tooth contact is correct, mark the retainer position and loosen it. After fitting a new O-ring and oil seal, screw in the retainer to the marked position. Tighten the lock plate with specified torque.

**Tightening torque:**
25 N-m (2.5 kgf-m, 18.1 ft-lb)

(A) Lock plate
39. Front Differential Assembly

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter clutch assembly. <Ref. to 4AT-80, REMOVAL, Torque Converter Clutch Assembly.>
3) Remove the input shaft.
4) Lift-up the lever on rear side of transmission harness connector, and then remove it from the stay.
5) Remove the inhibitor switch from the stay.
6) Remove the oil charge pipe. <Ref. to 4AT-79, REMOVAL, Oil Charge Pipe.>
7) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-67, REMOVAL, ATF Cooler Pipe and Hose.>
8) Separate the converter case and transmission case. <Ref. to 4AT-101, REMOVAL, Converter Case.>
9) Remove the seal pipe.
10) Remove the differential side retainers using ST.

NOTE:
Hold the differential case assembly by hand to avoid damaging retainer mounting hole of converter case.

ST 499787000 WRENCH ASSY

11) Remove the differential assembly without damaging installation part of retainer.

B: INSTALLATION

1) When installing the differential assembly to case, be careful not to damage the inside of case (particularly, the differential side retainer mating surface).

2) Install the O-ring to left and right side retainer.
3) Install the side retainers using ST. <Ref. to 4AT-117, ADJUSTMENT, Front Differential Assembly.>

ST 499787000 WRENCH ASSY

4) Adjust the front differential backlash. <Ref. to 4AT-117, ADJUSTMENT, Front Differential Assembly.>
5) Install the lock plate.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

6) Install the new seal pipe to converter case.

(A) Differential assembly

(A) Lock plate

(A) Seal pipe
7) Install the converter case to transmission case.  
<Ref. to 4AT-101, INSTALLATION, Converter Case.>

8) Insert the inhibitor switch and transmission connector to the stay.

9) Install the oil cooler pipe. <Ref. to 4AT-69, INSTALLATION, ATF Cooler Pipe and Hose.>
10) Install the oil charge pipe with a O-ring. <Ref. to 4AT-79, INSTALLATION, Oil Charge Pipe.>
11) Insert the input shaft with rotating it by hand lightly, and then check the protrusion amount.

*Normal protrusion A:*
50 — 55 mm (1.97 — 2.17 in)

12) Install the torque converter clutch assembly.  
<Ref. to 4AT-80, INSTALLATION, Torque Converter Clutch Assembly.>
13) Install the transmission assembly into vehicle.  
<Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

---

**C: DISASSEMBLY**

1. DIFFERENTIAL CASE ASSEMBLY

1) Remove taper roller bearing using ST and press.
ST 498077000 REMOVER

2) Secure the case in a vise and remove the hypoid driven gear tightening bolts, then separate the hypoid driven gear, case (RH) and case (LH).

3) Pull out the straight pin and shaft, and then remove the differential bevel gear, washer and differential bevel pinion.
2. SIDE RETAINER

NOTE:
After adjusting the drive pinion backlash and tooth contact, remove and install the oil seal and O-ring.

1) Remove the O-ring.

2) Remove the oil seal.

3) Remove the split pin, and then remove the claw.

4) Attach two claws to the outer race, and set the ST to side retainer.

5) Restore the removed claws to original position, and install the pin and split pin.

6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.

NOTE:
Replace the bearing inner and outer races as a single unit.

(A) Shaft
(B) Claw

(A) Shaft
(B) Side retainer
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the washer, differential bevel gear and differential bevel pinion in differential case (RH). Insert the pinion shaft.
2) Install the straight pin in reverse direction.
3) Install the washer and differential bevel gear to differential case (LH). Put the differential case (RH) on the case, and then combine the both cases.
4) Install the hypoid driven gear and secure by tightening the bolt.

**Tightening torque:**

\[ 62 \text{ Nm (6.3 kgf-m, 45.6 ft-lb)} \]

5) Measurement of backlash (Selection of washer)

- (1) Install the SUBARU genuine axle shaft to differential case.
- (2) Measure the gear backlash using ST1 and ST2, and then insert the ST2 from the access window of case.
- (3) If the backlash is not within specified, select a washer from the table below.

**Standard value:**

\[ 0.13 - 0.18 \text{ mm (0.0051 - 0.0071 in)} \]

<table>
<thead>
<tr>
<th>Washer</th>
<th>Part number</th>
<th>Thickness mm (in)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>803038021</td>
<td>0.95 (0.037)</td>
</tr>
<tr>
<td></td>
<td>803038022</td>
<td>1.00 (0.039)</td>
</tr>
<tr>
<td></td>
<td>803038023</td>
<td>1.05 (0.041)</td>
</tr>
</tbody>
</table>

6) Using the ST, install the taper roller bearing.

**ST** 398487700 DRIFT

(A) Differential case (RH)

(B) Differential case (LH)

(C) Hypoid driven gear

(A) Differential case (RH)

2. SIDE RETAINER

1) Install the bearing outer race to side retainer.
2) Install a new oil seal using ST and hammer.

**ST** 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

- Measure the backlash by applying a pinion tooth between two bevel gear teeth.
3) Apply gear oil to a new O-ring and install it.

**E: INSPECTION**
- Check each component for scratches, damage and other faults.
- Measure the backlash, and then adjust it within specification.

<Ref. to 4AT-117, ADJUSTMENT, Front Differential Assembly.>

**F: ADJUSTMENT**

1) Using the ST, screw-in the retainer until light contact is felt.

**NOTE:**
Screw-in the RH side slightly deeper than the LH side.

ST 499787000 WRENCH ASSY

2) Remove the oil pump housing.

3) Remove the liquid gasket completely.

4) Install the oil pump housing assembly to converter case, and secure them with tightening four bolts evenly.

**NOTE:**
Use an old gasket or an aluminum washer so as not to damage the mating surface of housing.

5) Rotate the drive pinion several times using ST1 and ST2.

**ST1 498937110 HOLDER**

**ST2 499787700 WRENCH**

**Tightening torque:**

41 N·m (4.2 kgf-m, 30.4 ft-lb)
6) Tighten the retainer LH until contact is felt while rotating the shaft. Then loosen the retainer RH. Keep tightening the retainer LH, and loosening the retainer RH until the pinion shaft cannot be turned. This is the “zero” state.

7) After the “zero” state is established, back off the retainer LH 3 notches and secure it with the lock plate. Then back off the retainer RH and retighten until it stops. Rotate the drive pinion few times. Tighten the retainer RH 1-3/4 notches further. This sets the preload. Finally, secure the retainer with its lock plate.

(4) Retainer

NOTE:
Turning the retainer by one tooth changes the backlash about 0.05 mm (0.0020 in).

8) Install the SUBARU genuine axle shaft to both side of front differential part.
Parts No. 38415AA000 AXLE SHAFT

9) Turn the drive pinion several times with ST1 and check to see if the backlash is within the specified value with ST2, ST3, ST4 and ST5.

ST4 499787500 ADAPTER
ST5 498255400 PLATE

Backlash:
0.13 — 0.18 mm (0.0051 — 0.0071 in)

10) Adjust the tooth contact between front differential and drive shaft. <Ref. to 4AT-110, ADJUSTMENT, Drive Pinion Shaft Assembly.>

(A) Retainer

(A) Lock plate
40. AT Main Case

A: REMOVAL

1) Remove the transmission assembly from vehicle. *<Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>*
2) Pull out the torque converter clutch assembly.  *<Ref. to 4AT-80, REMOVAL, Torque Converter Clutch Assembly.>*
3) Remove the input shaft.

4) Lift-up the lever on the rear side of transmission harness connector, and then disconnect it from the stay.
5) Disconnect the inhibitor switch connector from the stay.
6) Disconnect the air breather hose.
7) Remove the oil charge pipe. *<Ref. to 4AT-79, REMOVAL, Oil Charge Pipe.>*
8) Remove the oil cooler inlet and outlet pipes. *<Ref. to 4AT-67, REMOVAL, ATF Cooler Pipe and Hose.>*
9) Separate the converter case and transmission case. *<Ref. to 4AT-101, REMOVAL, Converter Case.>*
10) Remove the oil pump housing.  *<Ref. to 4AT-103, REMOVAL, Oil Pump Housing.>*
11) Take out the high clutch, thrust needle bearing and reverse clutch assembly.
12) Take out the high clutch hub and thrust bearing.
13) Take out the front sun gear and thrust needle bearing.
14) Pull out the leaf spring without folding.

NOTE: Remove it while pressing down on lower leaf spring.
15) Remove the snap ring and thrust needle bearing.

16) Take out the retaining plate, drive plate and driven plate of 2-4 brake.

17) Take out the thrust needle bearing, planetary gear assembly and low clutch assembly.

18) Remove the 2-4 brake seal.

19) Remove the snap ring.

20) Take out the 2-4 brake return spring.

21) Remove the 2-4 brake piston and piston retainer without damaging.
22) Pull out the leaf spring without folding.

![Leaf spring](AT-00293)

(A) Leaf spring

23) Remove the snap ring.

![Snap ring](AT-00294)

(A) Snap ring

24) Take out the retaining plate, drive plate, driven plate and dish plate.

25) Turn the transmission case upside down, and then take out the socket bolts while holding the one-way clutch inner race with hand.

26) Remove the spring retainer.

![Spring retainer](AT-00302)

27) Take out the return spring.

![Return spring](AT-00301)

28) Apply compressed air.

![Compressed air](AT-00297)

29) Take out the low & reverse piston.

![Low & reverse piston](AT-00300)
B: INSTALLATION

1) Install the low & reverse brake piston.
   NOTE:
   • Be careful not to damage the lip seal.
   • Apply ATF to the lip.

2) Install the return spring.

3) Install the spring retainer.

4) Install the one-way clutch inner race, spring retainer and return spring.
5) Tighten the socket bolts evenly from the rear side of transmission case.

6) Place the front side of transmission body up.
7) Install the thrust needle bearing.
8) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.
9) Set the micro gauge to clutch, and read its scale.
   NOTE:
   The value, which is read in the gauge at this time, is zero point.
10) Scale and record the weight “Z” of a flat board which will be put on plates.
   NOTE:
   • Use a stiff flat board which does not bend against load.
   • Use a flat board of its weight less than 83 N (8.5 kgf, 18.7 lb).
11) Put the flat board on retaining plate.
12) Using the following formula, calculate “N” indicated on the push/pull gauge.
   \[ N = 83 \text{ N (8.5 kgf, 18.7 lb)} - Z \]
   N: Value indicated on push/pull gauge
   83 N (8.5 kgf, 18.7 lb): Load applied to clutch plate
   Z: Flat board weight
13) Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height A. Make more than three measurements at even distance and take the average value.
NOTE:
If three points, measure the height every 120°. If four points, measure the height every 90°.

14) Installation of the low & reverse brake:
Install the dish plate, driven plate and retaining plate, and then secure them with snap ring.
NOTE:
Pay attention to the orientation of dish plate.

15) Apply compressed air intermittently to check for operation.

16) Place the same thickness of shim on both sides to prevent the plate from tilting, and then measure and record the clearance B.
NOTE:
Do not press the shim downward with excessive force, or else the waveform of drive plates will be broken down.

17) Piston stroke calculation
Select the retaining plate within the specification by calculating with A and B dimensions which have been recorded before. If the calculated value exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

\[ T = A + B \]

T: Piston stroke
A: Collapse amount of drive plate
B: Clearance between retaining plate and snap ring

**Initial standard:**
2.15 — 2.65 mm (0.085 — 0.104 in)

**Limit thickness:**
2.95 mm (0.116 in)
18) Install the leaf spring of low & reverse brake.

19) Install the 2-4 brake piston and 2-4 brake retainer by aligning the holes of 2-4 brake retainer and hole of transmission case.

20) Install 2-4 brake piston return spring to transmission case.

21) Position the snap ring in transmission. Using the ST, press the snap ring into specified place. ST 498677100 COMPRESSOR

22) Install the planetary gear and low clutch assembly to transmission case. Install carefully while slowly rotating the low clutch and planetary gear assembly paying special attention not to damage the seal ring.

23) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

24) Set the micro gauge to clutch, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

25) Scale and record the weight “Z” of a flat board which will be put on plates.

NOTE:
- Use a stiff flat board which does not bend against load.
- Use a flat board of its weight less than 100 N (10.2 kgf, 22.5 lb).

### Retaining plate

</tbody>
</table>
26) Put the flat board on retaining plate.

27) Using the following formula, calculate “N” indicated on the push/pull gauge.
N = 100 N (10.2 kgf, 22.5 lb) – Z
N: Value indicated on push/pull gauge
100 N (10.2 kgf, 22.5 lb): Load applied to clutch plate
Z: Flat board weight

28) Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height A. Make more than three measurements at even distance and take the average value.

NOTE:
If three points, measure the height every 120°. If four points, measure the height every 90°.

29) Install the pressure plate, drive plate, driven plate, retaining plate and snap ring.

30) Install a new 2-4 brake oil seal to transmission case.

31) After all 2-4 brake component parts have been installed, blow air intermittently and confirm the operation of brake.

32) Measure and record the clearance B between the retaining plate and snap ring.
33) Piston stroke calculation
Select the retaining plate within the specification by calculating with A and B dimensions which have been recorded before. If the calculated value exceeds the usage limit, replace the drive plate with a new one and adjust it within the specification.

\[ T = A + B \]

T: Piston stroke
A: Collapse amount of drive plate
B: Clearance between retaining plate and snap ring

8) Remove the one-way clutch. <Ref. to 4AT-119, REMOVAL, AT Main Case.>
9) Install the one-way clutch inner race to low clutch drum, and then apply compressed air to remove the low clutch piston.

10) Remove the one-way clutch inner race.
11) Remove the one-way clutch after taking out the snap ring.

12) Remove the needle bearing after taking out the snap ring.

3. 2-4 BRAKE
Separate the 2-4 brake piston and piston retainer.

4. ONE-WAY CLUTCH INNER RACE
1) Remove the seal ring.

2) Remove the needle bearing using ST. ST 398527700 PULLER ASSY

5. ONE-WAY CLUTCH OUTER RACE
1) Remove the one-way clutch after taking out the snap ring.
2) Remove the needle bearing after taking out the snap ring.

4) Install the spring retainer to high clutch piston.

D: ASSEMBLY

1. HIGH CLUTCH AND REVERSE CLUTCH

1) Install the seal ring and lip seal to the high clutch piston and reverse clutch piston.
2) Install the high clutch piston to reverse clutch piston.
3) Install the reverse clutch piston to high clutch drum. Align the groove on reverse clutch piston with the groove on high clutch drum during installation.
4) Install the spring retainer to high clutch piston.

5) Install the ST to high clutch piston.

6) Install the cover to high clutch piston without folding the high clutch piston seal.

7) Install the snap ring using ST1 and ST2.

8) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

9) Set the micro gauge to clutch, and read its scale.

NOTE:
The value, which is read in the gauge at this time, is zero point.

10) Scale and record the weight “Z” of a flat board which will be put on plates.
NOTE:
- Use a stiff flat board which does not bend against load.
- Use a flat board of its weight less than 250 N (25.5 kgf, 56.2 lb).

11) Put the flat board on retaining plate.

12) Using the following formula, calculate “N” indicated on the push/pull gauge.
\[ N = 250 \text{ N (25.5 kgf, 56.2 lb)} - Z \]
- \( N \): Value indicated on push/pull gauge
- \( 250 \text{ N (25.5 kgf, 56.2 lb)} \): Load applied to clutch plate
- \( Z \): Flat board weight

13) Press the center of retaining plate applying force of \( N \) with push/pull gauge, and then measure and record the height \( A \). Make more than three measurements at even distance and take the average value.

14) Install the thickest driven plate to piston side, and then install the driven plate, drive plate, retaining plate to high clutch drum.

15) Install the snap ring to high clutch drum.
16) Apply compressed air intermittently to check for operation.

17) Measure and record the clearance B between the retaining plate and snap ring. (High clutch) At this time, do not press down the retaining plate.

18) Piston stroke calculation
Select the retaining plate within the specification by calculating with A and B dimensions which have been recorded before. If the calculated value exceeds the usage limit, replace the drive plate with a new one and adjust it within the specification.

\[ T = A + B \]

T: Piston stroke
A: Collapse amount of drive plate
B: Clearance between retaining plate and snap ring

**Initial standard:**
2.0 — 2.3 mm (0.079 — 0.091 in)

**Limit thickness:**
2.6 mm (0.102 in)

<table>
<thead>
<tr>
<th>Part number</th>

<td>5.8 (0.228)</td>
</tr>
</tbody>
</table>

19) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

20) Set the micro gauge to clutch, and read its scale.

**NOTE:**
The value, which is read in the gauge at this time, is zero point.

21) Scale and record the weight “Z” of a flat board which will be put on plates.

**NOTE:**
- Use a stiff flat board which does not bend against load.
- Use a flat board of its weight less than 150 N (15.3 kgf, 33.7 lb).

22) Put the flat board on retaining plate.

23) Using the following formula, calculate “N” indicated on the push/pull gauge.

\[ N = 150 \text{ N (15.3 kgf, 33.7 lb)} - Z \]

N: Value indicated on push/pull gauge
150 N (15.3 kgf, 33.7 lb): Load applied to clutch plate
Z: Flat board weight

24) Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height A. Make more than three measurements at even distance and take the average value.
NOTE:
If three points, measure the height every 120°. If four points, measure the height every 90°.

27) Measure and record the clearance \( B \) between the retaining plate and snap ring. (Reverse clutch)
At this time, do not press down the retaining plate.

28) Piston stroke calculation
Select the retaining plate within the specification by calculating with \( A \) and \( B \) dimensions which have been recorded before. If the calculated value exceeds the usage limit, replace the drive plate with a new one and adjust it within the specification.

\[
T = A + B
\]

Initial standard:
1.1 — 1.4 mm (0.043 — 0.055 in)

Limit thickness:
1.6 mm (0.063 in)

</tbody>
</table>

25) Install the driven plate, drive plate, retaining plate and snap ring.

26) Apply compressed air intermittently to check for operation.
2. PLANETARY GEAR AND LOW CLUTCH

1) Apply ATF to D-ring and install it to low clutch piston.
2) Install the low clutch piston to low clutch drum.

3) Install the spring retainer to low clutch piston.

4) Install the ST to low clutch drum.

5) Set the cover on the piston with a press using ST1 and ST2, and attach the snap ring. At this time, be careful not to fold the cover seal during installation.

6) Install the dish plate, driven plate and retaining plate, and then secure them with snap ring.

7) Check the low clutch for operation.
   (1) Remove the one-way clutch. <Ref. to 4AT-119, REMOVAL, AT Main Case.>
   (2) Set the one-way clutch inner race, and apply compressed air for checking.

8) Check the low clutch clearance.
   (1) Place the same thickness of shim on both sides to prevent pressure plate from tilting.
(2) Check the clearance between retaining plate and low clutch operation.

*Initial standard:*  
0.7 — 1.1 mm (0.028 — 0.043 in)  

*Limit thickness:*  
1.5 mm (0.059 in)

If the clearance is out of specification, select a suitable retaining plate.

</tbody>
</table>

9) Install the washer to rear internal gear.

10) Install the rear internal gear.

11) Install the thrust needle bearing in correct direction.

12) Install the washer by aligning protrusion of washer and hole of rear planetary carrier.
13) Install the rear planetary carrier to low clutch drum.

14) Install the thrust needle bearing in correct direction.

15) Install the rear sun gear in proper direction.

16) Install the thrust needle bearing in proper direction.

17) Install the front planetary carrier to low clutch drum.

18) Install the snap ring to low clutch drum.
19) Install the needle bearing, and then secure with the snap ring.

20) Install the one-way clutch and one-way clutch inner race, and then secure with the snap ring.
21) Set the inner race. Make sure that the clutch locks in the clockwise direction and rotates freely in the counterclockwise direction.

3. 2-4 BRAKE
1) Apply ATF to D-ring, and install it to 2-4 brake piston.
2) Install the 2-4 brake piston to 2-4 brake piston retainer.

4. ONE-WAY CLUTCH INNER RACE
1) Install the needle bearing to inner race using ST and press.

2) Apply vaseline to the groove of inner race and seal ring.
3) Install two seal rings to one-way clutch inner race.

5. ONE-WAY CLUTCH OUTER RACE
1) Install the needle bearing, and then secure with the snap ring.
2) Install the one-way clutch and one-way clutch inner race, and then secure with the snap ring.
3) Set the inner race. Make sure that the clutch locks in the clockwise direction and rotates freely in the counterclockwise direction.

E: INSPECTION

1. HIGH CLUTCH AND REVERSE CLUTCH

Check the following items:
- Drive plate facing for wear and damage
- Driven plate for discoloration (burned color)
- Snap ring for wear, return spring for setting and breakage, and snap ring retainer for deformation
- Lip seal and D-ring for damage
- Piston and drum check ball for operation
- Adjust the total end play. <Ref. to 4AT-107, ADJUSTMENT, Oil Pump Housing.>

2. PLANETARY GEAR AND LOW CLUTCH

Check the following items:
- Drive plate facing for wear and damage
- Driven plate for discoloration (burned color)
- Snap ring for wear, return spring for setting and breakage, and spring retainer for deformation
- Lip seal and D-ring for damage
- Piston check ball for operation
- Measure the total end play and adjust it within specifications. <Ref. to 4AT-107, ADJUSTMENT, Oil Pump Housing.>

3. 2-4 BRAKE

Check the following items:
- Drive plate facing for wear and damage
- Driven plate for discoloration (burned color)
- Snap ring for wear and spring retainer for deformation
- Lip seal and D-ring for damage
- Measure the total end play and adjust it within specifications. <Ref. to 4AT-107, ADJUSTMENT, Oil Pump Housing.>

4. ONE-WAY CLUTCH

- Make sure the snap ring is not worn and the seal rings are not deformed.
- Measure the total end play and adjust it within specifications. <Ref. to 4AT-107, ADJUSTMENT, Oil Pump Housing.>

5. LOW & REVERSE BRAKE

Check the following items:
- Drive plate facing for wear and damage
- Driven plate for discoloration (burned color)
- Snap ring for wear and spring retainer for deformation
41. Transmission Control Device

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 4AT-40, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter clutch assembly. <Ref. to 4AT-80, REMOVAL, Torque Converter Clutch Assembly.>
3) Remove the input shaft.
4) Lift-up the lever on the rear side of transmission harness connector, and then remove it from stay.
5) Disconnect the air breather hose. <Ref. to 4AT-78, REMOVAL, Air Breather Hose.>
6) Remove the inhibitor switch connector from stay.
7) Wrap vinyl tape around the nipple attached to the air breather hose.
8) Remove the pitching stopper bracket.
9) Remove the inhibitor switch.
10) Remove the control valve body assembly. <Ref. to 4AT-60, REMOVAL, Control Valve Body.>
11) Pull out the straight pin of manual plate.

NOTE:
Be careful not to damage the lips of press-fitted oil seal in the case.

B: INSTALLATION
1) Install the detention spring to transmission case.
   Tightening torque:
   $6 \text{ N.m} (0.6 \text{ kgf-m}, 4.3 \text{ ft-lb})$
2) Insert the select lever, and then tighten the bolt.
Transmission Control Device

**Tightening torque:**

6 N\(\cdot\)m (0.6 kgf\(-\)m, 4.3 ft\(-\)lb)

3) Insert the manual plate and parking rod.

4) Insert a new straight pin to manual plate.

5) Install the oil pan and control valve assembly. <Ref. to 4AT-60, INSTALLATION, Control Valve Body.>

6) Turn over the transmission case to its original position.

7) Install the pitching stopper bracket.

**Tightening torque:**

41 N\(\cdot\)m (4.2 kgf\(-\)m, 30.4 ft\(-\)lb)

8) Install and adjust the inhibitor switch. <Ref. to 4AT-52, Inhibitor Switch.>

9) Insert the inhibitor switch and transmission connector to the stay.

10) Install the air breather hose. <Ref. to 4AT-78, INSTALLATION, Air Breather Hose.>

11) Insert the input shaft with rotating it by hand lightly, and then check the protrusion amount.

**Normal protrusion A:**

50 — 55 mm (1.97 — 2.17 in)

12) Install the torque converter clutch assembly. <Ref. to 4AT-80, INSTALLATION, Torque Converter Clutch Assembly.>

13) Install the transmission assembly into the vehicle. <Ref. to 4AT-43, INSTALLATION, Automatic Transmission Assembly.>

**C: INSPECTION**

Make sure the manual lever and detention spring are not worn or otherwise damaged.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.
Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## Basic Diagnostic Procedure

### A: PROCEDURE

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1. CHECK PRE-INSPECTION.**  
1) Ask the customer when and how the trouble occurred using the interview checklist. <Ref. to 4AT(diag)-4, Check List for Interview.>  
2) Before performing diagnosis, inspect the following items which might influence the AT problems.  
  - General inspection <Ref. to 4AT(diag)-5, INSPECTION, General Description.>  
  - Disconnection of harness connector  
  - Visual check for harness damage  
  - Oil Leaking  
  - Stall speed test <Ref. to 4AT-35, Stall Test.>  
  - Line pressure test <Ref. to 4AT-38, Line Pressure Test.>  
  - Transfer clutch pressure test <Ref. to 4AT-39, Transfer Clutch Pressure Test.>  
  - Time lag test <Ref. to 4AT-37, Time Lag Test.>  
  - Road test <Ref. to 4AT-34, Road Test.>  
  - Inhibitor switch <Ref. to 4AT-52, Inhibitor Switch.> | Is the unit that might influence the AT problem normal? | Go to step 2. | Repair or replace each item. |
| **2. CHECK SPORT INDICATOR LIGHT.**  
After starting the engine, wait for at least 2 seconds. | Does the SPORT indicator light blink? | Go to step 4. | Go to step 3. |
| **3. CHECK SPORT INDICATOR LIGHT.**  
1) Turn the ignition switch to OFF.  
2) Check the SPORT indicator light. <Ref. to 4AT(diag)-24, INSPECTION, SPORT Indicator Light Display.>  
3) After the ignition switch is turned to “ON”, wait for at least 2 seconds.  
| **4. CHECK INDICATION OF DTC.**  
Display DTC.  
NOTE: If the communication function of Subaru Select Monitor cannot be executed normally, check communication circuit. <Ref. to 4AT(diag)-27, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Select Monitor Communication.> | Is DTC displayed? | Go to step 6.  
NOTE: Record all DTC. | Go to step 5. |
| **5. PERFORM GENERAL DIAGNOSTICS.**  
2) Inspect using “General Diagnostic Chart”. <Ref. to 4AT(diag)-138, Diagnostics with Phenomenon.>  
3) Perform the inspection mode. <Ref. to 4AT(diag)-21, Inspection Mode.>  
4) Display DTC. | Is DTC displayed? | Go to step 6. | Finish the diagnosis. |
## Basic Diagnostic Procedure

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### Basic Diagnostic Procedure

1. PERFORM DIAGNOSIS.
   1. Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to 4AT(diag)-34, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
   2. Repair the trouble cause.
   3. Perform the clear memory mode.
   4. Perform the inspection mode. <Ref. to 4AT(diag)-21, Inspection Mode.>
   5. Display DTC.

#### Table

<table>
<thead>
<tr>

3. General Description

A: CAUTION

- SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”
The airbag system wiring harness is routed near the TCM.

CAUTION:
- All airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when performing diagnostics or servicing the TCM.

MEASUREMENT
When measuring the voltage and resistance of the ECM, TCM or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert a pin of more than 0.65 mm (0.026 in) diameter.

B: INSPECTION

1. BATTERY
Measure the battery voltage and specific gravity of electrolyte.

*Standard voltage: 12 V or more*

*Specific gravity: More than 1.260*

2. TRANSMISSION GROUND
Make sure that the ground terminal bolt is tightened securely.
- Chassis side

*Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)*

3. ATF LEVEL
Make sure that ATF level is within the specification. <Ref. to 4AT-31, INSPECTION, Automatic Transmission Fluid.>

4. FRONT DIFFERENTIAL OIL LEVEL
Make sure the front differential oil level is within the specification. <Ref. to 4AT-33, INSPECTION, Differential Gear Oil.>
General Description

5. OPERATION OF SHIFT SELECT LEVER
Make sure there is no noise, dragging or contact pattern in each select lever range.

WARNING:
Stop the engine while checking operation of the selector lever.

6. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to 4AT(diag)-6, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.
   - Data link connector is located in the lower portion of instrument panel (on the driver’s side).

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.

8) Press the [YES] key after the information of transmission type is displayed.

9) On the «Transmission Diagnosis» display screen, select the {Diagnosis Code(s) Display} and press [YES] key.

NOTE:
- For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to 4AT(diag)-32, List of Diagnostic Trouble Code (DTC).>

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

2) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.

3) Press the [YES] key after the information of transmission type is displayed.

4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.

5) On the «Transmission Diagnosis» display screen, select the {Data Display} and press the [YES] key.

6) Using the scroll key, scroll the display screen up or down until the desired data is shown.
A list of the support data is shown in the following table.

</tbody>
</table>

NOTE:
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
3. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
3) Press the [YES] key after the information of transmission type is displayed.
4) On the «Transmission Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.

NOTE:
When {Clear Memory 2} is selected and executed, DTC and learned control memory is cleared. If Clear Memory 2 has been performed, execute the learning control. <Ref. to 4AT(diag)-19, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>

4. FACILITATION OF LEARNING CONTROL

1) Shift the select lever to “P” range, and apply parking brake.
2) Lift-up the vehicle.
3) Connect the Subaru Select Monitor to data link connector, and then turn the ignition switch to ON.
4) Perform the {Clear Memory 2} using Subaru Select Monitor. <Ref. to 4AT(diag)-19, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>
5) Using Subaru Select Monitor, check that the DTC is not output. <Ref. to 4AT(diag)-17, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>
6) Warm-up the engine until the ATF temperature which is displayed on the Subaru Select Monitor reaches 60 — 90°C (140 — 194°F). <Ref. to 4AT(diag)-17, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
7) Shift the select lever to “R” range.
8) Turn all switches including headlight, air conditioner, seat heater, rear defogger and etc. to OFF.
9) Wait for 30 seconds with turning ignition key to OFF until ACC goes OFF.
10) Depress the brake pedal fully until the facilitation of learning control is completed when the “Communication Failed!” is displayed on Subaru Select Monitor.
11) Turn the ignition switch to ON.
12) Check that the Subaru Select Monitor is returned to normal operation.
13) Shift the select lever to “P” range, and then wait for more than 3 seconds.
14) Shift the select lever to “R” range, and then wait for more than 3 seconds.
15) Shift the select lever to “N” range, and then wait for more than 3 seconds.
16) Shift the select lever to “D” range, and then wait for more than 3 seconds.
17) Shift the select lever to “N” range, and then wait for more than 3 seconds.
18) Slowly depress the accelerator pedal fully.
19) Slowly release the accelerator pedal fully.
20) Start the engine, and idle it.
21) Shift the select lever to “D” range.
22) Start the facilitation of learning control. At this time, the SPORT indicator light in the combination meter start blinking at 2 Hz. When the SPORT indicator light does not blink, turn the ignition switch to OFF and repeat the procedures from step 4). When the SPORT indicator light stop blinking at 2 Hz and goes OFF, facilitation of learning control is completed.

NOTE:
When blinking of SPORT indicator light changes from 2 Hz to 4 Hz during facilitation of learning control, repeat the procedure from step 4).
23) Shift the select lever to “N” range, and then turn the ignition switch to OFF.
24) Shift the select lever to “P” range to complete the facilitation of learning control.
7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

Refer to “Subaru Select Monitor” for information about how to display DTC. <Ref. to 4AT(diag)-17, OPERATION, Subaru Select Monitor.>

For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to 4AT(diag)-32, List of Diagnostic Trouble Code (DTC).>

NOTE:
DTC can not be read by SPORT indicator light.
8. Inspection Mode

A: PROCEDURE

WARNING:
Observe the traffic law during actual driving.

1) Shift the select lever to “D” range, and then drive the vehicle at 60 km/h (37 MPH) for at least 10 seconds.
2) Drive the vehicle with manual mode.
9. Clear Memory Mode

A: OPERATION
Refer to “Subaru Select Monitor” for information about how to clear DTC.
<Ref. to 4AT(diag)-19, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>
10. SPORT Indicator Light Display

A: OPERATION
When any on-board diagnostics item is malfunctioning, the display on the SPORT indicator light blinks from the time the malfunction is detected after starting the engine until the ignition switch is turned OFF. The malfunctioning part or unit can be determined by a DTC during the on-board diagnostics operation. Problems which occurred previously can also be identified through the memory function. If the SPORT indicator light does not show a problem (although a problem is occurring), the problem can be determined by checking the performance characteristics of each sensor using Subaru Select Monitor. Indicator light signal patterns are as shown in the figure.

Perform the inspection when the SPORT indicator light does not operate correctly. <Ref. to 4AT(diag)-24, INSPECTION, SPORT Indicator Light Display.>
B: INSPECTION
DIAGNOSIS:
SPORT indicator light circuit is open or shorted.
TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), SPORT indicator light does not illuminate.

| **17** CHECK FUSE (No. 12).  
Remove the fuse (No. 12). | Is the fuse (No. 12) blown? | Replace the fuse (No. 12). If the replaced fuse (No. 12) blown out easily, repair the short circuit in harness between fuse (No. 12) and TCM. | Repair the open circuit in harness between fuse (No. 12) and TCM, or fuse (No. 12) and battery, and poor contact in connector. |
### Diagnostic Procedure for Select Monitor Communication

**AUTOMATIC TRANSMISSION (DIAGNOSTICS)**

#### Step 18: Check Harness Connector Between TCM and Transmission

1. Turn the ignition switch to OFF.
2. Disconnect the connector from TCM and transmission.
3. Measure the resistance of harness between TCM and transmission connector.

**Connector & terminal**
- (B54) No. 8 — (B11) No. 19:
- (B54) No. 17 — (B11) No. 19:
- (B55) No. 2 — (B11) No. 20:
- (B55) No. 3 — (B11) No. 20:

Is the resistance less than 1 Ω?  
**Check**  
**Yes**  
**No**  
Go to step 19.  
Repair the open circuit in harness between TCM and transmission harness connector, and poor contact in connector.

#### Step 19: Check Harness Connector Between Transmission and Transmission Ground

Measure the resistance of harness between transmission and transmission ground.

**Connector & terminal**
- (T4) No. 19 — Transmission ground:
- (T4) No. 20 — Transmission ground:

Is the resistance less than 1 Ω?  
**Check**  
**Yes**  
**No**  
Go to step 20.  
Repair the open circuit in harness between transmission and transmission ground.

#### Step 20: Check Poor Contact in Connectors

Is there poor contact in TCM power supply, ground and data link connector?  
**Check**  
**Yes**  
**No**  
Repair the connector.  
Replace the TCM.

13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)

DTC DETECTING CONDITION:
- Inhibitor switch is faulty.
- More than 2 range signal is input.

TROUBLE SYMPTOM:
- Shift characteristics are erroneous.
- Range position of select lever and AT select lever position indicator light on the combination meter is not matched.

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**Step** | **Check** | **Yes** | **No**  
--- | --- | --- | ---  
14 | CHECK INPUT SIGNAL FOR TCM.  
1) Turn the ignition switch to OFF.  
2) Connect the connector to TCM and inhibitor switch.  
3) Turn the ignition switch to ON.  
4) Shift the select lever to “P” range.  
5) Measure the voltage between TCM and chassis ground.  
**Connector & terminal**  
(B54) No. 5 (+) — Chassis ground (−): | Is the voltage less than 1 V? | Go to step 15. | Go to step 41.  
15 | CHECK INPUT SIGNAL FOR TCM.  
1) Shift the select lever to any range other than “P”.  
2) Measure the voltage between TCM and chassis ground.  
**Connector & terminal**  
(B54) No. 5 (+) — Chassis ground (−): | Is the voltage more than 8 V? | Go to step 41. | Replace the TCM.  
16 | CHECK BODY INTEGRATED UNIT.  
Read the data of the inhibitor switch from Subaru Select Monitor.  
<Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is “7” displayed? | Go to step 17. | Check the body integrated unit.  
17 | CHECK BODY INTEGRATED UNIT.  
Check DTC of body integrated unit. | Is DTC of CAN communication displayed? | Perform the diagnosis according to DTC. | Go to step 18.  
18 | CHECK COMBINATION METER.  
Check the “P” range indicator light.  
<Ref. to IDI-3, INSPECTION, Combination Meter System.> | Is the “P” range indicator light OK? | Go to step 41. | Replace the combination meter assembly.  
19 | CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connectors from TCM, inhibitor switch and combination meter.  
3) Measure the resistance of harness between TCM connector and chassis ground.  
**Connector & terminal**  
(B54) No. 5 — Chassis ground: | Is the resistance less than 1 MΩ? | Go to step 22. | Repair the ground short circuit in “P” range circuit.  
20 | CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from TCM and inhibitor switch.  
3) Measure the resistance of harness between TCM and inhibitor switch connector.  
**Connector & terminal**  
(B54) No. 14 — T7 No. 8: | Is the resistance less than 1 Ω? | Go to step 21. | Repair the open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.  
21 | CHECK INPUT SIGNAL FOR TCM.  
1) Turn the ignition switch to OFF.  
2) Connect the connector to TCM and inhibitor switch.  
3) Turn the ignition switch to ON.  
4) Shift the select lever to “R” range.  
5) Measure the voltage between TCM and chassis ground.  
**Connector & terminal**  
(B54) No. 14 (+) — Chassis ground (−): | Is the voltage less than 1 V? | Go to step 22. | Go to step 41.

### Automatic Transmission (Diagnosis)

#### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**Step 7**  
**Check Harness Connector Between Transmission and ATF Temperature Sensor.**  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from transmission.  
3) Remove the transmission connector from bracket.  
4) Lift-up the vehicle and support with rigid racks.  
**NOTE:**  
Raise all wheels off floor.  
5) Drain the ATF.  
**CAUTION:**  
Do not drain the ATF until it cools down.  
6) Remove the oil pan, and disconnect the connector from control valve.  
7) Measure the resistance of harness between ATF temperature sensor and transmission connector.  
**Connector & terminal**  
(T4) No. 11 — (AT2) No. 1: Is the resistance less than 1 Ω?  
Go to step 8.  
**Repair the open circuit in harness between ATF temperature sensor and transmission connector.**

**Step 8**  
**Check Harness Connector Between Transmission and ATF Temperature Sensor.**  
Measure the resistance of harness between ATF temperature sensor and transmission connector.  
**Connector & terminal**  
(T4) No. 15 — (AT2) No. 3: Is the resistance less than 1 Ω?  
Go to step 9.  
**Repair the open circuit in harness between ATF temperature sensor and transmission connector.**

**Step 9**  
**Check Harness Connector Between Transmission and ATF Temperature Sensor.**  
Measure the resistance of harness between transmission connector and transmission ground.  
**Connector & terminal**  
(T4) No. 11 — Transmission ground: Is the resistance more than 1 MΩ?  
Go to step 10.  
**Repair the short circuit in harness between ATF temperature sensor and transmission connector.**

**Step 10**  
**Check Harness Connector Between Transmission and ATF Temperature Sensor.**  
Measure the resistance of harness between transmission connector and transmission ground.  
**Connector & terminal**  
(T4) No. 15 — Transmission ground: Is the resistance more than 1 MΩ? Replace the control valve body.  
<Ref. to 4AT-60, Control Valve Body.>  
**Repair the short circuit in harness between ATF temperature sensor and transmission connector.**
C: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT

DTC DETECTING CONDITION:
Input signal circuit of TCM to ATF temperature sensor is shorted.

TROUBLE SYMPTOM:
Excessive shift shock

WIRING DIAGRAM:

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

**Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

1. **CHECK ACCELERATOR PEDAL POSITION SENSOR.**
   - 1) Fully open the throttle.
   - 2) Measure the voltage between TCM and chassis ground. **Connector & terminal (B54) No. 19 (+) — Chassis ground (-):**
     - Is the voltage 3.3 — 4.6 V? Go to step 7.
     - Check the accelerator pedal position sensor circuit. <Ref. to 4AT(diag)-92, DTC P1708 THROTTLE POSITION SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

2. **CHECK FRONT VEHICLE SPEED SENSOR.**
   - Diagnose according to DTC P0720 procedure.
     - Is the front vehicle speed sensor OK? Go to step 8.
     - Repair or replace the front vehicle speed sensor circuit.

3. **CHECK TORQUE CONVERTER TURBINE SPEED SENSOR.**
   - Diagnose according to DTC P0715 procedure.
     - Is the torque converter turbine speed sensor OK? There are malfunctions in TCM, TCM connector poor contact, or transmission assembly mechanical malfunction.
     - Repair or replace the torque converter turbine speed sensor circuit.
# AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### N: DTC P0741 TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF

**DTC DETECTING CONDITION:**
- Lock up clutch malfunction
- Locking of bulb

**TROUBLE SYMPTOM:**
No lock-up occurs.

| 2    | 1) Turn the ignition switch to OFF.  
2) Disconnect the connector from TCM and transmission.  
3) Measure the resistance of harness between TCM and transmission connector.  
  **Connector & terminal**  
  *(B55) No. 5 — (B11) No. 12:* | Is the resistance less than 1 Ω? | Go to step 3. | Repair the open circuit in harness between TCM and transmission connector. |
| 3    | Measure the resistance of harness connector between TCM and chassis ground.  
  **Connector & terminal**  
  *(B55) No. 5 — Chassis ground:* | Is the resistance more than 1 MΩ? | Go to step 4. | Repair the short circuit in harness between TCM and transmission connector. |
| 4    | Measure the resistance between transmission connector receptacle's terminals.  
  **Connector & terminal**  
  *(T4) No. 12 — No. 19:* | Is the resistance 2.0 — 6.0 Ω? | Go to step 5. | Go to step 8. |
| 5    | Connect the connectors to TCM and transmission.  
  1) Connect the Subaru Select Monitor to data link connector.  
  3) Connect the Subaru Select Monitor to data link connector.  
  4) Start the engine, and turn the Subaru Select Monitor switch to ON.  
  5) Start the engine and warm-up the engine until the ATF temperature is above 80°C (176°F).  
  6) Read the data of lock-up duty solenoid using Subaru Select Monitor.  
  7) Shift the select lever to “D”, and slowly increase vehicle speed to 60 km/h (37 MPH).  
  **NOTE:**  
  If the ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.  
  Lock-up duty solenoid is indicated in “%”.  
  When AT control diagnosis is finished, perform the ABS memory clearance procedure or VDC memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.> <Ref. to VDC(diag)-24, Clear Memory Mode.> | Is the value 95%? | Go to step 6. | Go to step 7. |
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

1. **CHECK OUTPUT SIGNAL Emitted FROM TCM USING SUBARU SELECT MONITOR.**
   - Return the engine to idling speed, shift the select lever to “N” range and read data.
   - **NOTE:**
     - The speed difference between front and rear wheels may light the ABS warning light or VDC warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure or VDC memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.> <Ref. to VDC(diag)-24, Clear Memory Mode.>

   **Check:** Is the value 5%?
   - **Yes:** Even if the SPORT indicator light is blinking, the circuit has returned to normal condition at this time. A temporary poor contact of connector or harness may be the cause. Repair the harness or connector in TCM and transmission.
   - **No:** Go to step 7.

2. **CHECK POOR CONTACT.**

3. **CHECK LOCK-UP DUTY SOLENOID (IN TRANSMISSION).**
   - 1) Disconnect the transmission connector.
   - 2) Drain the ATF.
   - **CAUTION:**
     - Do not drain the ATF until it cools down.
   - 3) Remove the oil pan, and disconnect the connector from control valve body.
   - 4) Measure the resistance between lock-up duty solenoid and transmission ground.

   **Connector & terminal**
   - (AT3) No. 4 — Transmission ground:

   **Check:** Is the resistance 2.0 — 6.0 Ω?
   - **Yes:** Go to step 9.
   - **No:** Replace the TCM. <Ref. to 4AT-65, Transmission Control Module (TCM).>

4. **CHECK HARNESS CONNECTOR BETWEEN LOCK-UP DUTY SOLENOID AND TRANSMISSION.**
   - Measure the resistance of harness between lock-up duty solenoid and transmission connector.

   **Connector & terminal**
   - (T4) No. 12 — (AT3) No. 4:

   **Check:** Is the resistance less than 1 Ω?
   - **Yes:** Go to step 10.
   - **No:** Repair the open circuit in harness between TCM and transmission connector.

5. **CHECK HARNESS CONNECTOR BETWEEN LOCK-UP DUTY SOLENOID AND TRANSMISSION.**
   - Measure the resistance of harness between transmission connector and transmission ground.

   **Connector & terminal**
   - (T4) No. 12 — Transmission ground:

   **Check:** Is the resistance more than 1 MΩ?
   - **Yes:** Repair the short circuit in harness between lock-up duty solenoid and transmission connector.
   - **No:** Even if the SPORT indicator light is blinking, the circuit has returned to normal condition at this time. A temporary poor contact of connector or harness may be the cause. Repair the harness or connector in lock-up duty solenoid and transmission.
**P: DTC P0748 PRESSURE CONTROL SOLENOID “A” ELECTRICAL**

**DTC DETECTING CONDITION:**
Output signal circuit of line pressure linear solenoid is open or shorted.

**TROUBLE SYMPTOM:**
Excessive shift shock

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### Step 4

**CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.**

1. Connect the connectors to TCM and transmission.
2. Lift-up the vehicle and support with rigid racks.

**NOTE:**

Raise all wheels off floor.

3. Connect the Subaru Select Monitor to data link connector.
4. Start the engine, and turn the Subaru Select Monitor switch to ON.
5. Start the engine and warm-up the engine until the ATF temperature is above 80°C (176°F).

**NOTE:**

If the ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.

6. Read the data of high clutch duty solenoid using Subaru Select Monitor.
   - High clutch duty solenoid is indicated in “%”.
7. Shift the select lever to “D”, and slowly increase vehicle speed at 3rd or 4th to measure.

**NOTE:**

The speed difference between front and rear wheels may light the ABS warning light or VDC warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure or VDC memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.> <Ref. to VDC(diag)-24, Clear Memory Mode.>

---

*4AT(diag)-81*
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**AUTOMATIC TRANSMISSION (DIAGNOSTICS)**

#### CHECK LOW & REVERSE DUTY SOLENOID (IN TRANSMISSION)

1. Remove the transmission connector from bracket.
2. Drain the ATF.

**CAUTION:**

Do not drain the ATF until it cools down.

3. Remove the oil pan, and disconnect the connector from control valve body.
4. Measure the resistance between low & reverse duty solenoid connector and transmission ground.

**Connector & terminal**

- **AT3** No. 1 — Transmission ground:

**Check:** Is the resistance 2.0 — 6.0 Ω?

- **Yes:** Go to step 8.
- **No:** Replace the control valve body. <Ref. to 4AT-60, Control Valve Body.>

#### CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LOW & REVERSE DUTY SOLENOID.

Measure the resistance of harness between low & reverse duty solenoid and transmission connector.

**Connector & terminal**

- **T4** No. 6 — **AT3** No. 1:

**Check:** Is the resistance less than 1 Ω?

- **Yes:** Go to step 9.
- **No:** Repair the open circuit in harness between low & reverse duty solenoid and transmission.

#### CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LOW & REVERSE DUTY SOLENOID.

Measure the resistance of harness between transmission connector and transmission ground.

**Connector & terminal**

- **T4** No. 6 — **Transmission ground**:

**Check:** Is the resistance more than 1 MΩ?

- **Yes:** Even if the SPORT indicator light is blinking, the circuit has returned to normal condition at this time. A temporary poor contact of connector or harness may be the cause. Repair the harness or connector in low & reverse duty solenoid and transmission.
- **No:** Repair the short circuit in harness between low & reverse brake solenoid and transmission connector.
U: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT

DTC DETECTING CONDITION:
Shift lock solenoid malfunction, open or short reverse inhibitor control circuit

TROUBLE SYMPTOM:
- Gear is shifted from “N” range to “R” range during driving at 20 km/h (12 MPH) or more.
- Gear cannot be shifted from “N” range to “R” range.

WIRING DIAGRAM:

     - (B135) No. 1 — Engine ground:
     - (B135) No. 12 — Engine ground:
     - (B137) No. 1 — Engine ground:
     - (B137) No. 2 — Engine ground:
     - (B137) No. 3 — Engine ground:
     - (B137) No. 7 — Engine ground:

   **Check**
   - Is the resistance less than 5 Ω?

   **Yes**
   - Go to step 3.

   **No**
   - Repair the open circuit in harness between ECM connector and engine grounding terminal.

2. **Check Accelerator Pedal Position Sensor.**
   1. Disconnect the connectors from accelerator pedal position sensor.
   2. Measure the resistance between accelerator pedal position sensor connector receptacle's terminals.

   **Connector & terminal**
   - **No. 1 — No. 6:**

   **Check**
   - Is the resistance 0.75 — 3.15 kΩ?

   **Yes**
   - Go to step 4.

   **No**
   - Replace the accelerator pedal position sensor.

3. **Check Accelerator Pedal Position Sensor.**
   1. Disconnect the connectors from accelerator pedal position sensor.
   2. Measure the resistance between accelerator pedal position sensor connector receptacle's terminals.

   **Connector & terminal**
   - **No. 6 — No. 2:**

   **Check**
   - Is the resistance 0.15 — 0.63 kΩ?

   **Yes**
   - Go to step 5.

   **No**
   - Replace the accelerator pedal position sensor.

4. **Check Harness Connector Between TCM and Accelerator Pedal Position Sensor.**
   1. Disconnect the connector from TCM.
   2. Measure the resistance of harness between TCM and accelerator pedal position sensor connector.

   **Connector & terminal**
   - **(B54) No. 19 — (B315) No. 2:**

   **Check**
   - Is the resistance less than 1 Ω?

   **Yes**
   - Go to step 6.

   **No**
   - Repair the open circuit in harness between TCM and accelerator pedal position sensor connector, and poor contact in coupling connector.

5. **Check Harness Connector Between TCM and Accelerator Pedal Position Sensor.**
   1. Disconnect the connector from TCM.
   2. Measure the resistance of harness between TCM connector and chassis ground.

   **Connector & terminal**
   - **(B54) No. 19 — Chassis ground:**

   **Check**
   - Is the resistance more than 1 MΩ?

   **Yes**
   - Go to step 7.

   **No**
   - Repair the short circuit in harness between TCM and accelerator pedal position sensor connector.
## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step 7: Check Harness Connector Between ECM and Accelerator Pedal Position Sensor

1. Remove the connector from ECM.
2. Measure the resistance of harness between the accelerator pedal position sensor connector and chassis ground.

**Connector & terminal**

(B315) No. 6 — Chassis ground:

<td>Repair the short circuit in harness between ECM and accelerator pedal position sensor.</td>
</tr>
</tbody>
</table>

#### Step 8: Check Input Signal for TCM Using Subaru Select Monitor

1. Connect the connectors to TCM, accelerator pedal position sensor, and ECM.
2. Connect the Subaru Select Monitor to data link connector.
3. Turn the ignition switch to ON (engine OFF).
4. Turn the Subaru Select Monitor switch to ON.
5. Fully close the throttle.
6. Read the data of accelerator pedal position sensor using Subaru Select Monitor.
   - Accelerator pedal position sensor input signal is indicated.

Y: DTC P1709 THROTTLE POSITION SENSOR CIRCUIT HIGH INPUT

DTC DETECTING CONDITION:
The input signal circuit of accelerator pedal position sensor is shorted.

TROUBLE SYMPTOM:
- Shift point is too high or too low.
- Excessive shift shock
- Tight corner braking phenomenon is occurred.

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step Check Yes No

1. **CHECK HARNESS CONNECTOR BETWEEN TCM AND ACCELERATOR PEDAL POSITION SENSOR.**
   1) Disconnect the connector from TCM.
   2) Measure the resistance of harness between TCM and accelerator pedal position sensor connector.
   
   **Connector & terminal**
   - 2.0 L model and 2.5 L KS, KA model: (B54) No. 10 — (B137) No. 18
   - 2.5 L EC, EK, K4 model: (B54) No. 10 — (B315) No. 1

   Is the resistance less than 1 Ω?  
   Go to step 2.  
   Repair the open circuit in harness between TCM and accelerator pedal position sensor connector, and poor contact in coupling connector.

2. **CHECK HARNESS CONNECTOR BETWEEN TCM AND ACCELERATOR PEDAL POSITION SENSOR.**
   Measure the resistance of harness between TCM connector and chassis ground.
   
   **Connector & terminal**
   - (B54) No. 10 — Chassis ground:

   Is the resistance more than 1 MΩ?  
   Go to step 3.  
   Repair the short circuit in harness between TCM and accelerator pedal position sensor connector.

3. **CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM.**
   1) Connect all the connectors.
   2) Turn the ignition switch to ON.
   3) Measure the voltage of harness between TCM and chassis ground.
   
   **Connector & terminal**
   - (B54) No. 10 (+) — Chassis ground (−):

   Is the voltage 4.6 — 5.4 V?  
   Go to step 4.  
   Even if the SPORT indicator light is blinking, the circuit has returned to normal condition at this time. A temporary poor contact of connector or harness may be the cause. Repair the harness or connector in accelerator pedal position sensor circuit.

4. **CHECK POOR CONTACT.**

   Is there poor contact in accelerator pedal position sensor circuit?  
   Repair the poor contact.  
   Replace the TCM.  

<Ref. to 4AT-65, Transmission Control Module (TCM).>
NOTE:
Refer to “Body Integrated Unit” for diagnosis of P1718. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
AB: DTC P1760 LATERAL ACCELERATION SENSOR PERFORMANCE PROBLEM

DTC DETECTING CONDITION:
Faulty lateral G sensor output voltage

| 1    | CHECK OUTPUT OF LATERAL G SENSOR USING SUBARU SELECT MONITOR.  
1) Select (Current Data Display & Save) in Subaru Select Monitor.  
2) Read the Subaru Select Monitor display.  
   | Is the reading on display 2.3 — 2.7 V when the vehicle is on a level?  
   | Go to step 2.  
   | Go to step 7.  |
| 2    | CHECK OUTPUT OF LATERAL G SENSOR USING SUBARU SELECT MONITOR.  
1) Turn the ignition switch to OFF.  
2) Remove the console box.  
3) Remove the lateral G sensor from vehicle.  
   (Do not disconnect connector.)  
4) Turn the ignition switch to ON.  
5) Select (Current Data Display & Save) in Subaru Select Monitor.  
6) Read the Subaru Select Monitor display.  
   | Is the value on the monitor display 3.3 — 4.3 V when lateral G sensor is inclined to the right to 90°?  
   | Go to step 3.  
   | Replace the lateral G sensor.  
   (<Ref. to 4AT-66, Lateral G Sensor.>)  |
| 3    | CHECK OUTPUT OF LATERAL G SENSOR USING SUBARU SELECT MONITOR.  
Read the Subaru Select Monitor display.  
   | Is the value on the monitor display 0.7 — 1.7 V when lateral G sensor is inclined to the left to 90°?  
   | Go to step 4.  
   | Replace the lateral G sensor.  
   (<Ref. to 4AT-66, Lateral G Sensor.>)  |
| 4    | CHECK POOR CONTACT IN CONNECTOR.  
Turn the ignition switch to OFF.  
   | Is there poor contact in connector between TCM and the lateral G sensor?  
   | Repair the connector.  
   | Go to step 5.  |
| 5    | CHECK ABSCM&H/U.  
1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode.  
4) Read the DTC.  
   | Is the same DTC still output?  
   | Replace the TCM.  
   (<Ref. to 4AT-65, Transmission Control Module (TCM).>)  
   | Go to step 6.  |
| 6    | CHECK OTHER DTC DETECTION.  
   | Is any other DTC detected?  
   | Perform the diagnosis according to DTC.  
   | Temporary poor contact occurs.  |
| 7    | CHECK OPEN CIRCUIT IN LATERAL G SENSOR OUTPUT HARNESS AND GROUND HARNESS.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from TCM.  
3) Measure the resistance between TCM connector terminals.  
   **Connector & terminal (B54) No. 2 — No. 9:**  
   | Is the resistance 5.0 — 6.0 kΩ?  
   | Go to step 8.  
   | Repair the harness connector between lateral G sensor and TCM.  |
| 8    | CHECK LATERAL G SENSOR.  
1) Remove the console box.  
2) Remove the lateral G sensor from vehicle.  
3) Connect the connector to lateral G sensor.  
4) Connect the connector to ABSCM&H/U.  
5) Turn the ignition switch to ON.  
6) Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal (B359) No. 3 (+) — No. 2 (-):**  
   | Is the voltage 2.3 — 2.7 V when the lateral G sensor is horizontal?  
   | Go to step 9.  
   | Replace the lateral G sensor.  
   (<Ref. to 4AT-66, Lateral G Sensor.>)  |
| 9    | CHECK LATERAL G SENSOR.  
Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal (B359) No. 3 (+) — No. 2 (-):**  
   | Is the voltage 3.3 — 4.3 V when lateral G sensor is inclined to the right to 90°?  
   | Go to step 10.  
   | Replace the lateral G sensor.  
   (<Ref. to 4AT-66, Lateral G Sensor.>)  |
| 10   | CHECK LATERAL G SENSOR.  
Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal (B359) No. 3 (+) — No. 2 (-):**

| 12   | CHECK INPUT VOLTAGE OF LATERAL G SENSOR.  
1) Turn the ignition switch to OFF.  
2) Remove the console box.  
3) Remove the lateral G sensor from vehicle. (Do not disconnect the connector.)  
4) Turn the ignition switch to ON.  
5) Measure the voltage between lateral G sensor connector terminals. **Connector & terminal** *(B359)* No. 1 (+) — No. 2 (−): | Is the voltage 4.75 — 5.25 V? | Go to step 13. | Repair the harness connector between lateral G sensor and TCM. |
| 13   | CHECK OPEN CIRCUIT IN LATERAL G SENSOR OUTPUT HARNESS AND GROUND HARNESS.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from TCM.  
3) Measure the resistance between TCM connector terminals. **Connector & terminal** *(B54)* No. 2 — No. 9: | Is the resistance 5.0 — 5.6 kΩ? | Go to step 14. | Repair the harness connector between lateral G sensor and TCM. |
| 14   | CHECK LATERAL G SENSOR.  
1) Connect the connector to lateral G sensor.  
2) Connect the connector to the TCM.  
3) Turn the ignition switch to ON.  
4) Measure the voltage between lateral G sensor connector terminals. **Connector & terminal** *(B359)* No. 3 (+) — No. 2 (−): | Is the voltage 2.3 — 2.7 V when lateral G sensor is in horizontal? | Go to step 15. | Replace the lateral G sensor.  
<Ref. to 4AT-66, Lateral G Sensor.> |
| 15   | CHECK LATERAL G SENSOR.  
Measure the voltage between lateral G sensor connector terminals. **Connector & terminal** *(B359)* No. 3 (+) — No. 2 (−): | Is the voltage 3.3 — 4.3 V when lateral G sensor is inclined to the right to 90°? | Go to step 16. | Replace the lateral G sensor.  
<Ref. to 4AT-66, Lateral G Sensor.> |
| 16   | CHECK LATERAL G SENSOR.  
Measure the voltage between lateral G sensor connector terminals. **Connector & terminal** *(B359)* No. 3 (+) — No. 2 (−): | Is the voltage 0.7 — 1.7 V when lateral G sensor is inclined to the left to 90°? | Go to step 17. | Replace the lateral G sensor.  
<Ref. to 4AT-66, Lateral G Sensor.> |
| 17   | CHECK POOR CONTACT IN CONNECTOR.  
Turn the ignition switch to OFF. | Is there poor contact in connector between TCM and lateral G sensor? | Repair the connector. | Go to step 18. |
| 18   | CHECK ABSCM&H/U.  
1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode.  
4) Read the DTC. | Is the same DTC still output? | Replace the TCM.  
<Ref. to 4AT-65, Transmission Control Module (TCM).> | Go to step 19. |
| 19   | CHECK OTHER DTC DETECTION. | Is any other DTC detected? | Perform the diagnosis according to DTC. | Temporary poor contact occurs. |
AE: DTC P1817 SPORTS MODE SWICH CIRCUIT

DTC DETECTING CONDITION:
Input signal circuit of SPORT shift switch is open or shorted.

TROUBLE SYMPTOM:
• The manual mode is not engaged.
• The SPORT indicator light does not illuminate.
• No SPORT mode occurs.

**Diagnostic Procedure without Diagnostic Trouble Code (DTC)**

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### Diagnostic Procedure without Diagnostic Trouble Code (DTC)

19 **CHECK THE INPUT SIGNAL TO BODY INTEGRATED UNIT.**
   1) Connect all the connectors.
   2) Turn the ignition switch to ON (engine OFF).
   3) Check the signal voltage for body integrated unit.
   
   **Connector & terminal**
   *(B281) No. 25 (+) — Chassis ground (−):*
   
   Is the voltage 1.5 — 8 V?  
   - **Yes**: Go to step 20.  
   - **No**: Go to step 21.

20 **CHECK THE INPUT SIGNAL TO BODY INTEGRATED UNIT.**
   1) Shift and hold the select lever to up side.
   2) Check the signal voltage for body integrated unit.
   
   **Connector & terminal**
   *(B281) No. 25 (+) — Chassis ground (−):*
   
   Is the voltage less than 1 V?  
   - **Yes**: Go to step 21.  
   - **No**: Replace the body integrated unit.  
   <Ref. to 4AT-65, Transmission Control Module (TCM).>

21 **CHECK POOR CONTACT.**

   Is there poor contact in SPORT shift switch circuit?  
   - **Yes**: Repair the poor contact.  
   - **No**: A temporary poor contact of SPORT shift switch connector or harness.
C: CHECK SPORT SHIFT INDICATOR

DIAGNOSIS:
Output signal circuit of SPORT shift indicator is open or shorted.

TROUBLE SYMPTOM:
- SPORT shift indicator does not display or remains displayed.
- SPORT shift indicator display does not change.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

- T4: 58 (5.9, 42.8)
- T5: 70 (7.1, 51.6)
C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Until the oil pan is removed, do not place with the oil pan side facing up to prevent foreign matter from entering the valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, disassembly and replacement.
- When disassembling the case and other light alloy parts, disassemble them by slightly tapping with a plastic hammer. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix them with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of ATF fluid to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vice.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove the old seal.

2. Automatic Transmission Fluid

A: INSPECTION

NOTE:
The level of ATF varies with fluid temperature. Pay attention to the ATF temperature when checking ATF level.
1) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 to 80°C (158 to 176°F) on Subaru Select Monitor. <Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

2) Park the vehicle on a level surface.
3) After selecting all positions (P, R, N, D), set the select lever in “P” range. Measure the ATF level with engine idling for one or two minutes.
4) Make sure that ATF level is above the center between upper and lower marks at HOT side.
5) If the ATF level is below the center between upper and lower marks, add the recommended ATF until the fluid level is found above the center between upper and lower marks.

CAUTION:
- Use care not to exceed the upper level.
- When the transmission is cold, be careful not to add ATF to the upper level on HOT side. Overfilling of ATF may cause oil splashing.

6) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 to 80°C (158 to 176°F) on Subaru Select Monitor. <Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
7) Check the ATF for leaks. Visually check for leaks in the transmission. If there are leaks, replace the gasket, oil seals, plugs or other parts.

B: REPLACEMENT

1) Lift-up the vehicle.
2) Remove the ATF drain plug to drain ATF.

CAUTION:
Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.
3) Check the condition of ATF.
<Ref. to 5AT-28, CONDITION CHECK, Automatic Transmission Fluid.>
4) Tighten the ATF drain plug.

NOTE:
Use a new gasket.

Tightening torque:
20 N·m (2.0 kgf-m, 14.8 ft-lb)

5) Lower the vehicle.
6) Pour ATF from the oil charge pipe.

Specified fluid:
SUBARU ATF (Part No. K0140Y0700)

Recommended fluid:
IDEMITSU ATF HP
Castrol Transmax J

NOTE:
Using of recommended fluid is permitted only on the area where the specified is not available.

Capacity:
Fill the same amount of ATF drained.

Capacity when transmission is overhauled:
9.6 — 10.0 ℓ (10.1 — 10.6 US qt, 8.4 — 8.8 Imp qt)

7) Check the level and leaks of ATF.
<Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>
**C: CONDITION CHECK**

NOTE: When replacing ATF, check the inside condition of transmission body by inspecting the drained ATF.

<table>
<thead>
<tr>
<th>Fluid condition</th>
<th>Trouble and possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>

<td>Replace ATF and check if AT or vehicle for faulty.</td>
</tr>
<tr>
<td>Clouded fluid or bubbles are found in fluid.</td>
<td>Water mixed in fluid</td>
<td>Replace ATF and check the water entering point.</td>
</tr>
</tbody>
</table>
3. Differential Gear Oil

A: INSPECTION
1) Park the vehicle on a level surface.
2) Remove the collector cover.
3) Remove the oil level gauge and wipe it clean.
4) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
5) Remove the oil level gauge again, and check the level of differential gear oil. If the differential gear oil level is below “L” line, add oil to bring the level up to “F” line.

NOTE:
To prevent overfilling the differential gear oil, do not add oil above “F” line.

B: REPLACEMENT
1) Lift-up the vehicle.
2) Remove the differential gear oil drain plug using TORX® BIT T70, and drain the differential gear oil.

CAUTION:
- Directly after the engine has been running, the differential gear oil is hot. Be careful not to burn yourself.
- Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.
3) Tighten the differential gear oil drain plug using TORX® BIT T70.

NOTE:
Use a new gasket.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)
4. Road Test

A: INSPECTION

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of automatic transmission.

NOTE:
When performing the test, do not exceed posted speed limit.

2. D RANGE SHIFT FUNCTION

Check shifting between 1st ←→ 2nd ←→ 3rd ←→ 4th ←→ 5th while driving on normal city streets.

3. D RANGE SHIFT SHOCK

Check the shock level when shifting up during normal driving.

4. KICK-DOWN FUNCTION

Check kick-down for each gear. Also check the kick-down shock level.

5. ENGINE BRAKE OPERATION

- Check the 4th gear engine brake when shifting down from 5th to 4th range while driving in 5th gear of manual mode [50 to 60 km/h (31 to 37 MPH)].
- Check the 3rd gear engine brake when shifting down from 4th to 3rd range while driving in 4th gear of manual mode [50 to 60 km/h (31 to 37 MPH)].
- Check the 2nd gear engine brake when shifting down from 3rd to 2nd range while driving in 3rd gear of manual mode [40 to 50 km/h (25 to 31 MPH)].
- Check the 1st gear engine brake when shifting down from 2nd to 1st range while driving in 2nd gear of manual mode [20 to 30 km/h (12 to 19 MPH)].

6. LOCK-UP FUNCTION

Check that engine speed does not change sharply when the accelerator pedal is lightly depressed while driving on flat roads at normal speed in the lock-up range.

7. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to “P” range. Check that the vehicle does not move when the parking brake is released.

8. NOISE & VIBRATION

Check for unusual sounds and vibration while driving and during shifting.

9. OIL LEAKAGE

After the driving test, inspect for oil leaks from the transmission body.
5. Stall Test

A: INSPECTION

NOTE:
The stall test is of extreme importance in diagnosing the condition of automatic transmission and engine. It should be conducted to measure the engine stall speeds in “R” and “2nd of manual mode”.

Purposes of the stall test:
• To check the operation of automatic transmission clutch.
• To check the operation of torque converter clutch.
• To check engine performance.
1) Check that the throttle valve opens fully.
2) Check that the engine oil level is correct.
3) Check that the coolant level is correct.
4) Check that the ATF level is correct.
5) Check that the differential gear oil level is correct.
6) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 to 80°C (158 to 176°F) on Subaru Select Monitor. <Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
7) Place the wheel chocks at the front and rear of all wheels and engage the parking brake.
8) Move the manual linkage to ensure it operates properly, and then set “2nd on manual mode”.
9) While forcibly depressing the foot brake pedal, gradually depress the accelerator pedal until the engine operates at full throttle.

10) When the engine speed is stabilized, quickly record that speed and release the accelerator pedal.
11) Shift the select lever to “N” range, and cool down the engine by idling it for more than one minute.
12) Perform the procedure for “R” range in the same way as “2nd on manual mode”.

NOTE:
• Do not continue the stall test for MORE THAN FIVE SECONDS at a time (from fully closed throttle to fully open throttle until stall speed reading). Engine oil and ATF to deteriorate and the clutch and brake to be adversely affected.
• Be sure to cool down the engine for at least one minute with the select lever set in “P” or “N” range and with the idle speed lower than 1,200 rpm after performing stall test.
• If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the automatic transmission from sustaining damage.

Stall speed (at sea level):

TURBO MODEL
3,100 — 3,500 rpm
NON-TURBO MODEL
2,400 — 2,800 rpm
## Stall Test

<table>
<thead>
<tr>
<th>Stall speed (at sea level)</th>

<tr>
<td></td>
<td>R</td>
<td>• Forward brake&lt;br&gt;• Forward brake one-way clutch&lt;br&gt;• Direct clutch&lt;br&gt;• 3rd one-way clutch&lt;br&gt;• One-way clutch of the torque converter</td>
</tr>
</tbody>
</table>
6. Time Lag Test

A: INSPECTION

NOTE:
When the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before the shock can be felt. Using this, check the condition of forward brake, reverse brake, 1st one-way clutch, forward one-way clutch and 3rd one-way clutch.

- Perform the test at normal operation fluid temperature 70 — 80°C (158 — 176°F).
- Be sure to allow a one minute interval between tests.
- Make three measurements and take the average value.

1) Fully apply the parking brake.
2) Start the engine.
Check the idling speed (A/C OFF).
3) Shift the select lever from “N” to “D” range. Using a stop watch, measure the time-lag which takes from shifting the lever until the shock is felt.

**Time-lag**

**Standard: 1.2 sec. or less**

If “N” → “D” time-lag is longer than specified:
- Line pressure too low
- Forward brake worn
- One-way clutch not operating properly

4) In the same manner, measure the time lag for “N” → “R”.

**Time-lag**

**Standard: 1.5 sec. or less**

If “N” → “R” time lag is longer than specified:
- Line pressure too low
- Reverse brake worn
7. Line Pressure Test

A: MEASUREMENT

NOTE:
If the clutch or brake shows a sign of slippage, or shifting interval is not correct, the line pressure should be checked.
- Excessive shocks during up-shift or shifting takes place at a higher point than under normal circumstances, may be due to the line pressure being too high.
- Slippage or inability to operate the vehicle may, in most cases, be due to loss of oil pressure for the operation of the clutch, brake or control valve.

1) Set the vehicle on a lift.
2) Remove the under cover.
3) Remove the test plug and install the ST.

ST  498897200  OIL PRESSURE ADAPTER

4) Set the ST1 and ST2.

ST1  498897200  OIL PRESSURE ADAPTER
ST2  498575400  OIL PRESSURE GAUGE ASSY

5) Lower the vehicle, and pull the ST1 and ST2 into vehicle.

ST1  498897200  OIL PRESSURE ADAPTER
ST2  498575400  OIL PRESSURE GAUGE ASSY

6) Connect the Subaru Select Monitor to data link connector and read the current data. <Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

(1) Start the engine.
(2) Turn the Subaru Select Monitor switch to ON.
(3) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
(4) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
(5) Press the [YES] key after the information of transmission type has been displayed.

6) On the «Transmission Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
(7) On the «Transmission Diagnosis» display screen, select the {Data Display} and press the [YES] key.
(8) Using the scroll key, display the “P/L solenoid target oil pressure”.

(1) Start the engine.
(2) Turn the Subaru Select Monitor switch to ON.
(3) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
(4) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
(5) Press the [YES] key after the information of transmission type has been displayed.
7) Perform the line pressure test.

NOTE:
- Do not perform the line pressure test for more than 5 seconds at a time. It makes engine oil and ATF deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least one minute with the select lever set in “P” or “N” range and with the idle speed lower than 1,200 rpm after performing line pressure test.
- Adjust the throttle valve angle in order to obtain the “P/L solenoid target pressure” displayed on the Subaru Select Monitor.

<table>

8. Transfer Clutch Pressure Test

A: INSPECTION

1) Lift-up the vehicle.
2) Remove the heat shield cover securing bolts to slide the heat shield cover.
3) Remove the test plug and install the ST.
   ST 498897200 OIL PRESSURE ADAPTER

CAUTION:
Be careful not to cut your arm with the heat shield cover when removing the test plug and installing the ST.

4) Set the ST1 and ST2.
   ST1 498897200 OIL PRESSURE ADAPTER
   ST2 498575400 OIL PRESSURE GAUGE ASSY

5) Lower the vehicle, and pull the ST1 and ST2 into vehicle.
   ST1 498897200 OIL PRESSURE ADAPTER
   ST2 498575400 OIL PRESSURE GAUGE ASSY

6) Connect the Subaru Select Monitor to data link connector and read the current data. <Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
   (1) Start the engine.
   (2) Turn the Subaru Select Monitor switch to ON.
   (3) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   (4) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
   (5) Press the [YES] key after the information of transmission type has been displayed.

9. Automatic Transmission Assembly

A: REMOVAL

1) Set the vehicle on a lift.
2) Fully open the front hood and support with the hood stay.
3) Disconnect the ground cable from battery.
4) Remove the collector cover.
5) Remove the intercooler. (Turbo model)
   <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
6) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
7) Remove the air cleaner case. (Non-turbo model) <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner Case.>
8) Remove the air breather hose. <Ref. to 5AT-69, REMOVAL, Air Breather Hose.>
9) Remove the starter. <Ref. to SC(H4SO 2.0)-6, REMOVAL, Starter.>
10) Disconnect the following connectors.
    • Turbo model
       (1) Transmission harness connectors

(1) Front oxygen (A/F) sensor

(2) Transmission harness connector

(2) Front oxygen (A/F) sensor

11) Remove the intercooler stay and engine hanger rear. (Turbo model)

12) Disconnect the engine harness connectors, and then remove the engine hanger rear. (Non-turbo model)
13) Remove the water by-pass pipe. (Turbo model)

14) Separate the torque converter from drive plate.
   (1) Remove the service hole plug.
   (2) Remove the bolts which hold torque converter to drive plate.
   (3) Remove the four bolts by rotating the clamp pulley a little at a time.
   (4) Make sure the torque converter moves freely by rotating with finger through the starter installation hole.

   **CAUTION:**
   Be careful not to drop bolts into converter housing.

15) Install the ST to converter case.
    ST 498277200 STOPPER SET

16) Lift-up the vehicle.
17) Remove the under cover. (Non-turbo model)
18) Remove the front exhaust pipe, rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>

19) Remove the ATF cooler inlet and outlet pipes. (Non-turbo model) <Ref. to 5AT-64, REMOVAL, ATF Cooler Pipe & Hose.>
20) Remove the pitching stopper.

21) Remove the pitching stopper bracket.

22) Set the ST.
    ST 41099AC000 ENGINE SUPPORT ASSEMBLY

23) Remove the air intake duct. (Turbo model) <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
24) Remove the air cleaner case. (Turbo model) <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
25) Remove the linear motion mounting. (Turbo model) <Ref. to ME(H4DOTC)-37, REMOVAL, Linear Motion Mounting.>
26) Remove the transmission mounting bolt (upper side).

27) Lift-up the vehicle. (Turbo model)
28) Remove the under cover. (Turbo model)
29) Remove the center exhaust pipe, rear exhaust pipe and muffler. (Turbo model) <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
30) Remove the front exhaust pipe, rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
31) Remove the heat shield cover.

32) Remove the ATF drain plug to drain ATF.

33) Remove the oil charge pipe.

34) Disconnect the connector from turbine speed sensor 1.

35) Remove the turbine speed sensor 1 connector mounting bolt and rotate the sensor by 180°.

**CAUTION:**
Failure to follow this procedure may cause the interference between vehicle body and sensor while removing/installing transmission, resulting in damage.

36) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
37) Remove the shift select cable. <Ref. to CS-12, REMOVAL, Select Cable.>
38) Disconnect the hose from the ATF inlet and outlet pipes.

39) Remove the ATF cooler bracket from transmission body. (ATF cooler model with warmer function)
   - Non-turbo model

40) Remove the front crossmember support plate.  

41) Remove the two clutch housing cover securing bolts.

42) Remove the front stabilizer bracket.  <Ref. to FS-16, REMOVAL, Front Stabilizer.>
43) Remove the bolts which secure front ball joint to the housing.  <Ref. to FS-17, REMOVAL, Front Ball Joint.>
44) Pull out the drive shaft from transmission.
45) Set the transmission jack under the transmission.

46) Remove the rear crossmember.
47) Remove the transmission mounting bolt (lower side).

48) Remove the transmission.

NOTE:
• Turn the engine support assembly from the vehicle under body to the left (to shorten the engine support length), and lower the rear of the engine for easy disassembly.
• Be careful not to allow breather pipe and etc. to touch the vehicle body when detaching the automatic transmission assembly by pulling it backward.

B: INSTALLATION
1) Install the ST to torque converter case.

ST 498277200 STOPPER SET

2) Install the transmission onto engine.
   (1) Lift up the transmission gradually using a transmission jack.
   (2) Engage them at splines.
3) Install the engine mounting bolt (lower side).

   Tightening torque:
   50 N·m (5.1 kgf-m, 36.9 ft-lb)

4) Install the transmission rear crossmember.

   Tightening torque:
   70 N·m (7.1 kgf-m, 51.6 ft-lb)

5) Take off the transmission jack.
6) Lower the vehicle.
7) Install the engine mounting bolt (upper side).

   Tightening torque:
   50 N·m (5.1 kgf-m, 36.9 ft-lb)

8) Remove the ST from converter case.
ST 498277200 STOPPER SET

9) Install the starter. <Ref. to SC(H4SO 2.0)-6, INSTALLATION, Starter.>

10) Install the torque converter to drive plate.
    (1) Install the bolts which hold torque converter to drive plate.
    (2) Install all four bolts by rotating the crank pulley a little at a time.
    (3) Install the service hole.

   Tightening torque:
   25 N·m (2.5 kgf-m, 18.4 ft-lb)

11) Remove the ST and install the pitching stopper bracket.

   Tightening torque:
   40 N·m (4.1 kgf-m, 29.5 ft-lb)
12) Install the pitching stopper.

**Tightening torque:**
- T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)
- T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)

13) Lift-up the vehicle.

14) Replace the front differential side retainer oil seal.
   - (1) Remove the oil seal by using flat tip screwdriver and etc.
   - (2) Fit a new oil seal using ST.

   **ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER**

   **NOTE:**
   - Apply oil to the oil seal lips.
   - Always replace the differential side oil seal after extracting front drive shaft from the transmission.

15) Apply grease to the oil seal lips.

16) Set the ST to the side retainer.

   **ST 28399SA000 OIL SEAL PROTECTOR**

17) Install the front drive shaft into transmission.

   **NOTE:**
   Replace the circlip of drive shaft with a new one.

18) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.

   **ST 28399SA000 OIL SEAL PROTECTOR**

19) Install the ATF cooler inlet and outlet pipes. (Non-turbo model) <Ref. to 5AT-66, INSTALLATION, ATF Cooler Pipe & Hose.>

20) Install the ATF cooler bracket to transmission proper. (ATF cooler model with warmer function)

   **Tightening torque:**
   - 25 N·m (2.5 kgf-m, 18.1 ft-lb)
   - Non-turbo model

21) Install the inlet and outlet hoses to the ATF inlet and outlet pipes.

22) Insert the ball joint into housing.<Ref. to FS-17, INSTALLATION, Front Ball Joint.>

23) Install the front stabilizer bracket. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>
24) Screw the securing bolts for clutch housing cover.

26) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>

27) Install the shift select cable. <Ref. to CS-13, INSTALLATION, Select Cable.>

28) Install the turbine speed sensor 1 and harness, and then connect the connector.

**Tightening torque:**

\(41 \text{ N}\cdot\text{m (4.2 kgf-m, 30.2 ft-lb)}\)

29) Install the oil charge pipe.

30) Install the heat shield cover.

31) Install the center exhaust pipe, rear exhaust pipe and muffler. (Turbo model) <Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>

32) Install the front exhaust pipe, rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>

33) Install the under cover.

34) Lower the vehicle.

35) Install the linear motion mounting. (Turbo model) <Ref. to ME(H4DOTC)-37, INSTALLATION, Linear Motion Mounting.>

36) Install the air cleaner hose. <Ref. to IN(H4DOTC)-8, INSTALLATION, Air Cleaner Case.>

37) Install the air intake duct. <Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.>
38) Connect the following connectors.
   - Turbo model
     (1) Transmission harness connectors
     (2) Front oxygen (A/F) sensor
   - Non-turbo model
     (1) Front oxygen (A/F) sensor
     (2) Transmission harness connector

39) Install the intercooler stay RH and engine hanger rear. (Turbo model)

40) Install the engine hanger rear, and then connect the engine harness connector. (Non-turbo model)

41) Install the water by-pass pipe. (Turbo model)

42) Pour ATF from the oil charge pipe. <Ref. to 5AT-27, REPLACEMENT, Automatic Transmission Fluid.>

43) Install the air breather hose. <Ref. to 5AT-69, INSTALLATION, Air Breather Hose.>

44) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>

45) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>

46) Install the air cleaner case. (Non-turbo model) <Ref. to IN(H6DO)-6, INSTALLATION, Air Cleaner Case.>

47) Install the collector cover.

48) Connect the battery ground cable to battery.

49) Perform the Clear Memory 2. <Ref. to 5AT(diag)-18, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>
   (1) Connect the Subaru Select Monitor to data link connector.
   (2) Turn the ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.
   (3) Ensure that the select lever is in “P” range.
   (4) On the «Main Menu» display screen, select the [Each System Check] and press the [YES] key.
(5) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
(6) Press the [YES] key after the information of transmission type has been displayed.
(7) On the «Transmission Diagnosis» display screen, select the {Clear Memory 2} and press the [YES] key.

50) Perform the inspection with driving the vehicle at the end of repair work and make sure there is no faulty as below;
• Excessive shift shock
• Oil leakage from transmission proper and etc.
• Occurrence of noise caused by interference etc.

NOTE:
If excessive shift shock is felt, execute the advance operation of learning control. <Ref. to 5AT(diag)-22, PROCEDURE, Learning Control.>
10. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

1) Disconnect the ground cable from battery.
2) Remove the intercooler. (Turbo model)
   <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
3) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Remove the pitching stopper.

2. TRANSMISSION REAR CROSSMEMBER & REAR CUSHION RUBBER

1) Disconnect the ground cable from battery.
2) Jack-up the vehicle and support it with rigid racks.
3) Remove the center exhaust pipe, rear exhaust pipe and muffler. (Turbo model)
   <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
4) Remove the front exhaust pipe, rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
5) Remove the heat shield cover.
6) Set the transmission jack under the transmission. Make sure that the support plate of transmission jack does not touch the oil pan.
7) Remove the transmission rear crossmember.
8) Remove the rear cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

1) Install the pitching stopper.

   Tightening torque:
   \[ T1: 50 \text{ N} \cdot \text{m} (5.1 \text{ kgf-m}, 36.9 \text{ ft-lb}) \]
   \[ T2: 58 \text{ N} \cdot \text{m} (5.9 \text{ kgf-m}, 42.8 \text{ ft-lb}) \]

2) Install the intercooler. (Turbo model)
   <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
3) Install the air intake chamber. (Non-turbo model)
   <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>
4) Connect the battery ground cable to battery.
2. TRANSMISSION REAR CROSSMEMBER & REAR CUSHION RUBBER

1) Install the rear cushion rubber.

**Tightening torque:**
35 N·m (3.6 kgf-m, 26 ft-lb)

2) Install the crossmember.

**Tightening torque:**
70 N·m (7.1 kgf-m, 51.6 ft-lb)

3) Remove the transmission jack.
4) Install the heat shield cover.
5) Install the center exhaust pipe, rear exhaust pipe and muffler. (Turbo model)
   <Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.>
   <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.>
   <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>
6) Install the front exhaust pipe, rear exhaust pipe and muffler. (Non-turbo model)
   <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>
   <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.>
   <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>
7) Connect the battery ground cable to battery.

C: INSPECTION

Repair or replace parts if the results of the inspection below are not satisfied.

1. PITCHING STOPPER

Check pitching stopper for bends or damage. Ensure there are no cracks, hardening or damage on rubbers.

2. TRANSMISSION REAR CROSSMEMBER & REAR CUSHION RUBBER

Check the crossmember for bends or damage. Ensure there are no cracks, hardening, or damage on cushion rubbers.
11. Extension Case Oil Seal

**A: INSPECTION**
Inspect there is no ATF leakage from the joint of transmission and propeller shaft. If so, replace the oil seal. <Ref. to 5AT-49, REPLACEMENT, Extension Case Oil Seal.>

**B: REPLACEMENT**
1) Lift-up the vehicle.
2) Clean the transmission exterior.
3) Remove the ATF drain plug to drain ATF.

**CAUTION:**
Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.
4) Tighten the ATF drain plug.

**NOTE:**
Use a new gasket.

**Tightening torque:**
20 N·m (2.0 kgf-m, 14.8 ft-lb)

5) Remove the rear exhaust pipe and muffler. (Turbo model)
<Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>

6) Remove the rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>

7) Remove the heat shield cover.

8) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
9) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY
10) Using the ST, install the oil seal.
ST 498057300 INSTALLER
11) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
12) Install the heat shield cover.

13) Install the rear exhaust pipe and muffler. (Turbo model)
<Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>

14) Install the rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>

15) Pour ATF into the oil charge pipe.

**Specified fluid:**
SUBARU ATF (Part No. K0140Y0700)

**Recommended fluid:**
IDEMITSU ATF HP
Castrol Transmax J

**NOTE:**
Use of recommended fluid is permitted only on the area where the specified is not available.

**Capacity:**
Fill the same amount of ATF drained.

16) Check the level and leaks of ATF. <Ref. to 5AT-27, Automatic Transmission Fluid.>
12. Differential Side Retainer Oil Seal

A: INSPECTION
Check the leakage of gear oil from differential side retainer oil seal part. If there is oil leakage, replace the oil seal.

B: REPLACEMENT
1) Lift-up the vehicle.
2) Remove the front exhaust pipe and center exhaust pipe. (Turbo model) <Ref. to EX(H4DOTC)-5, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.>
3) Remove the front exhaust pipe. (Non-turbo model) <Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>
4) Remove the differential gear oil drain plug using TORX® BIT T70 to drain differential gear oil.

CAUTION:
• Directly after the engine has been running, the differential gear oil is hot. Be careful not to burn yourself.
• Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.

5) Tighten the differential gear oil drain plug.

NOTE:
Use a new gasket.

Tightening torque:
44 N·m (4.5 kgf·m, 32.5 ft-lb)

6) Separate the front drive shaft from transmission. <Ref. to DS-22, REMOVAL, Front Drive Shaft.>
7) Remove the differential side retainer oil seal using driver wrapped with vinyl tape or etc.
8) Using the ST, install the differential side retainer oil seal by slightly tapping with hammer.

9) Apply oil to the oil seal lips.
10) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.> 
11) Install the front and center exhaust pipes. (Turbo model) <Ref. to EX(H4DOTC)-5, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.>
12) Install the front exhaust pipe. (Non-turbo model) <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>
13) Lower the vehicle.
14) Pour gear oil into the gauge hole.

Recommended gear oil:
<Ref. to 5AT-3, RECOMMENDED GEAR OIL, SPECIFICATION, General Description.>

Gear oil capacity:
1.3 — 1.5 2 (1.4 — 1.6 US qt, 1.1 — 1.3 Imp qt)

15) Check the level of differential gear oil. <Ref. to 5AT-29, INSPECTION, Differential Gear Oil.>
13. Inhibitor Switch

A: INSPECTION
Inhibitor switch cannot be checked, because the inhibitor switch is installed on control valve assembly. When the malfunction occurs, refer to 5AT (Diagnosis) section. <Ref. to 5AT(diag)-34, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
14. Front Vehicle Speed Sensor

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor.

NOTE:
Secure the harness of the rear vehicle speed sensor to the transmission proper using wire etc.

3) Remove the extension case.
4) Remove the intermediate case.
5) Remove the center differential carrier. <Ref. to 5AT-80, REMOVAL, Center Differential Carrier.>
6) Lay along the transmission case, and then remove the oil pan.
7) Remove the old gasket on the oil pan and transmission case completely.
8) Disconnect the front vehicle speed sensor connector.
9) Remove the front vehicle speed sensor securing bolt.
10) Remove the front vehicle speed sensor through the hole of the AT transmission main case.

B: INSTALLATION
1) Install the front vehicle speed sensor.

Tightening torque:
7 N-m (0.7 kgf-m, 5.2 ft-lb)

2) Connect the front vehicle speed sensor connector.
3) Apply proper amount of liquid gasket to the entire oil pan mating surface.

**Liquid gasket:**
THREE BOND 1217B (Part No. K0877YA020)

4) Install the oil pan by equally tightening the bolts.

**Tightening torque:**
5 N·m (0.5 kgf-m, 3.7 ft-lb)

5) Install the center differential carrier. <Ref. to 5AT-80, INSTALLATION, Center Differential Carrier.>
6) Install the intermediate case.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.4 ft-lb)

7) Install the extension case.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.4 ft-lb)

8) Install the rear vehicle speed sensor.

**Tightening torque:**
7 N·m (0.7 kgf-m, 5.2 ft-lb)

9) Install the transmission assembly into the vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>
10) Pour ATF from the oil charge pipe. <Ref. to 5AT-27, REPLACEMENT, Automatic Transmission Fluid.>
11) Check the level and leaks of the ATF. <Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>
15. Rear Vehicle Speed Sensor

A: REMOVAL

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.

3) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
4) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
5) Disconnect the following connectors.
   - Turbo model
     1) Transmission harness connectors
     2) Front oxygen (A/F) sensor
   - Non-turbo model
     6) Remove the transmission harness connector and front oxygen (A/F) sensor connector from the stay.
7) Lift-up the vehicle.
8) Clean the transmission exterior.
10) Remove the center exhaust pipe, rear exhaust pipe and muffler. (Turbo model) <Ref. to EX(H4DOTC)-6, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
11) Remove the rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, REMOVAL, Muffler.>
12) Remove the heat shield cover.
13) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
14) Place the transmission jack under transmission.

NOTE:
Make sure that the support plate of transmission jack does not touch the crossmember.
15) Remove the transmission rear crossmember bolt.
16) Lower the transmission jack.
NOTE:
Do not separate the transmission jack and transmission.
17) Remove the oil charge pipe. <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
18) Remove the ATF cooler inlet and outlet pipes.
NOTE:
When removing the outlet pipe, be careful not to lose the ball and spring used with retaining screw.
19) Disconnect the connector from turbine speed sensor 1.
20) Remove the rear vehicle speed sensor.
23) Remove the control valve body.
21) Remove the oil pan.
22) Disconnect the control valve connector and front vehicle speed sensor connector.
24) Remove the bolt securing harness of transmission main case.
25) Remove the harness assembly.

**B: INSTALLATION**

1) Pass the harness assembly through the hole in transmission case.
2) Install the securing bolt of transmission main case.

*Tightening torque:*

7 N·m (0.7 kgf·m, 5.2 ft·lb)
3) Install the control valve body.

**Tightening torque:**
8 N·m (0.8 kgf-m, 58 ft-lb)

**NOTE:**
Be careful not to catch harness in.

4) Connect the control valve connector and front vehicle speed sensor connector.

5) Apply proper amount of liquid gasket to the entire oil pan mating surface.

**Liquid gasket**
THREE BOND 1217B (Part No. K0877YA020)

6) Install the oil pan by equally tightening the bolts.

**Tightening torque:**
5 N·m (0.5 kgf-m, 3.6 ft-lb)

7) Install the rear vehicle speed sensor and turbine speed sensor 1, and then fasten the harness.

**Tightening torque:**
7 N·m (0.7 kgf-m, 5.1 ft-lb)

8) Install a new aluminum washer and oil cooler pipe.

**Tightening torque:**
T: 25 N·m (2.5 kgf-m, 18.1 ft-lb)

9) Install the oil charge pipe. <Ref. to 5AT-70, INSTALLATION, Oil Charge Pipe.>
10) Install the transmission rear crossmember bolt.

**Tightening torque:**
70 N·m (7.1 kgf-m, 51 ft-lb)

11) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
12) Install the heat shield cover.
13) Install the center exhaust pipe, rear exhaust pipes and muffler. (Turbo model)
<Ref. to EX(H4DOTC)-7, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-12, INSTALLATION, Muffler.>
14) Install the rear exhaust pipe and muffler. (Non-turbo model) <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H6DO)-10, INSTALLATION, Muffler.>
15) Lower the vehicle.
16) Install the transmission connector to the stay, and then connect the connector.
17) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
18) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>
19) Pour ATF through the oil charge pipe. <Ref. to 5AT-27, REPLACEMENT, Automatic Transmission Fluid.>
20) Check the level and leaks of ATF. <Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>
21) Execute the learning control promotion. <Ref. to 5AT(diag)-22, PROCEDURE, Learning Control.>
16. Turbine speed sensor 1

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
3) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
4) Disconnect the turbine speed sensor 1 connector.
5) Remove the turbine speed sensor 1.

B: INSTALLATION
1) Install the turbine speed sensor 1.

Tightening torque:
7 N·m (0.7 kgf-m, 5.2 ft-lb)
2) Connect the turbine speed sensor 1 connector.
3) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
4) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>
17. Control Valve Body

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Lift-up the vehicle.
4) Clean the transmission exterior.
5) Remove the ATF drain plug to drain ATF.

CAUTION:
Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.
6) Tighten the ATF drain plug.

NOTE:
Use a new gasket.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

7) Remove the oil pan.

CAUTION:
Be sure to prevent the entering of dust and other foreign matters into oil pan.
8) Remove the magnet.

9) Clean the magnet.
10) Completely remove the remaining liquid gasket on the transmission case and oil pan.
11) Disconnect the control valve connector and front vehicle speed sensor connector.

12) Remove the control valve body.

NOTE:
Replace the control valve body as assembly, because it is non-disassemble part.

B: INSTALLATION
1) Check the control valve body for dust and other foreign matters.
2) Install the control valve body to transmission by equally tightening the bolts.

Tightening torque:
8 N·m (0.8 kgf-m, 5.8 ft-lb)

3) Connect the control valve connector.

(A) Control valve connector
(B) Front vehicle speed sensor connector
4) Attach the magnet at the specified position of oil pan.

5) Apply liquid gasket to the oil pan.

**Liquid gasket:**
*THREE BOND 1217B (Part No. K0877YA020)*

6) Install the oil pan by equally tightening the bolts.

**Tightening torque:**
*5 N·m (0.5 kgf-m, 3.6 ft-lb)*

7) Pour ATF through the oil charge pipe.

**Specified and recommended fluid:**
*<Ref. to 5AT-2, SPECIFICATION, General Description.>*

**Capacity:**
*Fill the same amount of the drained ATF.*

8) Check the ATF level.
*<Ref. to 5AT-27, Automatic Transmission Fluid.>*

9) Execute the learning control promotion. *<Ref. to 5AT(diag)-22, PROCEDURE, Learning Control.>*

**C: INSPECTION**
Check each parts for holes, damages or other foreign matters.
18. ATF Filter

A: REMOVAL

NOTE:
ATF filter is maintenance free.
1) Disconnect the ground cable from battery and remove the battery from vehicle.

2) Remove the harness securing bracket.

3) Using the ST, remove the ATF filter.

B: INSTALLATION

1) Apply a thin coat of ATF to the oil seal part of new ATF filter.
2) Install the ATF filter. Turn it by hand, being careful not to damage oil seal.
3) Tighten the ATF filter using ST.

Calculate the ATF filter tightening torque using following formula.

\[ T_2 = \frac{L_2}{L_1 + L_2} \times T_1 \]

T1: 14 N·m (1.4 kgf-m, 10.1 ft-lb)
[Required torque setting]

T2: Tightening torque
L1: ST length 78 mm (3.07 in)
L2: Torque wrench length

Example:

<table>
<thead>
<tr>
<th>Torque wrench length</th>
<th>Tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>mm (in)</td>
<td>N·m (kgf-m, ft-lb)</td>
</tr>
<tr>
<td>100 (3.94)</td>
<td>7.7 (0.79, 5.7)</td>
</tr>
<tr>
<td>150 (5.91)</td>
<td>9.0 (0.92, 6.7)</td>
</tr>
<tr>
<td>200 (7.87)</td>
<td>10 (1.0, 7.2)</td>
</tr>
</tbody>
</table>

NOTE:
Align the ST with torque wrench while tightening the ATF filter.

ST 498545400 OIL FILTER WRENCH
4) Fill ATF.
5) Inspect the level of ATF. <Ref. to 5AT-27, Automatic Transmission Fluid.>
6) Install the harness securing bracket.
7) Install the battery.

C: INSPECTION

Check for rust, hole, ATF leaks and other damage. Replace the part if any defect is found from the inspection.
19. Transmission Control Module (TCM)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the lower cover and then disconnect the connector.
3) Remove the body integrated unit. (RHD model) <Ref. to SL-46, REMOVAL, Body Integrated Unit.>
4) Disconnect the connector from TCM.
   - RHD model
   - LHD model

5) Remove the relay from TCM body.
6) Remove the TCM.

B: INSTALLATION
1) Install the relay to TCM body.
2) Install the TCM.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- RHD model
- LHD model

3) Connect the connector to TCM.
4) Install in the reverse order of removal.
5) Perform the Clear Memory 2. <Ref. to 5AT(diag)-18, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>
   (1) Connect the Subaru Select Monitor to data link connector.
   (2) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON.
   (3) Ensure that the select lever is in “P” range.
   (4) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   (5) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
   (6) Press the [YES] key after the information of transmission type has been displayed.
   (7) On the «Transmission Diagnosis» display screen, select the {Clear Memory 2} and press the [YES] key.
6) Perform the inspection with driving the vehicle at the end of repair work, and make sure there is no faulty as below;
   - Excessive shift shock
   - Oil leakage from transmission proper and etc.
   - Occurrence of noise caused by interference etc.
NOTE:
If excessive shift shock is felt, execute the advance operation of learning control. <Ref. to 5AT(diag)-22, PROCEDURE, Learning Control.>
20. Lateral G Sensor

A: REMOVAL
1) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
2) Disconnect the connector from lateral G sensor.
3) Remove the lateral G sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
- T1: 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
- T2: 24.5 N·m (2.5 kgf-m, 18.1 ft-lb)
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.
# AUTOMATIC TRANSMISSION

21. ATF Cooler Pipe & Hose

A: REMOVAL

1. EXCEPT FOR ATF COOLER MODEL WITH WARMER FUNCTION

1) Set the vehicle on a lift.
2) Remove the battery.
3) Lift-up the vehicle.
4) Remove the under cover.
5) Remove the radiator under cover.

6) Disconnect the ATF cooler hose from radiator.

NOTE:
- Do not use a screwdriver or other pointed tools.
- When hard to remove the hose, wrap the hose with cloth to prevent from damaging, and then turn with pliers and pull out with hand straightly.

7) Disconnect the ATF cooler hoses from pipes.

NOTE:
- Do not use a screwdriver or other pointed tools.
- When hard to remove the hose, wrap the hose with cloth to prevent from damaging, and then turn with pliers and pull out with hand straightly.

8) Disconnect the ATF cooler pipe from frame.
9) Remove the oil cooler inlet and outlet pipes.  
NOTE:  
When disconnecting the outlet pipe, be careful not to lose the ball and spring used with retaining screw.

5) Remove the pipe securing bolts on the side of transmission.

2. ATF COOLER MODEL WITH WARMER FUNCTION

1) Lift-up the vehicle.  
2) Remove the front exhaust pipe.  
<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>
3) Disconnect the inlet and outlet hoses of the ATF cooler pipe from oil cooler pipe.

6) Lower the vehicle.  
7) Remove the air intake chamber.  
<Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
8) Remove the resonator chamber.  
<Ref. to IN(H6DO)-9, REMOVAL, Resonator Chamber.>
9) Remove the oil charge pipe.  <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
10) Disconnect the ATF cooler hoses and pipes.

11) Remove the pitching stopper bracket securing bolt and bolt on the side of transmission, and then remove ATF cooler pipe.
12) Remove the ATF cooler from the installation bracket as necessary.

13) Remove the ATF cooler bracket from transmission body as necessary.

B: INSTALLATION

1. EXCEPT FOR ATF COOLER MODEL WITH WARMER FUNCTION

1) Install the oil cooler inlet and outlet pipes with new washer.

   **Tightening torque:**
   - T1: 25 N·m (2.5 kgf-m, 18.1 ft-lb)
   - T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)

2) Install the ATF cooler pipe to frame.

3) Connect the ATF cooler hose to pipe on the transmission side.

   **NOTE:**
   - Install so that the hose is not folded over, excessively bent or twisted.
   - Be careful to insert the hose to the specified position.
4) Connect the ATF cooler hose to pipe on radiator side.

NOTE:
- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

5) Install the radiator under cover.

   **Tightening torque:**
   
   *4.9 N·m (0.5 kgf-m, 3.6 ft-lb)*

6) Install the under cover.
7) Install the battery.
8) Fill ATF. <Ref. to 5AT-27, Automatic Transmission Fluid.>

   **NOTE:**
   Make sure there are no ATF leaks in joints between the transmission, radiator, pipes, and hoses.

---

### 2. ATF COOLER MODEL WITH WARMER FUNCTION

1) Install the ATF cooler bracket if it is removed from transmission body.

   **Tightening torque:**
   
   *25 N·m (2.5 kgf-m, 18.1 ft-lb)*

2) Install the ATF cooler if it is removed from installation bracket.

   **Tightening torque:**
   
   *25 N·m (2.5 kgf-m, 18.1 ft-lb)*

3) Install the pitching stopper securing bracket and bolt on the side of transmission.
4) Install the ATF cooler hoses and pipes.

5) Connect the engine harness connectors, and then install the engine hanger rear.

6) Install the oil charge pipe. <Ref. to 5AT-70, INSTALLATION, Oil Charge Pipe.>

7) Install the resonator chamber. <Ref. to IN(H6DO)-9, INSTALLATION, Resonator Chamber.>

8) Install the air intake chamber. <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>

9) Lift-up the vehicle.

10) Install the pipe securing bolts on the side of transmission.

11) Install the union screw of oil cooler inlet and outlet pipes.

   **Tightening torque:**
   
   \[
   T1: 25 \text{ Nm (2.5 kgf-m, 18.1 ft-lb)} \\
   T2: 44 \text{ Nm (4.5 kgf-m, 32.5 ft-lb)}
   \]

12) Install the inlet and outlet pipes of the ATF oil cooler hose to oil cooler pipe.

13) Install the front exhaust pipe. <Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

**C: INSPECTION**

Repair or replace any defective hoses, pipes, clamps, and washers found from the inspection below.

1) Check for ATF leaks in joints between the transmission, radiator, pipes, and hoses.
2) Check for deformed clamps.
3) Lightly bend the hose and check for cracks in the surface and other damages.
4) Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was installed by pressing with your fingernail.
5) Check for peeling, cracks, and deformation at the tip of the hose.
6) Check the ATF cooler for cracks or deformation. (ATF cooler model with warmer function)
22. Air Breather Hose

A: REMOVAL
1) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
2) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
3) Disconnect the air breather hose.

B: INSTALLATION
1) Connect the air breather hose.
2) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
3) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>

C: INSPECTION
Make sure the hose is not cracked or clogged.
23. Oil Charge Pipe

A: REMOVAL
1) Remove the intercooler. (Turbo model)  
<Ref. to IN(H4DOTC)-12, REMOVAL, Intercooler.>
2) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Chamber.>
3) Remove the oil charge pipe, and then remove the O-ring from flange side.

B: INSTALLATION
1) Install the oil charge pipe with a new O-ring.
   Tightening torque:
   \[41 \text{ N\cdot m (4.2 kgf-m, 30.2 ft-lb)}\]
2) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-12, INSTALLATION, Intercooler.>
3) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Chamber.>

C: INSPECTION
Make sure the oil charge pipe is not deformed or damaged.
24. Torque Converter Assembly

**A: REMOVAL**
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter and oil pump shaft horizontally.

**NOTE:**
- Be sure not to scratch the inside of bush in oil pump shaft.
- Be careful that the oil pump shaft may drawn out simultaneously.

3) Remove the oil pump shaft from torque converter as necessary.

**B: INSTALLATION**
1) When the oil pump shaft is removed, install the shaft to torque converter.

**NOTE:**
Make sure the clip is firmly inserted.
2) Install the oil pump shaft to torque converter, and then make sure that the clip is secured on groove.
3) Apply ATF to the revolution and sliding surface oil pump shaft.
4) Holding the torque converter assembly by hand, lightly rotate the torque converter assembly to engage the oil pump rotor.
5) Check the protruding dimension of the torque converter assembly.

**Dimension A:**
*Less than 8 mm (0.31 in)*

6) Install the transmission assembly into the vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

**C: INSPECTION**
Make sure the ring gear and protrusion of torque converter end are not deformed or damaged.
25. Extension Case & Intermediate Case

A: REMOVAL
1) Remove the transmission assembly.
   <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor.

3) Separate the extension case and intermediate case.

4) Separate the intermediate case and transmission main case.

B: INSTALLATION
1) Secure the intermediate case to transmission main case.

   Tightening torque: 
   25 N·m (2.5 kgf-m, 18.4 ft-lb)

2) Attach the selected reduction driven gear shim to end surface of reduction driven gear with vaseline. <Ref. to 5AT-79, ADJUSTMENT, Reduction Driven Gear.>
3) Install the extension case to intermediate case.

   NOTE:
   Use a new gasket.

   Tightening torque: 
   25 N·m (2.5 kgf-m, 18.4 ft-lb)

4) Install the rear vehicle speed sensor.

   Tightening torque: 
   7 N·m (0.7 kgf-m, 5.1 ft-lb)

5) Install the transmission assembly.
   <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>
C: DISASSEMBLY
1) Take out the transfer clutch and multi-plate clutch hub assembly by lightly tapping the end of rear drive shaft.

NOTE:
Be careful not to damage the oil seal of extension.

2) Remove snap ring using ST and press.
ST 18762AA000 COMPRESSOR SPECIAL TOOL

3) Supply compressed air to remove the clutch piston.

4) Remove the dust cover from extension case.
5) Remove the oil seal from extension case.

D: ASSEMBLY
1) Press-fit new oil seal using ST and press.
ST 498057300 INSTALLER
2) Press-fit the dust cover.
3) Insert the multi-plate clutch, drive plate, driven plate and spring retainer.

4) Using the ST and compressor, install the snap ring.
ST 18762AA000 COMPRESSOR SPECIAL TOOL

5) Install the transfer clutch. <Ref. to 5AT-74, INSTALLATION, Transfer Clutch.>

NOTE:
For 3-transfer clutch model, make sure the press plate is included.

6) Install the multi-plate hub assembly.

E: INSPECTION
• Use compressed air to make sure the extension case routes are not clogged and not leaks.
• Measure the extension end play and adjust it to within specifications.
<Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>

(A) Spring retainer
(B) Multi-plate clutch (LSD) piston assembly
26. Transfer Clutch

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case, and then remove the transfer clutch. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.> <Ref. to 5AT-73, DISASSEMBLY, Extension Case & Intermediate Case.>

B: INSTALLATION
1) Select the rear drive shaft shim. <Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>
2) Select the driven plate No. 3. <Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>
3) Install the extension case and intermediate case. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>
4) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION
- Inspect the drive plate facing for wear and damage.
- Inspect the snap ring for wear; return spring for permanent distortion, breakage and deformation.
- Check that the D-ring is not damaged.
- Inspect the extension end play and adjust it to within specifications. <Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>

D: ADJUSTMENT
1) Insert the rear drive shaft into the reduction drive gear and center differential assembly.
2) Using the ST, measure the depth “A”, which is from mating surface of extension case to ball bearing outer ring contact surface.

4) Calculation formula:
When clearances are 0.05 mm (0.0020 in):
T (mm) = A – (B – 0.28) – 0.05
[T (in) = (A – (B – 0.011) – 0.0020]
When clearances are 0.25 mm (0.0098 in):
T (mm) = A – (B – 0.28) – 0.25
[T (in) = (A – (B – 0.011) – 0.0098]

A: Depth from end of extension case to ball bearing outer ring contact surface
B: Height from end of intermediate case to ball bearing outer ring contact surface
T: Shim thickness
0.05 — 0.25 mm (0.0020 — 0.0098 in)

NOTE:
Calculation formula for “T” is applied when measuring using ST (398643600 GAUGE). When not using ST, apply following.
When clearances are 0.05 mm (0.0020 in):
T (mm) = (A – α) – ((B – β) – 0.28) – 0.05
[T (in) = (A – α) – ((B – β) – 0.011) – 0.0020]
When clearances are 0.25 mm (0.0098 in):
T (mm) = (A – α) – ((B – β) – 0.28) – 0.25
[T (in) = (A – α) – ((B – β) – 0.011) – 0.0098]
Transfer Clutch

T: Shim thickness
A: Depth from end of extension case to ball bearing outer ring contact surface
B: Height from end of intermediate case to ball bearing outer ring contact surface
α: Collar thickness used when measuring “A”
β: Collar thickness used when measuring “B”
0.28 (0.011): Gasket thickness (Unit mm (in))

27. Multi-Plate Clutch

A: REMOVAL
Remove the multi-plate clutch following the same instructions as for the extension case. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.>

B: INSTALLATION
Install the multi-plate clutch following the same instructions as for the extension case. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>

C: INSPECTION
- Inspect the drive plate facing for wear and damage.
- Inspect the snap ring for wear; return spring for permanent distortion, breakage and deformation.
- Inspect the damage for D-ring.
- Measure the multi-plate clutch clearance and adjust it within specification. <Ref. to 5AT-76, ADJUSTMENT, Multi-Plate Clutch.>

D: ADJUSTMENT
1) Remove drive plate and driven plate from center differential carrier.
2) Measure the depth “A” from mating surface of extension case to multi-plate clutch (LSD) piston.
3) Using the ST, measure the height “B” from intermediate case mating surface to end of center differential clutch drum, and then subtract the thickness of ST gauge (50 mm (1.97 in)) from measured value.

ST 378744300 GAUGE

NOTE:
Measure with driven plate No. 3 removed.

4) Calculation formula:
When clearances are 0.2 mm (0.008 in):
T (mm) = A − (B − 0.28) − 0.2
[T (in) = A − (B − 0.011) − 0.008]
When clearances are 0.6 mm (0.024 in):
T (mm) = A − (B − 0.28) − 0.6
[T (in) = A − (B − 0.011) − 0.024]

NOTE:
- Calculation formula for “T” is applied when measuring using ST (398643600 GAUGE, 398744300 GAUGE). When not using ST, apply following.
- When clearances are 0.2 mm (0.008 in):
T (mm) = A − (B − α − 0.28) − 0.2
[T (in) = A − (B − α − 0.011) − 0.008]
When clearances are 0.6 mm (0.024 in):
T (mm) = A − (B − α − 0.28) − 0.6
[T (in) = A − (B − α − 0.011) − 0.024]

A: Measure the depth from mating surface of extension case to multi-plate clutch (LSD) piston
B: Height from end of intermediate case to center differential clutch drum
α: Collar thickness used when measuring “B”
0.28 (0.011): Gasket thickness (Unit mm (in))
- Measure multi-plate clutch (LSD) driven and drive plate thickness to find the clearance between measurement value and “T”.

Standard value:
0.2 — 0.6 mm (0.008 — 0.024 in)

If outside the standard value, replace the plate set (drive and driven plate) and select the driven plate No. 3 to bring clearance within the standard value.

28. Rear Drive Shaft

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor, and then remove the extension case. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.>
3) Pull out the rear drive shaft from center differential assembly.
4) Remove the drive plate and driven plate.

B: INSTALLATION
1) Select the appropriate shim. <Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>
2) Install drive plate and driven plate.
3) Insert the rear drive shaft into the center differential assembly.
4) Combine the extension case, and then install the rear vehicle speed sensor. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>
5) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY
1) Using a press, remove the revolution gear.
2) Using a press, remove the front and rear side ball bearings, and clutch hub.

D: ASSEMBLY
Assemble in the reverse order of disassembly.
NOTE:
• Use new ball bearings and revolution gear.
• Make sure the clutch hub is oriented in the correct direction.

E: INSPECTION
• Check each parts for holes, damages or other foreign matters.
• Inspect the extension end play and adjust it to within specifications. <Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>
29. Reduction Driven Gear

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear vehicle speed sensor, and then separate the extension case and intermediate case from transmission case. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.>
3) Remove the center differential carrier. <Ref. to 5AT-80, REMOVAL, Center Differential Carrier.>
4) Set the select lever to “P” range.
5) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737100 PULLER SET
ST2 18680AA000 GEAR HOLDER

B: INSTALLATION
1) Set the select lever to “P” range.
2) Use a plastic hammer to install reduction driven gear assembly.
3) Select the reduction gear shim. <Ref. to 5AT-79, ADJUSTMENT, Reduction Driven Gear.>
4) Connect the transmission case, extension case and intermediate case, and install the rear wheel speed sensor. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>
5) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY
1) Remove the ball bearing from reduction driven gear using ST.
   ST 498077310 REMOVER
2) Remove the ball bearing on reverse side with the same procedure in step 1).
3) Remove the snap ring from reduction driven gear.

D: ASSEMBLY
1) Install the snap ring to reduction driven gear.
2) Install the new ball bearing to reduction driven gear using press.
3) Install the ball bearing on reverse side with the same procedure in step 2).

E: INSPECTION
Make sure the ball bearing and gear are not deformed or damaged.

F: ADJUSTMENT
1) Using depth gauge, measure depth “A” from mating surface of extension case to ball bearing on rear end of reduction driven gear.

2) Using a depth gauge, measure the height “B” from mating surface of extension case to ball bearing inside low part of extension case.

3) Calculation formula:
Select the ball bearing from the table to adjust clearances within 0.05 — 0.25 mm (0.0020 — 0.098 in).

When clearances are 0.05 mm (0.0020 in):
T (mm) = A − B + 0.23
[T (in) = A − B + 0.0091]

When clearances are 0.25 mm (0.0098 in):
T (mm) = A − B + 0.03
[T (in) = A − B +0.0011]

T: Shim clearance
A: Depth from mating surface of extension case to ball bearing outer ring end surface
B: Height from mating surface of extension case to ball bearing inside low part

30. Center Differential Carrier

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the rear wheel speed sensor, and separate the extension case and intermediate case from transmission case. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.>
3) Pull out the rear drive shaft. <Ref. to 5AT-77, REMOVAL, Rear Drive Shaft.>
4) Pull out the center differential carrier assembly.
5) Pull out the shim(s) from transmission case.

B: INSTALLATION

1) Install the center differential assembly with the shim(s).

NOTE:
Press-fit it to the bottom of bearing shoulder completely.

2) Insert the rear drive shaft. <Ref. to 5AT-77, INSTALLATION, Rear Drive Shaft.>
3) Connect the transmission case, extension case and intermediate case, and install the rear wheel speed sensor. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>
4) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the seal ring.

2) Using a press and ST, remove the ball bearing.

ST 498077600 REMOVER

3) Remove the snap ring, and pull out the shaft from center differential assembly.
4) Remove the thrust washers, pinion gears and washers from center differential assembly.

5) Pull out the intermediate shaft and thrust bearing.

D: ASSEMBLY
1) Install the thrust washer onto intermediate shaft.
2) Install the thrust bearing onto intermediate shaft.
3) Install the pinion gears and washers.
4) Insert the shaft into the center differential assembly.
5) Install the snap ring.
6) Using a press, install a new ball bearing into the center differential assembly.

ST 498077000 REMOVER

7) Apply vaseline onto the seal ring outer surface and shaft grooves.
8) Install a new seal rings.

E: INSPECTION
- Check each parts for holes, damages or other foreign matters.
- Inspect the extension end play and adjust it to within specifications. <Ref. to 5AT-74, ADJUSTMENT, Transfer Clutch.>
31. Parking Pawl

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the extension case and intermediate case. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.>
3) Remove the center differential carrier. <Ref. to 5AT-80, REMOVAL, Center Differential Carrier.>
4) Remove the parking support actuator.
5) Remove the parking pawl, parking pawl shaft and return spring.

B: INSTALLATION
1) Set the transmission to “N” range.
2) Install the parking pawl, parking pawl shaft and return spring.
3) Temporarily secure the parking support actuator.
4) Set the ST between parking pawl and parking support actuator.
   ST 18679AA000 ADJUSTER
5) Tighten the securing bolts while pressing parking support actuator with finger.
   **Tightening torque:**
   \[10 \pm 2 \text{ N}\cdot\text{m} \ (1.0 \pm 0.2 \text{ kgf-m, } 7.4 \pm 1.5 \text{ ft-lb})\]
   **CAUTION:**
   Press the reduction driven gear and parking pawl in bottom condition.
6) Using the ST, tighten the bolts which tightened in step 4) with specified angle.
   **Tightening angle:**
   \[18 \pm 2^\circ\]
   ST 18554AA000 ANGLE GAUGE
NOTE:
Do not use extension as much as possible.

7) Install the center differential carrier. <Ref. to 5AT-80, INSTALLATION, Center Differential Carrier.>

8) Install the extension case and intermediate case. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>

9) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION
Make sure that the tab of parking pawl on reduction driven gear is not worn or otherwise damaged.
32. Converter Case

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Remove the torque converter assembly. <Ref. to 5AT-71, REMOVAL, Torque Converter Assembly.>
3) Remove the transmission harness connector from stay.
4) Remove the turbine speed sensor 1. <Ref. to 5AT-57, REMOVAL, Turbine speed sensor 1.>
5) Remove the oil charge pipe. <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
6) Remove the ATF filter inlet and outlet pipes. <Ref. to 5AT-60, REMOVAL, ATF Filter.>
7) Remove the converter case aligning bolt. Lay along the transmission body, and then remove the oil pan.
8) Remove the converter case aligning bolts (TORX®).

ST 18676AA020 TORX® WRENCH

10) Separate the converter case by lightly tapping with plastic hammer.
12) Remove the oil seal from converter case.

B: INSTALLATION

1) Check the appearance of each component and clean them.
2) Press-fit the oil seal to converter case using ST. ST 499587100 OIL SEAL INSTALLER

3) Install the differential assembly to case. <Ref. to 5AT-94, INSTALLATION, Front Differential.>
4) Install the left and right side retainers. <Ref. to 5AT-97, ADJUSTMENT, Front Differential.>
5) Apply proper amount of liquid gasket to the entire matching surface of converter case.

Liquid gasket:
THREE BOND 1215 (Part No. 004403007)

6) Install the converter case assembly without damaging bushing and oil seal.

Tightening torque:
41 N·m (4.2 kgf-m, 30.4 ft-lb)

7) Install the three converter case aligning bolts (TORX®).

ST 18676AA020 TORX® WRENCH

Tightening torque:
41 N·m (4.2 kgf-m, 30.4 ft-lb)

8) Apply proper amount of liquid gasket to the entire oil pan mating surface, and then install it.

Liquid gasket:
THREE BOND 1217B (Part No. K0877YA020)
Converter Case

**Tightening torque:**
5 N·m (0.5 kgf-m, 3.7 ft-lb)

9) Install the transmission harness connector to the stay.
10) Install the air breather hose. <Ref. to 5AT-69, INSTALLATION, Air Breather Hose.>
11) Install the ATF filter pipe. <Ref. to 5AT-60, INSTALLATION, ATF Filter.>
12) Install the oil charge pipe with O-ring.<Ref. to 5AT-70, INSTALLATION, Oil Charge Pipe.>
13) Install the torque converter assembly. <Ref. to 5AT-71, INSTALLATION, Torque Converter Assembly.>
14) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

**C: INSPECTION**

Measure the backlash, and then adjust it within specification. <Ref. to 5AT-91, ADJUSTMENT, Drive Pinion Shaft Assembly.>
33. Oil Pump Cover

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly. <Ref. to 5AT-71, REMOVAL, Torque Converter Assembly.>
3) Remove the transmission harness connector from stay.
4) Remove the oil charge pipe. <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
5) Remove the ATF filter inlet and outlet pipes. <Ref. to 5AT-60, REMOVAL, ATF Filter.>
6) Separate the converter case and transmission case part. <Ref. to 5AT-84, REMOVAL, Converter Case.>
7) Remove the oil pump cover aligning bolt, and then separate it from the AT main case by lightly tapping with plastic hammer.

B: INSTALLATION
1) Secure the oil pump cover.
   
   **Tightening torque:**
   
   41 N\(\cdot\)m (4.2 kgf\(\cdot\)m, 30.4 ft-lb)

2) Install the converter case assembly into transmission case assembly. <Ref. to 5AT-71, INSTALLATION, Torque Converter Assembly.>
3) Install the transmission harness connector to the stay.
4) Install the ATF filter pipe. <Ref. to 5AT-60, INSTALLATION, ATF Filter.>
5) Install the oil charge pipe with O-ring. <Ref. to 5AT-70, INSTALLATION, Oil Charge Pipe.>
6) Install the torque converter assembly. <Ref. to 5AT-71, INSTALLATION, Torque Converter Assembly.>
7) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. FRONT BRAKE
1) Remove the snap ring.

2) Remove the retainer plate, drive plate and driven plate.
3) Remove the snap ring using ST1, ST2 and ST3.
   ST1 18762AA000 COMPRESSOR SPECIAL TOOL
   ST2 18765AA000 COMPRESSOR SUPPORT
   ST3 18763AA000 COMPRESSOR SHAFT

4) Remove the retainer and return spring.
5) Remove the front brake piston by blowing compressed air.
6) Remove the D-ring from front brake piston.
2. OIL PUMP

1) Take out the oil pump housing.

2) Take out the oil pump body.

D: ASSEMBLY

1. FRONT BRAKE

1) Apply ATF to D-ring, and then install it to the front brake piston.
2) Install the front brake piston to oil pump cover.

NOTE:
Install by aligning the “▲” mark on front brake piston surface with the oil pump cover rib.

3) Install the retainer and return spring.
4) Install the front brake piston assembly using ST1, ST2 and ST3.

ST1 18762AA000 COMPRESSOR SPECIAL TOOL
ST2 18765AA000 COMPRESSOR SUPPORT

5) Install the genuine driven plate instead of retainer plate, temporarily assemble the drive plate and driven plate.

ST 31536AA290 DRIVEN PLATE

6) Install the snap ring.

7) Measure the clearance between retainer plate and snap ring, and then select a suitable retainer plate from table.

Front brake clearance standard value: 0.7 — 1.1 mm (0.028 — 0.043 in)

8) Remove the snap ring, replace the drive plate which used in measurement of clearance with retainer plate, and then reassemble.
2. OIL PUMP

1) Apply ATF to oil pump assembly, and then install it to oil pump housing.
2) Install the O-ring to oil pump cover.
3) Install the oil pump housing to oil pump housing cover.

**Tightening torque:**

$10 \text{ N\cdot m (1.0 kgf\cdot m, 7.4 ft-lb)}$

---

**E: INSPECTION**

1. FRONT BRAKE

Check the following items:
- Drive plate facing for wear and damage
- Snap ring for wear, return spring for damage, and retainer for damage
- Piston for damage
- D-ring for damage

2. OIL PUMP

Check the following items:
- Oil pump cover and oil seal for breakage or damage
- Oil pump body for scratch or damage
1) Check seal ring and oil seal for breaks or damages.
2) Check other parts for dents or abnormalities.
3) Selection of oil pump rotor assembly
   1) Tip clearance
      Install the inner rotor and outer rotor to oil pump housing. With rotor gears facing each other, measure the crest-to-crest clearance.

**Tip clearance:**

$0.02 — 0.15 \text{ mm (0.0008 — 0.0059 in)}$

---

(2) Side clearance

Set a depth gauge to oil pump housing, then measure the oil pump housing-to-rotor clearance.

**Side clearance:**

$0.02 — 0.045 \text{ mm (0.0008 — 0.0018 in)}$

---

Measure the total end play and adjust it within specifications. <Ref. to 5AT-106, ADJUSTMENT, AT Main Case.>
34. Drive Pinion Shaft Assembly

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly. <Ref. to 5AT-71, REMOVAL, Torque Converter Assembly.>
3) Remove the transmission harness connector from stay.
4) Disconnect the air breather hose. <Ref. to 5AT-69, REMOVAL, Air Breather Hose.>
5) Remove the oil charge pipe. <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
6) Remove the ATF filter inlet and outlet pipes. <Ref. to 5AT-60, REMOVAL, ATF Filter.>
7) Separate the converter case and transmission case part. <Ref. to 5AT-84, REMOVAL, Converter Case.>
8) Remove the drive pinion shaft mounting bolt, and then remove the drive shaft assembly from oil pump cover.

9) Remove the oil pump cover from AT main case. <Ref. to 5AT-86, Oil Pump Cover.>

B: INSTALLATION

1) Assemble the drive pinion assembly to oil pump cover.

NOTE:
Be careful not to bend the shim.

Tightening torque:
70 N·m (7.1 kgf-m, 51.6 ft-lb)

2) Adjust the tooth contact between drive pinion shaft assembly and front differential side gear. <Ref. to 5AT-91, ADJUSTMENT, Drive Pinion Shaft Assembly.>
3) Combine the converter case with transmission case. <Ref. to 5AT-84, INSTALLATION, Converter Case.>
4) Install the transmission harness connector to the stay.
5) Install the ATF filter pipe. <Ref. to 5AT-60, INSTALLATION, ATF Filter.>
6) Install the oil charge pipe with O-ring.
7) Install the torque converter assembly. <Ref. to 5AT-71, INSTALLATION, Torque Converter Assembly.>
8) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove the caulking part of lock nut, and then remove the lock nut with holding rear spline part of the shaft using ST1 and ST2. Pull out the drive pinion collar.

ST1 18667AA010 HOLDER
ST2 499787700 WRENCH
ST3 499787500 ADAPTER

2) Remove the O-ring.
3) Separate the rear roller bearing and outer race from the shaft using press.
4) Separate the front roller bearing from the shaft using press and ST.
**D: ASSEMBLY**

1) Measure the dimension “A” of drive pinion shaft.

**NOTE:**
If excessive force is applied to roller bearing, the roller bearing will not turn easily.

2) Using a press, press-fit the new roller bearing into specified position.

3) After fitting a new O-ring to the shaft, attach the drive pinion collar to shaft.
4) Install the lock washer to drive pinion shaft in proper direction.
5) Tighten new lock nuts using ST1, ST2 and ST3. Calculate the lock washer and lock nut specifications using following formula.
   \[ T2 = \frac{L2}{L1 + L2} \times T1 \]

6) Measure the starting torque of bearing. Make sure the starting torque is within the specified range. If the torque is not within specified range, replace the roller bearing.

   **Starting torque:**
   \[ 7.6 — 38.1 \text{ N (0.776 — 3.88 kgf, 1.7 — 3.88 kg)} \]

7) Stake the caulking of lock nut at two points.
8) Measure the dimension “B” of drive pinion shaft.
9) Calculate the thickness “t” (mm) of drive pinion shim.
\[ t = 6.5 \pm 0.0625 - (B - A) \]

10) Select three or less shims from following table.

<table>
<thead>
<tr>
<th>Drive pinion shim</th>

<td>0.275 (0.0108)</td>
</tr>
</tbody>
</table>

E: INSPECTION
- Make sure that all component parts are free of scratch, hole and other faults.
- Adjust the teeth alignment. <Ref. to 5AT-91, ADJUSTMENT, Drive Pinion Shaft Assembly.>

F: ADJUSTMENT
1) Remove the liquid gasket completely from mating surfaces.
2) Install the converter case to oil pump cover, and secure them with tightening four bolts evenly.

NOTE:
Use an old gasket or aluminum washer so as not to damage the mating surface of housing.

Tightening torque:
\[ 41 \text{ N.m (4.2 kgf-m, 30.4 ft-lb)} \]
3) Rotate the drive pinion several times using ST1 and ST2.

ST1 18667AA010 HOLDER

4) Adjust the backlash between drive pinion and hypoid driven gear. <Ref. to 5AT-97, ADJUSTMENT, Front Differential.>
5) Apply red lead evenly to the surfaces of three or four teeth on hypoid driven gear. Rotate the drive pinion in the leftward and rightward for several times. Remove the oil pump cover, and check the tooth contact pattern.

If the tooth contact is improper, readjust the backlash or shim thickness. <Ref. to 5AT-97, ADJUSTMENT, Front Differential.>

- Correct tooth contact

Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]
Drive Pinion Shaft Assembly

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to hypoid driven gear.

- Flank contact
  Checking item: Backlash is too small.
  Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to bring drive pinion away from hypoid driven gear.

- Heel contact (outside end contact)
  Checking item: Contact areas are too small
  Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to bring drive pinion away from hypoid driven gear.

- Toe contact (inside end contact)
  Checking item: Contact areas are too small
  Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to hypoid driven gear.

6) If tooth contact is correct, mark the retainer position and loosen it. After fitting a new O-ring and oil seal, screw in the retainer to the marked position. Tighten the lock plate with specified torque.
Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

(A) Lock plate
35. Front Differential

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly. <Ref. to 5AT-71, REMOVAL, Torque Converter Assembly.>
3) Remove the transmission harness connector from stay.
4) Remove the oil charge pipe. <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
5) Remove the ATF filter inlet and outlet pipes. <Ref. to 5AT-60, REMOVAL, ATF Filter.>
6) Separate the converter case and transmission case. <Ref. to 5AT-84, REMOVAL, Converter Case.>
7) Remove the differential side retainers using ST.

NOTE:
Hold the differential case assembly by hand to avoid damaging the retainer mounting hole of converter case.

ST 18630AA010 WRENCH COMPL RETAINER

8) Remove the differential assembly without damaging the installation part of retainer.

B: INSTALLATION

1) When installing the differential assembly to case, be careful not to damage the inside of case (particularly, the differential side retainer mating surface).

2) Install the O-ring to left and right side retainer.
3) Install the side retainers using ST. <Ref. to 5AT-94, REMOVAL, Front Differential.>

ST 18630AA010 WRENCH COMPL RETAINER

4) Adjust the front differential backlash. <Ref. to 5AT-97, ADJUSTMENT, Front Differential.>
5) Install the lock plate.

C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Remove the taper roller bearing using ST and press.

ST 498077000 REMOVER
2) Secure the case in a vise and remove the hypoid driven gear tightening bolts, then separate the hypoid driven gear case (RH) and case (LH).

3) Pull out the straight pin and shaft, and then remove the differential bevel gear, washer and differential bevel pinion.

2. SIDE RETAINER

NOTE:
After adjusting the drive pinion backlash and tooth contact, remove and install the oil seal and O-ring.

1) Remove the O-ring.

2) Remove the oil seal.

3) Remove the split pin, and then remove the claw.

4) Attach two claws to the outer race, and set the ST to side retainer.

5) Restore the removed claws to original position, and install the pin and split pin.

6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.
D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the washer, differential bevel gear and differential bevel pinion in the differential case (RH). Insert the pinion shaft.
2) Install the straight pin in reverse direction.
3) Install the washer and differential bevel gear to differential case (LH). Put the differential case (RH) on the case, and then combine the both cases.

4) Install the hypoid driven gear and secure by tightening the bolt.

**Tightening torque:**

62 N·m (6.3 kgf-m, 45.6 ft-lb)

5) Measurement of backlash (Selection of washer)

1) Install the SUBARU genuine axle shaft to differential case.

Parts No. 38415AA070 AXLE SHAFT

2) Measure the gear backlash using ST1 and ST2, and then insert the ST2 from the access window of case.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

**NOTE:**

- Measure the backlash by applying a pinion tooth between two bevel gear teeth.
- Fix the bevel pinion gear in place with a screwdriver or similar tool when measuring.

**Standard value:**

0.13 — 0.18 mm (0.0051 — 0.0071 in)

3) If the backlash is not within specifications, select a washer from the table below.

<table>
<thead>
<tr>
<th>Washer</th>
<th>Part Number</th>
<th>Thickness mm (in)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>803038021</td>
<td>0.95 (0.037)</td>
</tr>
<tr>
<td></td>
<td>803038022</td>
<td>1.00 (0.039)</td>
</tr>
<tr>
<td></td>
<td>803038023</td>
<td>1.05 (0.041)</td>
</tr>
</tbody>
</table>
6) Using the ST, install the taper roller bearing.
   ST 398487700 DRIFT

2. SIDE RETAINER

NOTE:
Install the oil seal and O-ring of side retainer after the adjustment of backlash and tooth contact.
1) Install the bearing outer race to side retainer.
2) Fit a new oil seal using ST.
   ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
Apply oil to the oil seal lips.

3) Install a new O-ring.

E: INSPECTION
- Check each component for scratches, damage and other faults.
- Measure the backlash, and then adjust it within specification.
<Ref. to 5AT-97, ADJUSTMENT, Front Differential.>

F: ADJUSTMENT
1) Using the ST, screw-in the retainer until light contact is felt.
   NOTE:
   Screw-in the RH side slightly deeper than the LH side.

2) Remove the oil pump cover.
3) Remove the liquid gasket from the mating surface completely.
4) Install the oil pump cover to converter case, and secure them with tightening four bolts evenly.
   NOTE:
   Use an old gasket or aluminum washer so as not to damage the mating surface of housing.

   **Tightening torque:**
   41 N·m (4.2 kgf-m, 30.4 ft-lb)
5) Rotate the drive pinion ten times or more using ST1 and ST2.
   ST1 18667AA010 HOLDER
   ST2 499787700 WRENCH

6) Tighten the retainer LH until contact is felt while rotating the shaft. Then loosen the retainer RH. Keep tightening the retainer LH, and loosening the retainer RH until the pinion shaft cannot be turned. This is the “zero” state.
7) After the “zero” state is established, back off the retainer LH 3 notches and secure it with the lock plate. Then back off the retainer RH and retighten until it stops. Rotate the drive pinion few times. Tighten the retainer RH 1-3/4 notches further. This sets the preload. Finally, secure the retainer with its lock plate.

![Diagram of Front Differential](image)

(A) Lock plate

NOTE:
Turning the retainer by one tooth changes the backlash about 0.05 mm (0.0020 in).

![Diagram of Front Differential](image)

(A) 0.05 mm (0.0020 in)

8) Turn the drive pinion several times with ST1 and check to see if the backlash is within the specified value with ST2, ST3, ST4 and ST5.

**Backlash:**

0.13 — 0.18 mm (0.0051 — 0.0071 in)

9) Adjust the tooth contact between front differential and drive shaft. <Ref. to 5AT-91, ADJUSTMENT, Drive Pinion Shaft Assembly.>
36. AT Main Case

A: REMOVAL

1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly. <Ref. to 5AT-71, REMOVAL, Torque Converter Assembly.>
3) Remove the transmission harness connector from stay.
4) Disconnect the air breather hose.
5) Remove the oil charge pipe. <Ref. to 5AT-70, REMOVAL, Oil Charge Pipe.>
6) Remove the ATF filter inlet and outlet pipes. <Ref. to 5AT-60, REMOVAL, ATF Filter.>
7) Remove the extension case and intermediate case. <Ref. to 5AT-72, REMOVAL, Extension Case & Intermediate Case.>
8) Remove the center differential carrier. <Ref. to 5AT-80, REMOVAL, Center Differential Carrier.>
9) Remove the reduction driven gear. <Ref. to 5AT-78, REMOVAL, Reduction Driven Gear.>
10) Separate the converter case and transmission case. <Ref. to 5AT-84, REMOVAL, Converter Case.>
11) Remove the control valve body. <Ref. to 5AT-58, REMOVAL, Control Valve Body.>
12) Remove the oil pump cover. <Ref. to 5AT-86, REMOVAL, Oil Pump Cover.>

NOTE:
The input clutch pack assembly and front sun gear assembly are also removed together.

13) Remove the needle bearing of the mid carrier assembly.

14) Remove the mid carrier assembly.

15) Remove the rear carrier assembly.
16) Remove the mid & rear sun gear assembly.

17) Remove the thrust needle bearing of high & low reverse clutch.

18) Remove the high & low reverse clutch assembly.

19) Remove the direct clutch assembly.

20) Remove the snap ring of reverse brake.

21) Remove the retaining plate.
22) Remove the leaf spring.

23) Take out the drive plate, driven plate and dish plate.
24) Remove the snap ring of the spring retainer of reverse brake.

(A) Leaf spring
ST1 18762AA000 COMPRESSOR SPECIAL TOOL
ST2 18765AA000 COMPRESSOR SUPPORT
ST3 18763AA000 COMPRESSOR SHAFT

25) Remove the spring retainer.

26) Remove the return spring.

27) Remove the snap ring of reverse brake piston.

28) Apply compressed air.

29) Remove the reverse brake piston.

B: INSTALLATION

1) Install the reverse brake piston.

NOTE:
Apply ATF onto the piston sliding surface.

ST1 18762AA000 COMPRESSOR SPECIAL TOOL
ST2 18765AA000 COMPRESSOR SUPPORT
ST3 18763AA000 COMPRESSOR SHAFT

2) Install the return spring.

3) Install the spring retainer and snap ring.

ST1 18762AA000 COMPRESSOR SPECIAL TOOL
ST2 18765AA000 COMPRESSOR SUPPORT
ST3 18763AA000 COMPRESSOR SHAFT
4) Install the dish plate.

NOTE:
When installing, make sure that the identification mark is facing the front side of transmission.
5) Install the drive plate and driven plate.
6) Install the leaf spring.

7) Install the retaining plate.

8) Install the snap ring of reverse brake.

9) Perform the clearance check of reverse brake.
   (1) Measure the clearance between retainer plate and snap ring using thickness gauge.

   **Standard value:**
   \[0.7 \text{ — } 1.1 \text{ mm (0.028 — 0.043 in)}\]

   (2) If the clearance is out of specification, select a suitable retainer plate from following table and assemble it.

<table>
<thead>
<tr>
<th>Retainer plate</th>
<th>Thickness mm (in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>31567AB100</td>
<td>4.2 (0.165)</td>
</tr>
<tr>
<td>31567AB170</td>
<td>4.4 (0.173)</td>
</tr>
<tr>
<td>31567AB180</td>
<td>4.6 (0.181)</td>
</tr>
<tr>
<td>31567AB190</td>
<td>4.8 (0.189)</td>
</tr>
<tr>
<td>31567AB200</td>
<td>5.0 (0.197)</td>
</tr>
</tbody>
</table>

10) Install the direct clutch assembly.
11) Install the high & low reverse clutch assembly.

12) Install the thrust needle bearing of high & low reverse clutch.

13) Install the middle & rear sun gear assembly.

14) Install the rear carrier assembly.

15) Install the middle carrier assembly.
16) Install the thrust needle bearing of middle carrier assembly.

17) Measure the total end play, and select the bearing. <Ref. to 5AT-106, ADJUSTMENT, AT Main Case.>

18) Install the impact clutch pack assembly to oil pump cover.

19) Turn the transmission sideways.

20) Install the oil pump cover.
   (1) Apply ATF to the O-ring of input clutch shaft.
   (2) Install the oil pump cover to AT main case while supporting the input clutch shaft and oil pump housing by hand.

21) Install the center differential carrier. <Ref. to 5AT-80, INSTALLATION, Center Differential Carrier.>

22) Install the reduction driven gear. <Ref. to 5AT-78, INSTALLATION, Reduction Driven Gear.>

3) Make sure the rear end of drive pinion shaft is engaged to the spline of reduction driven gear.

NOTE: Work with pressing oil pump cover.

4) Using a cloth, protect the input clutch shaft and rotate to engage the spline of input clutch and rear carrier using pliers.

Tightening torque: 41 N·m (4.2 kgf-m, 30.4 ft-lb)
23) Install the extension case and intermediate case. <Ref. to 5AT-72, INSTALLATION, Extension Case & Intermediate Case.>
24) Install the control valve body. <Ref. to 5AT-58, INSTALLATION, Control Valve Body.>
25) Install the converter case assembly into transmission case assembly. <Ref. to 5AT-84, INSTALLATION, Converter Case.>
26) Install the air breather hose. <Ref. to 5AT-69, INSTALLATION, Air Breather Hose.>
27) Install the ATF filter pipe. <Ref. to 5AT-60, INSTALLATION, ATF Filter.>
28) Install the oil charge pipe with O-ring. <Ref. to 5AT-70, INSTALLATION, Oil Charge Pipe.>
29) Install the torque converter assembly. <Ref. to 5AT-71, INSTALLATION, Torque Converter Assembly.>
30) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. INPUT CLUTCH PACK ASSY
   1) Remove the front sun gear.

2) Remove the snap ring, and then remove the front carrier.

3) Remove the input clutch assembly from rear internal gear.

D: ASSEMBLY

1. INPUT CLUTCH PACK ASSY
   1) Assemble the input clutch assembly to rear internal gear.

2) Install the front carrier, and then install the snap ring.

3) Install the front sun gear.
E: INSPECTION

1. FRONT, MIDDLE & REAR PLANETARY CARRIER ASSY

Inspect the followings:
- Visually inspect the tooth surface of planetary gear, and replace with new one if damaged, broken or excessively worn.
- Inspect the planetary carrier body for damage or brakeage.

2. INPUT CLUTCH

Check for damage of drive plate, driven plate and snap ring, and replace them as input clutch assembly if damaged.

3. HIGH & LOW REVERSE CLUTCH ASSEMBLY

Check the clearance of high & low reverse clutch. Measure the clearance “L” between snap ring and retaining plate using thickness gauge. If the measured value is out of specification, replace them as high & low reverse clutch assembly.

Standard value:
1.8 — 2.2 mm (0.070 — 0.087 in)

4. DIRECT CLUTCH ASSEMBLY

Check the clearance of direct clutch. Measure the clearance “L” between snap ring and retaining plate using thickness gauge. If the measured value is out of specification, replace them as direct clutch assembly.

Standard value:
0.6 — 0.8 mm (0.024 — 0.031 in)

5. REVERSE BRAKE

Check the following items:
- Drive plate facing for wear and damage
- Snap ring for wear, return spring for breakage, and spring retainer for deformation
- Lip seal and D-ring for damage
- Piston operation

F: ADJUSTMENT

1) Using the ST, measure the height “A” from AT main case mating surface to convex surface of oil pump cover.
   ST 499575400 GAUGE

2) Using the ST, measure the depth “B” from the convex surface of oil pump cover to thrust bearing transferring surface.
   ST 499575400 GAUGE

3) Calculate the measured value on step 1) and 2), and then set the calculated value as “C”
   Calculation formula: C = A − B
4) Using the ST, measure the depth “D” from AT main case mating surface to thrust bearing transferring surface of front sun gear.

ST 499575400 GAUGE

5) Set the value as “E” which subtract the thickness of ST GAUGE from measured value on step 4).

Calculation formula: $E (\text{mm}) = D - 15$

$[E (\text{in}) = D - 0.59]$  

6) Calculation formula:
Select a thrust bearing from the table to adjust clearance within 0.25 — 0.55 mm (0.0098 — 0.022 in).

When clearances are 0.25 mm (0.0098 in):

$T (\text{mm}) = E - C + 0.03$

$[T (\text{in}) = E - C + 0.0012]$  

When clearances are 0.55 mm (0.022 in):

$T (\text{mm}) = E - C - 0.27$

$[T (\text{in}) = E - C - 0.012]$  

**T**: Thrust bearing clearance  
**C**: Distance from oil pump cover mating surface to rear end of oil pump cover  
**E**: Depth from mating surface of AT main case to bearing surface of front sun gear

Example:
When the A is 39.50 mm (1.56 in), B is going to be 16.20 mm (0.64 in), so the C would be 23.30 mm (0.92 in) by calculation.

When the D is 41.90 mm (1.65 in), subtract the thickness of ST GAUGE from D, and then the value E would be 26.90 mm (1.06 in).

Calculation when clearance is 0.25 mm (0.0098 in)

$T (\text{mm}) = 26.90 - 23.30 + 0.03 = 3.63$

$[T (\text{in}) = 1.059 - 0.917 + 0.0012 = 0.143]$  

Calculation formula when clearances are 0.55 mm (0.022 in)

$T (\text{mm}) = 26.90 - 23.30 - 0.27 = 3.33$

$[T (\text{in}) = 1.059 - 0.917 - 0.012 = 0.131]$  

According to the calculation, the value “T” would be 3.33 — 3.63 mm (0.131 — 0.143 in), therefore select the thrust bearing with the thickness of 3.4 mm (0.134 in) or 3.6 mm (0.142 in) thrust bearing from the table.
37. Transmission Control Device

A: REMOVAL
1) Remove the transmission assembly from vehicle. <Ref. to 5AT-38, REMOVAL, Automatic Transmission Assembly.>
2) Pull out the torque converter assembly. <Ref. to 5AT-71, REMOVAL, Torque Converter Assembly.>
3) Lift-up the lever on rear side of transmission harness connector, and then disconnect it from stay.
4) Disconnect the air breather hose. <Ref. to 5AT-69, REMOVAL, Air Breather Hose.>
5) Wrap vinyl tape around the nipple attached to the air breather hose.
6) Remove the pitching stopper bracket.
7) Remove the control valve body assembly. <Ref. to 5AT-58, REMOVAL, Control Valve Body.>
8) Pull out the straight pin of manual plate.

9) Remove the bolts securing select lever, and then remove the select lever, manual plate and parking rod.

NOTE:
Be careful not to damage the lips of press-fitted oil seal in the case.

B: INSTALLATION
1) Install the detention spring to transmission case.

Tightening torque:
6 N·m (0.6 kgf-m, 4.3 ft-lb)

2) Insert the select lever, and then tighten the bolt.

Tightening torque:
6 N·m (0.6 kgf-m, 4.3 ft-lb)
3) Insert the manual plate and parking rod.

![Diagram showing parts A, B, C, D](AT-00306)

(A) Bolt  
(B) Range select lever  
(C) Manual plate  
(D) Parking rod

4) Insert the spring pin to manual plate.

![Diagram showing transmission connector to stay](AT-00305)

5) Install the oil pan and control valve assembly.  
<Ref. to 5AT-58, INSTALLATION, Control Valve Body.>

6) Install the pitching stopper bracket.

**Tightening torque:**  
41 N·m (4.2 kgf·m, 30.4 ft-lb)

7) Insert the transmission connector to the stay.  
8) Install the air breather hose. <Ref. to 5AT-69, INSTALLATION, Air Breather Hose.>

9) Install the torque converter assembly. <Ref. to 5AT-71, INSTALLATION, Torque Converter Assembly.>

10) Install the transmission assembly into vehicle. <Ref. to 5AT-42, INSTALLATION, Automatic Transmission Assembly.>

**C: INSPECTION**

Make sure the manual lever and detention spring are not worn or otherwise damaged.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## Basic Diagnostics Procedure

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### Step 6: PERFORM THE DIAGNOSIS.

1. Inspect using the “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. <Ref. to 5AT(diag)-34, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

   **NOTE:**
   For DTC table, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to 5AT(diag)-30, List of Diagnostic Trouble Code (DTC).>

2. Repair the trouble cause.
3. Perform clear memory mode.
4. Perform the inspection mode. <Ref. to 5AT(diag)-20, Inspection Mode.>
5. Display DTC.

3. General Description

A: CAUTION
- Supplemental Restraint System
  The airbag system wiring harness is routed near the TCM.

CAUTION:
- All airbag system wiring harnesses and connectors are colored yellow. Do not use an electric test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when performing diagnostics and servicing the TCM.

- Measurement
  When measuring the voltage and resistance of the ECM, TCM or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert a pin more than 0.65 mm (0.026 in) diameter.

B: INSPECTION

1. BATTERY
   Measure battery voltage and specific gravity of electrolyte.

   Standard voltage: 12 V or more
   Specific gravity: More than 1.260

2. TRANSMISSION GROUND
   Make sure that the ground terminal bolt is tightened securely.
   - Chassis side

   Tightening torque: 
   13 N·m (1.3 kgf·m, 9.4 ft-lb)

3. ATF LEVEL
   Make sure that ATF level is in the specification. <Ref. to 5AT-27, INSPECTION, Automatic Transmission Fluid.>

4. FRONT DIFFERENTIAL OIL LEVEL
   Make sure the front differential oil level is in the specification. <Ref. to 5AT-29, INSPECTION, Differential Gear Oil.>

5. OPERATION OF SHIFT SELECT LEVER
   Make sure there is no abnormal noise, dragging or contact pattern in each select lever range.

   WARNING:
   Stop the engine while checking operation of the select lever.

6. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to 5AT(diag)-6, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.
   (1) Data link connector is located in the lower portion of the instrument panel (on the driver’s side).

5) Turn ignition switch to ON (engine OFF) and turn on the Subaru Select Monitor.

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.

8) Press the [YES] key after the information of transmission type is displayed.

9) On the «Transmission Diagnosis» display screen, select the {Diagnosis Code(s) Display} and press [YES] key.

NOTE:
- For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to 5AT(diag)-30, List of Diagnostic Trouble Code (DTC).>

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

2) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.

3) Press the [YES] key after the information of transmission type is displayed.

4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.

5) On the «Transmission Diagnosis» display screen, select the {Data Display} and press the [YES] key.

6) Using the scroll key, scroll the display screen up or down until the desired data is shown.

NOTE:
Do not connect scan tools except for Subaru Select Monitor.
A list of the support data is shown in the following table.

NOTE:
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

3. CLEAR MEMORY MODE

NOTE:
To clear the previous DTC, use {Clear Memory}, and to clear the learned value, use {Clear Memory 2}.

1) Check that the select lever is in “P” range.
2) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
3) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
4) Press the [YES] key after the information of transmission type is displayed.
5) On the «Transmission Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.

NOTE:
If {Clear Memory 2} is selected and performed, DTC may not be cleared.

6) When the ‘Done’ are shown on the display screen, turn off the Subaru Select Monitor and turn the ignition switch to OFF. To turn the ignition switch ON again, wait for more than 10 seconds.

NOTE:
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION
Refer to “Subaru Select Monitor” for information about how to obtain and understand the DTC.
<Ref. to 5AT(diag)-16, OPERATION, Subaru Select Monitor.>

NOTE:
DTC can not be read by SPORT indicator light.
8. Inspection Mode

A: PROCEDURE

WARNING:
Observe the traffic law during actual driving.

1) Shift the select lever to “D” range, and then drive the vehicle with changing the gear from 1st to 5th.

2) When driving the vehicle at 5th speed of “D” range, set the gear to manual mode and drive the vehicle with shifting down using “−” of steering switch or “−” of select lever from 5th → 4th, 4th → 3rd, 3rd → 2nd, 2nd → 1st.

NOTE:
At shifting down, drive the vehicle at least 10 seconds in each speed.

3) Shift the select lever to “R” range and drive the vehicle for more than 2 seconds.
9. Clear Memory Mode

A: OPERATION
Use “Subaru Select Monitor” to clear DTC. <Ref. to 5AT(diag)-18, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

NOTE:
DTC cannot be cleared without using Subaru Select Monitor.
10. Learning Control

A: GENERAL DESCRIPTION

Be sure to perform the {Clear Memory 2} only when the following services are performed. And when the shifting shock is occurred in total check with vehicle driving, perform the learning with following procedures. <Ref. to 5AT(diag)-18, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

- Replacement of TCM
- Replacement of transmission assembly
- Replacement of TCM and transmission assembly

CAUTION:

When {Clear Memory 2} is executed, DTC may not be cleared.

B: PROCEDURE

1) Turn the ignition switch to OFF.
2) Turn the air conditioner switch to OFF.
3) Turn the headlight switch to OFF.
4) Turn the rear defogger switch to OFF.
5) Start the engine.
6) Connect the Subaru Select Monitor to the vehicle.
7) Drive the vehicle for 5 — 10 km (3 — 6 miles) to warm up ATF temperature more than 70 °C (158 °F).
8) With the throttle opening angle on SUBARU select monitor indicates between 10%±2%, shift the gear from 1st → 2nd, 2nd → 3rd, 3rd → 4th, 4th → 5th while driving the vehicle at "D" range. <Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
9) Repeat the step 8) until reducing of shifting shock was felt.
10) Reducing of shifting shock was not felt though the procedure was repeated 5 cycle, recheck that the learning conditions (throttle opening angle, ATF temperature, etc.) are specified and recheck that other parts are normal.
11. SPORT Indicator Light Display

A: OPERATION

When any on-board diagnostics item is malfunctioning, the display on the SPORT indicator light blinks from the time the malfunction is detected after starting the engine until the ignition switch is turned OFF. The malfunctioning part or unit can be determined by a DTC during the on-board diagnostics operation. Problems which occurred previously can also be identified through the memory function. If the SPORT indicator light does not show a problem (although a problem is occurring), the problem can be determined by checking the performance characteristics of each sensor using the Subaru Select Monitor. Indicator light signal is as shown in the figure.

When the SPORT indicator light does not operate normally though the DTC is not stored, perform the SPORT indicator light inspection. <Ref. to 5AT(diag)-24, INSPECTION, SPORT Indicator Light Display.>

(A) Ignition switch (Engine OFF)  
(B) Normal (Engine ON)  
(C) Faulty (Engine ON)

(1) ON  
(2) OFF  
(3) 2 sec.  
(4) 0.25 sec.  
(5) Blink
B: INSPECTION
DIAGNOSIS:
SPORT indicator light circuit is open or shorted.
TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), SPORT indicator light does not illuminate.
WIRING DIAGRAM:
### SPORT Indicator Light Display

#### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

**Step** | **Check** | **Yes** | **No**
--- | --- | --- | ---
1 | **CHECK SPORT INDICATOR LIGHT.**  
Turn the ignition switch to ON. | Does the SPORT indicator light illuminate? | Go to step 2.  
Perform the self-diagnosis of combination meter. |  
2 | **CHECK SPORT INDICATOR LIGHT.**  
After the ignition switch is “ON”, wait for at least 2 seconds. | Does the SPORT indicator light illuminate? | Go to step 3.  
Go to step 4. |  
3 | **CHECK SPORT INDICATOR LIGHT.**  
Start the engine. | Does the SPORT indicator light go off? | Normal. Go back to “Basic Diagnos-sis Procedure”.  
<Ref. to 5AT(diag)-2, Basic Diagnostics Procedure.>  
Go to step 7. |  
4 | **CHECK SUBARU SELECT MONITOR COMMUNICATION.**  
Connect the Subaru Select Monitor to data link connector. | Is the communication between Subaru Select Monitor and TCM normal? | Go to step 5.  
Check the TCM power supply ground circuit and Subaru Select Monitor communication.  
<Ref. to 5AT(diag)-26, Diagnostic Procedure for Select Monitor Communication.> |  
5 | **CHECK TCM.**  
Display the current data of TCM using Subaru Select Monitor. | Is “Diagnosis light” output signal set to “ON”? | Go to step 6.  
Replace the TCM.  
<Ref. to 5AT-61, Transmission Control Module (TCM).> |  
6 | **CHECK BODY INTEGRATED UNIT.**  
Display the current data of body integrated unit using Subaru Select Monitor.  
<Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is “SPORT light” input signal set to “ON”? | Replace the combination meter assembly.  
<Ref. to IDI-16, Combination Meter Assembly.>  
Check DTC of body integrated unit.  
<Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>  
Perform the self-diagnosis for combination meter.  
<Ref. to IDI-3, INSPECTION, Combination Meter System.> |  
7 | **CHECK TCM.**  
1) Start the engine.  
2) Display the current data of TCM using Subaru Select Monitor.  
<Ref. to 5AT(diag)-16, OPERATION, Subaru Select Monitor.> | Is “Diagnosis light” output signal set to “ON”? | Replace the TCM.  
<Ref. to 5AT-61, Transmission Control Module (TCM).>  
Go to step 8. |  
8 | **CHECK BODY INTEGRATED UNIT.**  
Display the current data of body integrated unit using Subaru Select Monitor.  
<Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is “SPORT light” input signal set to “ON”? | Check DTC of body integrated unit.  
Perform the diagnosis according to DTC.  
<Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.>  
Perform the self-diagnosis for combination meter.  
<Ref. to IDI-3, INSPECTION, Combination Meter System.> |
12. Diagnostic Procedure for Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DIAGNOSIS:
Faulty harness connector

TROUBLE SYMPTOM:
Subaru Select Monitor communication failure

WIRING DIAGRAM:
## Diagnostic Procedure for Select Monitor Communication

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 | CHECK SUBARU SELECT MONITOR POWER SUPPLY CIRCUIT.  
   Measure the voltage between data link connector and chassis ground. **Connector & terminal** *(B40) No. 1 (+) — Chassis ground (-):* | Is the voltage more than 10 V? | Go to step 2. | Repair harness connector and connector between battery and data link connector, and poor contact in coupling connector. |
| 2 | CHECK SUBARU SELECT MONITOR GROUND CIRCUIT.  
   Measure the resistance of harness between data link connector and chassis ground. **Connector & terminal** *(B40) No. 12 — Chassis ground:* | Is the resistance less than 1 Ω? | Go to step 3. | Repair the open circuit in harness between data link connector and ground terminal, and poor contact in coupling connector. |
| 3 | CHECK COMMUNICATION OF SUBARU SELECT MONITOR.  
   1) Turn the ignition switch to ON.  
   2) Using the Subaru Select Monitor, check whether communication to transmission systems can be executed normally. | Are the name and year of system displayed on Subaru Select Monitor? | Go to step 8. | Go to step 4. |
| 4 | CHECK COMMUNICATION OF SUBARU SELECT MONITOR.  
   1) Turn the ignition switch to OFF.  
   2) Disconnect the TCM connector.  
   3) Turn the ignition switch to ON.  
   4) Check whether communication to engine systems can be executed normally. | Are the name and year of system displayed on Subaru Select Monitor? | Go to step 6. | Go to step 5. |
| 5 | CHECK COMMUNICATION OF SUBARU SELECT MONITOR.  
   1) Turn the ignition switch to OFF.  
   2) Connect the TCM connector.  
   3) Disconnect the ECM connector.  
   4) Turn the ignition switch to ON.  
   5) Check whether communication to transmission systems can be executed normally. | Are the name and year of system displayed on Subaru Select Monitor? | Inspect the ECM. | Go to step 6. |
| 6 | CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL UNIT AND DATA LINK CONNECTOR.  
   1) Turn the ignition switch to OFF.  
   2) Disconnect the TCM and ECM connector.  
   3) Measure the resistance between TCM connector and chassis ground. **Connector & terminal** *(B40) No. 10 — Chassis ground:* | Is the resistance more than 1 MΩ? | Go to step 7. | Check harness and connector between each control unit and data link connector. |
| 7 | CHECK OUTPUT SIGNAL OF TCM.  
   1) Turn the ignition switch to ON.  
   2) Measure the voltage between TCM and chassis ground. **Connector & terminal** *(B40) No. 10 (+) — Chassis ground (-):* | Is the voltage more than 1 V? | Check harness and connector between each control unit and data link connector. | Go to step 8. |
| 8 | CHECK HARNESS CONNECTOR BETWEEN TCM AND DATA LINK CONNECTOR.  
   Measure the resistance between TCM connector and data link connector. **Connector & terminal** *(B54) No. 20 — (B40) No. 10:* | Is the resistance less than 1 Ω? | Go to step 9. | Repair the harness and connector between TCM and data link connector. |
### Diagnostic Procedure for Select Monitor Communication

<table>
<thead>

</tbody>
</table>
| 12   | CHECK POWER SUPPLY OF TCM.  
   1) Disconnect the connector from TCM.  
   2) Turn the ignition switch to ON.  
   3) Measure the voltage between TCM connector and chassis ground.  
   **Connector & terminal (B54) No. 1 (+) — Chassis ground (−):**  
| 13   | CHECK FUSE (No. 32).  
   1) Turn the ignition switch to OFF.  
   2) Remove the fuse (No. 32). | Is the fuse (No. 32) blown out? | Go to step 14. | Repair the open circuit in harness between fuse (No. 32) and TCM, or fuse (No. 32) and battery, and poor contact in coupling connector. |
| 14   | CHECK HARNESS.  
   Measure the resistance between TCM connector and chassis ground.  
   **Connector & terminal (B54) No. 1 — Chassis ground:**  
   Is the resistance less than 10 Ω? | Replace the fuse (No. 32). If the replaced fuse (No. 32) has blown out easily, repair the short circuit in harness between fuse (No. 32) and TCM. | Replace the fuse (No. 32). |
| 15   | CHECK IGNITION POWER SUPPLY CIRCUIT.  
   1) Turn the ignition switch to ON (engine OFF).  
   2) Measure the ignition power supply voltage between TCM connector and chassis ground.  
   **Connector & terminal (B55) No. 1 (+) — Chassis ground (−):**  
   **(B55) No. 10 (+) — Chassis ground (−):**  
   Is the voltage 10 — 13 V? | Go to step 17. | Go to step 16. |
| 16   | CHECK FUSE (No. 12).  
   Remove the fuse (No. 12). | Is the fuse (No. 12) blown out? | Replace the fuse (No. 12). If the replaced fuse (No. 12) has blown out easily, repair the short circuit in harness between fuse (No. 12) and TCM. | Repair the open circuit in harness between fuse (No. 12) and TCM, or fuse (No. 12) and battery, and poor contact in coupling connector. |
## Diagnostic Procedure for Select Monitor Communication

### Automatic Transmission (Diagnostics)

#### 17 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.
1. Turn the ignition switch to OFF.
2. Disconnect the connectors from TCM and transmission.
3. Measure the resistance of harness between TCM and transmission connector.

**Connector & terminal**
- (B54) No. 19 — Chassis ground:
- (B55) No. 21 — Chassis ground:
- (B54) No. 5 — Chassis ground:
- (B54) No. 14 — Chassis ground:

**Check** Is the resistance more than 1 MΩ?

**Yes** Go to step 18.
**No** Repair the short circuit in harness between TCM and transmission harness connector, and poor contact in coupling connector.

#### 18 CHECK POOR CONTACT IN CONNECTORS.

**Check** Is there poor contact in TCM power supply, ground and data link connector?

**Yes** Repair the connector.
**No** Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).>

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)

DTC DETECTING CONDITION:
The inhibitor switch is open or short.

TROUBLE SYMPTOM:
- Shift characteristics are erroneous.
- Shift indicator light does not match with select lever.
- Shift indicator light does not illuminate.
- N-D, N-R shock occur.

| 1. **CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.**  
1) Turn the ignition switch to OFF.  
2) Disconnect the connectors from TCM and transmission.  
3) Measure the resistance of harness between TCM and transmission connector.  
**Connector & terminal**  
(B54) No. 13 — (B11) No. 12:  
(B54) No. 2 — (B11) No. 5:  
| Is the resistance less than 1 Ω? | Go to step 2. | Repair the open circuit in harness between TCM and transmission connector. |
| 2. **CHECK ATF TEMPERATURE SENSOR.**  
1) Turn the ignition switch to OFF.  
2) Connect the connectors to transmission and TCM.  
3) Turn the ignition switch to ON and start engine.  
4) Warm-up the transmission until the ATF temperature reaches to 80°C (176°F).  
**NOTE:**  
If the ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.  
5) Disconnect the connector from transmission.  
6) Measure the resistance between transmission connector terminals.  
**Connector & terminal**  
(T4) No. 5 — (T4) No. 12:  
| Is the resistance 500 — 1,200 Ω? | Go to step 3. | Go to step 7. |
| 3. **CHECK ATF TEMPERATURE SENSOR.**  
Measure the resistance between transmission connector terminals.  
**Connector & terminal**  
(T4) No. 5 — (T4) No. 12:  
| Does the resistance value increase while the ATF temperature decreases? | Go to step 4. | Go to step 7. |
| 4. **PREPARE SUBARU SELECT MONITOR.**  
| Do you have a Subaru Select Monitor? | Go to step 6. | Go to step 5. |
| 5. **CHECK INPUT SIGNAL FROM TCM.**  
1) Connect the connector to transmission.  
2) Warm-up the transmission until the ATF temperature is approx. 80°C (176°F).  
**NOTE:**  
If the ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.  
3) Measure the voltage between TCM connector terminals.  
**Connector & terminal**  
(B54) No. 2 (+) — (B54) No. 13 (−):  
| Is the voltage 0.5 — 1.2 V? | Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact of harness between ATF temperature sensor and transmission connector. | Go to step 8. |
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)
#### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

**Step 6** CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.
1) Connect the connector.
2) Turn the ignition switch to ON (engine OFF).
3) Read the ATF temperature using Subaru Select Monitor.

**Check**

- Does the ATF temperature gradually decrease?

**Yes**

- Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact of harness between ATF temperature sensor and transmission connector.

**No**

- Go to step 8.

**Step 7** CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND CONTROL VALVE BODY.
1) Turn the ignition switch to OFF.
2) Disconnect the connector from transmission.
3) Remove the transmission connector from bracket.
4) Lift-up the vehicle and place it on rigid racks.

**NOTE:**

- Raise all wheels off floor.

**CAUTION:**

- Do not drain the ATF until it cools down.

5) Drain the ATF.

6) Remove the oil pan, and disconnect the connector from control valve body connector.
7) Measure the resistance between transmission connector and control valve body connector.

**Connector & terminal**

- (T4) No. 12 — (T5) No. 1:
- (T4) No. 5 — (T5) No. 16:

**Check**

- Is the resistance less than 1 Ω?

**Yes**

- Replace the control valve body. <Ref. to 5AT-58, Control Valve Body.>

**No**

- Repair the open circuit in harness between control valve body connector and transmission connector.

**Step 8** CHECK POOR CONTACT.

**Check**

- Is there poor contact in ATF temperature sensor circuit 1?

**Yes**

- Repair the poor contact.

**No**

- Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).>
C: DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT

4) Measure the voltage between TCM terminals.  
   **Connector & terminal**  
   **(B55) No. 16 (+) — (B54) No. 19 (−):**  
5) Stop the vehicle, and shift the select lever to “P” range.  
6) Measure the voltage between TCM terminals.  
   **Connector & terminal**  
   **(B55) No. 16 (+) — (B54) No. 19 (−):**  
**NOTE:**  
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.> | Does the voltage change within the range of 2 — 3 V when driving the vehicle with 4th of manual mode? Is the voltage less than 0.5 V or more than 4.5 V constantly when the vehicle is parked with “P” range? | Even if the SPORT indicator lights blinks, the system is in normal condition.  
A temporary poor contact of connector or harness may be the cause.  
Repair the poor contact of harness between the ATF temperature sensor and transmission connector. | Replace the turbine speed sensor 1. <Ref. to 5AT-57, Turbine speed sensor 1.> |
Diagnostic Procedure with Diagnostic Trouble Code (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

E: DTC P0719 TORQUE CONVERTER/BRAKE SWITCH “B” CIRCUIT LOW

DTC DETECTING CONDITION:
Brake switch malfunction, open input signal circuit

TROUBLE SYMPTOM:
- Brake down control is not operated at SPORT mode.
- No lock-up occurs at braking.

WIRING DIAGRAM:
<table>
<thead>
<tr>
<th>Step</th>

</table>
| 1    | CHECK DTC. | Is any of following DTC displayed?  
- AT CAN Communication Circuit  
- Output Speed Sensor Circuit  
- AT Vehicle Speed Sensor Circuit Malfunction (Rear Wheel) | Perform the diagnosis according to DTC. | Go to step 2. |
| 2    | CHECK BODY INTEGRATED UNIT.  
1) Turn the ignition switch to OFF.  
2) Connect the Subaru Select Monitor to data link connector.  
3) Turn the ignition switch to ON. (engine OFF)  
4) Turn the Subaru Select Monitor switch to ON.  
5) Depress the brake pedal.  
6) Read the data of brake pedal switch using Subaru Select Monitor. | Is the ON displayed? | Go to step 3. | Go to step 4. |
| 3    | CHECK TCM.  
Read the data of brake pedal switch using Subaru Select Monitor. | Is the ON displayed? | A temporary poor contact of connector or harness may be the cause. Check the poor contact. | Replace the TCM <Ref. to 5AT-61, Transmission Control Module (TCM).> |
| 4    | CHECK BODY INTEGRATED UNIT INPUT SIGNAL.  
1) Disconnect the connector from body integrated unit.  
2) Depress the brake pedal.  
3) Measure the voltage between body integrated unit connector and chassis ground.  
Connector & terminal (B281) No. 23 (+) — Chassis ground (-): | Is the voltage more than 10 V? | Go to step 7. | Go to step 5. |
| 5    | CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND STOP LIGHT SWITCH.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from stop light switch.  
3) Measure the resistance of harness between body integrated unit and stop light switch.  
Connector & terminal (B281) No. 23 — (B64) No. 2: | Is the resistance less than 1 Ω? | Go to step 6. | Repair the open circuit of harness between the body integrated unit and stop light switch. |
| 6    | CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND STOP LIGHT SWITCH.  
Measure the resistance of harness between body integrated unit connector and stop light switch.  
Connector & terminal (B281) No. 23 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 7. | Repair the short circuit of harness between the body integrated unit and stop light switch. |
| 7    | CHECK POOR CONTACT. | Is there poor contact in input signal of brake switch? | Repair the poor contact. | Check the body integrated unit. |
F: DTC P0720 OUTPUT SPEED SENSOR CIRCUIT

DTC DETECTING CONDITION:
- AT vehicle speed signal is abnormal.
- The harness connector between TCM and vehicle speed sensor is in short or open.

TROUBLE SYMPTOM:
- Deterioration of shifting quality.
- Poor driving performance.

WIRING DIAGRAM:

   2) Disconnect the connectors from TCM and transmission.  
   3) Measure the resistance of harness between TCM and transmission connector.  
   **Connector & terminal**  
   (B54) No. 16 — (B11) No. 7:  
   (B55) No. 7 — (B11) No. 1: | Is the resistance less than 1 Ω? | Go to step 2. | Repair the open circuit in harness between TCM and transmission connector. |
| 2 | CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.  
   Measure the resistance of harness between TCM connector and chassis ground.  
   **Connector & terminal**  
   (B54) No. 16 — Chassis ground:  
   (B55) No. 7 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 3. | Repair the short circuit in harness between TCM and chassis ground. |
| 3 | CHECK TCM POWER SUPPLY OUTPUT.  
   1) Connect the connector to TCM. (Transmission connector is disconnected)  
   2) Turn the ignition switch to ON. (engine OFF)  
   3) Measure the voltage between TCM connector and chassis ground.  
   **Connector & terminal**  
   (B54) No. 16 (+) — Chassis ground (−): | Is the voltage 10 — 13 V? | Go to step 4. | Go to step 5. |
| 4 | CHECK TURBINE SPEED SENSOR INPUT CIRCUIT OF TCM.  
   Measure the voltage between TCM connector terminals.  
   **Connector & terminal**  
   (B55) No. 7 (+) — (B54) No. 19 (−): | Is the voltage 4 — 6 V? | Go to step 6. | Go to step 5. |
| 5 | CHECK TCM I/O SIGNAL.  
   Check I/O signal of power supply, ground and PVIGN power supply relay.  
   <Ref. to 5AT(diag)-12, ELECTRICAL SPECIFICATION, Transmission Control Module (TCM) I/O Signal.> | Is TCM I/O signal OK? | Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).> | Repair the open or short circuit for power supply and ground. Perform the diagnosis according to DTC for PVIGN power supply relay. |
| 6 | PREPARE SUBARU SELECT MONITOR. | Do you have a Subaru Select Monitor? | Go to step 8. | Go to step 7. |
| 7 | PREPARE OSCILLOSCOPE. | Do you have an oscilloscope? | Go to step 9. | Go to step 10. |
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**AUTOMATIC TRANSMISSION (DIAGNOSTICS)**

#### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**Step** | **Check** | **Yes** | **No** |
--- | --- | --- | --- |
8 | **CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.**
1) Connect all the connectors.  
2) Lift-up the vehicle and support with rigid racks.

**NOTE:**
Raise all wheels off floor.

3) Start the engine, and drive it.
4) Read the current data of front wheel speed using Subaru Select Monitor. &lt;Ref. to 5AT(diag)-16, READ CURRENT DATA, OPERATION, Subaru Select Monitor.&gt;

**NOTE:**
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. &lt;Ref. to ABS(diag)-27, Clear Memory Mode.&gt;

Does the value of the front wheel speed depending on the acceleration and deceleration of the vehicle? | Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact of harness between the ATF temperature sensor and transmission connector. | Go to step 11. |

9 | **CHECK INPUT SIGNAL FOR TCM USING OSCILLOSCOPE.**
1) Connect all the connectors. 
2) Lift-up the vehicle and support with rigid racks.

**NOTE:**
Raise all wheels off floor.

3) Set the oscilloscope to TCM connector terminals.  
   **Positive probe; (B55) No. 16:**  
   **Ground lead; (B54) No. 19:**
4) Start the engine, and drive it.
5) Display the pulse signal of turbine speed sensor 1 to oscilloscope, and measure the frequency.

**NOTE:**
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. &lt;Ref. to ABS(diag)-27, Clear Memory Mode.&gt;

Is the frequency of measured waveform (pulse wave) changed depending on the acceleration and deceleration of the vehicle? | Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact of harness between the ATF temperature sensor and transmission connector. | Go to step 11. |
## Automatic Transmission (Diagnosis)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step 10: Check Input Signal for TCM Using Circuit Tester

1. Connect all the connectors.
2. Lift-up the vehicle and support with rigid racks.

**NOTE:**
- Raise all wheels off floor.

3. Start the engine, and drive it.
4. Measure the voltage between TCM terminals.

**Connector & terminal**
- (B55) No. 7 (+) — (B54) No. 19 (−):

5. Stop the vehicle, and shift the select lever to "P" range.
6. Measure the voltage between TCM terminals.

**Connector & terminal**
- (B55) No. 7 (+) — (B54) No. 19 (−):

**NOTE:**
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.>

- Does the voltage change within the range of 2 — 3 V when vehicle is driving? Is the voltage less than 0.5 V or more than 4.5 V constantly when the vehicle is parked with "P" range?

- Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact of harness between the ATF temperature sensor and transmission connector.

- Go to step 11.

#### Step 11: Check Harness Connector Between Transmission and Control Valve Body

1. Turn the ignition switch to OFF.
2. Disconnect the connector from transmission.
3. Remove the transmission connector from bracket.
4. Lift-up the vehicle and place it on rigid racks.

**NOTE:**
- Raise all wheels off floor.

5. Drain the ATF.

**CAUTION:**
- Do not drain the ATF until it cools down.
6. Remove the oil pan, and disconnect the connector from control valve body connector.
7. Measure the resistance between transmission connector and control valve body connector.

**Connector & terminal**
- (B11) No. 7 — (T5) No. 15:
- (B11) No. 1 — (T5) No. 14:

- Is the resistance less than 1 Ω?

- Go to step 12.
- Repair the open circuit in harness between control valve body connector and transmission connector.

#### Step 12: Check Harness Connector Between Transmission and Control Valve Body

Measure the resistance between transmission ground and control valve body connector.

**Connector & terminal**
- (T5) No. 15 — Transmission ground:
- (T5) No. 14 — Transmission ground:

- Is the resistance more than 1 MΩ?

- Go to step 13.
- Repair the short circuit in harness between transmission connector and transmission ground.
## Automatic Transmission (Diagnosis)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step 13
**CHECK HARNESS CONNECTOR BETWEEN CONTROL VALVE BODY AND VEHICLE SPEED SENSOR.**
1) Disconnect the connector from vehicle speed sensor.
2) Measure the resistance of harness between control valve body connector and vehicle speed sensor connector.

**Connector & terminal**
- (T5) No. 15 — (T7) No. 3:
- (T5) No. 14 — (T7) No. 2:
- (T7) No. 1 — Transmission ground:

Is the resistance less than 1 \(\Omega\)?

- **Yes**: Go to step 14.
- **No**: Replace the control valve body.  
  <Ref. to 5AT-58, Control Valve Body.>

#### Step 14
**CHECK HARNESS CONNECTOR BETWEEN CONTROL VALVE BODY AND VEHICLE SPEED SENSOR.**
Measure the resistance of harness between control valve body connector and transmission ground.

**Connector & terminal**
- (T5) No. 15 — Transmission ground:
- (T5) No. 14 — Transmission ground:

Is the resistance more than 1 \(\text{M}\Omega\)?

- **Yes**: Replace the vehicle speed sensor.
- **No**: Replace the control valve body.  
  <Ref. to 5AT-58, Control Valve Body.>
G: DTC P0724 TORQUE CONVERTER/BRAKE SWITCH “B” CIRCUIT HIGH

DTC DETECTING CONDITION:
Brake switch malfunction, open input signal circuit

TROUBLE SYMPTOM:
Gear is not shifted down when climbing a hill.

WIRING DIAGRAM:
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

| **1** CHECK DTC. | Is any of following DTC detected?  
  - AT CAN Communication Circuit  
  - Output Speed Sensor Circuit  
  - AT Vehicle Speed Sensor Circuit Malfunction (Rear Wheel) | Perform the diagnosis according to DTC. | Go to step 2. |
| **2** CHECK BODY INTEGRATED UNIT.  
  1) Turn the ignition switch to OFF.  
  2) Connect the Subaru Select Monitor to data link connector.  
  3) Turn the ignition switch to ON. (engine OFF)  
  4) Turn the Subaru Select Monitor switch to ON.  
| **3** CHECK TCM.  
  Read the data of brake pedal switch using Subaru Select Monitor. <Ref. to 5AT(diag)-16, OPERATION, Subaru Select Monitor.> | Is OFF displayed? | A temporary poor contact of connector or harness may be the cause. Check the poor contact. | Replace the TCM <Ref. to 5AT-61, Transmission Control Module (TCM).> |
| **4** CHECK BODY INTEGRATED UNIT INPUT SIGNAL.  
  1) Disconnect the connector from body integrated unit.  
  2) Measure the voltage between body integrated unit connector and chassis ground.  
  
    **Connector & terminal (B281) No. 23 (+) — Chassis ground (-):** | Is the voltage more than 10 V? | Go to step 5. | Go to step 7. |
| **5** CHECK STOP LIGHT SWITCH.  
  1) Turn the ignition switch to OFF.  
  2) Disconnect the connector from stop light switch.  
  3) Measure the resistance of harness between stop light switch connectors.  
  
    **Terminals No. 1 — No. 2:** | Is the resistance more than 1 MΩ? | Go to step 6. | Replace stop light switch. |
| **6** CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND STOP LIGHT SWITCH.  
  1) Turn the ignition switch to ON.  
  2) Measure the voltage of harness between the body integrated unit connector and chassis ground.  
  
    **Connector & terminal (B281) No. 23 (+) — Chassis ground (-):** | Is the voltage less than 1 V? | Go to step 7. | Repair the short circuit in harness between TCM and stop light switch. |
| **7** CHECK POOR CONTACT.  
  Is there poor contact in input signal of brake switch? | Repair the poor contact. | Check the body integrated unit. |

---

| 1    | CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connectors from TCM and transmission.  
3) Measure the resistance of harness between TCM and transmission connector.  
   **Connector & terminal**  
   (B54) No. 24 — (B11) No. 17:  
   (B55) No. 17 — (B11) No. 3:  
   (B54) No. 5 — Chassis ground:  
   (B54) No. 14 — Chassis ground:  
| Is the resistance less than 1 Ω? | Go to step 2. | Repair the open circuit in harness between TCM and transmission connector. |
| 2    | CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.  
Measure resistance of harness between TCM connector and chassis ground.  
   **Connector & terminal**  
   (B54) No. 24 — Chassis ground:  
   (B55) No. 17 — Chassis ground:  
| Is the resistance more than 1 MΩ? | Go to step 3. | Repair the short circuit in harness between TCM and transmission connector. |
| 3    | PREPARE SUBARU SELECT MONITOR.  
Do you have a Subaru Select Monitor? | Go to step 4. | Go to step 7. |
| 4    | CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.  
1) Connect all the connectors.  
2) Turn the ignition switch to ON. (engine OFF)  
3) Check input signal of Fr/B oil pressure SW.  
| Is OFF displayed? | Go to step 5. | Go to step 11. |
| 5    | CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.  
1) Turn the ignition switch to OFF.  
2) Turn the ignition switch to ON. (engine ON)  
3) Shift to 4th speed with checking current gear position using Subaru Select Monitor.  
4) Check input signal of Fr/B oil pressure SW.  
| Is OFF displayed? | Go to step 6. | Replace the control valve body.  
<Ref. to 5AT-58, Control Valve Body.> |
| 6    | CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.  
1) Turn the ignition switch to OFF.  
2) Turn the ignition switch to ON. (engine ON)  
3) Shift to 1st speed with checking current gear position using Subaru Select Monitor.  
4) Check input signal of Fr/B oil pressure SW.  
| Is the ON displayed? | Even if the SPORT indicator lights blinks, the system is in normal condition.  
A temporary poor contact of connector or harness may be the cause.  
Repair the poor contact of harness in the solenoid output and oil pressure SW input. | Go to step 10. |
| 7    | CHECK INPUT SIGNAL FOR TCM USING CIRCUIT TESTER.  
1) Connect all the connectors.  
2) Turn the ignition switch to ON. (engine OFF)  
3) Measure the voltage of harness between TCM connector and chassis ground.  
   **Connector & terminal**  
   (B55) No. 17 (+) — Chassis ground (-):  
| Is the voltage 10 — 13 V? | Go to step 8. | Go to step 11. |

W: DTC P0763 SHIFT SOLENOID “C” ELECTRICAL

DTC DETECTING CONDITION:
Output signal circuit of high & low reverse clutch solenoid is open or shorted.

TROUBLE SYMPTOM:
Locked to 4th gear.

WIRING DIAGRAM:
## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

<table>

| 1    | CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connectors from TCM and transmission.  
3) Measure the resistance of harness between TCM and transmission connector.  
**Connector & terminal**  
(B54) No. 17 — (B11) No. 15:  
(B55) No. 8 — (B11) No. 4:  
(B54) No. 5 — Chassis ground:  
(B54) No. 14 — Chassis ground: | Is the resistance less than 1 Ω? | Go to step 2. | Repair the open circuit in harness between TCM connector and transmission connector. |
| 2    | CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.  
Measure resistance of harness between TCM connector and chassis ground.  
**Connector & terminal**  
(B54) No. 17 — Chassis ground:  
(B55) No. 8 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 3. | Repair the short circuit in harness between TCM connector and transmission connector. |
| 3    | CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND CONTROL VALVE BODY.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from transmission.  
3) Remove the transmission connector from bracket.  
4) Lift-up the vehicle and place it on rigid racks.  
5) Drain the ATF.  
6) Remove the oil pan, and disconnect the control valve body connector.  
7) Measure the resistance between transmission connector and control valve body connector.  
**Connector & terminal**  
(T4) No. 15 — (T6) No. 12:  
(T4) No. 4 — (T5) No. 12: | Is the resistance less than 1 Ω? | Go to step 4. | Repair the open circuit in harness between control valve body connector and transmission connector. |
| 4    | CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND CONTROL VALVE BODY.  
Measure the resistance of harness connector between control valve body connector and chassis ground.  
**Connector & terminal**  
(T6) No. 12 — Chassis ground:  
(T5) No. 12 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 5. | Repair the open circuit in harness between control valve body connector and transmission ground. |
| 5    | CHECK HIGH & LOW REVERSE CLUTCH SOLENOID.  
Measure the resistance between transmission ground and control valve body connector.  
**Connector & terminal**  
(T6) No. 12 — Transmission ground: | Is the resistance 3 — 9 Ω? | Go to step 6. | Replace the control valve body.  
<Ref. to 5AT-58, Control Valve Body.> |
| 6    | CHECK POOR CONTACT.  
Check that there are no poor contact in TCM connector, transmission connector and control valve body connector. | Is there any loosening terminal, entering foreign matter, damaging connector body? | Repair the poor contact. | Go to step 7. |
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### Step Check After Repair
1. Perform the clear memory mode.
2. Drive for a while, read the DTC, and verify that there is no faulty.

# Automatic Transmission (Diagnosis)

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### Step 1: Check Harness Connector Between TCM and Transmission

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 | **Check Harness Connector Between TCM and Transmission.**  
   1) Turn the ignition switch to OFF.  
   2) Disconnect the connectors from TCM and transmission.  
   3) Measure the resistance of harness between TCM and transmission connector.  
   **Connector & terminal**  
   (B54) No. 22 — (B11) No. 16:  
   (B54) No. 21 — (B11) No. 10:  
   (B54) No. 5 — Chassis ground:  
   (B54) No. 14 — Chassis ground: | Is the resistance less than 1 Ω? | Go to step 2. | Repair the open circuit in harness between TCM and transmission connector. |
| 2 | **Check Harness Connector Between TCM and Body Harness.**  
   Measure resistance of harness between TCM connector and body harness.  
   **Connector & terminal**  
   (B54) No. 22 — Chassis ground:  
   (B54) No. 21 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 3. | Repair the short circuit in harness between TCM and transmission connector. |
| 3 | **Check Input Signal for TCM Using Subaru Select Monitor.**  
   1) Connect all the connectors.  
   2) Turn the ignition switch to ON. (engine OFF)  
| 4 | **Check Input Signal for TCM Using Subaru Select Monitor.**  
   1) Turn the ignition switch to OFF.  
   2) Turn the ignition switch to ON. (engine ON)  
   3) Shift to “D” range and brake ON (1st) with checking current gear position using Subaru Select Monitor.  
   4) Check input signal of D/C oil pressure SW. | Is OFF displayed? | Go to step 5. | Replace the control valve body. <Ref. to 5AT-58, Control Valve Body.> |
| 5 | **Check Input Signal for TCM Using Subaru Select Monitor.**  
   1) Turn the ignition switch to OFF.  
   2) Turn the ignition switch to ON. (engine ON)  
   3) Shift to 2nd speed of manual mode and brake ON with checking current gear position using Subaru Select Monitor.  
   4) Check input signal of D/C oil pressure SW. | Is the ON displayed? | Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact of harness in the solenoid output and oil pressure SW input. | Go to step 6. |

| 8 | CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.  
1) Connect all the connectors.  
2) Lift-up the vehicle and support with rigid racks.  
NOTE: Raise all wheels off floor.  
3) Start the engine, and set the vehicle in 1st speed driving condition of manual mode.  
4) Read the current data of torque converter turbine speed 2 using the Subaru Select Monitor.  
<Ref. to 5AT(diag)-16, OPERATION, Subaru Select Monitor.>  
NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.> | Does the value of the turbine speed sensor 2 change depending on the acceleration, deceleration and shifting gear of the vehicle? | Even if the SPORT indicator lights blinks, the system is in normal condition.  
A temporary poor contact of connector or harness may be the cause. Repair the poor contact in harness of turbine speed sensor 2 and transmission connector. | Go to step 11. |
| 9 | CHECK INPUT SIGNAL FOR TCM USING OSCILLOSCOPE.  
1) Connect all the connectors.  
2) Lift-up the vehicle and support with rigid racks.  
NOTE: Raise all wheels off floor.  
3) Set the oscilloscope to TCM connector terminals.  
Connector & terminal  
Positive probe; (B55) No. 22:  
Ground lead; (B54) No. 19:  
4) Start the engine, and set the vehicle in 1st speed driving condition of manual mode.  
5) Display the pulse signal of turbine speed sensor 1 to oscilloscope, and measure the frequency.  
NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.> | Is the frequency of measured waveform (pulse wave) changed depending on the acceleration and deceleration of the vehicle? | Even if the SPORT indicator lights blinks, the system is in normal condition.  
A temporary poor contact of connector or harness may be the cause. Repair the poor contact in harness of turbine speed sensor 2 and transmission connector. | Go to step 11. |
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**AUTOMATIC TRANSMISSION (DIAGNOSTICS)**

#### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**10 CHECK INPUT SIGNAL FOR TCM USING CIRCUIT TESTER.**

1. Connect all the connectors.
2. Lift-up the vehicle and support with rigid racks.

**NOTE:**
Raise all wheels off floor.

3. Start the engine, and set the vehicle in 1st speed driving condition of manual mode.
4. Measure the voltage between TCM terminals.

**Connector & terminal**

- **(B55) No. 22 (+)** — **(B54) No. 19 (−):**

5. Stop the vehicle, and shift the select lever to “P” range.
6. Measure the voltage between TCM terminals.

**Connector & terminal**

- **(B55) No. 22 (+)** — **(B54) No. 19 (−):**

**NOTE:**
The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS(diag)-27, Clear Memory Mode.>

- **Does the voltage change within the range of 2 — 3 V when vehicle is driving? Is the voltage less than 0.5 V or more than 4.5 V constantly when the vehicle is parked with “P” range?**

- **Even if the SPORT indicator lights blinks, the system is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair the poor contact in harness of turbine speed sensor 2 and transmission connector.**

- **Go to step 11.**

AN: DTC P1760 LATERAL ACCELERATION SENSOR PERFORMANCE PROBLEM

DTC DETECTING CONDITION:
Faulty lateral G sensor output voltage

WIRING DIAGRAM:
# Diagnostic Procedure with Diagnostic Trouble Code (DTC)
## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step Check Yes No

1. **CHECK OUTPUT OF LATERAL G SENSOR USING SUBARU SELECT MONITOR.**
   1) Select {Current Data Display & Save} in Subaru Select Monitor.
   2) Read the Subaru Select Monitor display.
   Is the value on the monitor display 2.3 — 2.7 V when the vehicle is on a level?
   Go to step 2.
   Go to step 7.

2. **CHECK OUTPUT OF LATERAL G SENSOR USING SUBARU SELECT MONITOR.**
   1) Turn the ignition switch to OFF.
   2) Remove the console box.
   3) Remove the lateral G sensor from vehicle. (Do not disconnect connector.)
   4) Turn the ignition switch to ON.
   5) Select {Current Data Display & Save} in Subaru Select Monitor.
   6) Read the Subaru Select Monitor display.
   Is the value on the monitor display 3.3 — 4.3 V when lateral G sensor is inclined to the right to 90°?
   Go to step 3.
   Go to step 7.

3. **CHECK OUTPUT OF LATERAL G SENSOR USING SUBARU SELECT MONITOR.**
   Read the Subaru Select Monitor display.
   Is the value on the monitor display 0.7 — 1.7 V when lateral G sensor is inclined to the left to 90°?
   Go to step 4.
   Go to step 7.

4. **CHECK POOR CONTACT IN CONNECTOR.**
   Turn the ignition switch to OFF.
   Is there poor contact in connector between TCM and the lateral G sensor?
   Repair the connector.
   Go to step 5.

5. **CHECK ABSCM&H/U.**
   1) Connect all the connectors.
   2) Erase the memory.
   3) Perform the inspection mode.
   4) Read the DTC.
   Is the same DTC displayed?
   Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).>
   Go to step 6.

6. **CHECK OTHER DTC DETECTION.**
   Is any other DTC displayed?
   Perform the diagnosis according to DTC.
   Temporary poor contact occurs.

7. **CHECK OPEN CIRCUIT IN LATERAL G SENSOR OUTPUT HARNESS AND GROUND HARNESS.**
   1) Turn the ignition switch to OFF.
   2) Disconnect the connector from TCM.
   3) Measure the resistance between TCM connector terminals.
   
   **Connector & terminal**
   
   \((B54) \text{ No. 13} \rightarrow (B55) \text{ No. 6}:\)
   Is the resistance 5.0 — 6.0 kΩ?
   Go to step 8.
   Repair the harness connector between lateral G sensor and TCM.

8. **CHECK LATERAL G SENSOR.**
   1) Remove the console box.
   2) Remove the lateral G sensor from vehicle.
   3) Connect the connector to lateral G sensor.
   4) Connect the connector to ABSCM&H/U.
   5) Turn the ignition switch to ON.
   6) Measure the voltage between lateral G sensor connector terminals.
   
   **Connector & terminal**
   
   \((B359) \text{ No. 3 (+)} \rightarrow \text{No. 2 (−)}:\)
   Is the voltage 2.3 — 2.7 V when the lateral G sensor is horizontal?
   Go to step 9.
   Replace the lateral G sensor. <Ref. to 5AT-63, Lateral G Sensor.>

9. **CHECK LATERAL G SENSOR.**
   Measure the voltage between lateral G sensor connector terminals.
   
   **Connector & terminal**
   
   \((B359) \text{ No. 3 (+)} \rightarrow \text{No. 2 (−)}:\)
   Is the voltage 3.3 — 4.3 V when lateral G sensor is inclined to the right to 90°?
   Go to step 10.
   Replace the lateral G sensor. <Ref. to 5AT-63, Lateral G Sensor.>

10. **CHECK LATERAL G SENSOR.**
    Measure the voltage between lateral G sensor connector terminals.
    
    **Connector & terminal**
    
    \((B359) \text{ No. 3 (+)} \rightarrow \text{No. 2 (−)}:\)
    Is the voltage 0.7 — 1.7 V when lateral G sensor is inclined to the left to 90°?
    Go to step 11.
    Replace the lateral G sensor. <Ref. to 5AT-63, Lateral G Sensor.>
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

**Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

1. **CHECK ABSCM&H/U.**
   - 1) Turn the ignition switch to OFF.
   - 2) Connect all the connectors.
   - 3) Erase the memory.
   - 4) Perform the inspection mode.
   - 5) Read the DTC.

Connector & terminal (B55) No. 6 (+) — Chassis ground (-): | Is the voltage less than 1 V? | Go to step 8. | Repair the harness between lateral G sensor and TCM. |
| 8    | CHECK BATTERY SHORT OF HARNESS.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between TCM connector and chassis ground.  
Connector & terminal (B55) No. 6 (+) — Chassis ground (-): | Is the voltage less than 1 V? | Go to step 9. | Repair the harness between lateral G sensor and TCM. |
| 9    | CHECK POOR CONTACT IN CONNECTOR. | Is there poor contact in connector between TCM and the lateral G sensor? | Repair the connector. | Go to step 10. |
| 10   | CHECK TCM.  
1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode.  
4) Read the DTC. | Is the same DTC displayed? | Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).> | Go to step 11. |
| 11   | CHECK OTHER DTC DETECTION. | Is any other DTC displayed? | Perform the diagnosis according to DTC. | Temporary poor contact occurs. |
### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**AUTOMATIC TRANSMISSION (DIAGNOSTICS)**

#### AQ:DTC P1798 GEAR 1 ENGINE BRAKE

**NOTE:**
Refer to DTC P0773 for diagnostic procedure. <Ref. to 5AT(diag)-94, DTC P0773 SHIFT SOLENOID “E” ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

<table>
<thead>
<tr>
<th>Step</th>

</thead>
</table>
| 12 | CHECK INPUT VOLTAGE OF LATERAL G SENSOR.  
   1) Turn the ignition switch to OFF.  
   2) Remove the console box.  
   3) Remove the lateral G sensor from vehicle. (Do not disconnect connector.)  
   4) Turn the ignition switch to ON.  
   5) Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal**  
   *(B359) No. 1 (+) — No. 2 (−):* | Is the voltage 4.75 — 5.25 V?  
   Go to step 13.  
   Repair the harness connector between lateral G sensor and TCM. |
| 13 | CHECK OPEN CIRCUIT IN LATERAL G SENSOR OUTPUT HARNESS AND GROUND HARNESS.  
   1) Turn the ignition switch to OFF.  
   2) Disconnect the connector from TCM.  
   3) Measure the resistance between TCM connector terminals.  
   **Connector & terminal**  
   *(B55) No. 5 — No. 6:* | Is the resistance 5.0 — 5.6 kΩ?  
   Go to step 14.  
   Repair the harness connector between lateral G sensor and TCM. |
| 14 | CHECK LATERAL G SENSOR.  
   1) Connect the connector to lateral G sensor.  
   2) Connect the connector to the TCM.  
   3) Turn the ignition switch to ON.  
   4) Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal**  
   *(B359) No. 3 (+) — No. 2 (−):* | Is the voltage 2.1 — 2.5 V when the lateral G sensor is horizontal?  
   Go to step 15.  
   Replace the lateral G sensor.  
   <Ref. to 5AT-63, Lateral G Sensor.> |
| 15 | CHECK LATERAL G SENSOR.  
   Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal**  
   *(B359) No. 3 (+) — No. 2 (−):* | Is the voltage 3.3 — 3.7 V when lateral G sensor is inclined to the right to 90°?  
   Go to step 16.  
   Replace the lateral G sensor.  
   <Ref. to 5AT-63, Lateral G Sensor.> |
| 16 | CHECK LATERAL G SENSOR.  
   Measure the voltage between lateral G sensor connector terminals.  
   **Connector & terminal**  
   *(B359) No. 3 (+) — No. 2 (−):* | Is the voltage 0.5 — 0.9 V when lateral G sensor is inclined to the left to 90°?  
   Go to step 17.  
   Replace the lateral G sensor.  
   <Ref. to 5AT-63, Lateral G Sensor.> |
| 17 | CHECK POOR CONTACT IN CONNECTOR.  
   Turn the ignition switch to OFF. | Is there poor contact in connector between TCM and the lateral G sensor?  
   Repair the connector.  
   Go to step 18. |
| 18 | CHECK ABS/C&M/H/U.  
   1) Connect all the connectors.  
   2) Erase the memory.  
   3) Perform the inspection mode.  
   4) Read the DTC. | Is the same DTC displayed?  
   Replace the TCM.  
   <Ref. to 5AT-61, Transmission Control Module (TCM).>  
   Go to step 19. |
| 19 | CHECK OTHER DTC DETECTION. | Is any other DTC displayed?  
   Perform the diagnosis according to DTC.  
   Temporary poor contact occurs. |
## AR:DTC P1799 INTERLOCK

**DTC DETECTING CONDITION:**
Perform the interlock judgment when the oil pressure switch pattern detect the specified interlock patterns for more than 2 seconds other than shifting.

**TROUBLE SYMPTOM:**
Locked to 2nd, 4th or 5th gear.

<table>

AS:DTC P1817 SPORTS MODE SWITCH CIRCUIT (MANUAL SWITCH)

DTC DETECTING CONDITION:
Input signal circuit of SPORT shift switch is open or shorted.

TROUBLE SYMPTOM:
- Can not set to manual mode.
- “SPORT” light illuminates when shifting to “N” → “D” range.

WIRING DIAGRAM:
### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

#### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1. **CHECK BODY INTEGRATED UNIT.**  
1) Connect the Subaru Select Monitor to data link connector.  
2) Turn the ignition switch to ON. (engine OFF)  
3) Read the DTC of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is DTC displayed? | Perform the diagnosis according to DTC. | Go to step 2. |
| 2. **CHECK BODY INTEGRATED UNIT INPUT SIGNAL.**  
1) Shift the select lever to “P” range.  
2) Read the TIP mode SW data of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is OFF displayed? | Go to step 3. | Go to step 7. |
| 3. **CHECK BODY INTEGRATED UNIT INPUT SIGNAL.**  
1) Shift the select lever from “P” to “D” range.  
2) Read the TIP mode SW data of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is the indication on each range OFF? | Go to step 4. | Replace the select lever assembly. <Ref. to CS-7, Select Lever.> |
| 4. **CHECK BODY INTEGRATED UNIT INPUT SIGNAL.**  
1) Shift the select lever to manual mode.  
2) Shift the select lever to other than “D” range.  
3) Read the TIP mode SW data of body integrated unit using Subaru Select Monitor. <Ref. to LAN(diag)-14, OPERATION, Subaru Select Monitor.> | Is OFF displayed? | Go to step 5. | Replace the select lever assembly. <Ref. to CS-7, Select Lever.> |
| 5. **CHECK DTC OF TCM.** | Is DTC of Transmission Range Sensor Circuit (PRNDL Input) and AT CAN communication circuit displayed? | Perform the diagnosis according to each DTC. | Go to step 6. |
| 6. **CHECK TCM INPUT SIGNAL.**  
1) Shift the select lever from “P” to “D” range.  
2) Read the TIP mode SW data of TCM using Subaru Select Monitor. <Ref. to 5AT(diag)-16, OPERATION, Subaru Select Monitor.> | Is the indication on each range OFF? | Even if the SPORT indicator lights blinks, the circuit is in normal condition. A temporary poor contact of connector or harness may be the cause. | Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).> |
| 7. **CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND SPORT SHIFT SWITCH.**  
1) Turn the ignition switch to OFF.  
2) Disconnect harness connector from body integrated unit and select lever.  
3) Measure the harness resistance between the body integrated unit and chassis ground.  
   **Connector & terminal (B281) No. 26 — Chassis ground:** | Is the resistance more than 1 MΩ? | Go to step 8. | Repair the short circuit of harness between the body integrated unit and SPORT shift switch. |
| 8. **CHECK SPORT SHIFT SWITCH.**  
1) Shift the select lever to “P” range.  
2) Measure the resistance between harness connector terminals of SPORT shift switch.  
   **Terminals (B116) No. 7 — No. 8:** | Is the resistance more than 1 MΩ? | Check the body integrated unit. | Replace the select lever assembly. <Ref. to CS-7, Select Lever.> |
Diagnostic Procedure with Diagnostic Trouble Code (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

**AT:** DTC P1840 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH A CIRCUIT

DTC DETECTING CONDITION:
Front brake oil pressure switch malfunction.

TROUBLE SYMPTOM:
Excessive shift shock

NOTE:
Refer to DTC P0751 for diagnostic procedure. <Ref. to 5AT(diag)-65, DTC P0751 SHIFT SOLENOID “A” PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

**AU:** DTC P1841 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH B CIRCUIT

DTC DETECTING CONDITION:
Low coast brake oil pressure switch malfunction.

TROUBLE SYMPTOM:
Excessive shift shock

NOTE:
Refer to DTC P0771 for diagnostic procedure. <Ref. to 5AT(diag)-91, DTC P0771 SHIFT SOLENOID “E” PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

**AV:** DTC P1842 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH C CIRCUIT

DTC DETECTING CONDITION:
Input clutch oil pressure switch malfunction.

TROUBLE SYMPTOM:
Excessive shift shock.

NOTE:
Refer to DTC P0756 for diagnostic procedure. <Ref. to 5AT(diag)-72, DTC P0756 SHIFT SOLENOID “B” PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

**AW:** DTC P1843 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH D CIRCUIT

DTC DETECTING CONDITION:
Direct clutch oil pressure switch malfunction.

TROUBLE SYMPTOM:
Excessive shift shock.

NOTE:
Refer to DTC P0766 for diagnostic procedure. <Ref. to 5AT(diag)-85, DTC P0766 SHIFT SOLENOID “D” PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

**AX:** DTC P1844 TRANSMISSION FLUID PRESSURE SENSOR/SWITCH E CIRCUIT

DTC DETECTING CONDITION:
High & low reverse clutch oil pressure switch malfunction.

TROUBLE SYMPTOM:
Excessive shift shock.

NOTE:
Refer to DTC P0761 for diagnostic procedure. <Ref. to 5AT(diag)-78, DTC P0761 SHIFT SOLENOID “C” PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
15. Diagnostic Procedure without Diagnostic Trouble Code (DTC)

A: CHECK SPORT SHIFT SWITCH

DIAGNOSIS:
Input signal circuit of SPORT shift switch is open or shorted.

TROUBLE SYMPTOM:
Does not shift on manual mode.

WIRING DIAGRAM:
# Diagnostic Procedure without Diagnostic Trouble Code (DTC)

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>

| 1    | CHECK BODY INTEGRATED UNIT.  
1) Perform the ON/OFF operation on SPORT shift switch.  
2) Read the data of SPORT shift switch signal using Subaru Select Monitor. | Both ON/OFF can be detected normally? | Go to step 2. | Go to step 7. |
| 2    | CHECK DTC OF BODY INTEGRATED UNIT. | Is DTC of CAN detected? | Perform the diagnosis according to DTC. | Go to step 3. |
| 3    | CHECK TCM.  
1) Perform the ON/OFF operation on SPORT shift switch.  
2) Read the data of SPORT shift switch signal using Subaru Select Monitor. | Both ON/OFF can be detected normally? | Go to step 4. | Go to step 5. |
| 4    | CHECK TIP INDICATOR ON COMBINATION METER. | Is the TIP indicator OK? | Go to step 6. | Replace the combination meter assembly. <Ref. to IDI-16, Combination Meter Assembly.> |
| 5    | CHECK DTC OF TCM. | Is DTC of CAN detected? | Perform the diagnosis according to DTC. | Replace the TCM. <Ref. to 5AT-61, Transmission Control Module (TCM).> |
| 6    | CHECK DTC OF METER. | Is DTC of CAN detected? | Perform the diagnosis according to DTC. | Replace the meter. |
| 7    | CHECK SPORT SHIFT SWITCH GROUND CIRCUIT.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from SPORT shift switch.  
3) Measure the resistance of harness between SPORT shift switch connector and chassis ground.  
   Connector & terminal (B116) No. 6 — Chassis ground: | Is the resistance less than 1 Ω? | Go to step 8. | Repair the open circuit in harness between SPORT shift switch and chassis ground. |
| 8    | CHECK SPORT SHIFT SWITCH.  
Measure the resistance between the SPORT shift switch terminals.  
Connector & terminal (B116) No. 6 — No. 5: | Is the resistance more than 1 MΩ? | Go to step 9. | Replace the guide plate assembly. |
| 9    | CHECK SPORT SHIFT SWITCH.  
1) Shift the select lever to manual mode.  
2) Measure the resistance between the SPORT shift switch terminals.  
Connector & terminal (B116) No. 6 — No. 5: | Is the resistance less than 1 Ω? | Go to step 10. | Replace the guide plate assembly. |
| 10   | CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND SPORT SHIFT SWITCH.  
1) Disconnect the connector from body integrated unit.  
2) Measure the resistance of harness between the body integrated unit and SPORT shift switch connector.  
Connector & terminal (B116) No. 5 — (B281) No. 15: | Is the resistance less than 1 Ω? | Go to step 11. | Repair the open circuit in harness between SPORT shift switch connector and TCM connector, or poor contact in coupling connector. |

</thead>
</table>
| Excessive shift shock on 4th of “D” range → 5th of “D” range or “4th of manual mode” → “5th of manual mode”. | • Accelerator pedal position sensor  
• Throttle position sensor  
• Control cable adjustment  
• Oil pressure switch 1 and Front brake solenoid valve  
• CAN communication signal  
• Engine speed signal  
• Turbine speed sensor  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Fluid level and condition |
| Excessive shock at kick down.                                           | • Accelerator pedal position sensor  
• Throttle position sensor  
• Control cable adjustment  
• CAN communication signal  
• Engine speed signal  
• Turbine speed sensor  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Fluid level and condition |
| Excessive shock at shift up.                                            | • Accelerator pedal position sensor  
• Throttle position sensor  
• Control cable adjustment  
• CAN communication signal  
• Engine speed signal  
• Turbine speed sensor  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Fluid level and condition |
| Excessive shock at lock up.                                             | • Accelerator pedal position sensor  
• Throttle position sensor  
• Control cable adjustment  
• CAN communication signal  
• Engine speed signal  
• Turbine speed sensor  
• Lock up solenoid valve  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Fluid level and condition |
| Excessive shock at engine brake.                                        | • Accelerator pedal position sensor  
• Throttle position sensor  
• Control cable adjustment  
• CAN communication signal  
• Fluid level and condition  
• Line pressure  
• Low coast brake solenoid valve |
| Judder is occurred at lock up.                                          | • Fluid level and condition  
• Engine speed signal  
• Turbine speed sensor  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Accelerator pedal position sensor  
• Throttle position sensor  
• Lock up solenoid valve  
• ATF temperature sensor 1 and 2 |
| Noise at “R”, “N” and “D” range.                                       | • Fluid level and condition  
• Engine speed signal  
• ATF temperature sensor 1 and 2 |
| Hold at “D” range or 1st on manual mode.                               | • Fluid level and condition  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Direct clutch solenoid valve  
• Line pressure  
• Up switch signal  
• CAN communication signal  
• Accelerator pedal position sensor |

• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Line pressure  
• Up switch signal  
• Down switch signal  
• CAN communication signal  
• Accelerator pedal position sensor |
| Hold at “D” range or 4th on manual mode. | • Fluid level and condition  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Oil pressure switch 3 and Input clutch solenoid valve  
• Oil pressure switch 4 and Direct clutch solenoid valve  
• Oil pressure switch 5 and High & low reverse clutch solenoid valve  
• Low coast brake solenoid valve  
• Front brake solenoid valve  
• Line pressure  
• Up switch signal  
• Down switch signal  
• CAN communication signal  
• Accelerator pedal position sensor  
• TCM power supply  
• PVIGN relay |
| Hold at “D” range or 5th on manual mode. | • Fluid level and condition  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Oil pressure switch 1 and Front brake solenoid valve  
• Line pressure  
• Down switch signal  
• CAN communication signal  
• Accelerator pedal position sensor |
| Gear does not shift 1st of “D” range → 2nd of “D” range or “1st of manual mode” → “2nd of manual mode”. | • Fluid level and condition  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Oil pressure switch 4 and Direct clutch solenoid valve  
• Line pressure  
• Up switch  
• CAN communication signal  
• Accelerator pedal position sensor |
| Gear does not shift 2nd of “D” range → 3rd of “D” range or “2nd of manual mode” → “3rd of manual mode”. | • Fluid level and condition  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Oil pressure switch 5 and High & low reverse clutch solenoid valve  
• Line pressure  
• Up switch signal  
• CAN communication signal  
• Accelerator pedal position sensor |
| Gear does not shift 3rd of “D” range → 4th of “D” range or “3rd of manual mode” → “4th of manual mode”. | • Fluid level and condition  
• Vehicle speed sensor 1 and Vehicle speed sensor 2  
• Oil pressure switch 3 and Input clutch solenoid valve  
• Oil pressure switch 1 and Front brake solenoid valve  
• Line pressure  
• Up switch signal  
• CAN communication signal  
• Accelerator pedal position sensor |
### Gear does not shift 4th of “D” range → 5th of “D” range or “4th of manual mode” → “5th of manual mode”.

- Fluid level and condition
- Vehicle speed sensor 1 and Vehicle speed sensor 2
- Oil pressure switch 1 and Front brake solenoid valve
- Oil pressure switch 4 and Direct clutch solenoid valve
- Turbine speed sensor
- ATF temperature sensor
- Line pressure
- Up switch signal
- CAN communication signal
- Accelerator pedal position sensor

### Gear does not shift down to 4th on “D” range or manual mode.

- Fluid level and condition
- Vehicle speed sensor 1 and Vehicle speed sensor 2
- Oil pressure switch 1 and Front brake solenoid valve
- Oil pressure switch 4 and Direct clutch solenoid valve
- Line pressure
- Down switch signal
- CAN communication signal
- Accelerator pedal position sensor

### Gear does not shift down to 3rd on “D” range or manual mode.

- Fluid level and condition
- Vehicle speed sensor 1 and Vehicle speed sensor 2
- Oil pressure switch 3 and Input clutch solenoid valve
- Oil pressure switch 1 and Front brake solenoid valve
- Line pressure
- Down switch signal
- CAN communication signal
- TCM power supply
- PVIGN relay

### Gear does not shift down to 2nd on “D” range or manual mode.

- Fluid level and condition
- Vehicle speed sensor 1 and Vehicle speed sensor 2
- Oil pressure switch 5 and High & low reverse clutch solenoid
- Line pressure
- Down switch signal
- CAN communication signal
- Accelerator pedal position sensor

### Gear does not shift down to 1st on “D” range or manual mode.

- Fluid level and condition
- Vehicle speed sensor 1 and Vehicle speed sensor 2
- Oil pressure switch 4 and Direct clutch solenoid valve
- Line pressure
- Down switch signal
- CAN communication signal
- Accelerator pedal position sensor

### No lock-up occurs.

- Fluid level and condition
- Line pressure
- Engine speed signal
- Turbine speed sensor
- Lock up solenoid valve
- CAN communication signal
- ATF temperature sensor 1 and 2
- Accelerator pedal position sensor
- Brake switch signal
- Range signal

### No shift shock occurred when shifting 1st of “D” range → 2nd of “D” range or “1st of manual mode” → “2nd of manual mode”. Or clutch slipping occurred.

- Fluid level and condition
- Vehicle speed sensor 1 and Vehicle speed sensor 2
- Oil pressure switch 4 and Direct clutch solenoid valve
- Line pressure
- CAN communication signal

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

</table>
7. REVERSE IDLER GEAR

Adjustment of reverse idler gear position

**Reverse idler gear to transmission case (LH) wall clearance:**

6.0 — 7.5 mm (0.236 — 0.295 in)

After installing a suitable reverse shifter lever, adjust the clearance using washer.

**Reverse idler gear to transmission case wall clearance:**

0 — 0.5 mm (0 — 0.020 in)

8. SHIFTER FORK AND ROD

Select suitable shifter forks so that both the coupling sleeve and reverse driven gear are positioned in the center of their synchromesh mechanisms.

**Rod end clearance:**

- **A:** 3rd-4th — 5th
  0.5 — 1.3 mm (0.020 — 0.051 in)
- **B:** 1st-2nd — 3rd-4th
  0.4 — 1.4 mm (0.016 — 0.055 in)

9. TRANSFER CASE OR REAR CASE

Neutral position adjustment

**Adjusting shim**

MANUAL TRANSMISSION AND DIFFERENTIAL

7. FRONT DIFFERENTIAL

(1) Drive pinion shaft
(2) Hypoid driven gear
(3) Pinion shaft
(4) Straight pin
(5) Washer
(6) Differential bevel gear
(7) Differential bevel pinion
(8) Roller bearing
(9) Differential case
(10) Oil seal
(11) Differential side retainer
(12) O-ring
(13) Retainer lock plate

Tightening torque: \( N \cdot m \) (kgf-m, ft-lb)
\[ T1: 25 \ (2.5, \ 18.1) \]
\[ T2: 62 \ (6.3, \ 45.6) \]
8. TRANSMISSION MOUNTING

(1) Pitching stopper
(2) Spacer
(3) Cushion rubber
(4) Front plate
(5) Rear cushion rubber
(6) Rear crossmember
(7) Cushion D
(8) Center crossmember
(9) Front crossmember
(10) Cushion (crossmember)

Tightening torque: $Nm$ (kgf-m, ft-lb)
- $T1$: 70 (7.1, 51)
- $T2$: 35 (3.6, 26)
- $T3$: 50 (5.1, 37)
- $T4$: 58 (5.9, 43)
- $T5$: 70 (7.1, 51)
- $T6$: 140 (14.3, 103)
C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes, during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Replace deformed or damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vice.
- Avoid damaging the mating surface of the case.
- Before applying sealant, completely remove the old seal.

## GENERAL DESCRIPTION

**MAGNET BASE**

- Used for measuring backlash between side gear and pinion, and hypoid gear.
- Used with DIAL GAUGE (498247100).

**DIAL GAUGE**

- Used for measuring backlash between side gear and pinion, and hypoid gear.
- Used with MAGNET BASE (498247001).

**STOPPER**

- Used for securing drive pinion shaft assembly and driven gear assembly when removing lock nut of drive pinion shaft assembly.

**MAIN SHAFT STOPPER**

- Used for removing and installing lock nut of transmission main shaft.

</tr>
</tbody>
</table>
2. Transmission Gear Oil

A: INSPECTION
1) Park the vehicle on a level surface.
2) Turn the ignition switch to OFF, and wait until the engine cools.
3) Remove the oil level gauge and wipe it clean.
4) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper direction.
5) Pull out the oil level gauge again, and check the oil level. If it is below the lower level, add oil through the oil level gauge hole to bring the level up to the upper level.

B: REPLACEMENT
1) Pull out the oil level gauge.
2) Lift-up the vehicle.
3) Drain transmission gear oil completely.

CAUTION:
Immediately after the engine running, the transmission gear oil is very hot. Be careful not to burn yourself.

NOTE:
- Tighten the transmission gear oil drain plug after draining transmission gear oil.
- Use a new gasket.

Recommended gear oil:
GL-5 (75W-90) or equivalent

Gear oil capacity:
Single-range model
3.5 \( \text{gal} \) \( (3.7 \text{ US qt, 3.1 Imp qt}) \)
Dual-range model
4.0 \( \text{gal} \) \( (4.2 \text{ US qt, 3.5 Imp qt}) \)

6) Check the level of transmission gear oil.

CAUTION:
The level should be within the specified range marked on the gauge.
3. Manual Transmission Assembly

A: REMOVAL
1) Open the front hood fully, and support with stay.
2) Disconnect the ground cable from battery.
3) Drain transmission gear oil completely.
4) Remove the air intake chamber and air cleaner case. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.> <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
5) Remove the air intake chamber stay.
6) Disconnect the following connectors:
   (1) Neutral position switch connector
   (2) Back-up light switch connector
   (3) High-low switch connector (Dual-range model)
7) Remove the snap pin and clevis pin from drive select cable. (Dual-range model)
8) Remove the drive select cable on transmission side. (Dual-range model)
9) Remove the starter. <Ref. to SC(H4SO 2.0)-6, REMOVAL, Starter.>
10) Remove the operating cylinder from transmission.
11) Remove the pitching stopper.
12) Set the ST.
   ST  41099AA000  ENGINE SUPPORT ASSY

13) Remove the bolts which hold upper side of transmission to engine.

14) Lift-up the vehicle.
15) Remove the front and center exhaust pipes. 
   <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
16) Remove the rear exhaust pipe and muffler. 
   <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>

CAUTION:
When removing the exhaust pipes, be careful each exhaust pipe does not drop out.
17) Remove the heat shield cover. (if equipped)
18) Remove the hanger bracket from the right side of transmission.

19) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
20) Remove the gear shift rod and the stay from transmission.

(1) Disconnect the stay from transmission.
(2) Remove the rod from transmission.

(A) Stay
(B) Rod

21) Remove the stabilizer link from front arm.

(A) Front arm
(B) Ball joint
(C) Stabilizer link

22) Remove the bolt securing ball joint of front arm to housing.
23) Using the lever, remove the left and right front drive shaft from transmission.

24) Remove the nuts which hold lower side of transmission to engine.

25) Place the transmission jack under transmission.

26) Remove the transmission rear crossmember from vehicle.

CAUTION:
Always support transmission case with a transmission jack.

27) Remove the transmission.

NOTE:
Move the transmission jack toward rear until main shaft is withdrawn from clutch disc.

28) Separate the transmission assembly from rear cushion rubber.

B: INSTALLATION
1) Install the rear cushion rubber to transmission assembly.

Tightening torque:
\[ 35 \text{ N}\cdot\text{m} (3.57 \text{ kgf-m, 25.8 ft-lb}) \]

2) Install the transmission onto engine.
   (1) Gradually raise the transmission with transmission jack.
   (2) Engage them at splines.

NOTE:
Be careful not to strike the main shaft against clutch housing cover.

3) Install the transmission rear crossmember.

Tightening torque:
\[ T1: 70 \text{ N}\cdot\text{m} (7.1 \text{ kgf-m, 51 ft-lb}) \]
\[ T2: 140 \text{ N}\cdot\text{m} (14.3 \text{ kgf-m, 103 ft-lb}) \]

4) Take out the transmission jack.
5) Tighten the nuts which hold lower side of transmission to engine.

**Tightening torque:**

50 N·m (5.1 kgf-m, 36.9 ft-lb)

6) Connect the transmission to engine.
   (1) Install the starter.
   <Ref. to SC(H4SO 2.0)-6, INSTALLATION, Starter.>
   (2) Tighten the bolts that hold upper side of transmission to engine.

**Tightening torque:**

50 N·m (5.1 kgf-m, 36.9 ft-lb)

7) Remove the ST.

8) Install the pitching stopper.

**Tightening torque:**

- **T1:** 50 N·m (5.1 kgf-m, 37 ft-lb)
- **T2:** 58 N·m (5.9 kgf-m, 43 ft-lb)

9) Lift-up the vehicle.

10) Install the front drive shaft into transmission.

11) Replace the differential side retainer oil seal.
   <Ref. to 5MT-40, REPLACEMENT, Differential Side Retainer Oil Seal.>
   ST 186755AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

**NOTE:**
Be sure to replace the differential side retainer oil seal after the procedure of removing the front drive shaft.

12) Install the front drive shaft into transmission.

ST 28399SA010 FRONT DRIVE SHAFT OIL SEAL PROTECTOR
13) Install the ball joint of lower arm.

*Tightening torque:*

49 N·m (5.0 kgf-m, 36 ft-lb)

14) Install the stabilizer link into front arm.

*Tightening torque:*

45 N·m (4.6 kgf-m, 33.2 ft-lb)

15) Install the gear shift rod and the stay.

(1) Install the gear shift rod into transmission.

(2) Install the stay onto transmission.

16) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>

17) Install the heat shield cover. (if equipped)

18) Install the hanger bracket on the right side of transmission.

19) Install the front, center and rear exhaust pipe, and muffler. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>

20) Install the operating cylinder.

*Tightening torque:*

37 N·m (3.8 kgf-m, 27.5 ft-lb)

21) Install the drive select cable on transmission side. (Dual-range model)

22) Connect the following connectors:

(1) Transmission ground cable

*Tightening torque:*

13 N·m (1.3 kgf-m, 9.4 ft-lb)
Manual Transmission Assembly

(2) Neutral position switch connector  
(3) Back-up light switch connector  
(4) High-low switch connector (Dual-range model)

23) Fill transmission gear oil through the transmission level gauge hole.
24) Install the air intake chamber stay.

**Tightening torque:**

\[16 \text{ N} \cdot \text{m} \ (1.6 \text{ kgf-m, 11.6 ft-lb})\]

25) Install the air intake chamber and air cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
26) Connect the battery ground cable to battery.
27) Take off the vehicle from lift arms.
4. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER
   1) Disconnect the ground cable from battery.
   2) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
   3) Remove the air cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.>
   4) Remove the pitching stopper.

2. CROSSMEMBER AND CUSHION RUBBER
   1) Disconnect the ground cable from battery.
   2) Jack-up the vehicle and support it with rigid racks.
   3) Remove the front, center and rear exhaust pipe, and muffler. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
   4) Remove the heat shield cover. (If equipped)
   5) Set the transmission jack under transmission body.

CAUTION:
Always support the transmission case with a transmission jack.

6) Remove the rear crossmember.

7) Remove the rear cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER
   1) Install the pitching stopper.

   **Tightening torque:**
   - \( T_1: 50 \text{ N} \cdot \text{m (5.1 kgf-m, 37 ft-lb)} \)
   - \( T_2: 58 \text{ N} \cdot \text{m (5.9 kgf-m, 43 ft-lb)} \)

2) Install the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>

3) Connect the battery ground cable to battery.

2. CROSSMEMBER AND CUSHION RUBBER
   1) Install the rear cushion rubber.

   **Tightening torque:**
   - \( 35 \text{ N} \cdot \text{m (3.6 kgf-m, 26 ft-lb)} \)

2) Install the rear crossmember.

   **Tightening torque:**
   - \( T_1: 70 \text{ N} \cdot \text{m (7.1 kgf-m, 51 ft-lb)} \)
   - \( T_2: 140 \text{ N} \cdot \text{m (14.3 kgf-m, 103 ft-lb)} \)

3) Remove the transmission jack.

4) Install the heat shield cover. (If equipped)

5) Install the front, center and rear exhaust pipe, and muffler. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>

6) Lower the vehicle.

7) Connect the battery ground cable to battery.
C: INSPECTION
Perform the following inspection procedures and repair or replace defective parts.

1. PITCHING STOPPER
Check pitching stopper for bends or damage. Check that the rubber is not stiff, cracked, or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER
Check crossmember for bends or damage. Check that the cushion rubber is not stiff, cracked, or otherwise damaged.
5. Oil Seal

A: INSPECTION
Check leakage of gear oil from the oil seal part. If there is oil leakage, replace with a new oil seal.

B: REPLACEMENT
1) Clean the transmission exterior.
2) Drain gear oil completely.

NOTE:
Tighten the drain plug after draining gear oil.

Tightening torque:
70 N-m (7.1 kgf-m, 51 ft-lb)

3) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4SO 2.0)-11, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.>
4) Remove the heat shield cover. (If equipped)
5) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
6) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY

7) Using the ST, install the oil seal.
ST 498057300 INSTALLER

8) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
9) Install the heat shield cover. (If equipped)
10) Install the rear exhaust pipe and muffler. <Ref. to EX(H4SO 2.0)-11, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO 2.0)-13, INSTALLATION, Muffler.>
11) Pour gear oil and check the oil level. <Ref. to 5MT-30, REPLACEMENT, Transmission Gear Oil.>
6. Differential Side Retainer Oil Seal

A: INSPECTION
Check leakage of gear oil from the differential side retainer oil seal part. If there is oil leakage, replace with a new oil seal.

B: REPLACEMENT
1) Lift-up the vehicle.
2) Drain gear oil from differential oil drain plug.
3) Replace with a new gasket and tighten the differential oil drain plug.

_Tightening torque:_
70 N·m (7.1 kgf-m, 51 ft·lb)

4) Remove the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>
5) Separate the front drive shaft from transmission. <Ref. to DS-22, REMOVAL, Front Drive Shaft.>
6) Remove the differential side retainer oil seal.

NOTE:
• Be sure to replace the differential side retainer oil seal after the procedure of removing the front drive shaft from transmission.
• When prying to remove the part using flat tip screwdriver, be careful not to scratch the differential side retainer. ST 398527700 puller assembly may be used for this operation procedure.

7) Using the ST, install the differential side retainer by slightly tapping with a plastic hammer. ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

NOTE:
Apply oil to the oil seal lips.

8) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>
ST 28399SA010 FRONT DRIVE SHAFT OIL SEAL PROTECTOR
9) Install the front and center exhaust pipe. <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
10) Lower the vehicle.
11) Pour gear oil through the gauge hole. <Ref. to 5MT-30, REPLACEMENT, Transmission Gear Oil.>
7. Switches and Harness

A: REMOVAL

1. BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH
   1) Disconnect the ground cable from battery.
   2) Remove the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
   3) Disconnect the connectors of back-up light switch and neutral position switch.
   4) Lift-up the vehicle.
   5) Remove the back-up light switch and neutral position switch with harness.

   ![Diagram of neutral position switch and back-up light switch](MT-00104)

   (A) Neutral position switch connector (Brown)
   (B) Back-up light switch connector (Gray)

2. HIGH-LOW SWITCH (DUAL-RANGE MODEL)
   1) Disconnect the ground cable from battery.
   2) Remove the air intake chamber and cleaner case. <Ref. to IN(H4SO 2.0)-6, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
   3) Disconnect the connector of high-low switch.
   4) Remove the high-low switch cable from clamp.
   5) Remove the high-low switch.

   ![Diagram of high-low switch](MT-00106)

   (A) Neutral switch (Brown)
   (B) Back-up light switch (Gray)
   (C) High-low switch (Black)

B: INSTALLATION

1. BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH
   1) Install the back-up light switch and neutral position switch with harness.

   ![Diagram of back-up light switch installation](MT-00108)

   (A) Clamp
   (B) High-low switch

   Tightening torque: 25 N-m (2.5 kgf-m, 18.4 ft-lb)
2) Connect the connectors of back-up light switch and neutral position switch.
3) Install the air intake chamber and cleaner case.
   <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.>
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
4) Connect the battery ground cable to battery.

2. HIGH-LOW SWITCH (DUAL-RANGE MODEL)

1) Install the high-low switch.

   **Tightening torque:**
   \[ 25 \text{ N}\cdot\text{m} \text{ (2.5 kgf-m, 18.4 ft-lb)} \]

2) Install the high-low switch cable to clamp.
3) Connect the connector of high-low switch.
4) Install the air intake chamber and cleaner case.
   <Ref. to IN(H4SO 2.0)-7, INSTALLATION, Air Cleaner Case.>
   <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
5) Connect the battery ground cable to battery.

C: INSPECTION

1. BACK-UP LIGHT SWITCH

   Inspect the back-up light switch. <Ref. to LI-7, INSPECTION, Back-up Light System.>

2. NEUTRAL POSITION SWITCH

1) Turn the ignition switch to OFF.
2) Disconnect the connector of neutral position switch.
3) Measure the resistance between neutral position switch terminals.

<table>
<thead>
<tr>
<th>Gear shift position</th>
<th>Terminal No.</th>
<th>Specified resistance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Neutral position</td>
<td>1 and 2</td>
<td>More than 1 MΩ</td>
</tr>
<tr>
<td>Other positions</td>
<td></td>
<td>Less than 1 Ω</td>
</tr>
</tbody>
</table>

4) Replace the faulty parts.
8. Preparation for Overhaul

A: PROCEDURE

1) Clean oil, grease, dirt and dust from transmission.
2) Remove the drain plug to drain oil. Tighten the engine oil drain plug after draining.

NOTE:
Use a new gasket.

_Tightening torque:_

\[ 70 \text{ N} \cdot \text{m (7.1 kgf-m, 51 ft-lb)} \]

3) Attach the transmission to ST.
   
   ST 499937100 TRANSMISSION STAND

4) Rotating parts should be coated with oil prior to assembly.
5) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
6) Always use new ones for gaskets, lock washers and lock nut.
7) Liquid gasket should be used where specified to prevent leakage.
9. Transfer Case and Extension Case Assembly

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly.
4) Remove the shifter arm.
5) Remove the extension case assembly.

B: INSTALLATION
1) Install the center differential and transfer driven gear into transfer case.
2) Remove the bearing outer race from extension case.
3) While pressing the bearing outer race horizontally, turn the driven shaft ten rotations.
4) Measure the height “W” between transfer case and taper roller bearing on the transfer driven gear.
5) Measure the depth “X” on bearing insertion part of extension case.

NOTE:
Measure with bearing outer race and thrust washer removed.

6) Calculate the tight “t” using following equation.
\[ t = X - W + 0.2 \text{ to } 0.3 \text{ mm (0.008 to 0.012 in)} \]
7) Select the washer of nearest value in the following table:

<table>
<thead>
<tr>
<th>Standard preload between thrust washer and taper roller bearing:</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.2 — 0.3 mm (0.008 — 0.012 in)</td>
</tr>
</tbody>
</table>
Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

NOTE:
Be sure that the preload is within standard value.

14) Fit the thrust washer on center differential.
15) Apply proper amount of liquid gasket to the transfer case mating surface.

**Liquid gasket**

*THREE BOND 1215 (Part No. 004403007) or equivalent*

16) Install the extension assembly into transfer case.

**Tightening torque:**

40 N·m (4.1 kgf-m, 29.7 ft-lb)

17) Install the shifter arm to transfer case.

18) Hang the shifter arm on 3rd-4th fork rod.

19) Install the transfer case with extension case assembly to transmission case.

**Tightening torque:**

25 N·m (2.5 kgf-m, 18.4 ft-lb)

---

**C: DISASSEMBLY**

1. **TRANSFER CASE**

1) Remove the reverse check assembly. <Ref. to 5MT-53, REMOVAL, Reverse Check Sleeve.>

2) Remove the oil guide.

2. **EXTENSION CASE**

1) Remove the transfer drive gear assembly. <Ref. to 5MT-48, REMOVAL, Transfer Drive Gear.>
2) Remove the shift bracket.

3) Remove the oil seal from extension case. <Ref. to 5MT-39, Oil Seal.>

D: ASSEMBLY

1. EXTENSION CASE

1) Using the ST, install the oil seal to extension case. <Ref. to 5MT-39, Oil Seal.>

NOTE:
Use a new oil seal.

2) Install the shift bracket to extension case.

**Tightening torque:**

\[ 25 \text{ N} \cdot \text{m (2.5 kgf-m, 18.4 ft-lb)} \]

3) Install the transfer drive gear to extension case.
<Ref. to 5MT-48, INSTALLATION, Transfer Drive Gear.>

2. TRANSFER CASE

1) Install the reverse check sleeve assembly to transfer case. <Ref. to 5MT-53, INSTALLATION, Reverse Check Sleeve.>

**Tightening torque:**

\[ 6.4 \text{ N} \cdot \text{m (0.65 kgf-m, 4.7 ft-lb)} \]
10. Transfer Drive Gear

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the extension case assembly.
5) Remove the transfer driven gear.
6) Remove the transfer drive gear.

B: INSTALLATION
1) Install the transfer drive gear.

Tightening torque:
26 N·m (2.7 kgf-m, 20 ft-lb)

2) Install the transfer driven gear.
3) Install the extension case assembly.
4) Install the transfer case and extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
6) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY
1) Remove the snap ring.

2) Remove the ball bearing.

D: ASSEMBLY
1) Set the ST applying to the inner race of bearing to install the drive shaft.

ST 398177700 INSTALLER

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

2) Install the snap ring on transfer drive shaft.

3) Inspect the clearance between snap ring and ball bearing. <Ref. to 5MT-48, INSPECTION, Transfer Drive Gear.>

E: INSPECTION
1) Bearings
Replace the bearing in following cases:
• In case of broken or rusty bearings
• In case of worn or damaged bearings
• When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
2) Drive gear
Replace the drive gear when their tooth surface and shaft are excessively broken or damaged.
3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

**Clearance:**

\[ 0.01 — 0.15 \text{ mm (0.0004 — 0.0059 in)} \]

If the measurement is not within specification, select a suitable snap ring and replace it.

<table>
<thead>

11. Transfer Driven Gear

**A: REMOVAL**

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>

2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>

3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>

4) Remove the extension case assembly.

5) Remove the transfer driven gear.

6) Remove the bearing outer races from the extension case and transfer case.

**B: INSTALLATION**

1) Install the bearing outer races to the extension case and transfer case.

2) Install the transfer driven gear.

3) Install the transfer case and extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>

4) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>

5) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>
C: DISASSEMBLY
1) Using the ST, remove the roller bearing (extension case side).
   ST  498077000  REMOVER

2) Using the ST1 and ST2, remove the roller bearing (transfer case side).
   ST1  498077000  REMOVER
   ST2  899864100  REMOVER

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

D: ASSEMBLY
1) Using the ST, install the roller bearing (extension case side).
   ST1  398177700  INSTALLER
   ST2  899864100  REMOVER

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

E: INSPECTION
1) Bearings
   Replace the bearing in following cases:
   • In case of broken or rusty bearings
   • In case of worn or damaged bearings
   • When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.

2) Driven gear
   Replace the drive gear when their tooth surface and shaft are excessively broken or damaged.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

12. Center Differential

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transfer driven gear. <Ref. to 5MT-50, REMOVAL, Transfer Driven Gear.>
5) Remove the center differential.

B: INSTALLATION
1) Install the center differential into transfer case.
2) Install the transfer driven gear. <Ref. to 5MT-50, INSTALLATION, Transfer Driven Gear.>
3) Install the extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
4) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
6) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY
NOTE:
Center differential is a non-disassembled part which should not be disassembled.
Remove the ball bearing using ST.

NOTE:
Do not reuse the ball bearing.

D: ASSEMBLY
Install the ball bearing into center differential assembly.
NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

E: INSPECTION
1) Bearings
Replace the bearing in following cases:
• In case of broken or rusty bearings
• In case of worn or damaged bearings
• When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
• When bearings have other defects.
2) Center differential
Replace the center differential case assembly if worn or damaged.
13. Reverse Check Sleeve

**A: REMOVAL**
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the shifter arm.
4) Remove the plug, spring, washer and reverse check ball.
5) Remove the reverse check sleeve.

**B: INSTALLATION**
1) Install the reverse check sleeve.

*Tightening torque:*
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

2) Install the ball, spring, washer and plug to transfer case.

*Tightening torque:*
10 N·m (1.0 kgf-m, 7.4 ft-lb)

3) Install the shifter arm to transfer case assembly.
4) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

**C: DISASSEMBLY**
1) Cover the reverse check sleeve with a rag, and remove the snap ring using a screwdriver.

*NOTE:* Replace the snap ring with a new one if it is deformed or reactive force is weakened.
2) Remove the reverse check plate, reverse check spring, reverse check cam, return spring (5th-Rev), reverse accent shaft, return spring cap and return spring (1st-2nd).

3) Remove the O-ring.

NOTE:
- Visually check the O-ring. Replace if defective.
- Be careful not to break adjustment shim placed between reverse check sleeve assembly and case.

D: ASSEMBLY

1) Install the return spring (1st-2nd), return spring cap, reverse accent shaft, check cam, return spring (5th-Rev.) and reverse check spring onto reverse check sleeve.

NOTE:
Be sure to position the bent section of reverse check spring in the groove in check cam.

2) Hook the bent section of reverse check spring over reverse check plate.

3) Rotate the cam so that the protrusion of reverse check cam is at the opening in plate.

4) With cam held in that position, install the reverse check plate onto reverse check sleeve and hold with snap ring.

5) Position the O-ring in the groove in sleeve.
E: INSPECTION
- Make sure the cutout of reverse accent shaft is aligned with the opening in reverse check sleeve.
- Check the cam for smooth rotation by turning with hand.
- Make sure the cam and shaft move all the way toward plate and release.
If the cam does not return properly, replace the reverse check spring. If the shaft does not return, check for scratches on the inner surface of sleeve. If the sleeve is in good order, replace the spring.
- Select a suitable reverse accent shaft and reverse check plate. <Ref. to 5MT-55, ADJUSTMENT, Reverse Check Sleeve.>

F: ADJUSTMENT

1. NEUTRAL POSITION ADJUSTMENT
1) Shift the gear into 3rd gear position.
2) Shifter arm turns lightly toward the 1st/2nd gear side but heavily toward the reverse gear side because of the function of return spring, until arm contacts the stopper.
3) Make adjustment so that the heavy stroke (reverse side) is a little more than the light stroke (1st/2nd side).
4) To adjust, remove the bolts holding reverse check sleeve assembly to the case, move the sleeve assembly outward, and place the adjustment shim between sleeve assembly and case to adjust the clearance.
CAUTION:
Be careful not to break O-ring when placing shim(s).
NOTE:
- When the shim is removed, the neutral position will move closer to reverse; when the shim is added, the neutral position will move closer to 1st gear.

- If the shims alone cannot adjust the clearance, replace the reverse accent shaft and re-adjust.

2. REVERSE CHECK PLATE ADJUSTMENT
1) Shift the shifter arm to “5th” and then to reverse to see if reverse check mechanism operates properly.
2) Also check to see if the arm returns to neutral when released from the reverse position. If the arm does not return properly, replace the reverse check plate.

14. Transmission Case

A: REMOVAL

1. SINGLE-RANGE MODEL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever. <Ref. to CL-18, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the bearing mounting bolts.
5) Remove the main shaft rear plate.
6) Separate the transmission case into the right and left cases by loosening coupling bolts and nuts.
7) Remove the drive pinion shaft assembly from the left side of transmission case.
   NOTE:
   Use a hammer handle, etc. to remove if too tight.
8) Remove the main shaft assembly for single-range.
9) Remove the differential assembly.
   NOTE:
   • Be careful not to confuse right and left roller bearing outer races.
   • Be careful not to damage the oil seal of retainer.

2. DUAL-RANGE MODEL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the clutch release lever. <Ref. to CL-18, REMOVAL, Release Bearing and Lever.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the input shaft holder.

5) Remove the high-low switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>

6) Using the ST, drive out the straight pin, and remove the high-low shifter lever.

   ST  398791700  STRAIGHT PIN REMOVER 2

   NOTE:
   When driving out the straight pin, remove it in the direction that it does not hit against transmission case.

7) Remove the main shaft rear plate.

8) Separate the transmission case into right and left cases by loosening the seventeen coupling bolts and nuts.

9) Remove the drive pinion shaft assembly from transmission case LH.

   NOTE:
   Use a hammer handle, etc. to remove if too tight.

10) Removing high-low shifter fork:
    Raise the main shaft assembly slightly, and remove the high-low shifter fork together with high-low shifter shaft and washer.

    NOTE:
    Be careful not to drop the two high-low shifter pieces.

11) Remove the main shaft assembly and input shaft assembly.
Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

NOTE:
Be careful not to drop the input shaft and main shaft as they are separable.

(A) Main shaft ASSY
(B) Input shaft ASSY

12) Remove the differential assembly.
NOTE:
• Be careful not to confuse the right and left roller bearing outer races.
• Be careful not to damage the retainer oil seal.

B: INSTALLATION

1. SINGLE-RANGE MODEL

1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.
2) Install the front differential assembly.
3) Install the main shaft assembly for single-range. Install the transmission case knock pin into needle bearing knock pin hole.
4) Install the drive pinion shaft assembly. Install the transmission case knock pin into roller bearing knock pin hole.
5) Apply liquid gasket, and then put the case RH and LH together.

Liquid gasket
THREE BOND 1215 (Part No. 004403007) or equivalent

6) Tighten seventeen bolts with bracket, clip, etc. as shown in the figure.

NOTE:
• Insert the bolts from the bottom and tighten nuts on the top.
• Put the cases together being careful that the drive pinion shim and input shaft holder shim are not caught up in between.

Tightening torque:
8 mm bolt
25 N·m (2.5 kgf-m, 18.1 ft-lb)
★ 10 mm bolt
39 N·m (4.0 kgf-m, 28.9 ft-lb)

7) Tighten the ball bearing mounting bolts.

Tightening torque:
29 N·m (3.0 kgf-m, 21.7 ft-lb)

8) Backlash adjustment of hypoid gear and preload adjustment of roller bearing:

NOTE:
Set the ST on drive pinion assembly.
ST  498427100  STOPPER

9) Place the transmission with the left side of case facing downward, and put ST1 on bearing cup.
10) Screw the retainer assembly into left case from the bottom with ST2. Fit the ST3 on transmission main shaft. Shift the gear into 4th or 5th and turn the shaft several times. Screw in the retainer while turning ST3 until a slight resistance is felt on ST2. This is the contact point of hypoid gear and drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

   ST1 399780104 WEIGHT
   ST2 499787000 WRENCH ASSY
   ST3 499927100 HANDLE

11) Remove the weight, and screw in the retainer without O-ring on the upper side and stop at the point where slight resistance is felt.

NOTE:
At this condition, the backlash between hypoid gear and drive pinion shaft is zero.

ST 499787000 WRENCH ASSY

12) Install the lock plate. Loosen the retainer on the lower side by 1-1/2 notches from lock plate, and turn the retainer on the upper side by the same amount in order to obtain the backlash.

NOTE:
The notch on the lock plate moves by 1/2 notch if the plate is turned upside down.

13) Turn in the retainer on the upper side additionally by 1 notch in order to apply preload on taper roller bearing.

14) Tighten temporarily both the upper and lower lock plates and mark both holder and lock plate for later readjustment.

15) Turn the transmission main shaft several times while tapping around retainer lightly with plastic hammer.

16) Inspect and adjust the backlash and tooth contact of hypoid gear. <Ref. to 5MT-88, INSPECTION, Front Differential Assembly.>

17) After checking the tooth contact of hypoid gears, remove the lock plate. Then loosen the retainer until the O-ring groove appears. Fit O-ring into the groove and tighten the retainer into the position where retainer has been tightened in. Tighten the lock plate.

NOTE:
Carry out this job on both upper and lower retainers.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

18) Selecting of main shaft rear plate: <Ref. to 5MT-66, ADJUSTMENT, Main Shaft Assembly for Single-Range.>

19) Install the clutch release lever and bearing. <Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>

20) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>

21) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

2. DUAL-RANGE MODEL

1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.

2) Install the front differential assembly.

3) Install the main shaft assembly for dual-range and the input shaft assembly. Connect the main shaft assembly for dual-range with the input shaft assembly, and install the transmission case knock pin into needle bearing knock pin hole.

4) Install the drive pinion shaft assembly. Install the transmission case knock pin into roller bearing knock pin hole.
5) Apply liquid gasket, and then put the case right side and left side together.

**Liquid gasket:**
THREE BOND (Part No. 004403007) 1215 or equivalent

6) Tighten the seventeen bolts with bracket, clip, etc. as shown in the figure.

**NOTE:**
- Insert the bolts from the bottom and tighten the nuts at the top.
- Put the cases together being careful that the drive pinion shim and input shaft holder shim are not caught up in between.

**Tightening torque:**

8 mm bolt
25 N·m (2.5 kgf-m, 18.1 ft-lb)

★ 10 mm bolt
39 N·m (4.0 kgf-m, 28.9 ft-lb)

7) Tighten the ball bearing mounting bolts.

**Tightening torque:**

29 N·m (3.0 kgf-m, 21.7 ft-lb)

8) Tighten the input shaft holder attaching bolts.

**Tightening torque:**

20 N·m (2.0 kgf-m, 14.5 ft-lb)

9) Backlash adjustment of hypoid gear and preload adjustment of roller bearing

**NOTE:**
Set the ST to drive pinion assembly.
ST 498427100 STOPPER

10) Place the transmission with the left side of case facing downward, and put ST1 on bearing cup.
11) Screw the retainer assembly into left case from the bottom using ST2. Fit the ST3 on transmission main shaft. Shift the gear into 4th or 5th and turn the shaft several times. Screw in the retainer while turning ST3 until a slight resistance is felt on ST2. This is the contact point of hypoid gear and drive pinion shaft. Repeat the above sequence several times to ensure the contact point.
12) Remove the weight, and screw in the retainer without O-ring on upper side and stop at the point where slight resistance is felt.

NOTE:
In this condition, the backlash between hypoid gear and drive pinion shaft is zero.

ST 499787000 WRENCH ASSY

13) Fit the lock plate. Loosen the retainer on the lower side by 1-1/2 notches of lock plate and turn in the retainer on upper side by the same amount in order to obtain the backlash.

NOTE:
The notch on the lock plate moves by 1/2 notch if the plate is turned upside down.

14) Turn in the retainer on the upper side additionally by 1 notch in order to apply preload on taper roller bearing.

15) Tighten temporarily both the upper and lower lock plates and mark both holder and lock plate for later readjustment.

16) Turn the transmission main shaft several times while tapping around the retainer lightly with plastic hammer.

17) Inspect and adjust the backlash and tooth contact of hypoid gear. <Ref. to 5MT-88, INSPECTION, Front Differential Assembly.>

18) After checking the tooth contact of hypoid gears, remove the lock plate. Then loosen the retainer until the O-ring groove appears. Fit the O-ring into groove and tighten the retainer into the position where retainer has been tightened in. Tighten the lock plate.

NOTE:
Carry out this job on both upper and lower retainers.

Tightening torque:
T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

19) Selection of main shaft rear plate: <Ref. to 5MT-66, ADJUSTMENT, Main Shaft Assembly for Single-Range.>

20) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>

21) Install the clutch release lever and bearing. <Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>

22) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION
Check the transmission case for cracks, damage, or oil leaks.
15. Main Shaft Assembly for Single-Range

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly for single range.

B: INSTALLATION
1) Install the needle bearing and oil seal onto the front of transmission main shaft assembly for single range.
2) Install the transmission case knock pin into needle bearing outer race knock pin hole.
3) Install the drive pinion assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
4) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
5) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
6) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY
1) Put the vinyl tape around main shaft splines to protect oil seal from damage. Then pull out the oil seal and needle bearing by hand.
2) Remove the lock nut from transmission main shaft assembly for single range.

NOTE:
Unlock the caulking before removing lock nut.
ST1 498937000 TRANSMISSION HOLDER
ST2 499987003 SOCKET WRENCH (35)
3) Remove the 5th-Rev sleeve & hub assembly, baulk ring, 5th drive gear & needle bearing.
4) Remove the snap ring and synchro cone stopper from 5th-Rev sleeve & hub assembly.
5) Using the ST1, ST2 and a press, remove the ball bearing, synchro cone and baulk ring (Rev).

NOTE:
- When replacing the sleeve & hub with new ones, replace them as a set.
- Do not disassemble the sleeve & hub, because the aligning position is specified.
- If it is necessary to disassemble, mark the engaging points on the splines beforehand.
- Do not reuse the ball bearing.

ST1 499757002 INSTALLER
ST2 498077400 SYNCHRO CONE REMOVER

6) Using the ST1 and ST2, remove the rest of parts.

NOTE:
- When replacing the sleeve & hub with new ones, replace them as a set.
- Do not disassemble the sleeve & hub, because the aligning position is specified.
- If it is necessary to disassemble, mark the engaging points on the splines beforehand.

D: ASSEMBLY

1) When the sleeve & hub assemblies have been disassembled, reassemble with aligning each engaging point.
NOTE:
Position open ends of spring 120° apart.

2) Install the 3rd drive gear, baulk ring, sleeve & hub assembly for 3rd needle bearing, on the transmission main shaft. (2.0 L model)

3) Install the 3rd drive gear, outer baulk ring, synchro cone, inner baulk ring, sleeve & hub assembly for 3rd needle bearing, on the transmission main shaft. (2.5 L model)

4) Install the 4th needle bearing race onto transmission main shaft using ST1, ST2 and a press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST1 899714110 REMOVER
ST2 499877000 RACE 4-5 INSTALLER

5) Install the baulk ring, needle bearing, 4th drive gear and 4th gear thrust washer to transmission main shaft.

NOTE:
Align the baulk ring and gear & hub assembly with key groove.

6) Press the ball bearing into the rear section of transmission main shaft using ST1, ST2 and a press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
7) Using the ST1 and ST2, install the 5th gear thrust washer and 5th needle bearing race onto the rear section of transmission main shaft.

**NOTE:**
- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Face the thrust washer in the correct direction.

8) Install the bearing onto synchro cone.

9) Install the baulk ring and synchro cone onto 5th-Rev sleeve & hub assembly using ST and a press.

**NOTE:**
- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Use new ball bearing.
- Make sure the synchro cone rotates smoothly after press-fitting.

10) Install the synchro cone stopper and snap ring to 5th-Rev sleeve & hub assembly.

11) Install the rest of parts to the rear section of transmission main shaft.

**NOTE:**
Align the groove in baulk ring with shifting insert.
12) Tighten the lock nuts to the specified torque using ST1 and ST2.

NOTE:
Caulk the lock nuts in two places after tightening.
ST1 499987003 SOCKET WRENCH
ST2 498937000 TRANSMISSION HOLDER

**Tightening torque:**
120 N·m (12.2 kgf-m, 88.5 ft-lb)

**E: INSPECTION**
Disassembled parts should be washed with unleaded gasoline first and then inspected carefully.

1) Bearings
Replace the bearing in following cases:
- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
- When bearings have other defects.

2) Bushing (each gear)
Replace the bushings in following cases:
- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears
- Replace gears with new ones if their tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring
Replace the ring in following cases:
- When the inner surface and end face is damaged.
- When the ring inner surface is abnormally or partially worn.
- When contact surfaces of the synchronizer ring insert have cracks or abnormally worn.

5) Shifting insert key
Replace the insert key if deformed, excessively worn or defective in any way.

6) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

7) O-ring
Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

**F: ADJUSTMENT**
Selection of main shaft rear plate:
Using the ST, measure the amount (A) of ball bearing protrusion from transmission main case surface, and select a suitable plate in the following table.

NOTE:
Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and moving flange of bearing.

**ST 498147000 DEPTH GAUGE**

Main Shaft Assembly for Dual-Range

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly and input shaft assembly.

B: INSTALLATION
1) Install the needle bearing onto the front of transmission main shaft assembly.
2) Connect the main shaft assembly and input shaft assembly.
3) Install the transmission case knock pin into needle bearing outer race knock pin hole.
4) Install the drive pinion assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
6) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
7) Install the manual transmission assembly to vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY
1) Put a vinyl tape around the main shaft splines to protect oil seal from damage. Then pull out the oil seal and needle bearing by hand.
2) Remove the lock nut from transmission main shaft assembly.

NOTE:
Straighten the caulking before taking off lock nut.

ST1 498937000 TRANSMISSION HOLDER

3) Remove the 5th-Rev sleeve & hub assembly, baulk ring, 5th drive gear and needle bearing.

(A) 5th-Rev sleeve & hub ASSY
(B) Baulk ring
(C) 5th drive gear

4) Remove the snap ring and synchro cone stopper from 5th-Rev sleeve & hub assembly.

(A) Synchro cone stopper
(B) Snap ring

5) Using the ST1, ST2 and a press, remove the ball bearing, synchro cone and baulk ring (Rev).

NOTE:
• When replacing the sleeve and hub with new ones, replace them as a set.
• Do not disassemble the sleeve and hub, because the aligning position is specified.
• If it is necessary to disassemble, mark the engaging points on the splines beforehand.
Do not reuse the ball bearing.

**ST1 499757002 INSTALLER**
**ST2 498077400 SYNCHRO CONE REMOVER**

6) Using the ST1 and ST2, remove rest of the parts.

**NOTE:**
- When replacing the sleeve and hub with new ones, replace them as a set.
- Do not disassemble the sleeve and hub, because the aligning position is specified.
- If it is necessary to disassemble, mark the engaging points on the splines beforehand.

**ST1 899864100 REMOVER**
**ST2 899714110 REMOVER**

7) Remove the snap ring from main shaft.

**ST 899474100 EXPANDER**

8) Remove rest of the parts.

**D: ASSEMBLY**
1) Assemble with aligning the matching mark if the sleeve & hub assembly have been disassembled.
Main Shaft Assembly for Dual-Range

MANUAL TRANSMISSION AND DIFFERENTIAL

NOTE:
Position the open ends of spring 120° apart.

2) Install the 3rd drive gear, baulk ring, sleeve & hub assembly for 3rd-4th needle bearing on transmission main shaft. (2.0 L model)
3) Install the 3rd drive gear, outer baulk ring, synchro cone, inner baulk ring, sleeve & hub assembly for 3rd needle bearing, on the transmission main shaft. (2.5 L model)

4) Install the 4th needle bearing race onto transmission main shaft using ST1, ST2 and a press.
   ST1 899714110 REMOVER
   ST2 499877000 RACE 4-5 INSTALLER

5) Install the baulk ring, needle bearing, 4th drive gear and 4th gear thrust washer to transmission main shaft.
NOTE:
Face the thrust washer in correct direction.

6) Press-fit the ball bearing into the rear section of transmission main shaft using ST1, ST2 and a press.
NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
7) Using the ST1 and ST2, install the 5th gear thrust washer and 5th needle bearing race onto the rear section of transmission main shaft.

NOTE:
- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Face the thrust washer in correct direction.

8) Install the bearing onto synchro cone.
9) Install the baulk ring and synchro cone onto 5th-Rev sleeve & hub assembly using ST and a press.

NOTE:
- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Use a new ball bearing.
- After press-fitting, make sure the synchro cone rotates freely.

10) Install the synchro cone stopper and snap ring to 5th-Rev sleeve & hub assembly.

11) Install rest of the parts to the rear section of transmission main shaft.

NOTE:
Align the groove in baulk ring with shifting insert.
12) Tighten the lock nuts to the specified torque using ST1 and ST2.

**NOTE:**
Stake the caulking of lock nuts in two places after tightening.

ST1  499987003  SOCKET WRENCH
ST2  498937000  TRANSMISSION HOLDER

**Tightening torque:**
120 N·m (12.2 kgf·m, 88.5 ft-lb)

13) Install the needle bearing on main shaft.
14) Install rest of the parts to the front section of transmission main shaft.

**NOTE:**
- Be careful not to damage the graded section of transmission main shaft when installing the needle bearing.
- Face the grooved side toward input gear.
- Align the high-low baulk ring’s groove with shifting insert.

15) Install a new snap ring to the rod section of transmission main shaft using ST1 and ST2.

**NOTE:**
Select a suitable outer snap ring so that axial clearance between snap ring and hub is held within 0.060 to 0.100 mm (0.0024 to 0.0039 in).

ST1  499757002  INSTALLER
ST2  499757001  SNAP RING GUIDE

---

### E: INSPECTION

Disassembled parts should be washed with unleaded gasoline first and then inspected carefully.

1) **Bearings**
   - Replace the bearings in following cases:
     - Bearings balls, outer races and inner races are broken or rusty.
     - Worn bearings
     - Bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
     - Bearings having other defects

2) **Bushing (each gear)**
   - Replace the bushing in following cases:
     - When the sliding surface is damaged or abnormally worn.
     - When the inner wall is abnormally worn.

3) **Gears**
   - Replace the gears with new ones if their tooth surfaces are broken, damaged or excessively worn.
   - Correct or replace if the cone that contacts the baulk ring is rough or damaged.
   - Correct or replace if the inner surface or end face is damaged.

4) **Baulk ring**
   - Replace the ring in following cases:
     - When the inner surface and end face are damaged.
     - When the ring inner surface is abnormally or partially worn down.
     - When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) **Shifting insert key**
   - Replace the insert key if deformed, excessively worn or defective in any way.

6) **Oil seal**
   - Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

7) **O-ring**
   - Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

8) **Gearshift mechanism**
   - Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

---

- **A** Ball
- **B** Input low gear spacer
- **C** Needle bearing
- **D** Input low gear
- **E** Friction damper
- **F** High-low baulk ring
- **G** Sleeve & hub ASSY
F: ADJUSTMENT
Select a suitable main shaft rear plate. <Ref. to 5MT-66, ADJUSTMENT, Main Shaft Assembly for Single-Range.>
17. Input Shaft Assembly

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly and input shaft assembly.

B: INSTALLATION

1) Install the needle bearing onto the front of transmission main shaft assembly.
2) Connect the main shaft assembly and input shaft assembly.
3) Install the transmission case knock pin into needle bearing outer race knock pin hole.
4) Install the drive pinion assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
5) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
6) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
7) Install the manual transmission assembly on the vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

1) Remove the O-ring from input shaft holder. Also, remove the input shaft holder shim.

NOTE:
- Use a new O-ring.
- Number of shims used varies from zero to two.

2) Put a vinyl tape around the input shaft splines to protect oil seal from damage.
3) Remove the inner snap ring.

ST 398663600 PLIERS

4) Hold the input shaft holder stationary and remove the input shaft by tapping its end with a plastic hammer.

5) Remove the outer snap ring. Then remove the oil squeeze plate and straight pin.
6) Remove the snap ring.

7) Using a press and ST, remove the ball bearing.
NOTE: Remove the inner snap ring before pressing.
ST 498077000 REMOVER

8) Remove the oil seal from input shaft holder.

D: ASSEMBLY
1) Install the ball bearing onto input shaft.
NOTE: Place the snap ring between input shaft gear and ball bearing beforehand. Use the table at 8) as a guide in selecting a suitable snap ring.
ST1 899580100 INSTALLER
ST2 399513600 INSTALLER

2) Install the snap ring on input shaft.

3) Inspect the clearance between ball bearing and snap ring. <Ref. to 5MT-75, INSPECTION, Input Shaft Assembly.>

4) Install the straight pin and oil squeeze plate to input shaft.

5) Install the snap ring.

6) Install the oil seal into input shaft holder.
NOTE: Apply a coat of grease to sealing lips before installing oil seal.
ST 398507703 DUMMY COLLAR
7) Wind a vinyl tape around the shaft splines and insert the input shaft into holder by lightly tapping it by hand.

8) Install the snap ring to input shaft holder.

NOTE:
Select a suitable snap ring so that clearance between snap ring and bearing is held within 0 to 0.12 mm (0 to 0.0047 in).

ST 398663600 PLIERS

9) Install the O-ring to input shaft holder.

E: INSPECTION
Disassembled parts should be washed clean first with unleaded gasoline and then inspected carefully.

1) Bearings
Replace the bearings in following cases:
- Bearing balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.
- Bearings having other defects

2) Bushing (each gear)
Replace the bushing in following cases:
- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears
- Replace the gears with new ones if their tooth surfaces are broken, damaged or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring
Replace the ring in following cases:
- When the sliding surface and end face are damaged.
- When the ring inner surface is abnormally or partially worn down.
- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key
Replace the insert key if deformed, excessively worn or defective in any way.

6) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn or defective in any way.

7) O-ring
Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

8) Gearshift mechanism
Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

9) Measure the clearance between snap ring and ball bearing using thickness gauge.
Clearance:
0 — 0.12 mm (0 — 0.0047 in)

If the measurement is not within specification, select a suitable snap ring.

<table>
<thead>
<tr>
<th>Snap ring</th>
<th>Thickness mm (in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>805028050</td>
<td>2.48 (0.0976)</td>

</tbody>
</table>
18. Drive Pinion Shaft Assembly

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Remove the drive pinion shaft assembly.

NOTE:
Use a hammer handle, etc. to remove if too tight.

B: INSTALLATION
1) Remove the differential assembly.
2) Alignment marks/numbers on hypoid gear set:
   Use hypoid driven gear of its match number corresponding with upper one on the drive pinion (A).
   The figure (B) shows a number for shim adjustment. If no number is shown, the value is zero.
3) Place the drive pinion shaft assembly on the transmission main case RH without shim and tighten the bearing mounting bolts.
4) Inspection and adjustment of ST:
   • Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.
   • Tighten the two bolts.
   ST 499917500 DRIVE PINION GAUGE ASSY
5) Position the ST by inserting the knock pin of ST into the knock hole in the transmission case.
   ST 499917500 DRIVE PINION GAUGE ASSY
6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.
   ST 499917500 DRIVE PINION GAUGE ASSY
7) The thickness of shim shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by +, and subtract if the number is prefixed by −.)
   ST 499917500 DRIVE PINION GAUGE ASSY
Drive Pinion Shaft Assembly

8) Select one to three shims in the next table for the value determined as described above, and take the shim(s) which thickness is closest to the said value.

</table>

9) Install the differential assembly. <Ref. to 5MT-85, INSTALLATION, Front Differential Assembly.>

10) Set the transmission main shaft assembly and drive pinion assembly in position. (So there is no clearance between these two when moved all the way to the front). Inspect the suitable 1st — 2nd, 3rd — 4th and 5th shifter fork so that the coupling sleeve and reverse driven gear are positioned in the center of their synchronizing mechanisms. <Ref. to 5MT-82, INSPECTION, Drive Pinion Shaft Assembly.>

11) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>

12) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>

13) Install the manual transmission assembly to vehicle. <Ref. to 5MT-31, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:
Attach a cloth to the end of driven shaft (on the frictional side of thrust needle bearing) to prevent damage during disassembly or reassembly.

1) Unlock the caulking of lock nut. Remove the lock nut using ST1, ST2 and ST3.
   - ST1 899884100 HOLDER
   - ST2 498427100 STOPPER
   - ST3 899988608 SOCKET WRENCH (27)

2) Draw out the drive pinion from driven shaft. Remove the differential bevel gear sleeve, adjusting washer No. 1, adjusting washer No. 2, thrust bearing, needle bearing and drive pinion collar.

3) Remove the roller bearing and washer using ST and press.

   NOTE:
   Do not reuse the roller bearing.
   
   ST 498077000 REMOVER

4) Unlock the caulking of lock nut. Remove the lock nut using ST1 and ST2.
   - ST1 499987300 SOCKET WRENCH (50)
   - ST2 899884100 HOLDER
5) Remove the 5th driven gear using ST.
   **ST 499857000 5TH DRIVEN GEAR REMOVER**

6) Remove the woodruff key.

7) Remove the roller bearing and 3rd-4th driven gear using ST1 and ST2.
   **ST1 499757002 INSTALLER**
   **ST2 899714110 REMOVER**

8) Remove the key.

9) Remove the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring.

10) Remove the 1st driven gear, 2nd gear bushing, gear and hub using ST1 and ST2.

   **NOTE:**
   Replace the gear and hub if necessary. Do not disassemble because they must engage at a specified point. If they have to be disassembled, mark the engaging point on the spline beforehand.
   **ST1 499757002 INSTALLER**
   **ST2 899714110 REMOVER**

**D: ASSEMBLY**

1) Install the sleeve and hub assembly by matching alignment marks.
NOTE:
Use the new gear and hub assembly, when replacing the gear or hub.

2) Install the washer to 1st driven gear. (EC, EK and KA model)
3) Install the washer, snap ring and sub gear onto 1st driven gear. (Except for EC, EK and KA model)
4) Install the 1st driven gear, 1st baulk ring, gear and hub assembly onto driven shaft.

NOTE:
Take care to install the gear and hub assembly in proper direction.
Align the baulk ring and gear and hub assembly with key groove.

5) Install the 2nd driven gear bushing onto driven shaft using ST1, ST2 and a press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
Align the groove in baulk ring with insert.

6) Install the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring, and insert onto driven shaft.

7) After installing the key on driven shaft, install the 3rd-4th driven gear using ST and press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
Align the groove in baulk ring with insert.

8) Install a set of roller bearings onto the driven shaft using ST and press.
NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

9) Position the woodruff key in groove on the rear of driven shaft. Install the 5th driven gear onto driven shaft using ST and press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

10) Install the lock washer. Install the lock nut and tighten to the specified torque using ST.

ST 49997300 SOCKET WRENCH (50)

Tightening torque:
260 N·m (26.5 kgf·m, 191.7 ft-lb)

11) Install the roller bearing onto drive pinion.

NOTE:
When installing roller bearing, note its directions (front and rear) because the knock pin hole in outer race is offset.

12) Install the washer using ST1, ST2 and a press.

NOTE:
Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST1 499277100 BUSHING 1-2 INSTALLER
ST2 499277200 INSTALLER

Using a spring balancer, check that starting torque of roller bearing is 0.1 to 1.5 N (0.01 to 0.15 kgf, 0.02 to 0.33 ft).

NOTE:
Stake the caulking of lock nut at two points.
13) Install the thrust bearing and needle bearing. Install the driven shaft assembly.

14) Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

**NOTE:**
Be careful because the spacer must be installed in proper direction.

The ball bearing on the rear side of the drive pinion shaft should be checked for smooth rotation before the drive pinion assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.

15) Adjust the thrust bearing preload. <Ref. to 5MT-83, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

**E: INSPECTION**
Disassembled parts should be washed with unleaded gasoline first and then inspected carefully.

1) Bearings
Replace the bearing in following cases:
- When the bearing balls, outer races and inner races are broken or rusty.
- When the bearing is worn.
- When the bearings fail to turn smoothly or emit noise in rotation after gear oil lubrication.

- When bearings have other defects:
  2) Bushing (each gear)
  Replace the bushings in following cases:
  - When the sliding surface is damaged or abnormally worn.
  - When the inner wall is abnormally worn.
  3) Gears
  - Replace gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
  - Correct or replace if the cone that contacts the baulk ring is rough or damaged.
  - Correct or replace if the inner surface or end face is damaged.
  4) Baulk ring
  Replace the ring in following cases:
  - When the inner surface and end face are damaged.
  - When the ring inner surface is abnormally or partially worn.
  - If the gap between the end faces of ring and the gear splined part is excessively small, check the clearance (A) while pressing the ring against the cone.
Clearance (A): 0.5 — 1.0 mm (0.020 — 0.040 in)

- When the contact surface of synchronizer ring insert is scratched or abnormally worn.

5) Shifting insert key
Replace the insert key if deformed, excessively worn, or defective in any way.

6) Oil seal
Replace the oil seal if the lip is deformed, hardened, worn, or defective in any way.

7) O-ring
Replace the O-ring if the sealing face is deformed, hardened, damaged, worn, or defective in any way.

F: ADJUSTMENT

1. THRUST BEARING PRELOAD
1) Select a suitable adjusting washer No. 1 to adjust dimension (H) to zero through visual check. Position the washer (18.3 × 30 × 4) and lock washer (18 × 30 × 2) and install the lock nut (18 × 13.5).

2) Using the ST1, ST2 and ST3, tighten new lock nut to the specified torque.
ST1 899884100 HOLDER
ST2 498427100 STOPPER
ST3 899988608 SOCKET WRENCH (27)

Tightening torque: 120 N·m (12.2 kgf-m, 88.5 ft-lb)
3) After removing the ST2, measure the starting torque using torque driver.
   ST1 899884100 HOLDER
   ST3 899988608 SOCKET WRENCH (27)

**Starting torque:**
0.3 — 0.8 N·m (0.03 — 0.08 kgf·m, 0.2 — 0.6 ft-lb)

4) If the starting torque is not within specified limit, select new adjusting washer No. 1 and recheck starting torque.

5) When the specified starting torque cannot be obtained by the adjusting washer No. 1, select the adjusting washer No. 2 from following table. Repeat steps 1) through 4) to adjust starting torque.

<table>
<thead>
<tr>
<th>Adjusting washer No. 1</th>

6) Recheck that the starting torque is within specified range, then clinch the lock nut at four positions.
19. Front Differential Assembly

A: REMOVAL
1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Removes the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the main shaft assembly.
   • Single-range model
     <Ref. to 5MT-62, REMOVAL, Main Shaft Assembly for Single-Range.>
   • Dual-range model
     <Ref. to 5MT-67, REMOVAL, Main Shaft Assembly for Dual-Range.>
6) Remove the differential assembly.

NOTE:
• Be careful not to confuse right and left roller bearing outer races.
• Be careful not to damage the oil seal of retainer.

7) Remove the differential side retainers using ST.
   ST 499787000 WRENCH ASSY

B: INSTALLATION
1) Install the differential side retainers using ST.
   ST 499787000 WRENCH ASSY
2) Install the bearing outer race on transmission case.
3) Install the differential assembly.

NOTE:
Be careful not to fold the sealing lip of oil seal.

4) Install the main shaft assembly.
   • Single-range model
     <Ref. to 5MT-62, INSTALLATION, Main Shaft Assembly for Single-Range.>
   • Dual-range model
     <Ref. to 5MT-67, INSTALLATION, Main Shaft Assembly for Dual-Range.>
5) Install the drive pinion assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
6) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
7) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
8) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>
C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Loosen the twelve bolts and remove hypoid driven gear.

2) Drive out the straight pin from differential assembly toward hypoid driven gear side.

3) Pull out the pinion shaft, and remove the differential bevel pinion, bevel gear and washer.

4) Using the ST, remove the roller bearing.

2. SIDE RETAINER

1) Remove the O-ring.
2) Remove the oil seal.

NOTE:
Do not reuse the oil seal. Replace with a new oil seal.

D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install the bevel gear and bevel pinion together with washers, and insert the pinion shaft.

NOTE:
Face the chamfered side of washer toward gear.

2) Measure the backlash between bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust. <Ref. to 5MT-89, ADJUSTMENT, Front Differential Assembly.>

NOTE:
Be sure the pinion gear teeth contacts adjacent gear teeth during measurement.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

3) Align the pinion shaft and differential case at their holes, and drive the straight pin into holes from the hypoid driven gear side, using ST.

NOTE:
Lock the straight pin after installing.

ST 899904100 REMOVER

4) Install the roller bearing to differential case.

NOTE:
- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Be careful because the roller bearing outer races are used as a set.

ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 ADAPTER
5MT-88

**Front Differential Assembly**

**MANUAL TRANSMISSION AND DIFFERENTIAL**

5) Install the hypoid driven gear to differential case using twelve bolts.

*Tightening torque:*

\[ T: 62 \text{ N\cdot m} (6.3 \text{ kgf-m}, 45.6 \text{ ft-lb}) \]

---

2. **SIDE RETAINER**

1) Install a new oil seal.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

**NOTE:**
- For press-fitting of oil seal to retainer, make tapping with plastic hammer etc.
- Do not use press.

2) Install a new O-ring.

**NOTE:**
Do not stretch or damage the O-ring.

---

**E: INSPECTION**

Repair or replace the differential gear in following cases:
- When the hypoid drive gear and drive pinion shaft tooth surface are damaged, excessively worn or seized.
- When the roller bearing on the drive pinion shaft is worn or damaged.
- When there is damage, wear or seizure of the differential bevel pinion, differential bevel gear, washer, pinion shaft and straight pin.
- When the differential case sliding surfaces is worn or damaged.

---

**1. BEVEL PINION GEAR BACKLASH**

Measure the backlash between bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust.

**NOTE:**
Be sure the pinion gear teeth contacts adjacent gear teeth during measurement.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE
MANUAL TRANSMISSION AND DIFFERENTIAL

Front Differential Assembly

3. TOOTH CONTACT OF HYPOID GEAR

Check tooth contact of hypoid gear as follows: Apply a uniform thin coat of red lead on both tooth surfaces of 3 or 4 teeth of the hypoid gear. Move the hypoid gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on hypoid gear, and judge whether face contact is correct. If it is inaccurate, make adjustment. <Ref. to 5MT-89, ADJUSTMENT, Front Differential Assembly.>

- Tooth contact is correct.

1. BEVEL PINION GEAR BACKLASH

1) Disassemble the front differential. <Ref. to 5MT-85, REMOVAL, Front Differential Assembly.>

2) Select a different washer from the table and install.

3) Adjust until the standard value is obtained.

**Backlash:**

**Standard**

0.13 — 0.18 mm (0.0051 — 0.0071 in)
2. HYPOID GEAR BACKLASH
Adjust the backlash by turning holder in the right side case.

NOTE:
Each time the side retainer rotates one notch, backlash changes by 0.05 mm (0.020 in).

3. TOOTH CONTACT OF HYPOID GEAR
1) Adjust until correct teeth contact is obtained.
2) Check tooth contact as follows.
   • Tooth contact
     Checking item: Tooth contact pattern is slightly shifted to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

     (A) Toe side
     (B) Heel side
• Toe contact (inside end contact)
**Checking item: Contact area is small.**
Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer in order to bring drive pinion closer to driven gear.

• Heel contact (outside end contact)
**Checking item: Contact area is small.**
Contact pattern

Corrective action: Reduce thickness of pinion height adjusting washer in order to bring drive pinion away from driven gear.
20. Reverse Idler Gear

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove the transmission case. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
5) Remove the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly.
   - Single-range model
     <Ref. to 5MT-62, REMOVAL, Main Shaft Assembly for Single-Range.>
   - Dual-range model
     <Ref. to 5MT-67, REMOVAL, Main Shaft Assembly for Dual-Range.>
7) Remove the differential assembly. <Ref. to 5MT-85, REMOVAL, Front Differential Assembly.>
8) Remove the shifter forks and rods. <Ref. to 5MT-94, REMOVAL, Shifter Fork and Rod.>
9) Pull out the straight pin, and remove the idler gear shaft, reverse idler gear and washer.
10) Remove the reverse shifter lever.

B: INSTALLATION

1) Install the reverse shifter lever, reverse idler gear and reverse idler gear shaft, and secure them with straight pin.

   NOTE:
   Be sure to install the reverse idler shaft from rear side.

2) Inspect and adjust the clearance between reverse idler gear and transmission case wall. <Ref. to 5MT-92, INSTALLATION, Reverse Idler Gear.>
   <Ref. to 5MT-93, ADJUSTMENT, Reverse Idler Gear.>
3) Install the shifter forks and rods. <Ref. to 5MT-94, INSTALLATION, Shifter Fork and Rod.>
4) Install the differential assembly. <Ref. to 5MT-85, INSTALLATION, Front Differential Assembly.>
5) Install the main shaft assembly.
   - Single-range model
     <Ref. to 5MT-62, INSTALLATION, Main Shaft Assembly for Single-Range.>
   - Dual-range model
     <Ref. to 5MT-67, INSTALLATION, Main Shaft Assembly for Dual-Range.>
6) Install the drive pinion shaft assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>
7) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
8) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
9) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>
10) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>
C: INSPECTION
1) Move the reverse shifter rod toward reverse side. Inspect the clearance between reverse idler gear and transmission case wall. If out of specification, select an appropriate reverse shifter lever and adjust.

**Clearance A:**
6.0 — 7.5 mm (0.236 — 0.295 in)

2) After installing a suitable reverse shifter lever, shift into neutral. Inspect the clearance between reverse idler gear and transmission case wall. If out of specification, select an appropriate washer and adjust.

**Clearance:**
0 — 0.5 mm (0 — 0.020 in)

3) Check the reverse idler gear and shaft for damage. Replace if it is damaged.

D: ADJUSTMENT
1) Select an appropriate reverse shifter lever from the table below, and adjust until the gap between reverse idler gear and transmission case wall is within specification.

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Marking</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>32820AA070</td>

21. Shifter Fork and Rod

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-41, REMOVAL, Switches and Harness.>
3) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
4) Remove transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
5) Removes the drive pinion shaft assembly. <Ref. to 5MT-77, REMOVAL, Drive Pinion Shaft Assembly.>
6) Remove the main shaft assembly.
   - Single-range model <Ref. to 5MT-62, REMOVAL, Main Shaft Assembly for Single-Range.>
   - Dual-range model <Ref. to 5MT-67, REMOVAL, Main Shaft Assembly for Dual-Range.>
7) Remove the differential assembly. <Ref. to 5MT-85, REMOVAL, Front Differential Assembly.>
8) Drive out the straight pin tapping by ST, and pull out the 5th shifter fork.

ST 398791700 STRAIGHT PIN REMOVER

9) Remove the plugs, springs and checking balls.
10) Drive out the straight pin tapping by ST, and pull out the 3-4 fork rod and shifter fork.

NOTE:
When removing a rod, keep other rods in neutral. Also, when pulling out the straight pin, remove it toward the inside of case so that it does not hit against the case.

ST 398791700 STRAIGHT PIN REMOVER

11) Drive out the straight pin tapping by ST, and pull out the 1-2 fork rod and shifter fork.

ST 398791700 STRAIGHT PIN REMOVER

B: INSTALLATION

1) Install the reverse arm fork spring, ball and interlock plunger to reverse fork rod arm. Insert the reverse fork rod into the hole in reverse fork rod arm, and hold it with outer snap ring using ST.

NOTE:
Apply a coat of grease to plunger to prevent it from falling.

ST 399411700 ACCENT BALL INSTALLER

2) Position the ball, spring and new gasket in the reverse shifter rod hole on the left side of transmission case, and tighten the checking ball plug.

3) Install the 1-2 fork rod into 1-2 shifter fork through the hole on the rear of transmission case.

4) Align the holes in rod and fork, and drive new straight pin into these holes using ST.

NOTE:
- Set other rods to neutral.
- Make sure the interlock plunger is on the 3-4 fork rod side.

ST 398791700 STRAIGHT PIN REMOVER

5) Install the interlock plunger onto 3-4 fork rod.

NOTE:
Apply a coat of grease to plunger to prevent it from falling.
6) Install the 3-4 fork rod into 3-4 shifter fork through the hole on the rear of transmission case.  
7) Align the holes in rod and fork, and drive new straight pin into these holes.  

NOTE:  
- Set the reverse fork rod to neutral.  
- Make sure the interlock plunger (before installation) is on the reverse fork rod side.  

ST 398791700 STRAIGHT PIN REMOVER  
8) Install the 5th shifter fork onto the rear of reverse fork rod. Align the holes in the two parts and drive new straight pin into the specified place.  
ST 398791700 STRAIGHT PIN REMOVER  
9) Position the balls, checking ball springs and new gaskets into 3-4 and 1-2 rod holes, and install plugs.  

10) Install the differential assembly. <Ref. to 5MT-85, INSTALLATION, Front Differential Assembly.>  
11) Install the main shaft assembly.  
- Single-range model  
  <Ref. to 5MT-62, INSTALLATION, Main Shaft Assembly for Single-Range.>  
- Dual-range model  
  <Ref. to 5MT-67, INSTALLATION, Main Shaft Assembly for Dual-Range.>  
12) Install the drive pinion shaft assembly. <Ref. to 5MT-77, INSTALLATION, Drive Pinion Shaft Assembly.>  
13) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>  
14) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>  
15) Install the back-up light switch and neutral position switch. <Ref. to 5MT-41, INSTALLATION, Switches and Harness.>  
16) Install the manual transmission assembly into vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>  

C: INSPECTION  
1) Inspect the fork and rod for damage. Replace if it is damaged.  
2) Gearshift mechanism  
Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.  
3) Inspect the clearance between 1st, 2nd driven gear and reverse driven gear. If any clearance is not within specifications, replace the shifter fork as required.  

**Clearance (a) and (b):**  
9.5 mm (0.374 in)  

<table>

22. Counter Gear

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the transfer case with extension case assembly. <Ref. to 5MT-44, REMOVAL, Transfer Case and Extension Case Assembly.>
3) Remove the transmission case. <Ref. to 5MT-56, REMOVAL, Transmission Case.>
4) Move the counter gear shaft until it touches transmission case, and remove the snap ring with a suitable tool.

5) Slide the washer to the rear of high-low counter shaft, and remove the straight pin from counter shaft.

6) Remove the counter shaft from transmission case, taking care not to drop the counter gear and two washers.

NOTE:
- Be careful not to damage the O-ring.
- Be careful not to drop the straight pin on front side.

B: INSTALLATION

1) Install the O-ring and straight pin onto counter gear shaft.
2) Install the following parts in main case (Right-side), and push the shaft perfectly into case.  
   - Counter gear shaft
   - Two counter gear washers
   - Two needle bearings
   - Counter gear collar
   - Counter gear
   - Straight pin
   - Snap ring

3) Install the transmission case. <Ref. to 5MT-58, INSTALLATION, Transmission Case.>
4) Install the transfer case with extension case assembly. <Ref. to 5MT-44, INSTALLATION, Transfer Case and Extension Case Assembly.>
5) Install the manual transmission assembly on vehicle. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

NOTE:
- Make sure that the cut-out end surface of counter gear shaft does not protrude above the end surface of the case.
- Position the cut-out portion of counter gear shaft.

C: INSPECTION

1) After installing the snap ring, measure the clearance between snap ring and counter washer.

   Clearance:
   
   $0.05 - 0.35 \text{ mm} \ (0.0020 - 0.0138 \text{ in})$

2) If the clearance is out of specified value, select a snap ring and install to put clearance within specified value. <Ref. to 5MT-98, ADJUSTMENT, Counter Gear.>
D: ADJUSTMENT
Selection of snap ring:
If the measurement is not within specification, select a suitable snap ring.

<table>

</table>
23. General Diagnostic Table

A: INSPECTION

1. MANUAL TRANSMISSION

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Gears are difficult to intermesh.</td>
<td>(a) Worn, damaged or burred chamfer of internal spline of sleeve and reverse driven gear</td>
<td>Replace.</td>
</tr>
<tr>
<td>NOTE: The cause for difficulty in shifting gears can be classified into two kinds: one is defective gear shift system and the other is defective transmission. However, if the operation is heavy and engagement of the gears is difficult, defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.</td>
<td>(b) Worn, damaged or burred chamfer of spline of gears</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(c) Worn or scratched bushings</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(d) Incorrect contact between synchro-nizer ring and gear cone, or wear</td>
<td>Rectify or replace.</td>
</tr>
<tr>
<td>2. Gear slip-out</td>
<td>(a) Defective pitching stopper adjustment</td>
<td>Adjust.</td>
</tr>
<tr>
<td>• Gear slips out when coasting on rough road.</td>
<td>(b) Loose engine mounting bolts</td>
<td>Tighten or replace.</td>
</tr>
<tr>
<td>• Gear slips out during acceleration.</td>
<td>(c) Worn fork shifter, broken shifter fork rail spring</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(d) Worn or damaged ball bearing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(f) Worn tooth step of synchronizer hub (caused by slip-out of 3rd gear)</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(g) Worn 1st driven gear and driven shaft</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(h) Worn 2nd driven gear and bushing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(i) Worn 3rd drive gear and needle bearing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(j) Worn 3rd drive gear and needle bearing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(k) Worn reverse idler gear and bushing</td>
<td>Replace.</td>
</tr>
<tr>
<td>3. Noise emit from transmission.</td>
<td>(a) Insufficient or improper lubrication</td>
<td>Lubricate with specified oil or replace.</td>
</tr>
<tr>
<td>NOTE: If a noise is heard when the vehicle is parked with its engine idling and if a noise ceases when the clutch is disengaged, it may be considered that the noise comes from the transmission.</td>
<td>(b) Worn or damaged gears and bearings</td>
<td>Replace.</td>
</tr>
<tr>
<td>NOTE: If the trouble is only wear of the tooth surfaces, merely a high roaring noise will occur at high speeds, but if any part is broken, rhythmical knocking sound will be heard even at low speeds.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## 2. DIFFERENTIAL

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Broken differential (case, gear, bearing, etc.)</td>
<td>(a) Insufficient or improper oil</td>
<td>Disassemble differential and replace broken components. At the same time check other components for any trouble, and replace if necessary.</td>
</tr>
<tr>
<td></td>
<td>(b) Use of vehicle under severe conditions such as excessive load and improper use of clutch</td>
<td>Readjust bearing preload and backlash and face contact of gears.</td>
</tr>
<tr>
<td></td>
<td>(c) Improper adjustment of taper roller bearing</td>
<td>Adjustment.</td>
</tr>
<tr>
<td></td>
<td>(d) Improper adjustment of drive pinion and hypoid driven gear</td>
<td>Adjustment.</td>
</tr>
<tr>
<td></td>
<td>(e) Excessive backlash due to worn differential side gear, washer or differential pinion under severe operating conditions of the vehicle.</td>
<td>Add recommended oil to the specified level. Do not use vehicle under severe operating conditions.</td>
</tr>
<tr>
<td></td>
<td>(f) Loose hypoid driven gear tightening bolts</td>
<td>Tighten.</td>
</tr>
<tr>
<td>2. Differential and hypoid gear noises</td>
<td>(a) Insufficient oil</td>
<td>Lubricate.</td>
</tr>
<tr>
<td></td>
<td>(b) Improper adjustment of hypoid driven gear and drive pinion</td>
<td>Check tooth contact.</td>
</tr>
<tr>
<td></td>
<td>(c) Worn teeth of hypoid driven gear and drive pinion</td>
<td>Replace as a set. Readjust bearing preload.</td>
</tr>
<tr>
<td></td>
<td>(d) Loose roller bearing</td>
<td>Readjust hypoid driven gear to drive pinion backlash and check tooth contact.</td>
</tr>
<tr>
<td></td>
<td>(e) Distorted hypoid driven gear or differential case</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(f) Worn washer and differential pinion shaft</td>
<td>Replace.</td>
</tr>
</tbody>
</table>

NOTE: Noise will be developed and finally it will become impossible to continue to run due to broken pieces obstructing the gear revolution.

Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of trouble. However noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises.

- **Gear noise when driving:**
  If noise increases as the vehicle speed increases it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc.
- **Gear noise when coasting:**
  Damaged gears due to maladjusted bearings and incorrect shim adjustment.
- **Bearing noise when driving or coasting:**
  Cracked, broken or rusty bearings
- **Noise mainly when turning:**
  Noise occurs from differential side gear, differential pinion or differential pinion shaft, etc.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

- **T3**: 30 (3.1, 22.4)
**C: CAUTION**
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine fluid, grease etc. or equivalent. Do not mix fluid, grease etc. with that of another grade or from other manufacturers.

2. Clutch Disc and Cover

A: REMOVAL

1. EC, EK AND KA MODEL

1) Remove the transmission assembly from vehicle. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Insert the ST on flywheel.

ST 499747100 CLUTCH DISC GUIDE

3) Remove the clutch cover and clutch disc.

NOTE:
• Take care not to allow oil on the clutch disc surface.
• Do not disassemble the clutch cover or clutch disc.
• Be sure to mark alignment marks on the flywheel and clutch cover before removing the clutch cover.

2. KS AND K4 MODEL

1) Remove the transmission assembly from vehicle body. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>
2) Install the ST on flywheel.

ST 499747100 CRANKSHAFT STOPPER

3) Remove the clutch cover and clutch disc.

NOTE:
• Take care not to allow oil on the clutch disc facing.
• Do not disassemble the clutch cover or clutch disc.

B: INSTALLATION

1. EC, EK AND KA MODEL

1) Insert the ST into clutch disc and install on the flywheel by inserting the ST end into pilot bearing.

NOTE:
When installing the clutch disc, be careful of its direction.

ST 499747100 CLUTCH DISC GUIDE

2) Place the clutch cover on flywheel and tighten the bolts to specified torque.

NOTE:
• When reinstalling, align the alignment marks.
• When installing a new clutch cover and flywheel, position the clutch cover in order to make the gap between “0” marks of flywheel and clutch cover 120° or more.
• Note the front and rear of the clutch disc when installing.
• Tighten the clutch cover installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

**Tightening torque:**
16 N·m (1.6 kgf-m, 11.8 ft-lb)

3) Remove the ST.

ST  499747100  CLUTCH DISC GUIDE

4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

### 2. KS AND K4 MODEL

1) Insert the ST into clutch disc and install them on the flywheel by inserting the ST end into pilot bearing.

**NOTE:**
When installing the clutch disc, be careful to its direction.

ST  499747100  CLUTCH DISC GUIDE

2) Install the clutch cover on flywheel and tighten the bolts to specified torque.

**NOTE:**
• When installing the clutch cover on flywheel, position the clutch cover so that there is a gap of 120° or more between “0” marks on the flywheel and clutch cover. (“0” marks indicate the directions of residual unbalance.)
• Note the front and rear of the clutch disc when installing.

3) Remove the ST.

ST  499747100  CLUTCH DISC GUIDE

4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

#### 1. CLUTCH DISC

1) Facing wear:
Measure the depth from the surface of facing to rivet head. Replace if the facings are worn locally or worn down to less than the specified value.

**Depth of rivet head:**
- **Limit of sinking**
  - 0.3 mm (0.012 in)

**NOTE:**
Do not wash the clutch disc with any cleaning fluid.
2) Hardened facing:
Replace the clutch disc.

3) Oil leakage on facing:
Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other points for oil leakage.

• EC, EK and KA model

4) Deflection on facing:
If deflection exceeds the specified value at the outer circumference of facing, replace the clutch disc.

Limit for deflection:
1.0 mm (0.039 in) at R = 110 mm (4.33 in)

• KS and K4 model

5) If the spline wears, rivets loosen and damper spring is failure, replace the clutch disc.
2. CLUTCH COVER

NOTE:
Visually check the following items without disassembling, and replace or repair if defective.
1) Loose thrust rivet
2) Damaged or worn bearing contact area at the center of diaphragm spring
• EC, EK and KA model

(A) Spline
(B) Rivet
(C) Damper spring

3) Damaged or worn disc contact surface of pressure plate
4) Loose strap plate installation area
5) Worn diaphragm sliding area
• EC, EK and KA model

(A) Thrust rivet
(B) Diaphragm spring

(A) Pressure plate
(B) Strap plate

• KS and K4 model
3. Flywheel

A: REMOVAL

1. EC, EK AND KA MODEL

1) Remove the transmission assembly. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>

2) Remove the clutch cover and clutch disc. <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>

3) Using ST1 and ST2, remove the flywheel.
   ST1 498497100 CRANKSHAFT STOPPER
   ST2 499057000 TORX® PLUS

2. KS AND K4 MODEL

1) Remove the transmission assembly. <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>

2) Remove the clutch cover and clutch disc. <Ref. to CL-12, REMOVAL, Clutch Disc and Cover.>

3) Using the ST, remove the flywheel.
   ST 498497100 CRANKSHAFT STOPPER

B: INSTALLATION

1. EC, EK AND KA MODEL

1) Set the flywheel and ST.

2) Tighten the flywheel mounting bolts to specified torque.
   ST 499057000 TORX® PLUS

NOTE:
Tighten the flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

Tightening torque:
72 N·m (7.3 kgf-m, 52.8 ft-lb)

2. KS AND K4 MODEL

1) Install the flywheel and ST.
   ST 498497100 CRANKSHAFT STOPPER

2) Tighten the flywheel attaching bolts to specified torque.
NOTE:
Tighten the flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

_Tightening torque:_
72 N·m (7.3 kgf-m, 52.8 ft-lb)

3) Install the clutch disc and cover. <Ref. to CL-13, KS AND K4 MODEL, INSTALLATION, Clutch Disc and Cover.>
4) Install the transmission assembly. <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

CAUTION:
Since this bearing is grease-sealed and non-lubrication type, do not wash it with gasoline or any solvent.
1) Damage on sliding surface of facing and ring gear:
   If defective, replace the flywheel.
   • EC, EK and KA model
   • KS and K4 model

2) Smoothness of rotation
   Rotate the ball bearing while applying pressure in thrust direction.
3) If noise or excessive play is noted, replace the flywheel.
4. Release Bearing and Lever

A: REMOVAL
1) Remove the transmission assembly from vehicle body.
   <Ref. to 5MT-31, REMOVAL, Manual Transmission Assembly.>
2) Remove the two clips from clutch release lever and remove the release bearing.
   CAUTION:
   Be careful not to deform the clips.
3) Remove the dust cover.
4) Remove the lever spring from pivot with a screwdriver by accessing it through the clutch housing release lever hole. Then remove the release lever.

B: INSTALLATION
   NOTE:
   Before or during installation, lubricate the following points with a light coat of grease.
   • Contact surface of lever and pivot
   • Contact surface of lever and bearing
   • Transmission main shaft spline (Use grease containing molybdenum disulphide.)
1) While pushing the release lever to pivot and twisting it to both sides, fit the lever spring onto the constricted portion of pivot.
2) Place the release bearing and fasten it with two clips.
3) Install the dust cover.
4) Check smooth movement of bearing with operating release lever.
5) Install the transmission assembly.
   <Ref. to 5MT-33, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION
1. RELEASE BEARING

   NOTE:
   Since this bearing is grease-sealed and non-lubrication type, do not wash with gasoline or any solvent when servicing the clutch.
1) Check the bearing for smooth movement by applying force to the bearing in radial direction.

**Radial direction stroke:**
1.6 mm (0.063 in)

![Diagram of bearing case](CL-00032)

(A) Bearing case

2) Check the bearing for smooth rotation by applying force to the bearing in thrust direction.

![Diagram of bearing case](CL-00160)

(A) Bearing case

3) Check wear and damage of bearing case surface contacting with lever.

**2. RELEASE LEVER**

Check the lever pivot portion and contact point with release bearing case for wear.

![Diagram of clutch releasing lever](CL-00034)

(A) Clutch release lever
(B) Pivot
(C) Clutch release bearing
5. Operating Cylinder

A: REMOVAL
1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Disconnect the clutch hose from operating cylinder.

CAUTION:
Cover the hose joint to prevent clutch fluid from flowing out.

3) Remove the operating cylinder from transmission.

B: INSTALLATION
1) Install in the reverse order of removal.

NOTE:
Before installing the operating cylinder, apply grease (SUNLIGHT 2: Part No. 003602010) to the contact point of the release lever and operating cylinder.

C: INSPECTION
1) Check the operating cylinder for damage. If operating cylinder is damaged, replace it.
2) Check the operating cylinder for fluid leakage or damage on boot. If any leakage or damage is found, replace the operating cylinder.

Tightening torque:
- **T1**: 18 N·m (1.8 kgf·m, 13.0 ft-lb)
- **T2**: 37 N·m (3.8 kgf·m, 27.5 ft-lb)
6. Master Cylinder

A: REMOVAL
1) Thoroughly drain the brake fluid from reservoir tank.
2) Remove the snap pin and clevis pin, and then separate the push rod of master cylinder from clutch pedal.
3) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.> 
4) Disconnect the clutch pipes from master cylinder.
5) Remove the master cylinder and reservoir tank as a unit.

CAUTION:
Be careful not to spill the brake fluid. Brake fluid spilt on the vehicle body will harm the paint surface; wipe it off quickly if spilt.

B: INSTALLATION
1) Install the master cylinder to the vehicle, and connect the clutch pipe to master cylinder.

NOTE:
Check that the pipe is routed properly.

Tightening torque:
T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)
T2: 18 N·m (1.8 kgf-m, 13.0 ft-lb)

2) Connect the push rod of master cylinder to clutch pedal, and install the clevis pin and snap pin.

NOTE:
Apply grease to the clevis pin.

C: DISASSEMBLY
1) Remove the straight pin and reservoir tank.

3) After bleeding air from the clutch system, ensure that clutch operates properly. <Ref. to CL-25, Clutch Fluid Air Bleeding.>
4) Install the air intake chamber. <Ref. to IN(H4SO 2.0)-8, INSTALLATION, Air Intake Chamber.>
2) Remove the oil seal.

3) Pull the cylinder boot backward.

4) Remove the snap ring.

**CAUTION:**

Be careful to prevent the rod, washer, piston and return spring from flying out when removing the snap ring.

**D: ASSEMBLY**

1) Apply a coat of grease to the contacting surfaces of the push rod and piston before installation.

**Grease:**

*SILICONE GREASE G40M (Part No. 004404003)*

2) Assemble in the reverse order of disassembly.

**E: INSPECTION**

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, fluid reservoir, return spring, gasket, clutch damper cylinder boot or hose, replace the faulty part.

**Tightening torque:**

10 N·m (1.0 kgf-m, 7 ft-lb)
7. Clutch Pipe and Hose

A: REMOVAL
1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Drain the clutch fluid. <Ref. to CL-24, Clutch Fluid.>
3) Disconnect the clutch pipe from the clutch hose and master cylinder.
4) Pull out the clamp, then remove the clutch hose from bracket.
5) Disconnect the hose from operating cylinder.
6) Remove the bracket.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Bleed the air of clutch fluid. <Ref. to CL-25, Clutch Fluid Air Bleeding.>

Tightening torque:
- T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)
- T2: 18 N·m (1.8 kgf-m, 13.0 ft-lb)
- T3: 25 N·m (2.5 kgf-m, 18.4 ft-lb)

C: INSPECTION
Check pipes and hoses for cracks, breakage or damage. Check joints for fluid leakage. If any crack, breakage, damage or leakage is found, repair or replace the defective pipe or hose.
8. Clutch Fluid

A: INSPECTION
1) Park the vehicle on a level surface.
2) Inspect the fluid level using the scale on the outside of reservoir tank. If the level is below “MIN”, add fluid to bring it up to “MAX”, and also inspect for leakage.

B: REPLACEMENT

CAUTION:
- The FMVSS No. 116, fresh DOT3 or 4 brake fluid must be used.
- When loosening bleeder screw, cover the bleeder with cloth to prevent brake fluid from being splashed over surrounding parts.
- Avoid mixing different brands of brake fluid to prevent the quality of fluid from degrading.
- Be careful not to allow dirt or dust to get into the reservoir tank.

NOTE:
- During bleeding operation, keep the clutch reservoir tank filled with brake fluid to eliminate the entry of air.
- Clutch pedal operating must be very slow.
- For convenience and safety, it is advisable to have two people working.
- The amount of brake fluid required is approx. 70 mℓ (2.4 US fl oz, 2.5 Imp fl oz) for total clutch system.

1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>
2) Drain the brake fluid from reservoir tank.
3) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
- FMVSS No. 116, fresh DOT3 or 4 brake fluid

4) Drain all contaminated fluid in the same method as air bleeding.

NOTE:
- Refill the brake fluid before reservoir tank becomes empty.
9. Clutch Fluid Air Bleeding

A: PROCEDURE

NOTE:
Bleed air from the oil line with help of a co-worker.

1) Remove the air intake chamber. <Ref. to IN(H4SO 2.0)-8, REMOVAL, Air Intake Chamber.>

2) Fit one end of a vinyl tube into the air bleeder of operating cylinder and put the other end into a brake fluid container.

3) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the fluid. Release the air bleeder for 1 or 2 seconds. Next, with the bleeder closed, slowly release the clutch pedal.

CAUTION:
When loosening bleeder screw, cover the bleeder with cloth to prevent brake fluid from being splashed over surrounding parts.

4) Repeat the procedure 3), until there are no more air bubbles in the vinyl tube.

5) Tighten the air bleeder.

6) After depressing the clutch pedal, make sure that there are no leaks evident in the entire clutch system.

7) After bleeding air from the clutch system, ensure that clutch operates properly.

Tightening torque:
$T: 8 \text{ N}\cdot\text{m} (0.8 \text{ kgf-m}, 5.8 \text{ ft-lb})$
10. Clutch Pedal

A: REMOVAL

1. LHD MODEL
   1) Disconnect the ground cable from battery.
   2) Remove the steering column. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
   3) Disconnect the connectors from the stop light and clutch switches.
   4) Remove the snap pins which secure lever to push rod and operating rod.
   5) Remove the clevis pins which secure lever to push rod and operating rod.
   6) Remove the nut which secures clutch master cylinder.
   7) Remove the bolts and nuts which secure brake pedal and clutch pedal, and remove the pedal assembly.

2. RHD MODEL
   1) Disconnect the ground cable from battery.
   2) Remove the instrument panel lower cover.
B: INSTALLATION
1) Install in the reverse order of removal.

**Tightening torque:**
* T: 18 N·m (1.8 kgf-m, 13.0 ft-lb)

- Clutch pedal catcher

2) Adjust the clutch pedal after installation. <Ref. to CL-29, ADJUSTMENT, Clutch Pedal.>  

C: DISASSEMBLY
1. LHD MODEL
   1) Remove the clutch switches.
   2) Remove the clips, assist spring, rod and bushing.

3) Remove the spring pin and lever.

4) Remove the clutch pedal and bushings.

5) Remove the stopper, clip and rod S, and then remove the spring and bushing S.

6) Remove the stoppers from clutch pedal.

7) Remove the clutch pedal pad.
2. RHD MODEL

1) Remove the clutch switch.
2) Remove the clip, and then pull out the clevis pin.

3) Remove the assist rod, spring and bushing.
4) Remove the clutch pedal from clutch pedal bracket.

5) Remove the following parts (B to G) from clutch pedal bracket (A) as shown in the figure.

6) Remove the spacer, bushing and pedal pad from clutch pedal.

D: ASSEMBLY

1. LHD MODEL

1) Attach the clutch switch, etc. to pedal bracket temporarily.
2) Clean the inside of bores of clutch pedal and brake pedal, and apply grease, and set bushings into bores.
3) Align the bores of pedal bracket, clutch pedal and brake pedal, and then attach the brake pedal return spring, assist rods, spring and bushing.

NOTE: Clean up the inside of bushings and apply grease before installing spacer.

2. RHD MODEL

1) Clean and apply grease to the hole of sliding portion between clutch pedal and bushing.
2) Install the pad, stopper, bushing C, spacer and bushing to clutch pedal.
3) Install the rod S, spring S, bushing S, clip, bushing, clutch switch and bushing C to clutch pedal bracket.
4) Install the clutch pedal assembly, stopper, adjusting rod, bushing and spring to clutch pedal bracket.

**Tightening torque:**

\[ T: 30 \text{ N}\cdot\text{m (3.1 kgf-m, 22.4 ft-lb)} \]

5) Install the assist rod, bushing and assist spring to clutch pedal and pedal bracket.

**E: INSPECTION**

1. **CLUTCH PEDAL**

Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lb) to ensure the pedal deflection is in specified range. If excessive deflection is noted, replace the bushings with new ones.

**Deflection of clutch pedal:**

- **Service limit**
  - 5.0 mm (0.197 in) or less

**RHD model**

- LHD model

**F: ADJUSTMENT**

1) Measure the full stroke amount of clutch pedal.

**NOTE:**

- Measure the length between the seat cushion front end and center portion of clutch pedal.
- Slide the seat at seventh notch from first notch.

**Specified clutch pedal full stroke A:**

\[ 130 — 135 \text{ mm (5.12 — 5.31 in)} \]

2) If the clutch pedal stroke is out of specification, loosen the clutch stopper nut and adjust it.

**Tightening torque (Clutch stopper nut):**

\[ 8 \text{ N}\cdot\text{m (0.8 kgf-m, 5.8 ft-lb)} \]
3) Loosen the push rod lock nut.

4) Turn the push rod to adjust.
   (1) Ensure that the clutch pedal contacts clutch switch, when releasing the clutch pedal.
   (2) Ensure that the clutch pedal contacts clutch pedal bracket stopper, when fully depressing the clutch pedal.

5) Turn the push rod counterclockwise to shorten until clearance is made at clutch switch.

6) Turn the push rod clockwise to lengthen until clutch pedal contacts to clutch switch.
7) Turn the push rod further 270° counterclockwise to shorten (arrow direction as shown in the figure).
   - LHD model

8) Move the clevis pin in lateral direction to ensure it moves smoothly.

- RHD model
9) Tighten the push rod lock nut.

**Tightening torque:**

\[ 10 \text{ N\,m (1.0 \text{ kgf-m}, 7.2 \text{ ft-lb})} \]

10) Depress and release the clutch pedal two or three times to ensure that clutch pedal and release fork operates smoothly. If the clutch pedal and release fork do not operate smoothly, bleed air from the clutch hydraulic system.  

<Ref. to CL-25, **Clutch Fluid Air Bleeding.**>

11) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not, repeat adjustment procedures again from the beginning.

**Specified clutch pedal full stroke:**

\[ 130 — 135 \text{ mm (5.12 — 5.31 in)} \]

12) Move the clevis pin to the left and then to the right. It should move without resistance while it is rattling. If resistance is felt, repeat adjustment procedures again from the beginning.

13) Push the release lever until operating cylinder push rod retracts. Ensure that clutch fluid level in reservoir tank increases. If the clutch fluid level increases, hydraulic clutch is properly adjusted; if fluid level does not increase or push rod does not retract, replace the master cylinder with a new one.  

<Ref. to CL-21, **Master Cylinder.**>

14) Push the release lever until operating cylinder push rod retracts. Check that the clutch fluid level in reservoir tank increases.

15) If the clutch fluid level increases, hydraulic clutch play is correct.

16) If the clutch fluid level does not increase or push rod does not retract, clutch pedal must be re-adjusted.

17) Check the fluid level on the outside of the reservoir tank. If the level is below “MIN”, add clutch fluid to bring it up to “MAX”.

**Recommended clutch fluid:**

FMVSS No. 116, fresh DOT 3 or DOT 4 brake fluid
11. Clutch Switch

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover.
3) Disconnect the connector from clutch switch.
4) Remove the clutch switch.

B: INSTALLATION
1) Install the clutch switch and clutch pedal stopper so that the gap between them is 0 mm (0 in).

**Tightening torque:**
8 N·m (0.8 kgf-m, 5.8 ft-lb)

2) Measure the stroke of clutch pedal.

**Specified clutch pedal full stroke A:**
130 — 135 mm (5.12 — 5.31 in)

C: INSPECTION
Check the clutch switch continuity. If continuity is not as specified, replace the switch.
1) Disconnect the clutch switch connector.
2) Measure the resistance between terminal 1 and 2 of switch.

**Terminal / Specified resistance**
- **When clutch pedal depressed:**
  1 — 2 / More than 1 MΩ
- **When clutch pedal not depressed:**
  1 — 2 / Less than 1 Ω

D: ADJUSTMENT
Refer to “ADJUSTMENT” for clutch pedal. <Ref. to CL-29, ADJUSTMENT, Clutch Pedal.>
# 12. General Diagnostic Table

## A: INSPECTION

### 1. CLUTCH

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Clutch slippage</td>
<td>(a) Clutch facing smeared by oil</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(b) Worn clutch facing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(c) Deteriorated diaphragm spring</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(d) Distorted pressure plate or flywheel</td>
<td>Rectify or replace.</td>
</tr>
<tr>
<td></td>
<td>(e) Defective release bearing holder</td>
<td>Rectify or replace.</td>
</tr>
<tr>
<td>Engine speeds up when shifting.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>High-speed driving is impossible; especially rapid acceleration is impossible and vehicle speed does not increase in proportion to the increase in engine speed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Power falls, particularly when ascending a slope, and there is a smell of burning of the clutch facing.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Method of testing: Put the vehicle in a stationary condition with parking brake fully applied. Disengage the clutch and shift the transmission gear into the 1st. Gradually allow the clutch to engage while gradually increasing the engine speed. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not start off and the engine does not stall.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Clutch drags.</td>
<td>(a) Worn or rusty clutch disc hub spline</td>
<td>Replace clutch disc.</td>
</tr>
<tr>
<td>As a symptom of this trouble, a harsh scratching noise develops and control becomes quite difficult when shifting gears. The symptom becomes more apparent when shifting into the 1st gear. However, because much trouble of this sort is due to defective synchronization mechanism, carry out the following tests.</td>
<td>(b) Excessive deflection of clutch disc facing</td>
<td>Rectify or replace.</td>
</tr>
<tr>
<td></td>
<td>(c) Stick of crankshaft pilot needle bearing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(d) Cracked clutch disc facing</td>
<td>Replace.</td>
</tr>
<tr>
<td></td>
<td>(e) Stuck clutch disc (smeared by oil or water)</td>
<td>Replace.</td>
</tr>
<tr>
<td>It may be judged as insufficient disengagement of clutch if any noise occurs during this test.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Clutch chatters.</td>
<td>(a) Adhesion of oil on the facing</td>
<td>Replace clutch disc.</td>
</tr>
<tr>
<td>Clutch chattering is an unpleasant vibration to the whole body when the vehicle is just started with clutch partially engaged.</td>
<td>(b) Weak or broken damper spring</td>
<td>Replace clutch disc.</td>
</tr>
<tr>
<td></td>
<td>(c) Defective facing contact or excessive disc</td>
<td>Replace the defective clutch disc.</td>
</tr>
<tr>
<td></td>
<td>(d) Warped pressure plate or flywheel</td>
<td>Rectify or replace.</td>
</tr>
<tr>
<td></td>
<td>(e) Loose disc rivets</td>
<td>Replace clutch disc.</td>
</tr>
<tr>
<td></td>
<td>(f) Loose engine mounting</td>
<td>Retighten or replace mounting.</td>
</tr>
<tr>
<td></td>
<td>(g) Improper adjustment of pitching stopper</td>
<td>Adjustment.</td>
</tr>
<tr>
<td>4. Noisy clutch</td>
<td>(a) Broken, worn or unlubricated release bearing</td>
<td>Replace the release bearing.</td>
</tr>
<tr>
<td>Examine whether the noise is generated when the clutch is disengaged, engaged, or partially engaged.</td>
<td>(b) Insufficient lubrication of pilot bearing</td>
<td>Replace the pilot bearing.</td>
</tr>
<tr>
<td></td>
<td>(c) Loose clutch disc hub</td>
<td>Replace clutch disc.</td>
</tr>
<tr>
<td></td>
<td>(d) Loose damper spring retainer</td>
<td>Replace clutch disc.</td>
</tr>
<tr>
<td></td>
<td>(e) Deteriorated or broken damper spring</td>
<td>Replace clutch disc.</td>
</tr>
</tbody>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease or the equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vice.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

</tbody>
</table>
2. Wheel Alignment

A: INSPECTION
Check the following items before taking wheel alignment measurement.
Check items before taking wheel alignment measurement:
- Tire inflation pressure
- Unbalanced right and left tire wear, size difference
- Tire runout
- Excessive play and wear in ball joint
- Excessive play and wear in tie rod end
- Excessive play in wheel bearing
- Right and left wheel base imbalance
- Deformation and excessive play in steering link
- Deformation and excessive play in suspension parts
Check, adjust and measure the wheel alignment in accordance with the procedures indicated in the figure.

<table>
<thead>

</tr>
<tr>
<td>Thrust angle</td>
<td>&lt;Ref. to FS-14, THRUST ANGLE, INSPECTION, Wheel Alignment.&gt;</td>
</tr>
</tbody>
</table>
1. WHEEL ARCH HEIGHT

1) Park the vehicle on a level surface.
2) Set the vehicle under “curb weight” condition. (Make the luggage compartment empty, install the spare tire, jack and service tools, and top up the fuel tank.)
3) Set the steering wheel in a straight-ahead position, and stabilize the suspensions by moving the vehicle straight more than 5 m (16 ft).
4) Suspend a thread from wheel arch (point “A” in the figure below) to determine the point directly above the center of wheel.
5) Measure the distance between the point “A” and the center of wheel.

<table>
<thead>

<tr>
<td>Rear</td>
<td>360 (14.2)</td>
<td>375 (14.8)</td>
</tr>
</tbody>
</table>
### FRONT SUSPENSION

#### 2. CAMBER

**INSPECTION**

1) Place the front wheel on turning radius gauge. Make sure the ground contacting surfaces of front and rear wheels are set at the same height.

2) Set the ST into the center of wheel, and then set the wheel alignment gauge.

   **ST 927380002 ADAPTER**

3) Measure the camber angle in accordance with the operation manual for wheel alignment gauge.

#### FRONT CAMBER ADJUSTMENT

1) When adjusting the camber, adjust it to the following value.

   **Model** | **Camber (Differences between RH and LH: 45° or less)**
   --- | ---
   Sedan | −0°20′±0°45′
   Wagon 2.0 i, 2.5 i | −0°15′±0°45′
   2.0 GT, 3.0 R | −0°20′±0°45′
   OUTBACK 2.5 i, OUTBACK 3.0 R | 0°30′±0°45′

2) Loosen the two self-locking nuts located at the lower front portion of strut.

   **NOTE:**
   When the adjusting bolt needs to be loosened or tightened, hold its head with a wrench and turn the self-locking nut.

3) Turn the camber adjusting bolt so that the camber is set at specification.

   **NOTE:**
   Moving the adjusting bolt by one scale changes the camber by approx. 0°15′.
4) Tighten two new self-locking nuts.

**Tightening torque:**

175 N·m (17.8 kgf-m, 129 ft-lb)

### 3. CASTER

**INSPECTION**

1) Place the front wheel on turning radius gauge. Make sure the ground contacting surfaces of front and rear wheels are set at the same height.
2) Set the ST into the center of wheel, and then set the wheel alignment gauge.

**ST 927380002 ADAPTER**

<table>
<thead>
<tr>
<th>Model</th>
<th>Caster</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sedan</td>
<td>6°00'</td>
</tr>
<tr>
<td>Wagon</td>
<td>5°45'</td>
</tr>
<tr>
<td>OUTBACK</td>
<td>5°05'</td>
</tr>
</tbody>
</table>

### 4. STEERING ANGLE

**INSPECTION**

1) Place the vehicle on turning radius gauge.
2) While depressing the brake pedal, turn the steering wheel fully to the left and right. With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angle.

<table>
<thead>
<tr>
<th>Model</th>
<th>Inner wheel</th>
<th>Outer wheel</th>
</tr>
</thead>
<tbody>
<tr>
<td>OUTBACK</td>
<td>37.8°±1.5°</td>
<td>33.5°±1.5°</td>
</tr>
<tr>
<td>Except for OUTBACK</td>
<td>37.3°±1.5°</td>
<td>33.0°±1.5°</td>
</tr>
</tbody>
</table>

(1) Alignment gauge
(2) Turning radius gauge
Wheel Alignment

1. ADJUSTMENT

1) Turn the tie-rod to adjust the steering angle of both inner and outer wheels.
2) Check the toe-in.

NOTE:
Correct the boot if it is twisted.

5. FRONT WHEEL TOE-IN

• INSPECTION

Toe-in:

0 ± 3 mm (0 ± 0.12 in)

1) Set the toe-in gauge in the position at wheel axis center height behind the right and left front tires.
2) Measure the distance “A” between the marks which are put on the centers of left and right tires.
3) Move the vehicle forward and rotate the tires 180°.

NOTE:
Be sure to rotate the tires in the forward direction.
4) Measure the distance “B” between the left and right marks. Detect toe-in by the following equation:

A - B = Toe-in

• ADJUSTMENT

When adjusting the toe-in, adjust it to the following value.

Toe-in:

0 ± 2 mm (0 ± 0.08 in)

1) Check that the left and right wheel steering angle is within specifications.
2) Loosen the left and right side steering tie-rod lock nuts.
3) Turn the left and right tie rods equal amounts until the toe-in is at the specification.
Both the left and right tie-rod are right-hand threaded. To increase toe-in, turn both tie-rods clockwise by equal amount (viewing from the inside of vehicle).

6. REAR WHEEL TOE-IN

• INSPECTION

Toe-in:

0 ± 3 mm (0 ± 0.12 in)

Refer to “FRONT WHEEL TOE-IN” for rear toe-in inspection procedure.

Tightening torque:

85 N·m (8.7 kgf-m, 62.7 ft-lb)

NOTE:
Check and correct the tie rod boot if twisted.
1) Loosen the self-locking nut on the inner side of rear link.

NOTE:
When loosening or tightening the adjusting bolt, hold the bolt head and turn self-locking nut.

2) Turn the adjusting bolt until toe-in is at the specification.

NOTE:
When the left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 0.6 mm (0.02 in).

3) Tighten a new self-locking nut.

**Tightening torque:**
120 N·m (12.2 kgf-m, 88.5 ft-lb)
7. THRUST ANGLE

• INSPECTION

1) Park the vehicle on a level surface.
2) Move the vehicle 3 to 4 meters (10 to 13 feet) directly forward.
3) Draw the center of loci of both the front and rear axles.
4) Measure the distance “L” between center lines of the loci of axles.

**Thrust angle:**

\[ 0^\circ \pm 30' \]

*Less than 30’ when “L” is less than 23 mm (0.9 in).*

3) When the left and right adjusting bolts are turned by one graduation, the thrust angle will change approx. 17’ [“L” is approx. 13 mm (0.51 in)].

**NOTE:**

Thrust angle refers to a mean value of left and right rear wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while slanting in the oblique direction depending on the degree of the mean thrust angle.

\[ \text{Thrust angle: } r = \frac{\alpha - \beta}{2} \]

\( \alpha \): Rear RH wheel toe-in angle
\( \beta \): Rear LH wheel toe-in angle

Use only positive toe-in values from each wheel to substitute for \( \alpha \) and \( \beta \) in the equation.

• ADJUSTMENT

When adjusting, adjust it to the following value.

**Thrust angle:**

\[ 0^\circ \pm 20' \]

*Less than 20’ when “L” is less than 15 mm (0.6 in).*

1) Make the thrust angle adjustments by turning the toe-in adjusting bolts of rear suspension equally in the same direction.
2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make the thrust angle adjustment.
3. Front Crossmember Support Plate

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the front under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
3) Remove the bolt and remove front crossmember support plate.
   • Large type

   ![Diagram](FS-00104)

   • Small type

   ![Diagram](FS-00105)

   (1) Crossmember support plate
   (2) Jack-up plate

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Tighten the small type crossmember support plate together with stabilizer bracket.
After installing the stabilizer bracket to crossmember, tighten the crossmember support plate together.

*Tightening torque:*
- **Crossmember support plate:**
  
  \[ 60 \text{ Nm} \ (6.1 \text{ kgf-m, 44.3 ft-lb}) \]

- **Crossmember support plate (Joint tightening portion of stabilizer bracket):**
  
  \[ 25 \text{ Nm} \ (2.5 \text{ kgf-m, 18.1 ft-lb}) \]

- **Jack-up plate:**
  
  \[ 60 \text{ Nm} \ (6.1 \text{ kgf-m, 44.3 ft-lb}) \]
4. Front Stabilizer

A: REMOVAL

1) Lift-up the vehicle, and then remove the front wheels.
2) Remove the front under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
4) Remove the stabilizer link.

5) Remove the stabilizer bracket.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
• Use a new self-locking nut.
• Ensure that the stabilizer bushing and stabilizer have the same identification colors.
• Install the stabilizer bushing (front crossmember side) while aligning it with the paint mark on stabilizer.

- Stabilizer bracket has an orientation, so install it with the arrow mark faced to the front side of vehicle.

Tightening torque:
Stabilizer link
45 N·m (4.6 kgf-m, 33.2 ft-lb)
Stabilizer bracket
25 N·m (2.5 kgf-m, 18.1 ft-lb)

C: INSPECTION

1) Check the bushing for crack, fatigue or damage.
2) Check the stabilizer link for damage.
5. Front Ball Joint

A: REMOVAL
1) Lift-up the vehicle and remove the front wheels.
2) Remove the both sides of stabilizer bracket.
3) Pull out the pin from ball stud, remove the castle nut, and extract the ball stud from front arm.
4) Remove the bolt installing ball joint to housing.
5) Extract the ball joint from housing.

B: INSTALLATION
1) Insert the ball joint into housing.

Tightening torque (Bolt):
50 N·m (5.1 kgf-m, 36.9 ft-lb)

CAUTION:
Do not apply grease to the tapered portion of ball stud.
2) Install the ball joint into front arm.

Tightening torque (Castle nut)
Front arm:
39 N·m (4.0 kgf-m, 28.8 ft-lb)
3) Retighten the castle nut further within 60° until the hole in ball stud is aligned with a slot in castle nut. Then, insert a new cotter pin and bend it around castle nut.
4) Install the stabilizer bracket.

C: INSPECTION
1) Measure the play of ball joint by the following procedures. Replace with a new one when the play exceeds specified value.

(1) With 686 N (70 kgf, 154 lb) loaded in direction shown in the figure, measure the dimension \( \varnothing_1 \).

(2) With 686 N (70 kgf, 154 lb) loaded in direction shown in the figure, measure the dimension \( \varnothing_2 \).

(3) Determine the plays from the following formula. \( S = \varnothing_2 - \varnothing_1 \)
(4) Replace with a new one when the play exceeds specified value.

**FRONT BALL JOINT**

*Specified play for replacement S:*

*Less than 0.3 mm (0.012 in)*

2) When the play is within specified value, visually check the dust cover.
3) Remove the ball joint and cover, check them for wear, damage or cracks, and then replace them if any defective part is found.
4) If the dust cover is damaged, replace with a new ball joint.
6. Front Arm

A: REMOVAL
1) Lift-up the vehicle, and then remove the front wheels.
2) Remove the front crossmember support plate. <Ref. to FS-15, REMOVAL, Front Crossmember Support Plate.>
3) Remove the front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>
4) Remove the ball joint of front arm.
5) Remove the nut securing the front arm to crossmember. (Do not remove the bolt.)
6) Remove the front arm support plate.
7) Remove the bolt securing the front arm to crossmember and extract the front arm from crossmember.
8) To remove the stud bolt, use ST.

CAUTION:
Do not remove the stud bolt without necessity. Always replace the parts with new ones when removed.

B: INSTALLATION
1) Using the ST, install the stud bolt.
   ST 20299AG020 STUD BOLT SOCKET
   **Tightening torque:**
   \[110 \text{ N} \cdot \text{m (11.2 kgf-m, 81.1 ft-lb)}\]
2) Using new bolts and self-locking nuts, temporarily tighten the front arm to crossmember.
3) Secure the front arm to body, and then install the support plate with new bolts and self-locking nuts.
   **Tightening torque:**
   - Support plate-to-Front arm: \[110 \text{ N} \cdot \text{m (11.2 kgf-m, 81.1 ft-lb)}\]
   - Support plate-to-Body: \[150 \text{ N} \cdot \text{m (15.3 kgf-m, 110.6 ft-lb)}\]
4) Install the ball joint into housing.
   **Tightening torque:**
   \[50 \text{ N} \cdot \text{m (5.1 kgf-m, 36.9 ft-lb)}\]
5) Install the stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>
6) Lower the vehicle from the lift, and tighten the bolt which secures the front arm to crossmember at the state that wheels are in full contact with the ground and the vehicle is curb weight.
   **Tightening torque:**
   \[95 \text{ N} \cdot \text{m (9.7 kgf-m, 70.1 ft-lb)}\]

NOTE:
Inspect the wheel alignment and adjust if necessary.
C: DISASSEMBLY

1. FRONT BUSHING
Using the ST and a press, remove the front bushing.
ST  927680000  INSTALLER & REMOVER SET

2. REAR BUSHING
1) Scribe an aligning mark on the front arm based on the center of rear bushing recess portion.
 CAUTION:
Always put an alignment mark for aligning the position on bushing installation.

D: ASSEMBLY

1. FRONT BUSHING
Assemble in the reverse order of disassembly.
 CAUTION:
Install the front bushing in proper direction as shown in the figure.

2) Using the ST and a press, remove the rear bushing.
ST1  20299AG000  REMOVER
ST2  20299AG010  BASE
2. REAR BUSHING

1) Install the rear bushing with its longer inner cylinder faced upward and its shorter one faced downward and protruding part rearward as shown in the figure.

2) Align the center of rear bushing recess portion with the aligning mark on the front arm.

3) Using the ST and a press, install the rear bushing.

   ST1  20299AG000  REMOVER
   ST2  20299AG010  BASE

E: INSPECTION

1) Check the front arm for wear, damage or cracks, and correct or replace if defective.
2) Check the bushing for crack, fatigue or damage.
7. Front Strut

A: REMOVAL
1) Lift-up the vehicle, and then remove the front wheels.
2) Scribe an alignment mark on the camber adjusting bolt and strut.
3) Remove the bolt securing brake hose from strut.
4) Remove the bolt securing ABS wheel speed sensor harness.
5) Remove the two bolts securing housing to strut.

NOTE:
While holding the head of adjusting bolt, loosen the self-locking nut.

B: INSTALLATION
1) Install the strut mount at the upper side of strut to body, and tighten it with new self-locking nuts.

*Tightening torque:*
\[20 \, \text{N-m} \, (2.0 \, \text{kgf-m, 14.5 ft-lb})\]

2) Align alignment marks on the camber adjusting bolt and strut.
Using new self-locking nuts, install the strut to housing.

NOTE:
While holding the head of adjusting bolt, tighten the self-locking nut.

*Tightening torque:*
\[175 \, \text{N-m} \, (17.8 \, \text{kgf-m, 129 ft-lb})\]

3) Secure the ABS wheel speed sensor harness to strut.

*Tightening torque:*
\[33 \, \text{N-m} \, (3.4 \, \text{kgf-m, 24.3 ft-lb})\]

4) Install the bolts which secure the brake hose to strut.

*Tightening torque:*
\[33 \, \text{N-m} \, (3.4 \, \text{kgf-m, 24.3 ft-lb})\]

5) Install the front wheels.

NOTE:
Inspect the wheel alignment and adjust if necessary.
C: DISASSEMBLY
1) Using a coil spring compressor, compress the coil spring.

2) Using the ST, remove the self-locking nut.
   ST 20399AG000 STRUT MOUNT SOCKET

3) Remove the strut mount and upper spring seat from strut.
4) Gradually decrease the compression force of compressor, and remove the coil spring.
5) Remove the dust cover and helper spring.

D: ASSEMBLY
1) Before installing the coil spring, strut mount, etc. on strut, check for the presence of air in the dampening force generating mechanism of the strut since air prevents proper dampening force production.
2) Check for presence of air
   (1) Place the strut vertically with the piston rod facing up.
   (2) Move the piston rod to the center of its entire stroke.
   (3) While holding the piston rod end with fingertips, move the rod up and down.
   (4) If the piston rod moves at least 10 mm (0.39 in) in the former step, purge air from the strut.
3) Air purging procedure
   (1) Place the strut vertically with the piston rod facing up.
   (2) Fully extend the piston rod.
   (3) With the piston rod fully extended, place the piston rod side down. The strut must stand vertically.
   (4) Fully contract the piston rod.
   (5) Repeat 3 to 4 times from the step (1).

NOTE:
After completely purging air from the strut, be sure to place the strut with the piston rod facing up. If the strut is laid down and set, check for the entry of air in accordance with “Check for presence of air”.
4) Using a coil spring compressor, compress the coil spring.
NOTE:
Make sure that the vertical installing direction of coil spring is as shown in the figure.
5) Set the coil spring correctly so that its end face fits well into the spring seat as shown in the figure.
6) Install the helper and dust cover to piston rod.
7) Pull the piston rod fully upward, and install the spring seat.

NOTE:
Ensure the upper spring seat is positioned as shown in the figure.

8) Install the strut mount to piston rod, and tighten a new self-locking nut temporarily.
9) Using a hexagon wrench to prevent strut rod from turning, tighten the new self-locking nut with ST.

ST 20399AG000 STRUT MOUNT SOCKET

**Tightening torque:**
55 N·m (5.6 kgf-m, 41 ft-lb)

10) Loosen the coil spring carefully.

---

**E: INSPECTION**

Check the removed part for wear, damage or cracks, and then repair or replace it if defective.

1. **DAMPER STRUT**

1) Check for oil leaks.
2) Move the piston rod up and down to check that it operates smoothly without any hitch.
3) Piston rod play

- Measure the play as follows:
  Fix the outer shell and fully extend the rod. Set a dial gauge at the end of rod L [10 mm (0.39 in)], and then read the dial gauge indication P₁ while applying a force of W [20 N (2 kgf, 4 lb)] to threaded portion. Apply a force of 20 N (2 kgf, 4 lb) in the opposite direction of “W”, and then read the dial gauge indication P₂.

**Play limit (P₁ + P₂):**
0.8 mm (0.031 in)

If the play exceeds limit, replace the strut.

2. **STRUT MOUNT**

Check the rubber part for deformation, cracks or deterioration, and then replace it with a new one if defective.

3. **DUST COVER**

If any cracks or damage are found, replace it with a new one.

4. **COIL SPRING**

If a permanent strain is found, replace it with a new one.

5. **HELPER**

Replace it with a new one if cracked or damaged.
**F: DISPOSAL**

**CAUTION:**
- Before handling struts, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
- Do not disassemble the strut damper or place into a fire.
- Drill a hole into struts in case of discarding struts filled with gas.

1) Place the strut on a level surface with the piston rod fully expanded.
2) Using a 2 to 3 mm (0.08 to 0.12 in) dia. drill, make holes in areas shown in the figure.

(1) 40 mm (1.57 in)
8. Front Crossmember

A: REMOVAL
1) Lift-up the vehicle, and then remove the front wheels.
2) Remove the front exhaust pipe.
4) Remove the front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>
5) Disconnect the tie-rod end from housing.
6) Remove the front arm. <Ref. to FS-19, REMOVAL, Front Arm.>
7) Remove the nuts attaching the engine mount cushion rubber to crossmember.
8) Remove the steering universal joint.
9) Disconnect the power steering hose from steering gearbox.
10) Lift the engine approx. 10 mm (0.39 in) using a chain block.
11) Support the crossmember with a jack, remove the bolts securing crossmember to body, and then gradually lower the crossmember with steering gearbox as a unit.

CAUTION:
When removing the crossmember downward, be careful that the tie-rod end does not interfere with drive shaft boot.

B: INSTALLATION
1) Install in the reverse order of removal.

NOTE:
- Use a new bolt and self-locking nut. For the parts which are not reusable, refer to “COMPONENT”.<Ref. to FS-4, COMPONENT, General Description.>
- Always tighten the bushing in the state that wheels are in full contact with the ground and the vehicle is curb weight.

**Tightening torque:**
- **Crossmember to body:** 95 N·m (9.7 kgf-m, 70.1 ft-lb)
- **Engine mounting to crossmember:** 85 N·m (8.7 kgf-m, 62.7 ft-lb)
- **Front arm-to-Crossmember:** 95 N·m (9.7 kgf-m, 70.1 ft-lb)
- **Front arm-to-Support plate:** 110 N·m (11.2 kgf-m, 81.1 ft-lb)
- **Support plate body:** 150 N·m (15.3 kgf-m, 110.6 ft-lb)
- **Tie-rod end to housing:** 27.0 N·m (2.75 kgf-m, 19.9 ft-lb)
- **Universal joint:** 24 N·m (2.4 kgf-m, 17.4 ft-lb)
- **Stabilizer bracket:** 25 N·m (4.6 kgf-m, 33.2 ft-lb)
- **Stabilizer link:** 45 N·m (2.5 kgf-m, 18.4 ft-lb)
- **Power steering hose-to-Steering gearbox:** 15 N·m (1.5 kgf-m, 11 ft-lb)

Retighten the castle nut further within 60° until the hole in ball stud is aligned with a slot in castle nut after tightening in specified torque.

2) Purge air from the power steering system.
3) Inspect the wheel alignment and adjust if necessary.

C: INSPECTION
Check the crossmember for wear, damage or cracks, and then repair or replace if defective.
General Diagnostic Table

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

</table>
C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before discarding shock absorbers, be sure to bleed gas completely. Also, do not throw away in fire.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or cloth between the part and the vice.
- Be sure to tighten fasteners including bolts and nuts to specified torque.
- Place shop jacks or rigid racks at the specified points.

2. Wheel Alignment

A: INSPECTION

NOTE:
Measure and adjust the front and rear wheel alignment at a time. Refer to “FS” section for measurement and adjustment of wheel alignment. <Ref. to FS-8, INSPECTION, Wheel Alignment.>
3. Rear Stabilizer

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the stabilizer link.
3) Remove the stabilizer bracket.

B: INSTALLATION
1) Install in the reverse order of removal.

NOTE:
- Use a new self-locking nut.
- Ensure the stabilizer bushing and stabilizer have the same identification colors.
- To install the stabilizer bushing, align the paint mark end of stabilizer to the end of stabilizer bushing.
- Stabilizer bracket has an orientation, so install it with the arrow mark faced to the upper side of vehicle.
2) Always tighten the stabilizer bushing in the state that wheels are in full contact with the ground and the vehicle is curb weight.

Tightening torque:
- Stabilizer link
  44 N·m (4.5 kgf-m, 32.5 ft-lb)
- Stabilizer bracket
  40 N·m (4.1 kgf-m, 30 ft-lb)

C: INSPECTION
1) Check the bushing for crack, fatigue and damage.
2) Check the stabilizer link for damage.
4. Rear Arm

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the sub frame support arm.
   <Ref. to RS-21, REMOVAL, Sub Frame Support Arm.>
3) Remove the bearing unit.
   <Ref. to DS-19, REMOVAL, Rear Hub Unit Bearing.>
4) Hang the back plate from sub frame.
5) Remove the bolts which secure the parking brake cable clamp to rear arm bracket.
6) Remove the bolt which hold the brake hose bracket and ABS wheel speed sensor bracket to rear arm.
7) Remove the bolts which secure the brake hose bracket to rear arm. Remove the bolts which secure the ABS wheel speed sensor to rear arm.
8) Remove the stabilizer link from rear arm.
9) Remove the shock absorber from rear arm.
10) Support the rear arm horizontally using a transmission jack.
11) Remove the nuts which hold the rear arm to bracket. Remove the rear arm bracket.

12) Loosen the nut which hold the front link to rear arm.

13) Loosen the nut which hold the rear link to rear arm.

14) Loosen the nut which hold the upper link to rear arm.

15) Remove the bolt which secure the rear arm to the link, and then remove the rear arm.

### B: INSTALLATION

**NOTE:**
Use a new bolt and self-locking nut. For the parts which are not reusable, refer to “COMPONENT”.<Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

1) Support the rear arm using a transmission jack.
2) Install the rear arm and temporarily tighten the bolts which hold the rear arm to the link.
3) Install the bearing unit.<Ref. to DS-20, INSTALLATION, Rear Hub Unit Bearing.>
4) Install the bolts which secure the ABS wheel speed sensor to rear arm.
5) Install the bolts which secure the brake hose to rear arm.
6) Install the bolts which secure the parking brake cable clamp to rear arm bracket.
7) Set the jack which is originally equipped to the vehicle under the upside down situation, and place the jack between rear link and sub frame. Align the installing position of rear shock absorber and rear arm by adjusting the jack position, temporarily tighten the bolt and nut.

**CAUTION:**
Protect the rear link and sub frame from scratch in the way of putting a cloth between the jack and mating portion.
8) Using the transmission jack, support the rear arm horizontally.
9) Tighten the nuts and bolts which hold the rear arm, front link, rear link, upper link and shock absorber.

NOTE:
Always tighten the bushing in the state that wheels are in full contact with the ground and the vehicle is curb weight.

10) Install the sub frame support arm.

NOTE:
Inspect the wheel alignment and adjust it if necessary.

**Tightening torque:**
Refer to “COMPONENT” of “General Description” for tightening torque. <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

**C: DISASSEMBLY**

**1. FRONT BUSHING**

1) Set the ST A with the larger side of its inner diameter turned upward.
2) Set the rear arm with the protruding side of bushing turned upward.

3) Place the ST B on bushing, and push the bushing out.

ST A 20099AE020 INSTALLER & REMOVER SET
ST B 20099AE020 INSTALLER & REMOVER SET

**D: ASSEMBLY**

**1. FRONT BUSHING**

1) Set the ST A with the larger side of its inner diameter turned upward.
2) Set the rear arm with the vehicle inner side of arm turned downward.
3) Place the bushing on rear arm as shown in the figure.
4) Place the ST B on bushing, and press-fit until each edge surface of bushing and rear arm comes to be aligned.

ST A 20099AE020 INSTALLER & REMOVER SET
ST B 20099AE020 INSTALLER & REMOVER SET

E: INSPECTION
Check the rear arm for bend, corrosion or damage.

2. REAR BUSHING
1) Press the bushing into the bore inside of ST D.
2) Set the ST C, ST D and bearing puller in the specified position as shown in the figure, and then press-fit the bush until the outer end of bush and rear end of rear arm in flat.

ST C 20099AE040 INSTALLER & REMOVER SET
ST D 20099AE040 INSTALLER & REMOVER SET
5. Upper Link

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Using the transmission jack, support the rear arm horizontally.

3) Remove the bolt which secure the upper link to sub frame.

4) Remove the bolts which secure the upper link to rear arm, and then remove the upper link.

B: INSTALLATION
1) Using the transmission jack, support the rear arm horizontally.

2) Using new self-locking nuts, install the upper link.

NOTE:
Inspect the wheel alignment and adjust it if necessary.

Tightening torque:
Upper link to Sub frame
57 N·m (5.8 kgf-m, 42 ft-lb)
Upper link to Rear arm
65 N·m (6.6 kgf-m, 48 ft-lb)

C: DISASSEMBLY
Using the ST, press the bushing out of place.
ST 20099AE010 INSTALLER & REMOVER

D: ASSEMBLY
Using the ST, press the bushing into place.
ST 20099AE010 INSTALLER & REMOVER
CAUTION:
Outer side bushing has an orientation. Assemble it with the longer protrusion faced to the rear side of vehicle.

E: INSPECTION
1) Visually check the upper link for damage and deformation.
2) Visually check the bush for crack, damage and fatigue.
6. Rear Shock Absorber

A: REMOVAL
1) Remove the luggage floor mat. (Wagon model)
2) Roll up the trunk side trim. (Sedan model)
3) Lift-up the vehicle, and then remove the rear wheels.
4) Remove the bolts which secure the shock absorber to rear arm.
5) Support the shock absorber using a jack.
6) Remove the nuts which secure the shock absorber mount to vehicle.
7) Remove the shock absorber.

B: INSTALLATION
1) Support the shock absorber using a jack.
2) Using new self-locking nuts, secure the shock absorber to vehicle.

Tightening torque:
30 N·m (3.1 kgf-m, 22.4 ft-lb)

3) Set the jack which is originally equipped to the vehicle under the upside down situation, and place the jack between rear link and sub frame. Align the installing position of rear shock absorber and rear arm by adjusting the jack position. Using new self-locking nuts, temporary tighten the bolt.

4) Using the transmission jack, support the rear arm horizontally.
5) Using new self-locking nuts, tighten the bolt and nut which secure the shock absorber.

Tightening torque:
62 N·m (6.3 kgf-m, 48 ft-lb)

6) Install the floor mat. (Wagon model)
7) Set the trunk side trim. (Sedan model)

NOTE:
Check the wheel alignment and adjust it if necessary.

C: DISASSEMBLY
Refer to Front Strut for disassembly procedures.
<Ref. to FS-23, DISASSEMBLY, Front Strut.>

D: ASSEMBLY
Refer to Front Strut for installation procedures.
<Ref. to FS-23, ASSEMBLY, Front Strut.>

E: INSPECTION
Refer to “Front Strut” for inspection procedures.
<Ref. to FS-24, INSPECTION, Front Strut.>
F: DISPOSAL

CAUTION:
- Before handling shock absorbers, be sure to wear goggles to protect eyes from gas, oil and cutting powder.
- Do not disassemble the shock absorber or place it into a fire.
- Drill a hole into shock absorbers in case of discarding shock absorbers filled with gas.

1) Place the shock absorber on a level surface with the piston rod fully expanded.
2) Make a hole into the specified position 30 mm (1.18 in) deep using a drill with 2 to 3 mm (0.08 to 0.12 in) diameter.

(1) 40 mm (1.57 in)
7. Front Link

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Using the transmission jack, support the rear arm horizontally.
3) Remove the bolt which secure the front link to sub frame.
4) Remove the bolt which secure the front link to rear arm, and then remove the front link.

B: INSTALLATION
1) Using the transmission jack, support the rear arm horizontally.
2) Using new self-locking nuts, install the front link.

CAUTION:
Install the front link with the protrusion side faced to the front side of vehicle.

NOTE:
Inspect the wheel alignment and adjust it if necessary.

Tightening torque:
57 N·m (5.8 kgf-m, 42 ft-lb)

C: INSPECTION
Visually check the front link for damage and deformation.
8. Rear Link

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the rear stabilizer. <Ref. to RS-9, REMOVAL, Rear Stabilizer.>
3) Using the transmission jack, support the rear arm horizontally.

\[\text{RS-00052}\]

(1) Rear arm
(2) Transmission jack

4) Remove the bolts which secure the rear link to rear arm.

\[\text{RS-00080}\]

5) Put alignment marks on the rear link adjusting bolt and sub frame.
6) Remove the bolt which secure the rear link to sub frame, and then remove the rear link.

CAUTION:
Loosen the nut with the bolt head secured when loosening the adjusting bolt.

B: INSTALLATION
1) Using the transmission jack, support the rear arm horizontally.
2) Using new self-locking nuts, install the rear link.

NOTE:
- Tighten the self-locking nut with the bolt head secured when installing the adjusting bolt.
- Inspect the wheel alignment and adjust it if necessary.

**Tightening torque:**
- Rear link to Sub frame: 120 N·m (12.2 kgf-m, 89 ft-lb)
- Rear link to Rear arm: 57 N·m (5.8 kgf-m, 42 ft-lb)

C: DISASSEMBLY
Using the ST A and ST B, press the bushing out of place.
ST A 20099AE000 INSTALLER & REMOVER
ST B 20099AE000 INSTALLER & REMOVER
D: ASSEMBLY
Using the ST A and ST B, press-fit the bushing.
ST A  20099AE000 INSTALLER & REMOVER
ST B  20099AE000 INSTALLER & REMOVER

E: INSPECTION
Visually check the rear link for damage and deformation.
9. Sub Frame Support Arm

A: REMOVAL
1) Lift-up the vehicle, and support the rear sub frame with support stand.
2) Remove the sub frame support arm.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
- Sub frame support arm to Rear arm bracket
  80 N·m (8.2 kgf-m, 59 ft-lb)
- Sub frame support arm to Rear sub frame
  175 N·m (17.8 kgf-m, 129 ft-lb)

C: INSPECTION
Visually check the sub frame support arm for damage and deformation.
10. Sub Frame Support Plate

A: REMOVAL
1) Lift-up the vehicle, and support the rear sub frame with support stand.
2) Remove the sub frame support plate.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
- Support plate to Sub frame
  175 N·m (17.8 kgf-m, 129 ft-lb)
- Support plate to Body
  65 N·m (6.6 kgf-m, 48 ft-lb)

C: INSPECTION
Visually check the support plate for damage.
11. Rear Sub Frame

A: REMOVAL
1) Separate the front exhaust pipe from rear exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the rear differential.
   T-type
   <Ref. to DI-29, REMOVAL, Rear Differential (T-type).>
   VA-type
   <Ref. to DI-46, REMOVAL, Rear Differential (VA-type).>
4) Remove the rear stabilizer. <Ref. to RS-9, REMOVAL, Rear Stabilizer.>
5) Remove the bolts which secure the rear shock absorber to rear arm.
6) Support the sub frame using a transmission jack.
7) Remove the front link from sub frame.
   <Ref. to RS-18, REMOVAL, Front Link.>
8) Remove the rear link from sub frame.
   <Ref. to RS-19, REMOVAL, Rear Link.>
9) Remove the upper link from sub frame.
   <Ref. to RS-14, REMOVAL, Upper Link.>
10) Remove the sub frame support arm.
    11) After removing the bolt, remove the sub frame and sub frame support plate from vehicle.
B: INSTALLATION
1) Install in the reverse order of removal.
2) Follow the procedure below for the rear differential installation and tightening torque.
   T-type
   <Ref. to DI-30, INSTALLATION, Rear Differential (T-type).>
   VA-type
   <Ref. to DI-47, INSTALLATION, Rear Differential (VA-type).>
3) Using the transmission jack, support the rear arm horizontally. Then tighten the nuts and bolts which hold the rear arm, front link, rear link, upper link and shock absorber.

NOTE:
Check the wheel alignment and adjust it if necessary.

C: INSPECTION
Check the removed parts for wear, damage and crack, and repair or replace them if faulty.
12. Helper

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the helper using ST.
   ST 20099AE030 HELPER SOCKET WRENCH

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
32 N·m (3.3 kgf-m, 24 ft-lb)

C: INSPECTION
Check the helper for crack, fatigue and damage.
# General Diagnostic Table

## REAR SUSPENSION

## A: INSPECTION

### 1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Permanent distortion or breakage of coil spring</td>
<td>Replace.</td>
</tr>
<tr>
<td>(2) Rough operation of damper strut or shock absorber</td>
<td>Replace.</td>
</tr>
<tr>
<td>(3) Installation of wrong strut or shock absorber</td>
<td>Replace with proper parts.</td>
</tr>
<tr>
<td>(4) Installation of wrong coil spring</td>
<td>Replace with proper parts.</td>
</tr>
</tbody>
</table>

### 2. POOR RIDE COMFORT

1) Large rebound shock
2) Rocking of the vehicle continues too long after running over bump and hump.
3) Large shock in bumping

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Breakage of coil spring</td>
<td>Replace.</td>
</tr>
<tr>
<td>(2) Overinflating pressure of tire</td>
<td>Adjust.</td>
</tr>
<tr>
<td>(3) Improper wheel arch height</td>
<td>Adjust or replace the coil springs with new ones.</td>
</tr>
<tr>
<td>(4) Fault in operation of damper strut or shock absorber</td>
<td>Replace.</td>
</tr>
<tr>
<td>(5) Damage or deformation of strut mount or shock absorber mount</td>
<td>Replace.</td>
</tr>
<tr>
<td>(6) Unsuitability of maximum or minimum length of damper strut or shock absorber</td>
<td>Replace with proper parts.</td>
</tr>
<tr>
<td>(7) Deformation or loss of bushing</td>
<td>Replace.</td>
</tr>
<tr>
<td>(8) Deformation or damage of helper in strut assembly or shock absorber</td>
<td>Replace.</td>
</tr>
<tr>
<td>(9) Oil leakage of damper strut or shock absorber</td>
<td>Replace.</td>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

### General Description

#### A: SPECIFICATION

#### 1. WHEEL AND TIRE SIZE

**NOTE:**
- Except for KA, KS model, “T-type” tire for temporary use is supplied as a spare tire.
- For KA, KS model, a spare tire of standard tire size is supplied.

B: PREPARATION TOOL

1. GENERAL TOOL

<table>
<thead>
<tr>
<th>TOOL NAME</th>
<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air pressure gauge</td>
<td>Used for measuring tire inflation pressure.</td>
</tr>
<tr>
<td>Dial gauge with magnet stand</td>
<td>Used for measuring wheel runout.</td>
</tr>
<tr>
<td>Wheel balancer</td>
<td>Used for adjusting wheel balance.</td>
</tr>
</tbody>
</table>
2. Tire

A: INSPECTION
1) Take stones, glass, nails etc. out of the tread groove.
2) Replace the tire if as follows.

CAUTION:
When replacing a tire, make sure to use only the same size, construction and load range as originally installed.
(1) When large crack on side wall, damage or crack on tread is found.
(2) When the “tread wear indicator” appears as a solid band across the tread.

3) When a crack on tire valve is found, replace the tire valve.

1. TIRE ROTATION
Rotate tires periodically (5,000 km/3,100 miles) as shown in the figure, in order to prevent them from uneven wear and to prolong their life.
3. Steel Wheel

A: REMOVAL
1) Apply the parking brake, and position the select lever to “P” or “LOW”.
2) Set the shop jacks or a lift to specified point, and support the vehicle with its wheels slightly contacting the floor.
3) Loosen the wheel nuts.
4) Raise the vehicle until its wheels take off the ground using a jack or a lift.
5) Remove the wheel nuts and wheels.

NOTE:
- When removing the wheels, prevent hub bolts from damage.
- Place the wheels with their outer sides facing upward to prevent wheels from damage.

B: INSTALLATION
1) Remove dirt from the mating surface of wheel and brake rotor.
2) Attach the wheel to the hub by aligning the wheel bolt hole with the hub bolt.
3) Temporarily attach the wheel nuts to the hub bolts. (In the case of aluminum wheel, use SUBARU genuine wheel nut for aluminum wheel.)
4) Manually tighten the nuts making sure the wheel hub hole is aligned correctly to the guide portion of hub.
5) Tighten the wheel nuts in a diagonal selection to the specified torque. Use a wheel nut wrench.

Wheel nut tightening torque: 90 N·m (9.1 kgf-m, 65.7 ft-lb)

CAUTION:
- Tighten the wheel nuts in two or three steps by gradually increasing the torque and working diagonally, until they reach the specified torque.
- Do not depress the wrench with foot. Always use both hands when tightening.
- Make sure the bolt, nut and the nut seating surface of the wheel are free from oil.
6) If a wheel is removed for replacement or for repair of a puncture, retighten the wheel nuts to the specified torque after running 1,000 km (600 miles).

C: INSPECTION
1) Deformation or damage on the rim may cause air leakage. Check the rim flange for deformation, crack or damage, and repair or replace as necessary.
2) Jack-up the vehicle until wheels clear the floor.
3) Slowly rotate the wheel to check rim “runout” using a dial gauge.

Rim runout:

<table>
<thead>
<tr>
<th>Axial runout limit</th>
<th>Radial runout limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.5 mm (0.059 in)</td>
<td></td>
</tr>
</tbody>
</table>

4) If the rim runout exceeds specifications, remove the tire from wheel and check runout while attaching the dial gauge to positions shown in the figure.

5) If the measured runout still exceeds specifications, replace the wheel.
4. Aluminum Wheel

A: REMOVAL
Refer to “Steel Wheel” for removal procedure of aluminum wheels. <Ref. to WT-5, REMOVAL, Steel Wheel.>

B: INSTALLATION
Refer to “Steel Wheel” for installation procedure of aluminum wheels. <Ref. to WT-5, INSTALLATION, Steel Wheel.>

C: INSPECTION
Refer to “Steel Wheel” for inspection procedure of aluminum wheels. <Ref. to WT-5, INSPECTION, Steel Wheel.>

Rim runout:

<table>
<thead>
<tr>
<th>Axial runout limit</th>
<th>Radial runout limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0 mm (0.039 in)</td>
<td></td>
</tr>
</tbody>
</table>

D: CAUTION
Aluminum wheels are easily scratched. To maintain their appearance and safety, do the followings:
1) Do not damage the aluminum wheels during removal, installation, wheel balancing, etc. After removing the aluminum wheels, place them on a rubber mat, etc.
2) While driving the vehicle, be careful not to ride over sharp obstacles or allow aluminum wheels to contact the shoulder of the road.
3) When installing a tire chain, be sure to install it properly not to have slack, otherwise it may hit the wheel while driving.
4) When washing the aluminum wheel, use neutral synthetic detergent and water. Avoid using the cleanser including abrasive, hard brushes or an automatic car washer.
5. Wheel Balancing

A: ADJUSTMENT

NOTE:
Change the setting of wheel balancer to adhesive type weight as adhesive type weight is adopted for outside balance weight of 17-inch wheel.

1) Remove the balance weights.

CAUTION:
• Be careful not to damage the wheel.
• Completely remove the two-sided tape of the adhesive type weight from the wheel.

2) Using the wheel balancer, measure the wheel balance.

3) Select a weight close to the value measured by wheel balancer.

CAUTION:
Use SUBARU genuine balance weight.

4) Install the selected weight to the point designated by wheel balancer.

CAUTION:
• Remove grease from adhesive type weight applying surface of wheel.
• Press the adhesive type weight by 25 N (2.5 kgf, 5.6 lb) or more per 5 g (0.18 oz) for 2 seconds at least to attain close contact.
• Make all amounts of the applied adhesive type weight to be 100 g (3.53 oz) or less.
5) Using the wheel balancer, measure the wheel balance again. Check that wheel balance is correctly adjusted.

NOTE:
- 55 g (1.94 oz) knock-on type weight used with aluminum wheel is not available.
- Balance weights of knock-on type weight for aluminum wheel are available for use with any of 15- to 17-inch aluminum wheels.

Service limit: A

Knock-on type weight for steel wheel:

5 — 25 g (0.18 — 0.88 oz) 2.0 mm (0.08 in)
30 g (1.06 oz) or more 1.8 mm (0.07 in)

Knock-on type weight for aluminum wheel:

5 — 25 g (0.18 — 0.88 oz) 5.0 mm (0.20 in)
30 g (1.06 oz) or more 4.5 mm (0.177 in)
6. “T-type” Tire

A: NOTE
“T-type” tire for temporary use is prepared as a spare tire. (Except for KA, KS model)

CAUTION:
- Do not use a tire chain with the “T-type” tire. Because of the smaller tire size, a tire chain will not fit properly and will result in damage to the vehicle and the tire.
- Do not drive at a speed greater than 100 km/h (62 MPH).
- Drive as slowly as possible and avoid passing over bumps.

B: REPLACEMENT
Refer to “Steel Wheel” for installation procedure of “T-type” tire. <Ref. to WT-5, REMOVAL, Steel Wheel.>

CAUTION:
Replace with a conventional tire as soon as possible since the “T-type” tire is only for temporary use.

C: INSPECTION
1) Check the tire air pressure.

Specifications:
- 420 kPa (4.2 kg/cm², 60 psi)
2) Take the stones, glass, nails, etc. out of the tread groove.
3) Check the tires for deformation, cracks, partial wear or wear.

CAUTION:
Replace the tire with a new one if defective.

WT-12
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## General Description

### A: SPECIFICATION

#### 1. REAR DIFFERENTIAL

When replacing a rear differential assembly, select the correct one according to the following table.

**NOTE:**
- Using the different rear differential assembly causes the drive line and tires to “drag” or emit noise.
- For option code, refer to “ID” section. <Ref. to ID-2, IDENTIFICATION, Identification.>

- VA2-type

![Identification](image3)

3. REAR DIFFERENTIAL GEAR OIL

*Recommended gear oil:*

**GL-5 (75W-90)**

**NOTE:**

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

- $T2$: 70 (7.1, 51)
- $T3$: 110 (11.2, 81)
C: CAUTION
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.

</tbody>
</table>
2. Differential Gear Oil

A: INSPECTION
1) Remove the filler plug, and then check the gear oil. If it is contaminated or deteriorated, replace the gear oil. <Ref. to DI-26, REPLACEMENT, Differential Gear Oil.>
2) Check that the gear oil level is up to the bottom of filler plug hole. If the level is low, refill up to the bottom of filler plug hole.
   - Except for VA2-type

B: REPLACEMENT
1) Jack-up the vehicle and support it with rigid racks.
2) Remove the oil drain plug and filler plug, and drain the gear oil.
   CAUTION:
   Be careful not to burn your hands, because gear oil becomes extremely hot after running.
   - VA2-type

3) Tighten the oil drain plug.
   NOTE:
   - Apply liquid gasket to the drain plug threads for T-type.
   Liquid gasket:
   THREE BOND 1105 (Part No. 004403010) or equivalent
   - Use a new aluminum gasket for VA1-type.
   - Use a new metal gasket for VA2-type.
   Tightening torque:
   T-type: 
   49 Nm (5.0 kgf-m, 36.2 ft-lb)
   VA1-type: 
   34 Nm (3.5 kgf-m, 25.3 ft-lb)
   VA2-type: 
   29 Nm (3.0 kgf-m, 21.4 ft-lb)
4) Fill the differential carrier with gear oil to the bottom of filler plug.
   NOTE:
   - Carefully refill oil while watching the level. Excessive or insufficient oil must be avoided.
Recommended gear oil:
<Ref. to DI-2, SPECIFICATION, General Description.>

**Oil capacity:**

- **0.8 q (0.8 US qt, 0.7 Imp qt)**
- Except for VA2-type

5) Install the filler plug.

**NOTE:**
- Apply liquid gasket to the filler plug threads for T-type.

**Liquid gasket:**
- THREE BOND 1105 (Part No. 004403010) or equivalent
- Use a new aluminum gasket for VA1-type.
- Use a new metal gasket for VA2-type.

**Tightening torque:**
- **T-type:**
  - 49 N·m (5.0 kgf-m, 36.2 ft-lb)
- **VA1-type:**
  - 34 N·m (3.5 kgf-m, 25.3 ft-lb)
- **VA2-type:**
  - 29 N·m (3.0 kgf-m, 21.4 ft-lb)
3. Front Differential Assembly

A: NOTE

1. AT MODEL
   - 4AT
     For front differential of 4AT model, refer to “4AT” section. <Ref. to 4AT-113, Front Differential Assembly.>
   - 5AT
     For front differential of 5AT model, refer to “5AT” section. <Ref. to 5AT-94, Front Differential.>

2. MT MODEL
   For front differential of manual transmission, refer to “5MT” section. <Ref. to 5MT-85, Front Differential Assembly.>
4. Rear Differential (T-type)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Move the select lever or gear shift lever to neutral.
3) Loosen the wheel nuts.
4) Release the parking brake.
5) Jack-up the vehicle and support it with rigid racks.
6) Remove the rear wheels.
7) Remove the rear exhaust pipe and muffler.
   • 2.0 L SOHC and DOHC non-turbo model
      <Ref. to EX(H4SO 2.0)-11, Rear Exhaust Pipe.>
      <Ref. to EX(H4SO 2.0)-13, Muffler.>
   • 2.0 L DOHC turbo model
      <Ref. to EX(H4DOTC)-11, Rear Exhaust Pipe.>
8) Remove the propeller shaft.
   <Ref. to DS-10, REMOVAL, Propeller Shaft.>
9) Prepare the transmission jack and band.
10) Loosen the self-locking nuts which hold the rear differential to rear crossmember.
11) Remove the DOJ of rear drive shaft from rear differential using ST.
12) Remove the rear differential front member.
13) Support the rear differential with transmission jack.
14) Secure the rear differential using band.
15) Remove the self-locking nuts which hold the rear differential to crossmember.
16) Remove the rear differential stud bolt from rear crossmember bushing.
NOTE: When removing the stud bolt, carefully adjust the angle and location of transmission jack and jack stand, if necessary.

17) Lower the transmission jack stand after removing the rear differential stud bolt from rear cross-member. Rear drive shaft should not come into contact with lateral link bolt.

18) Pull out the axle shaft from rear differential.

NOTE:
If it is difficult to remove the axle shaft from rear differential, remove it using ST.

ST 28099PA100 DRIVE SHAFT REMOVER

19) Lower the transmission jack.

20) Secure the rear drive shaft to lateral link using wire.

21) Remove the rear differential member plate from rear differential.

B: INSTALLATION
1) Install the rear differential member plate to rear differential.

2) Set the rear differential to transmission jack.

NOTE:
Secure the rear differential to transmission jack using band.
3) Install the ST to rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

4) Insert the spline shaft until the spline portion comes inside the side oil seal.

5) Remove ST from rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

6) Push the rear differential to insert the axle shaft into rear differential.

7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into rear crossmember bushing properly.

8) After inserting the rear differential stud bolt into rear crossmember bushing, lift up the transmission jack and align the rear differential with its own position.

9) Tighten the rear crossmember self-locking nut temporarily.

10) Remove the band from rear differential. Lift up the rear differential until the rear differential is separated from the transmission jack.

11) Install the rear differential front member.

Tightening torque:

- **T1**: 52 N·m (5.3 kgf-m, 38 ft-lb)
- **T2**: 110 N·m (11.2 kgf-m, 81 ft-lb)
12) Tighten the self-locking nut.

**Tightening torque:**

\[ 70 \text{ N \cdot m (7.1 kgf \cdot m, 51 ft-lb)} \]

13) Lower the transmission jack.
14) Install the propeller shaft. <Ref. to DS-11, INSTALLATION, Propeller Shaft.>
15) Install the heat shield cover.
16) Install the rear exhaust pipe and muffler.
17) After installing the rear differential carrier to the vehicle, remove the filler plug, and refill the gear oil to the bottom of plug hole.

**Oil capacity:**

\[ 0.8 \text{ US qt, 0.7 Imp qt} \]

18) Tighten the filler plug.

**NOTE:**

Apply liquid gasket to the drain plug.

**Liquid gasket:**

THREE BOND 1105 (Part No. 004403010) or equivalent

**Tightening torque:**

\[ 49.0 \text{ N \cdot m (5.0 kgf \cdot m, 36.2 ft-lb)} \]

C: DISASSEMBLY

To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact of hypoid driven gear and drive pinion, and backlash
- Hypoid driven gear runout on its back surface
- Total preload of drive pinion
1) Set the ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT

2) Drain the gear oil by removing plug.
3) Remove the air breather cap.

**NOTE:**

- Do not attempt to replace the air breather cap unless necessary.
- Replace the air breather cap with a new one when removing it.
4) Remove the bolts, and then remove the rear cover.

NOTE:
Remove it by tapping with plastic hammer.

5) Keep the side bearing retainers RH and LH separately for easier reassembly. Remove the side bearing retainer attaching bolts, set the ST to differential case, and extract the side bearing retainers RH and LH with a puller.

NOTE:
Each shim, which is installed to adjusted the side bearing preload, should be kept together with its mating retainer.

ST 398457700 ATTACHMENT

6) Pull out the differential case assembly from differential carrier.

NOTE:
Be careful not to hit the teeth against the case.

7) When replacing the side bearing, remove the bearing cup from side bearing retainer using ST.
ST 398527700 PULLER ASSY

8) Extract the bearing cone with ST.

NOTE:
- Do not attempt to disassemble the parts unless necessary.
- Set the puller so that its claws catch the edge of the bearing cone.
- Never mix up the bearing races RH and LH and cones.
ST 18759AA000 PULLER ASSY

9) Remove the hypoid driven gear by loosening hypoid driven gear bolts.

10) Drive out the pinion shaft lock pin from hypoid driven gear side (Model without LSD).

NOTE:
The lock pin is staked at the pin hole end on the differential carrier. Do not drive it out forcibly before removing the stake.
11) Draw out the pinion mate shaft and remove pinion mate gears, side gears and thrust washers. (Model without LSD)

**NOTE:**
The gears should be marked or kept separated right and left, and front and rear as well as thrust washers.

12) Hold the companion flange with ST and remove the self-locking nut.

**ST 498427200 FLANGE WRENCH**

13) Extract the companion flange with a puller.

**ST 899904100 STRAIGHT PIN REMOVER**

14) Press the end of drive pinion shaft and extract it together with rear bearing cone, pinion height adjust washer and washer.

**NOTE:**
Hold the drive pinion so as not to drop it.

**ST 398467700 DRIFT**

15) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

**NOTE:**
Place the replacer so that its center-recessed side faces the pinion gear.

**ST 398517700 REPLACER**
16) Remove the front oil seal from differential carrier using ST.
   ST 398527700 PULLER ASSY

17) Remove the pilot bearing together with front bearing cone and collar using ST.
   ST 398467700 DRIFT

18) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case using a brass bar.

D: ASSEMBLY

NOTE:
- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil to the bearings and thrust washers when installing them.
- Be careful not to mix up the bearing races RH and LH.
- Use new O-rings and gasket.
- Replace the oil seals with new ones at every disassembly. Apply grease to the lips when installing the oil seals.
- Be careful not to mix up the differential oil seal RH and LH.

1) Adjusting preload for front and rear bearings:
Adjust the bearing preload with collar and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

   (1) Press the rear bearing race into differential carrier with ST1 and ST2.
   ST1 398477701 HANDLE
   ST2 398477703 DRIFT 2

   (2) Install the front bearing race to differential carrier using ST1 and ST2.
   ST1 398477701 HANDLE
   ST2 398477702 DRIFT
Rear Differential (T-type)

(3) Measure and record the thickness of pinion height adjust washer.

NOTE:
If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(4) Insert the ST1 into carrier with pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
Use new rear bearing cone.

(5) Install the preload adjusting collar and washer, front bearing cone, ST2, companion flange, and washer and drive pinion nut.

ST1 398507702 DUMMY SHAFT
ST2 398507703 DUMMY COLLAR

(6) Turn the ST1 with hand to make it seated, and tighten the self-locking nut while measuring the preload with spring balance. Select the preload adjusting washer and collar so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:
• Use a new self-locking nut.
• Be careful not to give excessive preload.
• When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.

- Measure the preload in direction of tangent to flange.

ST1 398507702 DUMMY SHAFT
ST2 398507704 BLOCK

* Tightening torque: 181 N·m (18.5 kgf-m, 134 ft-lb)

Drive pinion bearing preload
18.1 — 38.8 N (1.8 — 4.0 kgf, 4.1 — 8.7 lb)
at companion flange bolt hole

ST2 399780104 WEIGHT

(A) Drive pinion
(B) Bearing preload adjusting collar
(C) Bearing preload adjusting washer
(D) Differential carrier
9) Install a new self-locking nut and secure the companion flange using ST and tighten the nut.
   **ST 498427200 FLANGE WRENCH**

   **Tightening torque:**  
   181 N·m (18.5 kgf-m, 134 ft-lb)

10) Assembling differential case
   Install the side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case. (Model without LSD)

   **NOTE:**
   - Apply gear oil on both sides of the washer and on the side gear shaft before installing.
   - Insert the pinion mate shaft into the differential case by aligning the lock pin holes.

(1) Measure the side gear backlash.

   **Side gear backlash:**  
   0.10 — 0.20 mm (0.0039 — 0.0079 in)

(2) Adjust the side gear backlash as specified by selecting side gear thrust washer.

   **Side gear thrust washer**
<table>

</tbody>
</table>

(3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.

(4) After inserting the pinion shaft lock pin into differential case, stake the both sides of the hole to prevent pin from falling off.

11) Install the hypoid driven gear to differential case.

   **NOTE:**
   - Before installing bolts, apply Lock Tite to bolt threads.

   **Lock Tite:**
   **THREE BOND 1324 (Part No. 004403042)**
   - Tighten diagonally while tapping the bolt heads.

   **Tightening torque:**  
   105 N·m (10.7 kgf-m, 77.4 ft-lb)
12) Press the side bearing into differential case using ST.
ST  398227700  DRIFT

13) Press-fit the side bearing cone to the side bearing retainer using ST.
ST  398437700  DRIFT

14) Adjusting the side bearing retainer shims
(1) The hypoid driven gear backlash and side bearing preload can be adjusted by the side bearing retainer shim thickness.
(2) Install the differential assembly into differential carrier in the reverse order of disassembly.
(3) Install the side bearing retainer shims to retainers RH and LH from which they were removed.

NOTE:
Replace the broken or corroded side retainer shim with a new one of same thickness.

(4) Align the arrow mark on differential carrier with the mark on side retainer during installation.

NOTE:
Be careful that side bearing outer race is not damaged by bearing roller.

(5) Tighten the side bearing retainer bolts.

Tightening torque:
10.3 N·m (1.05 kgf·m, 7.6 ft-lb)

(6) Measure the hypoid driven gear to drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.
If the backlash exceeds 0.2 mm (0.08 in), reduce the thickness of shim on the back face of hypoid driven gear and increase the thickness of shim on the tooth face of hypoid driven gear. If the backlash is less than 0.1 mm (0.004 in), increase the thickness of shim on the back face of hypoid driven gear and reduce the thickness of shim on the tooth face of hypoid driven gear.

</table>
Rear Differential (T-type)

**Backlash:**
0.10 — 0.20 mm (0.0039 — 0.0079 in)

(7) At the same time, measure the total preload of drive pinion. Compared with the resistance when differential case is not installed, if the total preload is not within specification, adjust the thickness of side bearing retainer shims, increasing/reducing by an even amount at a time.

**Total preload:**
20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)

15) Recheck the hypoid driven gear to drive pinion backlash.

**Backlash:**
0.10 — 0.20 mm (0.0039 — 0.0079 in)

16) Check the hypoid driven gear runout on its back surface, and make sure that pinion and hypoid driven gear rotates smoothly.

If the hypoid driven gear runout on its back surface exceed the specification, verify that there is any foreign material between hypoid driven gear and differential case, and they are not deformed.

**Hypoid driven gear runout on its back surface:**
0.05 mm (0.0020 in)

17) Checking and adjusting the tooth contact of hypoid driven gear

(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is incorrect, readjust.

**NOTE:**
Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

**Checking item:** Tooth contact pattern is slightly shifted toward toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

(A) Toe side
(B) Heel side
**DIFFERENTIALS**

**Rear Differential (T-type)**

- **Face contact**
  **Checking item:** Backlash is too large.
  **Contact pattern**

  Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

- **Flank contact**
  **Checking item:** Backlash is too small.
  **Contact pattern**

  Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.

- **Toe contact (inside end contact)**
  **Checking item:** Contact areas is small
  **Contact pattern**

- **Heel contact (outside end contact)**
  **Checking item:** Contact areas is small
  **Contact pattern**

  Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.
18) If proper tooth contact is not obtained, once again adjust the drive pinion height by changing RH and LH side bearing retainer shims and the hypoid gear backlash.
19) Remove the RH and LH side bearing retainer.
20) Install a new O-ring to side bearing retainer of both side.
21) Using the ST, install the oil seal to the side bearing retainer of both side.
ST 398437700 DRIFT
22) Align the arrow mark on differential carrier with the mark on side retainer during installation.
23) Tighten the side bearing retainer bolts.
Tightening torque:
\[10.3 \text{ N-m (1.05 kgf-m, 7.6 ft-lb)}\]
24) Install the new gasket and rear cover to the differential carrier, and tighten the bolts to specified torque.
Tightening torque:
\[29 \text{ N-m (3.0 kgf-m, 21.7 ft-lb)}\]
25) Install the breather cap.
26) Install the drain plug and filler plug.

**Tightening torque:**
\[49 \text{ N-m (5.0 kgf-m, 36.2 ft-lb)}\]

**E: INSPECTION**

Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
   - If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact. Replace the gear if excessively worn or incapable of adjustment.
   - If crack, score or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
   - Replace if crack, score or other defects are evident on tooth surface.
   - Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.
3) Bearings
   - Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washers of side gear and pinion mate gear:
   - Replace if seizure, flaw, abnormal wear or other defect is evident.
5) Oil seal
   - Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
   - Replace if the bearing bores are worn or damaged.
7) Differential case
   - Replace if its sliding surfaces are worn or cracked.
8) Companion flange
   - Replace if the oil seal lip contacting surfaces have flaws.

**1. SIDE GEAR BACKLASH**

Using a dial gauge, check the backlash of the side gear. (Model without LSD)

**Side gear backlash:**
\[0.1 — 0.2 \text{ mm (0.004 — 0.008 in)}\]
If the side gear backlash is not within the specification, adjust it as specified by selecting side gear thrust washer.

2. HYPOID DRIVEN GEAR BACKLASH
Using a dial gauge, check the backlash of hypoid driven gear.

_Hypoid driven gear backlash:_

0.1 — 0.2 mm (0.004 — 0.008 in)

If the hypoid driven gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.

3. HYPOID DRIVEN GEAR RUNOUT ON ITS BACK SURFACE
Using a dial gauge, check the hypoid driven gear runout on its back surface.

_Hypoid driven gear runout on its back surface:_

0.05 mm (0.0020 in)

If the hypoid driven gear runout exceeds 0.05 mm (0.0020 in), replace the hypoid driven gear.

4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION
Inspect the tooth contact between hypoid driven gear and drive pinion. <Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

5. TOTAL PRELOAD
Using a spring balance, check the total preload.

_Total preload:_

20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lb)

If the total preload is not within the specification, adjust the side bearing retainer shims.

6. COMPANION FLANGE
1) If rust or dirt is attached to the companion flange, remove them.
2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

_Limit of runout:_

0.08 mm (0.0031 in)
3) Set the gauge inside of the companion flange, and measure the runout.

**Limit of runout:**

0.08 mm (0.0031 in)

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.

5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.

6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

**F: ADJUSTMENT**

1. **SIDE GEAR BACKLASH**
   Adjust the side gear backlash.
   <Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

2. **HYPOID DRIVEN GEAR BACKLASH**
   Adjust hypoid driven gear backlash.
   <Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

3. **TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION**
   Adjust the tooth contact between hypoid driven gear and drive pinion gear.
   <Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>

4. **TOTAL PRELOAD**
   Adjust the side bearing shim.
   <Ref. to DI-35, ASSEMBLY, Rear Differential (T-type).>
5. Rear Differential (VA-type)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Move the select lever or gear shift lever to neutral.
3) Loosen the wheel nuts.
4) Release the parking brake.
5) Jack-up the vehicle and support it with rigid racks.
6) Remove the rear wheels.
7) Remove the rear exhaust pipe and muffler.
8) Remove the heat shield cover.

9) Remove the propeller shaft.
<Ref. to DS-10, REMOVAL, Propeller Shaft.>
10) Prepare the transmission jack and band.

11) Loosen the self-locking nuts which hold the rear differential to rear crossmember.

12) Remove the DOJ of rear drive shaft from rear differential.

13) Remove the nuts which hold the rear differential front member.

14) Support the rear differential with transmission jack.

15) Remove the rear differential front member.
16) Secure the rear differential using band.
17) Remove the self-locking nuts which hold the rear differential to rear crossmember.
18) Remove the rear differential stud bolt from rear crossmember bushing.

NOTE:
When removing the stud bolt, carefully adjust the angle and location of transmission jack and jack stand, if necessary.

19) Lower the transmission jack stand after removing the rear differential stud bolt from rear crossmember. Rear drive shaft should not come into contact with lateral link bolt.

20) Pull out the axle shaft from rear differential.

NOTE:
If it is difficult to remove the axle shaft from rear differential, remove it using tire lever.

21) Lower the transmission jack.

22) Secure the rear drive shaft to lateral link using wire.

23) Remove the rear differential member plate from rear differential.

B: INSTALLATION

1) Insert the rear differential member plate into rear differential.

2) Set the rear differential to transmission jack.

NOTE:
Secure the rear differential to transmission jack using band.
3) Install the ST to rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

4) Insert the spline shaft until the spline portion comes inside the side oil seal.

ST 28099PA090 OIL SEAL PROTECTOR

5) Remove ST from rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

6) Push the rear differential to insert the axle shaft into rear differential.

7) Adjust the transmission jack, if necessary, and insert the rear differential stud bolt into rear crossmember bushing properly.

8) After inserting the rear differential stud bolt into rear crossmember bushing, lift up the transmission jack and align the rear differential to the height of rear differential.

9) Tighten a new self-locking nut temporarily to rear crossmember.

10) Remove the band from rear differential. Lift up the rear differential until the rear differential is left from the transmission jack.

11) Install the rear differential front member with a new self-locking nut.

_Tightening torque:_

\[ T1: 52 \text{ N\cdot m} \ (5.3 \text{ kgf\cdot m, 38 ft-lb}) \]

\[ T2: 110 \text{ N\cdot m} \ (11.2 \text{ kgf\cdot m, 81 ft-lb}) \]
12) Tighten the self-locking nut.

**Tightening torque:**
70 N·m (7.1 kgf-m, 51 ft-lb)

13) Lower the transmission jack.
14) Install the propeller shaft.
<Ref. to DS-11, INSTALLATION, Propeller Shaft.>
15) Install the heat shield cover.
16) Install the rear exhaust pipe and muffler.

**C: DISASSEMBLY**

1. **VA1-TYPE**

   To detect the real cause of trouble, inspect the following items before disassembling.
   - Tooth contact and backlash between hypoid driven gear and drive pinion
   - Hypoid driven gear runout on its back surface
   - Total preload of drive pinion

   1) Set the ST on vise and install the differential assembly to ST.

   **ST 398217700 ATTACHMENT**

   2) Drain the gear oil by removing plug.

   3) Remove the rear cover by loosening retaining bolts.

   4) Remove the air breather cap.

   **NOTE:**
   - Do not attempt to remove the air breather cap unless necessary.
   - When removing the air breather cap, replace it with a new one.

   **ST**

   5) Remove the lock plate RH and LH.
6) Remove the holder RH and LH with ST.
ST 499785500 WRENCH ASSY

7) Pull out the differential case assembly from differential carrier.
NOTE:
Be careful not to hit the teeth against the case.

8) Remove the bearing race from holder RH and LH with ST1 and ST2.
ST1 499705401 PULLER ASSY
ST2 499705404 SEAT

9) Remove the oil seal from holder RH and LH using screwdriver.

NOTE:
Perform this operation only when changing oil seal.

10) Extract the bearing cone with ST1 and ST2.
NOTE:
• Do not attempt to disassemble the parts unless necessary.
• Set the puller so that its claws catch the edge of the bearing cone.
• Never mix up the bearing races RH and LH and cones.
ST1 899524100 PULLER SET
ST2 399520105 SEAT

11) Remove the hypoid driven gear by loosening hypoid driven gear bolts.

12) Drive out the pinion shaft lock pin from hypoid driven gear side.
NOTE:
The lock pin is staked at the pin hole end on the differential case. do not drive it out forcibly before unstaking it.
13) Draw out the pinion mate shaft and remove pinion mate gears, side gears and thrust washers.

**NOTE:**
The gears should be marked or kept separated right and left, and front and rear as well as thrust washers.

14) Support the companion flange with ST and remove self-locking nut.

**ST 498427200 FLANGE WRENCH**

15) Extract the companion flange with a puller.

**ST 498467700 DRIFT**

16) Press the end of drive pinion shaft and extract it together with rear bearing cone, pinion height adjust washer and washer.

**NOTE:**
Hold the drive pinion so as not to drop it.

17) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

**NOTE:**
Place the replacer so that its center-recessed side faces the pinion gear.

**ST 498515500 REPLACER**
18) Remove the front oil seal from differential carrier using ST.  
ST  398527700  PULLER SET

20) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case by using a brass bar.

(A) Differential carrier  
(B) Front oil seal

19) Remove the pilot bearing together with front bearing cone and collar using ST.  
ST  398467700  DRIFT

(A) Pilot bearing  
(B) Collar  
(C) Front bearing  
(D) Rear bearing cup

2. VA2-TYPE

To detect the real cause of trouble, inspect the following items before disassembling.
- Tooth contact and backlash between hypoid driven gear and drive pinion  
- Hypoid driven gear runout on its back surface  
- Total preload of drive pinion

1) Set the ST on vise and install the differential assembly to ST.  
ST  398217700  ATTACHMENT

2) Drain the gear oil by removing plug.  
3) Remove the rear cover by loosening retaining bolts.  
4) Remove the lock plate RH and LH.

(A) 2 cutouts along diagonal lines  
(B) Hit out alternately with brass bar
5) Remove the holder RH and LH with ST.
   ST  18630AA010  WRENCH

6) Pull out the differential case assembly from differential carrier.

   NOTE:
   Be careful not to hit the teeth against the case.

7) Remove the bearing race from holder RH and LH with ST1 and press.
   ST  18758AA000  PULLER

   NOTE:
   • Make sure the bolt of puller turn manually.

   • Set the puller so that its claws catch the groove of holder.

   (A) Groove
   (B) Claw

8) Remove the oil seal from holder RH and LH using screwdriver.

   NOTE:
   Perform this operation only when changing oil seal.

   (A) Holder

9) Extract the bearing cone with ST1, ST2 and ST3.

   NOTE:
   • Do not attempt to disassemble the parts unless necessary.
   • Never mix up the bearing races RH and LH and cones.
10) Remove the hypoid driven gear by loosening hypoid driven gear bolts.

11) Support the companion flange with ST and remove self-locking nut.

12) Extract the companion flange with a puller.

13) Removes the drive pinion shaft.

14) Remove the rear bearing cone from drive pinion by supporting cone with ST.

NOTE:
Place the replacer so that its center-recessed side faces the pinion gear.

15) Remove the front oil seal from differential carrier using screwdriver.

16) Remove the pilot bearing, front bearing cone and collar.

17) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case by using a brass bar.

(A) Companion flange
(B) Puller

(A) Pilot bearing
(B) Collar
(C) Front bearing
(D) Rear bearing cup

(A) 2 cutouts along diagonal lines
(B) Hit out alternately with brass bar
DIFFERENTIALS

Rear Differential (VA-type)

D: ASSEMBLY

1. VA1-TYPE

NOTE:
- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Use a new gasket.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the bearing races RH and LH.
- Replace the oil seal with a new one at every disassembly. Apply grease to the lips when installing the oil seal.
- Be careful not to mix up the differential oil seal RH and LH.

1) Adjusting preload for front and rear bearings:
Adjust the bearing preload with collar and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

(1) Install the rear bearing race into differential carrier with ST1 and ST2.
ST1 398477701 HANDLE
ST2 398477702 DRIFT

(2) Install the front bearing race to differential carrier using ST1 and ST2.

ST1 398477701 HANDLE
ST2 498447110 DRIFT

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.
(4) Measure and record the thickness of pinion height adjust washer.

NOTE:
If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(5) Insert the ST1 into the case with pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
Use new rear bearing cone.

(6) Install the preload adjusting collar and washer, front bearing cone, ST2, companion flange, and washer and self-locking nut.
ST1 498447150 DUMMY SHAFT
ST2 32285AA000 DUMMY COLLAR

(7) Turn the ST1 with hand to make it seated, and tighten the self-locking nut while measuring the preload with spring balance. Select the preload adjusting washer and collar so that the specified preload is obtained when nut is tightened to the specified torque.
NOTE:
- Use a new self-locking nut.
- Be careful not to give excessive preload.
- When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.
- Measure the preload in direction of tangent to flange.

ST1 498447150 DUMMY SHAFT
ST2 398507704 BLOCK

**Tightening torque:**
191 N·m (19.5 kgf-m, 141 ft-lb)

2) Adjusting drive pinion height:
Adjust the drive pinion height with washer installed between the rear bearing cone and the back of pinion gear.

(1) Install the ST2.
ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE
ST3 32285AA000 DUMMY COLLAR

(A) Pinion height adjusting washer

(2) Measure the clearance N between the end of ST2 and the end surface of ST1 by using a thickness gauge.

**NOTE:**
Make sure there is no clearance between the case and ST2.

ST1 498447150 DUMMY SHAFT
ST2 498505501 DIFFERENTIAL CARRIER GAUGE

---

**Drive pinion bearing preload**
For new bearing:
12.7 — 32.2 N (1.3 — 3.3 kgf, 2.9 — 7.3 lb)
Measure at companion flange bolt hole

DIFFERENTIALS

Rear Differential (VA-type)

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed washer with this one.

**NOTE:**
Adjust it using the 1 — 3 washers.

\[ T = T_0 + N - 0.05 \text{ (mm)} \]

(Example of calculation)

- \( T_0 = 0.15 \text{ mm} \)
- \( N = 0.1 \text{ mm} \)

\[ T = 0.15 + 0.1 - 0.05 = 0.2 \text{ mm} \]

Result: Thickness = 0.2 mm
Therefore use the pinion height adjusting washer of part number 32295AA220.

4) Insert the drive pinion into differential carrier, install the selected bearing preload adjusting collar and washer.

5) Press-fit the front bearing cone into carrier with ST1, ST2 and ST3.
   - ST1: 32285AA000 DUMMY COLLAR
   - ST2: 399780104 WEIGHT
   - ST3: 899580100 INSTALLER

6) Insert the collar, then press-fit the pilot bearing with ST1 and ST2.
   - ST1: 399780104 WEIGHT
   - ST2: 899580100 INSTALLER

7) Fit a new oil seal with ST.

**NOTE:**
- Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
- Apply grease to the oil seal lips.
8) Press-fit the companion flange with ST1 and ST2.

NOTE:
Be careful not to damage the bearing.
ST1 899874100 INSTALLER
ST2 399780104 WEIGHT

9) Install a new self-locking nut, and secure the companion flange using ST, and tighten the nut.
ST 498427200 FLANGE WRENCH

**Tightening torque:**
191 N·m (19.1 kgf·m, 141 ft·lb)

10) Assembling differential case
Install the side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case.

NOTE:
• Apply gear oil to both sides of the washer and the side gear shaft before installing.

1) Measure the side gear backlash.

**Side gear backlash:**
0.05 — 0.15 mm (0.0020 — 0.0059 in)

2) Adjust the side gear backlash as specified by selecting side gear thrust washer.

<table>
<thead>
<tr>
<th>Side gear thrust washer</th>

</tbody>
</table>

3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.

4) After inserting the pinion shaft lock pin into differential case, stake the both sides of the hole to prevent pin from falling off.
11) Install the hypoid driven gear on differential case.  

**NOTE:**  
- Before installing bolts, apply Lock Tite to bolt threads.  

**Lock Tite:**  
THREE BOND 1324 (Part No. 004403042)  
- Tighten diagonally while tapping the bolt heads.  

**Tightening torque:**  
62 N·m (6.3 kgf-m, 45.6 ft-lb)

12) Press the side bearing into differential case using ST.  

ST 498485400 DRIFT

13) Assemble holders.  
(1) Install the oil seal into holder RH and LH.  
ST 498447100 INSTALLER  
(2) Install the bearing race into holder RH and LH.  
ST 398477702 DRIFT  

**CAUTION:**  
Make sure that the oil seal, bearing outer race and cone are properly assembled.

(3) Install the differential assembly into differential carrier in the reverse order of disassembly.

(4) Temporarily tighten the side holder RH and LH in differential carrier to install.  

14) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and preload adjustment of differential side bearing.  
(1) Turn the drive pinion with ST for better fitting of differential side bearing.  
ST 498427200 FLANGE WRENCH
(2) Screw in the side holder LH until light contact is made with ST.

ST 499785500 WRENCH

(3) Back off the side (hypoid driven gear side) holder approx. 1 1/2 teeth of holder, and tighten the other side holder by approx. 2 teeth (approx. 1 1/2 + 1/2 teeth). [Back off amount of side (hypoid driven gear side) holder + 1/2 tooth.] This + 1/2 tooth gives preload.

(4) Temporarily tighten the lock plate.

NOTE:
Turn over the lock plate to displace the holder 1/2 tooth.

(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

NOTE:
If measured backlash is not within specified range, repeat the procedures for pinion driven gear set backlash adjustment and differential side bearing preload adjustment.

**Backlash:**

0.10 — 0.15 mm (0.0039 — 0.0059 in)

15) Draw a matching mark on both differential carrier and holder. Remove the holder side at a time. Replace in the original position after inserting an O-ring and applying grease to threaded portion.

16) Tighten the bolt of lock plate to specified torque.

**Tightening torque:**

25 N·m (2.5 kgf-m, 18.1 ft-lb)
17) Recheck the hypoid driven gear to pinion backlash.

**Backlash:**

\[0.10 \text{ — } 0.15 \text{ mm (0.0039 — 0.0059 in)}\]

18) Checking and adjusting the tooth contact of hypoid driven gear

(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is incorrect, readjust.

**NOTE:**

Be sure to wipe off red lead completely after adjustment is completed.

- **Correct tooth contact**
  
  **Checking item:** Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

- **Face contact**
  
  **Checking item:** Backlash is too large.
  
  Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

- **Flank contact**
  
  **Checking item:** Backlash is too small.
  
  Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.
Rear Differential (VA-type)

19) If proper tooth contact is not obtained, once again adjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.

20) Install the new gasket and rear cover to differential carrier and tighten the bolts to specified torque.

**Tightening torque:**

\[ 25 \, \text{Nm} \ (2.5 \, \text{kgf-m, 18.1 ft-lb}) \]

### 2. VA2-TYPE

**NOTE:**

- Assemble in the reverse order of disassembly.
- Check and adjust each part during assembly.
- Use a new gasket.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the bearing races RH and LH.
- Replace the oil seal with a new one at every disassembly. Apply grease to the lips when installing the oil seal.
- Be careful not to mix up the differential oil seal RH and LH.
1) Adjusting preload for front and rear bearings:
Adjust the bearing preload with collar and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

(1) Install the rear bearing race into differential carrier with ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477703 DRIFT 2

(2) Using the ST, install the front bearing race to the differential carrier.

ST 499277200 INSTALLER

(3) Insert the front bearing cone.

NOTE:
Use new front bearing cone.

(4) Measure and record the thickness of pinion adjust washer.

NOTE:
If tooth contact (drive pinion, hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

(5) Insert the ST1 into carrier with pinion height adjusting washer and rear bearing cone fitted onto it.

NOTE:
Use new rear bearing cone.

(6) Install the preload adjusting collar and washer, front bearing cone, collar, companion flange, and washer and self-locking nut.

NOTE:
- Use a new self-locking nut.
- Be careful not to give excessive preload.
- When tightening the self-locking nut, lock companion flange with ST2 as shown in the figure.
- Measure the preload in direction of tangent to flange.

Memo:

(Example of calculation)
\[ T_0 = 0.15 \text{ mm} \]
\[ N = 0.1 \text{ mm} \]
\[ T = 0.15 + 0.1 - 0.05 = 0.2 \text{ mm} \]
Result: Thickness = 0.2 mm
Therefore use the pinion height adjusting washer of part number 32295AA370.

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.

ST 398177700 INSTALLER

4) Insert the drive pinion into differential carrier, install the previously selected bearing preload adjusting collar and washer.

5) Set ST and differential carrier to the press and install the front bearing cone.

ST 399780104 WEIGHT

NOTE:
Set the carrier to the press until the companion flange is installed.

6) Insert the collar, then install the pilot bearing.
7) Fit a new oil seal with ST.
   NOTE:
   - Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
   - Apply grease to the oil seal lips.
   ST 499277200 INSTALLER

8) Press-fit the companion flange with ST.
   NOTE:
   Be careful not to damage the bearing.
   ST 899874100 INSTALLER

9) Install a new self-locking nut, and secure the companion flange using ST, and tighten the nut.
   ST 498427200 FLANGE WRENCH
   **Tightening torque:**
   191 N·m (19.1 kgf-m, 141 ft-lb)

10) Install the hypoid driven gear on differential case.
    NOTE:
    - Tighten diagonally while tapping the bolt heads.
    - Set a cushioning such as wooden block, aluminum plate or shop cloth between vise and differential case if the side gear comes into contact with vise.

**Tightening torque:**
62 N·m (6.3 kgf-m, 45.6 ft-lb)

11) Press the side bearing into differential case using ST.
    ST 398227700 DRIFT

12) Assemble holders.
    (1) Install the new oil seal into holder RH and LH.
    ST 498447100 INSTALLER
(2) Install the bearing race into holder RH and LH.
ST 398487700 DRIFT

CAUTION: Make sure that the oil seal, bearing outer race and cone are properly assembled.

(3) Install the differential assembly into differential carrier in the reverse order of disassembly.

(4) Temporarily tighten the side holder RH and LH in differential carrier to install.

13) Perform the backlash adjustment between the hypoid driven gear and drive pinion, and preload adjustment of differential side bearing.

   (1) Turn the drive pinion with ST for better fitting of differential side bearing.
ST 498427200 FLANGE WRENCH

(2) Screw in the side holder LH until light contact is made with ST.
ST 18630AA010 WRENCH

(3) Back off the side (hypoid driven gear side) holder approx. 1 1/2 teeth of holder, and tighten the other side holder by approx. 2 teeth (approx. 1 1/2 + 1/2 teeth). [Back off amount of side (hypoid driven gear side) holder + 1/2 tooth.] This + 1/2 tooth gives preload.

(4) Temporarily tighten the lock plate.

NOTE: Turn over the lock plate to displace the holder 1/2 tooth.

(5) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

NOTE: If measured backlash is not within specified range, repeat the procedures for pinion driven gear set backlash adjustment and differential side bearing preload adjustment.
**Backlash:**
*0.10 — 0.15 mm (0.0039 — 0.0059 in)*

14) Draw a matching mark on both differential carrier and holder. Remove the holder side at a time. Replace in the original position after inserting an O-ring and applying grease to threaded portion.

15) Tighten the bolt of lock plate to specified torque.

**Tightening torque:**
*25 N·m (2.5 kgf-m, 18.1 ft-lb)*

16) Recheck the hypoid driven gear to pinion backlash.

**Backlash:**
*0.10 — 0.15 mm (0.0039 — 0.0059 in)*

17) Checking and adjusting the tooth contact of hypoid driven gear

(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is incorrect, readjust.

**NOTE:**
Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

**Checking item:** Tooth contact pattern is slightly shifted toward toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

(A) Toe side
(B) Heel side
Rear Differential (VA-type)

- **Face contact**
  **Checking item:** Backlash is too large.
  **Contact pattern**

Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

- **Flank contact**
  **Checking item:** Backlash is too small.
  **Contact pattern**

Corrective action: Reduce thickness of drive pinion height adjusting washer in order to bring drive pinion away from hypoid driven gear.

- **Toe contact (inside end contact)**
  **Checking item:** Contact areas is small
  **Contact pattern**

- **Heel contact (outside end contact)**
  **Checking item:** Contact areas is small
  **Contact pattern**

Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.
18) If proper tooth contact is not obtained, once again adjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.
19) Install the new gasket and rear cover to differential carrier and tighten the bolts to specified torque.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

---

**E: INSPECTION**
Wash all the disassembled parts clean, and examine them for wear, damage and other defects. Repair or replace the defective parts as necessary.
1) Hypoid driven gear and drive pinion
   - If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact. Replace the gear if excessively worn or incapable of adjustment.
   - If crack, score or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.
2) Side gear and pinion mate gear
   - Replace if crack, score or other defects are evident on tooth surface.
   - Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.
3) Bearings
   Replace if seizure, peeling, wear, rust, dragging during rotation, noise or other defect is evident.
4) Thrust washers of side gear and pinion mate gear: Replace if seizure, flaw, abnormal wear or other defect is evident.
5) Oil seal
   Replace if deformed or damaged, and at every disassembling.
6) Differential carrier
   Replace if the bearing bores are worn or damaged.
7) Differential case
   Replace if its sliding surfaces are worn or cracked.
8) Companion flange
   Replace if the oil seal lip contacting surfaces have flaws.

---

1. **SIDE GEAR BACKLASH**
   Using a dial gauge, check the backlash of the side gear. (VA1-type only)
   **Side gear backlash:**
   0.05 — 0.15 mm (0.0020 — 0.0059 in)
   If the side gear backlash is not within the specification, adjust it as specified by selecting side gear thrust washer.

---

2. **HYPOID DRIVEN GEAR BACKLASH**
   Using a dial gauge, check the backlash of hypoid driven gear.
   **Hypoid driven gear backlash:**
   0.10 — 0.15 mm (0.0039 — 0.0059 in)
   If the hypoid driven gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.

---

3. **TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION**
   Inspect the tooth contact between hypoid driven gear and drive pinion. <Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

4. **COMPANION FLANGE**
   1) If rust or dirt is attached to the companion flange, remove them.
   2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.
3) Set the gauge inside of the companion flange, and measure the runout.

**Limit of runout:**

\[0.08 \text{ mm (0.003 in)}\]

4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point that the runout is within the limit.

5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.

6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

**F: ADJUSTMENT**

**1. SIDE GEAR BACKLASH**
Adjust the side gear backlash. (VA1-type)
<Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

**2. HYPOID DRIVEN GEAR BACKLASH**
Adjust hypoid driven gear backlash.
<Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>

**3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION**
Adjust the tooth contact between hypoid driven gear and drive pinion gear.
<Ref. to DI-55, ASSEMBLY, Rear Differential (VA-type).>
6. Rear Differential Front Oil Seal

A: INSPECTION
Make sure that there is no leakage from front oil seal portion. If there is any leakage, replace the oil seal and inspect the propeller shaft.

B: REPLACEMENT
1) Disconnect the ground cable from battery.
2) Move the select lever or gear shift lever to neutral.
3) Release the parking brake.
4) Remove the oil drain plug, and drain gear oil.
   • Except for VA2-type

5) Install the oil drain plug.
   NOTE:
   • Apply liquid gasket to the oil drain plug for T-type.
   • Use a new aluminum gasket for VA1-type.
   • Use a new metal gasket for VA2-type.

   Liquid gasket:
   THREE BOND 1105 (Part No. 004403010) or equivalent

6) Jack-up the rear wheel and support the body with rigid racks.
7) Remove the rear exhaust pipe and muffler.
8) Remove the propeller shaft. <Ref. to DS-10, REMOVAL, Propeller Shaft.>
9) Remove the self-locking nut while holding the companion flange with ST.

ST 498427200 FLANGE WRENCH

10) Extract the companion flange using ST.
ST 399703600 PULLER ASSY

11) Remove the oil seal using ST or screwdriver.
ST 398527700 PULLER ASSY
12) Install a new oil seal with ST.
ST  498447120  OIL SEAL INSTALLER

13) Install the companion flange.

NOTE:
Use a plastic hammer to install companion flange.

14) Tighten the self-locking nut within the specified torque range so that the turning resistance of companion flange becomes the same as that of before oil seal replacement.
ST  498427200  FLANGE WRENCH

NOTE:
Use a new self-locking nut.

**Tightening torque:**

* T-type:
  181 N·m (18.5 kgf-m, 134 ft-lb)
* VA-type:
  191 N·m (19.5 kgf-m, 141 ft-lb)

15) Hereafter, reassemble in the reverse order of disassembly.
7. Rear Differential Side Oil Seal

A: INSPECTION
Make sure that there is no leakage from side oil seal. If there is any leakage, replace the oil seal.

B: REPLACEMENT
1) Remove the rear differential. <Ref. to DI-29, REMOVAL, Rear Differential (T-type).> <Ref. to DI-46, REMOVAL, Rear Differential (VA-type).>
2) Remove the rear differential side oil seal using a screwdriver wrapped with vinyl tape to prevent the side retainer from scratches.
3) Using the ST, install the oil seal to the side retainer.
   • T-type and VA2-type
     ST 398437700 DRIFT
   • VA1-type
     ST 498447100 INSTALLER
4) Install the rear differential. <Ref. to DI-30, INSTALLATION, Rear Differential (T-type).> <Ref. to DI-47, INSTALLATION, Rear Differential (VA-type).>
8. Rear Differential Front Member

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle.
3) Support the rear differential using transmission jack, and then remove the rear differential front member.

B: INSTALLATION
Install the rear differential front member with a new self-locking nut.

Tightening torque:
- $T1: 52 \, N\cdot m \ (5.3 \, kgf\cdot m, \ 38 \, ft\cdot lb)$
- $T2: 110 \, N\cdot m \ (11.2 \, kgf\cdot m, \ 81 \, ft\cdot lb)$

C: INSPECTION
1) Check the rear differential front member for damage, bend and corrosion.
If damage, bend or corrosion is excessive, replace the rear differential front member.
2) Check the bushings of rear differential member for cracking, hardening and damage.
If cracking, hardening or damage is excessive, replace rear differential front member.
### General Diagnostic Table

#### A: INSPECTION

<table>
<thead>
<tr>
<th>Symptom or trouble</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Oil leakage</strong></td>
<td>(1) Worn, scratched or incorrectly seated front or side oil seal. Scored, battered or excessively worn sliding surface of companion flange.</td>
<td>Correct or replace.</td>
</tr>
<tr>
<td></td>
<td>(2) Clogged or damaged air breather.</td>
<td>Clean, repair or replace.</td>
</tr>
<tr>
<td></td>
<td>(3) Loose bolts on differential spindle or side retainer, or incorrectly fitted O-ring.</td>
<td>Tighten the bolts to specified torque. Replace the O-ring.</td>
</tr>
<tr>
<td></td>
<td>(4) Loose rear cover attaching bolts or damaged gasket.</td>
<td>Tighten the bolts to specified torque. Replace gasket and apply liquid gasket.</td>
</tr>
<tr>
<td></td>
<td>(5) Loose oil filler or drain plug.</td>
<td>Retighten and apply liquid gasket.</td>
</tr>
<tr>
<td></td>
<td>(6) Wear, damage or incorrectly fitting for spindle, side retainer and oil seal.</td>
<td>Correct or replace.</td>
</tr>
<tr>
<td><strong>2. Seizure</strong></td>
<td>(1) Insufficient backlash for hypoid gear.</td>
<td>Readjust or replace.</td>
</tr>
<tr>
<td></td>
<td>(2) Excessive preload for side, rear or front bearing.</td>
<td>Readjust or replace.</td>
</tr>
<tr>

$T2$: 190 (19.4, 140)
C: CAUTION
- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.

- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

2. Propeller Shaft

A: REMOVAL

NOTE:
- Before removing propeller shaft, wrap metal parts with a cloth or rubber material.
- In case of DOJ type, before removing propeller shaft, wrap metal parts (installed at the rubber boot of center DOJ) with a cloth or rubber material, as shown in the figure. Rubber boot may be damaged due to interference with adjacent metal parts while bending the DOJ during removal.

1) Disconnect the ground cable from battery.
2) Shift the select lever or gear shift lever to neutral.
3) Release the parking brake.
4) Lift-up the vehicle.
5) Remove the center exhaust pipe.
6) Remove the rear exhaust pipe and muffler.
7) Remove the heat shield cover.
8) Make matching marks on the flange yoke and rear differential before removal.
9) Remove the three bolts which hold propeller shaft to rear differential.
10) Remove the remaining bolt.
11) Remove the two bolts which hold center bearing to vehicle body.
12) Remove the propeller shaft from transmission.

CAUTION:
- Be careful not to damage oil seals and frictional surface of sleeve yoke.
- Cover the center exhaust pipe with a cloth to keep off any ATF or oil spilled from transmission when removing propeller shaft.

NOTE:
Use a container to catch ATF or oil flowing from propeller shaft.

13) Install the extension cap to transmission.
NOTE:
If extension cap is not available, place vinyl bag over opening and fasten with string to prevent gear oil or ATF from leaking.

B: INSTALLATION
1) Insert the sleeve yoke into the transmission and attach center bearing to body.

Tightening torque:
52 N·m (5.3 kgf·m, 38.3 ft-lb)

2) Align the matching marks and connect the flange yoke and rear differential.

Tightening torque:
31 N·m (3.2 kgf·m, 23.1 ft-lb)

3) Install the heat shield cover.
4) Install the center exhaust pipe.
5) Install the rear exhaust pipe and muffler.
6) Lower the vehicle.
7) Connect the battery ground cable to battery.

C: INSPECTION
NOTE:
Do not disassemble propeller shaft. Check the following and replace if necessary.
• Tube surface for dents of cracks
• Splines for deformation or abnormal wear
• Joints for non-smooth operation or abnormal noise
• Center bearing for free play, noise or non-smooth operation.
• Oil seals for abnormal wear or damage
• Center bearing for breakage
Check the following points with propeller shaft installed in vehicle.

1. JOINTS AND CONNECTIONS
1) Remove the center exhaust pipe.
2) Remove the heat shield cover.
3) Check for any looseness of the yoke flange mounting bolts which connect to rear differential and center bearing bracket mounting bolts.

2. SPLINES AND BEARING
1) Remove the center exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the heat shield cover.
4) Turn the propeller shaft by hand to see if abnormal free play exists at splines. Also move yokes to see if abnormal free play exists at spiders and bearings.

3. RUNOUT OF PROPELLER SHAFT
1) Remove the center exhaust pipe.
2) Remove the rear exhaust pipe and muffler.
3) Remove the heat shield cover.
4) Set the dial gauge with its indicator stem at center of propeller shaft tube.
5) Turn the propeller shaft slowly by hands to check for “runout” of propeller shaft.
**Propeller Shaft**

**DRIVE SHAFT SYSTEM**

**Runout:**
*Service limit 0.6 mm (0.024 in)*

![Diagram of propeller shaft and dial gauge](DS-00036)

(A)  Propeller shaft  
(B)  Dial gauge

**4. CENTER BEARING FREE PLAY**

1) Remove the front and center exhaust pipe.  
2) Remove the rear exhaust pipe and muffler.  
3) Remove the heat shield cover.  
4) Move the propeller shaft near center bearing up and down, and left and right with your hand to check for any abnormal bearing free play.

![Diagram of propeller shaft movement](DS-00037)
3. Front Axle

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle and remove the front wheels.
3) Unlock the axle nut.

4) Remove the axle nut using a socket wrench while depressing the brake pedal.

**CAUTION:**
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Remove the stabilizer link.

6) Remove the disc brake caliper from housing, and suspend it from strut using a wire.

7) Remove the disc rotor from hub.

**NOTE:**
If the disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on rotor.

8) Remove the cotter pin and castle nut which secure tie-rod end to housing knuckle arm.

9) Using a puller, remove the tie-rod ball joint from knuckle arm.

10) Remove the ABS wheel speed sensor assembly and harness.

11) Remove the bolts which secure sensor harness to strut.
12) Remove the front arm ball joint from housing.

13) Remove the PTJ from transmission.
14) Remove the front drive shaft assembly from hub. If it is hard to remove, use STs.

ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 AXLE SHAFT PULLER PLATE

15) After scribing an alignment mark on camber adjusting bolt head, remove the bolts which connect housing and strut, and disconnect the housing from strut.

B: INSTALLATION
1) While aligning the alignment mark on the camber adjusting bolt head, tighten the housing and strut using a new self-locking nut.

_Tightening torque:_
177 N·m (18.0 kgf·m, 130 ft-lb)

2) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>

3) Install the front arm ball joint to housing.

_Tightening torque:_
49 N·m (5.0 kgf·m, 36 ft-lb)

4) Install the ABS wheel speed sensor harness to strut.
5) Install the ABS wheel speed sensor on housing.

_Tightening torque:_
32 N·m (3.3 kgf·m, 23.9 ft-lb)

6) Install the disc rotor on hub.
7) Install the disc brake caliper on housing.

_Tightening torque:_
78 N·m (8.0 kgf·m, 57.9 ft-lb)

8) Install the stabilizer link.
9) Connect the tie-rod end ball joint to the knuckle arm with a castle nut.

_Tightening torque:_
27.0 N·m (2.75 kgf·m, 19.9 ft-lb)

**CAUTION:**
When connecting, do not hit the cap at bottom of tie-rod end with hammer.

10) Tighten the castle nut to specified torque and tighten further within 60° until the pin hole is aligned with the slot in nut. Bend the cotter pin to lock.

11) While depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

_Tightening torque:_
220 N·m (22.4 kgf·m, 162 ft-lb)

**CAUTION:**
• Install the wheel after installation of axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.
12) After tightening the axle nut, lock it securely.

13) Install the wheel and tighten the wheel nuts to specified torque.

**Tightening torque:**
90 N·m (9.2 kgf-m, 66 ft-lb)

**C: DISASSEMBLY**
1) Remove the four bolts from housing, and remove the front hub unit bearing and disc cover.

**CAUTION:**
- Do not get closer the tool which charged magnetism to magnetic encoder.
- Be careful not to damage the magnetic encoder.

2) Disassemble the front hub unit bearing. <Ref. to DS-18, DISASSEMBLY, Front Hub Unit Bearing.>

**D: ASSEMBLY**
1) Assemble the front hub unit bearing. <Ref. to DS-18, ASSEMBLY, Front Hub Unit Bearing.>
2) Place the disc cover between housing and front hub unit, and tighten the four bolts.

**Tightening torque:**
65 N·m (6.6 kgf-m, 47.9 ft-lb)

**CAUTION:**
- Do not get closer the tool which charged magnetism to magnetic encoder.
- Be careful not to damage the magnetic encoder.

**E: INSPECTION**
1) Moving the front tire up and down by hand, check there is no backlash in bearing, and check the wheel rotates smoothly.

2) Disassemble the front hub unit bearing. <Ref. to DS-18, DISASSEMBLY, Front Hub Unit Bearing.>
2) Inspect the lean of axis direction using a dial gauge. Replace the bearing if the load range exceeds the limitation.

*Service limit:*

*Maximum: 0.05 mm (0.0020 in)*
4. Front Hub Unit Bearing

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle and remove the front wheels.
3) Unlock the axle nut.
4) Remove the axle nut using a socket wrench while depressing the brake pedal.

CAUTION:
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.

5) Remove the disc brake caliper from housing, and suspend it from strut using a wire.
6) Remove the disc rotor from hub.

NOTE:
If the disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on rotor.

7) Remove four bolts from housing.

8) Remove the front hub unit bearing. If it is hard to remove, use STs.

ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 AXLE SHAFT PULLER PLATE

B: INSTALLATION
1) Place the disc cover between housing and front hub unit, and tighten the four bolts.

_Tightening torque:_
65 N·m (6.6 kgf·m, 47.9 ft·lb)_

(A) Housing

(A) Housing
Front Hub Unit Bearing

DRIVE SHAFT SYSTEM

2) Install the front drive shaft. <Ref. to DS-22, INSTALLATION, Front Drive Shaft.>
3) Tighten the axle nut temporarily.
4) Install the disc rotor on hub.
5) Install the disc brake caliper on the housing.

**Tightening torque:**
- 78 N·m (8.0 kgf-m, 57.9 ft-lb)

6) While depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

**Tightening torque:**
- 220 N·m (22.4 kgf-m, 162 ft-lb)

**CAUTION:**
- Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
- Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

7) After tightening the axle nut, lock it securely.

8) Install the wheel and tighten the wheel nuts to specified torque.

**Tightening torque:**
- 90 N·m (9.2 kgf-m, 66 ft-lb)

C: DISASSEMBLY

Using the ST and a hydraulic press, drive hub bolts out.

ST 28399AG000 HUB STAND

**CAUTION:**
- Be careful not to hammer the hub bolts. This may deform the hub.
- Do not reuse the hub bolt.

**NOTE:**
Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

D: ASSEMBLY

1) Attach the hub to ST securely.

ST 927080000 HUB STAND

2) Using a press, press new hub bolts until their seating surfaces contact the hub.

**NOTE:**
Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

E: INSPECTION

Refer to “FRONT AXLE” for inspection procedures.
<Ref. to DS-15, INSPECTION, Front Axle.>

**CAUTION:**
If there is any fault in the bearing, replace hub unit bearing.
5. Rear Hub Unit Bearing

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the rear wheels.
3) Unlock the axle nut.
4) While applying the parking brake, remove the axle nut using the socket wrench.
   CAUTION: Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.
5) Release the parking brake.
6) Remove the rear ABS wheel speed sensor.
7) Remove the disc brake caliper from back plate, and suspend it from stabilizer using wire.
8) Remove the disc rotor from hub.
   NOTE: 
   - Mark the mating surface of hub and disc rotor before removing the disc rotor to avoid confusing when installing.

9) Remove the four bolts from rear arm.

10) Remove the hub unit bearing.
   CAUTION:
   - Be careful not to damage the magnetic encoder.
   - Do not get closer the tool which charged magnetism to magnetic encoder.

   • If the disc rotor seizes up within hub, drive the disc rotor out by installing an 8-mm bolt in screw hole on rotor.
NOTE:
If it is hard to remove, use STs.
ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 AXLE SHAFT PULLER
PLATE

B: INSTALLATION
1) Aligning the hub unit bearing to the mounting hole of the back plate, install the hub unit assembly and back plate. Tighten the axle nut temporarily.

CAUTION:
• Be careful not to damage the magnetic encoder.
• Do not get closer the tool which charged magnetism to magnetic encoder.

2) Tighten the four bolts to the back plate.

Tightening torque:
65 N·m (6.6 kgf-m, 47.9 ft-lb)

3) Remove the axle nut.
4) Draw the rear drive shaft into specified position.
5) Tighten the new axle nut temporarily.

CAUTION:
Use a new axle nut (olive color).
6) Install the disc rotor on hub.
7) Install the disc brake caliper on back plate.

Tightening torque:
52 N·m (5.3 kgf-m, 38.3 ft-lb)

8) Install the rear ABS wheel speed sensor and brake cable bracket.

9) Adjust the parking brake lever stroke by turning adjuster. <Ref. to PB-5, ADJUSTMENT, Parking Brake Lever.>
10) While applying the parking brake and depressing the brake pedal, tighten a new axle nut (olive color) to the specified torque and lock it securely.

*Tightening torque:*

\[ 190 \text{ N	extperiodcentered}m \ (19.4 \text{ kgf	extperiodcentered}m, 140 \text{ ft	extperiodcentered}lb) \]

**CAUTION:**
- Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
- Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.
11) After tightening the axle nut, lock it securely.

12) Install the wheel and tighten the wheel nuts to specified torque.

*Tightening torque:*

\[ 90 \text{ N	extperiodcentered}m \ (9.2 \text{ kgf	extperiodcentered}m, 66 \text{ ft	extperiodcentered}lb) \]

**C: DISASSEMBLY**
Using the ST and a hydraulic press, drive hub bolts out.

ST 28399AG000  HUB STAND

**CAUTION:**
- Be careful not to hammer the hub bolts. This may deform the hub.
- Do not reuse the hub bolt.

**NOTE:**
Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

**D: ASSEMBLY**
1) Attach the hub to ST securely.

ST 927080000  HUB STAND

2) Using a press, press the new hub bolts until their seating surfaces contact the hub.

**NOTE:**
Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

**E: INSPECTION**
1) Moving the rear tire up and down by hand, check there is no backlash in bearing, and check the wheel rotates smoothly.

2) Inspect the lean of axis direction using a dial gauge. Replace the hub bearing if the lean range exceed the limitation.

**Service limit:**

*Maximum: 0.05 mm (0.0020 in)*
6. Front Drive Shaft

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle and remove the front wheels.
3) Unlock the axle nut.
4) Remove the axle nut using a socket wrench while depressing the brake pedal.

**CAUTION:**
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.
5) Remove the stabilizer link from front arm.
6) Disconnect the front arm from housing.
7) Remove the front drive shaft assembly. If it is hard to remove, use ST1 and ST2.
   ST1 926470000 AXLE SHAFT PULLER
   ST2 927140000 AXLE SHAFT PULLER PLATE
8) Using a bar, remove the front drive shaft from transmission.

**CAUTION:**
Be careful not to allow the bar to damage holder area.

B: INSTALLATION
1) Using the ST, replace the differential side retain-er oil seal with a new one.
   ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER
2) Insert the EBJ into hub splines.
3) Draw the drive shaft into specified position.

**CAUTION:**
Do not hammer drive shaft when installing it.
4) Tighten the axle nut temporarily.
5) Using the ST, install the front drive shaft to transmission.
   ST 28399SA010 OIL SEAL PROTECTOR
6) Connect the front arm to housing.

**Tightening torque:**
49 N·m (5.0 kgf-m, 36 ft-lb)

**CAUTION:**
Be sure to use a new self-locking nut.
7) Install the stabilizer bracket.
8) While depressing the brake pedal, tighten a new axle nut (olive color) to the specified torque and lock it securely.

**Tightening torque:**
220 N·m (22.4 kgf-m, 162 ft-lb)

**CAUTION:**
- Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
- Be sure to tighten axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.
9) After tightening axle nut, lock it securely.
C: DISASSEMBLY
1) Place alignment marks on the shaft and outer race.

2) Remove the PTJ boot band and boot.

CAUTION:
Be careful not to damage boot.

3) Remove the snap ring from PTJ outer race.

4) Remove the PTJ outer race from shaft assembly.
5) Wipe off grease.

CAUTION:
The grease is a special grease. Do not confuse with other greases.

6) Place alignment marks on the roller kit and trunnion.

7) Remove the roller kit from trunnion.

CAUTION:
Be careful with the roller kit position.

8) Place alignment marks on the trunnion and shaft.

9) Remove the snap ring and trunnion.

CAUTION:
Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.
10) Remove the PTJ boot.

NOTE:
Further disassembly of axle is impossible because the BJ cannot be disassembled.

D: ASSEMBLY
1) Place the PTJ boot at the center of shaft.
2) Align alignment marks and install the trunnion on the shaft.
3) Install the snap ring to shaft.

CAUTION:
Confirm that the snap ring is completely fitted in shaft groove.

4) Fill 100 to 110 g (3.53 to 3.88 oz.) of specified grease into the interior of PTJ outer race.
5) Apply a thin coat of specified grease to the roller kit and trunnion.
6) Align alignment marks on roller kit and trunnion and install the roller kit.

CAUTION:
Be careful with the roller kit position.

7) Align alignment marks on the shaft and outer race, and install outer race.

8) Install the snap ring in the groove on PTJ outer race.

CAUTION:
Pull the shaft lightly and assure that the snap ring is completely fitted in the groove.

9) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz.) to the entire inner surface of boot.
10) Install the PTJ boot taking care not to twist it.

CAUTION:
• The large end of PTJ boot and the boot groove shall be cleaned completely so as to be free from grease and other substances.
• When installing PTJ boot, position outer race of PTJ at center of its travel.

11) Put a new band through the clip and wind twice in alignment with band groove of boot.
12) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, use care so that the air within the boot is appropriate.

13) Tighten the band using ST.
ST 925091000 BAND TIGHTENING TOOL

NOTE:
Tighten the band until it cannot be moved by hand.
14) Tap on the clip with the punch provided at the end of ST. ST 925091000 BAND TIGHTENING TOOL

CAUTION:
Tap to an extent that the boot underneath is not damaged.

15) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

CAUTION:
Be careful so that the end of the band is in close contact with clip.

16) Extend and retract the PTJ to provide equal grease coating.

E: INSPECTION
Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.
• PTJ (pillow tripod joint)
  Check for seizure, corrosion, damage, wear and excessive play.
• EBJ (high-efficiency compact ball fixed joint)
  Check for seizure, corrosion, damage and excessive play.
• Shaft
  Check for excessive bending, twisting, damage and wear.
• Boot
  Check for wear, warping, breakage and scratches.
• Grease
  Check for discoloration and fluidity.
7. Rear Drive Shaft

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the rear wheels.
3) Unlock the axle nut.
4) While applying the parking brake, remove the axle nut using the socket wrench.

**CAUTION:**
Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.
5) Remove the rear differential assembly.
   • T-type
     <Ref. to DI-29, REMOVAL, Rear Differential (T-type).>
   • VA-type
     <Ref. to DI-46, REMOVAL, Rear Differential (VA-type).>
6) Remove the axle nut and rear drive shaft. If it is hard to remove, use ST1 and ST2.
   ST1 926470000 AXLE SHAFT PULLER
   ST2 927140000 AXLE SHAFT PULLER PLATE

**CAUTION:**
• Do not hammer drive shaft when removing.
• Do not damage the oil seal and magnetic encoder.

B: INSTALLATION
1) Insert the BJ or EBJ into rear hub splines.

**CAUTION:**
• Be careful not to damage the magnetic encoder.
• Do not get closer the tool which charged magnetism to magnetic encoder.
2) Draw the rear drive shaft into specified position.

**CAUTION:**
Do not hammer drive shaft when installing it.
3) Tighten the axle nut temporarily.
4) Install the rear differential assembly.
   • T-type
     <Ref. to DI-30, INSTALLATION, Rear Differential (T-type).>
   • VA-type
     <Ref. to DI-47, INSTALLATION, Rear Differential (VA-type).>
5) While applying the parking brake and depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

**Tightening torque:**
190 N·m (19.4 kgf-m, 140 ft-lb)

**CAUTION:**
• Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
• Be sure to tighten the axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.
6) Lock the axle nut securely.

7) Install the wheel.

**Tightening torque:**

90 Nm (9.2 kgf-m, 66 ft-lb)

C: DISASSEMBLY

1) Straighten the bent claw of larger end of DOJ boot.
2) Loosen the band by means of screwdriver or pliers.

**CAUTION:**
Be careful not to damage boot.

3) Remove the boot band on the small end of DOJ boot in the same manner.
4) Remove the larger end of DOJ boot from DOJ outer race.
5) Pry and remove the round circlip located at the neck of DOJ outer race with a screwdriver.

6) Take out the DOJ outer race from shaft assembly.

7) Wipe off the grease and take out balls.

**CAUTION:**
The grease is a special grease (grease for constant velocity joint). Do not confuse with other greases.

**NOTE:**
Disassemble exercising care not to lose balls (6 pcs).

8) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race and shift the cage.
9) Remove the snap ring, which fixes inner race to shaft, using pliers.
10) Take out the DOJ inner race.
11) Take off the DOJ cage from shaft and remove DOJ boot.

**CAUTION:**
Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

12) Remove the BJ boot or EBJ boot in the same procedure as DOJ boot.

**NOTE:**
Further disassembly of axle is impossible because the BJ and EBJ cannot be disassembled.

D: ASSEMBLY

**NOTE:**
Use specified grease.

**BJ side:**

NTG2218-M (Part No. 28395AG010)

**EBJ side:**

NTG2218-M (Part No. 28395AG000)

**DOJ side:**

NKG205 (Part No. 28495AG000)

1) Install the BJ or EBJ boot in specified position, and fill it with 60 to 70 g (2.12 to 2.47 oz.) of specified grease.
2) Place the DOJ boot at the center of shaft.

**CAUTION:**
Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

3) Insert the DOJ cage onto shaft.

**NOTE:**
Insert the cage with the cut-out portion facing the shaft end, since the cage has an orientation.

4) Install the DOJ inner race on shaft and fit the snap ring with pliers.

**NOTE:**
Confirm that the snap ring is completely fitted in the shaft groove.

5) Install the cage to inner race fixed upon shaft.

**NOTE:**
Fit the cage with the protruded part aligned with the track on the inner race and then turn by a half pitch.

6) Fill 80 to 90 g (2.82 to 3.17 oz.) of specified grease into the interior of DOJ outer race.

7) Apply a coat of specified grease to the cage pocket and six balls.

8) Insert six balls into the cage pocket.

9) Align the outer race track and ball positions, and place the shaft, inner race, cage and balls in the original positions and then fit outer race.

10) Install the snap ring in the groove on DOJ outer race.

**NOTE:**
- Assure that the balls, cage and inner race are completely fitted in the outer race of DOJ.
- Use care not to place the matched position of snap ring in the ball groove of outer race.
• Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz.)] to the entire inner surface of boot. Also apply grease to shaft.
12) Install the DOJ boot taking care not to twist it.

NOTE:
• The inside of the larger end of DOJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.
• When installing DOJ boot, position outer race of DOJ at center of its travel.

13) Put a new band through the clip and wind twice in alignment with band groove of boot.
14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:
When tightening boot, exercise care so that the air within the boot is appropriate.

15) Tighten the band by using ST.
ST 925091000 BAND TIGHTENING TOOL

NOTE:
Tighten the band until it cannot be moved by hand.

16) Tap on the clip with the punch provided at the end of ST.
ST 925091000 BAND TIGHTENING TOOL

NOTE:
Tap to an extent that the boot underneath is not damaged.

17) Cut off the band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

NOTE:
Be careful so that the end of the band is in close contact with clip.

18) Install the BJ boot or EBJ boot in the same procedure as DOJ boot.
19) Extend and retract the DOJ to provide equal grease coating.

E: INSPECTION
Check the removed parts for damage, wear, corrosion etc. Repair or replace if defective.
• DOJ (Double Offset Joint)
Check for seizure, corrosion, damage, wear and excessive play.
• EBJ (high-efficiency compact ball fixed joint)
Check for seizure, corrosion, damage, wear and excessive play.
• Shaft
Check for excessive bending, twisting, damage and wear.
• BJ (Bell Joint)
Check for seizure, corrosion, damage and excessive play.
• Boot
Check for wear, warping, breakage and scratches.
• Grease
Check for discoloration and fluidity.
## 8. General Diagnostic Table

### A: INSPECTION

#### NOTE:

Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

**Tightening torque: N·m (kgf-m, ft-lb)**

- **T1:** 7.5 (0.76, 5.5)
- **T2:** 33 (3.3, 24)

### C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
## D: PREPARATION TOOL

</tbody>
</table>
2. ABS Control Module and Hydraulic Control Unit (ABSCM&H/U)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Use compressed air to get rid of water around the ABSCM&H/U.

NOTE:
When dust and dirt are attached to the terminal, they may cause poor contact.

3) Disconnect the ABSCM&H/U connector pulling up the lock lever.

CAUTION:
Do not pull the harness when disconnecting connector.

4) Remove the harness clip.
5) Disconnect the brake pipes from ABSCM&H/U.
6) Wrap the brake pipe using a vinyl bag not to spill the brake fluid on the vehicle body.

CAUTION:
When brake fluid is attached to the vehicle body, wash it off with water and wipe the water.
7) Remove the nuts and remove the ABSCM&H/U.

CAUTION:
• Do not drop or bump the ABSCM&H/U.
• Do not turn ABSCM&H/U upside down or place it sideways for storage.
• Be careful that no foreign objects are mixed in ABSCM&H/U.
• Be careful that no water enters inside the connectors.

8) Remove the ABSCM&H/U bracket.

B: INSTALLATION
1) Install the ABSCM&H/U bracket.

Tightening torque:
33 N·m (3.3 kgf-m, 24 ft-lb)

2) Install the ABSCM&H/U aligning the groove of damper on ABSCM&H/U side with the pawl of bracket.

NOTE:
Check the identification mark of ABSCM&H/U.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

3) Connect the brake pipes to their correct ABSCM&H/U positions.

Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

4) Using a harness clip, secure the ABSCM&H/U harness to bracket.
5) Connect the connector to ABSCM&H/U.

NOTE:
• Be sure to remove all foreign matters from inside the connector before connecting.
• Ensure the ABSCM&H/U connector is securely locked.
6) Bleed air from the brake system.

C: INSPECTION
1) Check the connected and fixed condition of connector.
2) Check the mark used for ABSCM&H/U identification.
1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift-up the vehicle, and then remove the wheels.
2) Disconnect the air bleeder screws from the FL and FR caliper bodies.
3) Connect two pressure gauges to the FL and FR caliper bodies.

**CAUTION:**
- Pressure gauges used exclusively for brake fluid must be used.
- Do not use the pressure gauge for the measurement of transmission oil pressure since the piston seal may be expanded and deformed.

**NOTE:**
Wrap a sealing tape around the pressure gauge.

4) Bleed air from the pressure gauges and the FL and FR caliper bodies.
5) Perform ABS sequence control.
6) When the hydraulic unit begins to work, first the FL side performs decompression, holding and compression, and then the FR side performs decompression, holding and compression.

7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.

<table>
<thead>
<tr>
<th></th>
<th>Rear wheel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial value</td>
<td>3,500 kPa</td>
</tr>
<tr>
<td></td>
<td>(36 kgf/cm², 511 psi)</td>
</tr>
<tr>
<td>When decompressed</td>
<td>500 kPa</td>
</tr>
<tr>
<td></td>
<td>(5 kgf/cm², 73 psi) or less</td>
</tr>
<tr>
<td>When compressed</td>
<td>3,500 kPa</td>
</tr>
<tr>
<td></td>
<td>(36 kgf/cm², 511 psi) or more</td>
</tr>
</tbody>
</table>

8) Remove the pressure gauges from the FL and FR caliper bodies.
9) Connect the air bleeder screws of the FL and FR caliper bodies.
10) Remove the air bleeder screws from the RL and RR caliper bodies.
11) Connect two pressure gauges to the RL and RR caliper bodies.
12) Bleed air from the brake system.
13) Bleed air from the pressure gauges and the RL and RR caliper bodies.
14) Perform ABS sequence control.
15) When the hydraulic unit begins to work, first the RR side performs decompression, holding and compression, and then the RL side performs decompression, holding and compression.
16) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that the kick-back is normal, and tightness is normal.
17) Remove the pressure gauge from the RL and RR caliper bodies.
18) Connect the air bleeder screws of the RL and RR caliper bodies.
19) Bleed air from the brake system.
2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

1) Install the spare fuse to the FWD connector located in the main fuse box for the model without AT VTD.

2) Since the MT model and AT VTD model cannot cut off the AWD circuit forcibly, set the wheels other than measured one onto free rollers.

3) Prepare for the ABS sequence control. <Ref. to ABS-10, ABS Sequence Control.>

4) Set the front wheels or rear wheels on the brake tester and set the select lever to "neutral".

5) Operate the brake tester.

6) Perform ABS sequence control. <Ref. to ABS-10, ABS Sequence Control.>

7) When the hydraulic unit begins to work, check the following working sequence.

- The FL wheel performs decompression, holding and compression in sequence, and subsequently the FR wheel repeats the cycle.
- The RR wheel performs decompression, holding and compression in sequence, and subsequently the RL wheel repeats the cycle.

8) Read values indicated on the brake tester and check if the fluctuation of the values between decompression and compression meets the standard values.

<table>
<thead>
<tr>
<th></th>
<th>Front wheel</th>
<th>Rear wheel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial value</td>
<td>1,000 N (102 kgf, 225 lb)</td>
<td>1,000 N</td>
</tr>
<tr>
<td>When decompressed</td>
<td>500 N (51 kgf, 112 lb) or less</td>
<td>500 N (51 kgf, 112 lb) or less</td>
</tr>
<tr>
<td>When compressed</td>
<td>1,000 N (102 kgf, 225 lb) or more</td>
<td>1,000 N (102 kgf, 225 lb) or more</td>
</tr>
</tbody>
</table>

9) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: REPLACEMENT

CAUTION:
- Because the seal of ABSCM cannot be replaced, do not pull or peel it with lifting up.
- Because the screw part of H/U deteriorates in every replacement procedure, do not perform the replacement more than five times on it. When the malfunction is found though the replacement that performed is less than five times, replace the H/U body.
- Use new screws for installation of ABSCM.
- When the sealing surface of ABSCM or H/U is dirty or damaged and it cannot be removed or repaired, replace it with new one.

1) Remove the ABSCM&H/U. <Ref. to ABS-6, REMOVAL, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

2) To prevent entering foreign matter and brake fluid leakage, plug the oil pressure port of ABSCM&H/U using screw plug and etc.

3) Set the pump motor part of removed ABSCM&H/U faces down on a vise.
NOTE:
Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and vice.

4) Using TORX® bit T20, remove the four screws of ABSCM.

NOTE:
Always use new screws.

5) Slowly remove the ABSCM upward from H/U.

NOTE:
To prevent damaging of coil part, remove the ABSCM straightly from H/U.

6) Ensure there are no dirt or damage on sealing surface of H/U.

CAUTION:
- Do not clean the ABSCM & H/U with applying compressed air.
- Do not repair the damages of H/U sealing surface using file or metal scraper. To remove the sealing, use resin scraper. Do not use the chemical materials (thinner and etc.).

7) Position the coil of new ABSCM to align H/U valve.

8) To prevent deforming of ABSCM housing cover, hold the corner of ABSCM and install it to the H/U without tilting.

9) Using TORX® bit T20, tighten the screws step-wise in the order of (1) through (4).

10) Check that there is no foreign matter in aligning part between ABSCM and H/U.

11) Using TORX® bit T20, tighten the screws step-wise in the order of (1) through (4) again.

Tightening torque:
3 N·m (0.3 kgf-m, 2.2 ft-lb)

12) Check that there is no clearance in aligning part between ABSCM and H/U.

13) Install the ABSCM&H/U to vehicle.
3. ABS Sequence Control

A: OPERATION
1) While the ABS sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve operation.
2) ABS sequence control can be started by diagnosis connector or Subaru Select Monitor.

1. ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

NOTE:
In the event of any trouble, the ABS sequence control is not operated.
1) Turn the ignition switch to OFF at the vehicle stationary mode.
2) Take out the diagnosis connector from the inside of instrument panel lower cover on the driver’s side, and connect one of ground terminal to connector terminal No. 8.
3) Turn the ignition switch to ON without depressing the brake pedal.
4) After the ABS warning light is turned off, perform the brake pedal operation as follows; press it within 3 seconds, → release it, → press it again, → release it again, → and then press it.

NOTE:
Engine must not start.
5) After completion of ABS sequence control, turn the ignition switch to OFF.

2. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the ABS sequence control is not operated.
1) Connect the Subaru Select Monitor to data link connector under the driver’s side instrument panel lower cover.
2) Turn the ignition switch to ON.
3) Set the Subaru Select Monitor switch to ON.
4) Set the Subaru Select Monitor to “Brake Control” mode.

5) When the “Function check sequence” is selected, the “ABS sequence control” will start.
6) Execute the following operations when the message “Press the brake pedal so that the brake pedal force is between 100 and 150 kgf” is displayed.
   (1) When the brake tester is used, press brake pedal pad with a force of 1,000 N (102 kgf, 225 lb).
   (2) When using the pressure gauge, press the brake pedal so as to make the pressure gauge indicate 3,500 kPa (36 kg/cm², 511 psi).
7) “Press the [YES] key” will be displayed. Press the [YES] key.
8) The brake line being operated is displayed on the Subaru Select Monitor.
3. CONDITIONS FOR ABS SEQUENCE CONTROL

- V max < 4 km/h (2.5 MPH)
  - OFF
  - ON

- V max < 10 km/h (6 MPH)
  - OFF
  - ON

ABS Sequence Control
### B: SPECIFICATION

#### 1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

1. When the speed of at least one wheel reaches 10 km/h (6 MPH).
2. When the diagnosis connector is disconnected. (Without Subaru Select Monitor)
3. When the brake pedal is released during ABS sequence control and the stop light switch goes OFF.
4. When the brake pedal is depressed after the ignition key is turned to ON, but before ABS warning light goes out. (Without Subaru Select Monitor)
5. When the ignition key is turned to ON, but the brake pedal is not depressed within 3 seconds after ABS warning light goes OFF. (Without Subaru Select Monitor)
6. After completion of ABS sequence control.
7. When malfunction is detected.

---

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**NOTE:**

When using the Subaru Select Monitor, the control operation starts from point A. The patterns from ignition key ON to the point A show that operation is started by diagnosis connector. (However, it is required to turn the stop light switch to ON before point A.)
Front ABS Wheel Speed Sensor

4. Front ABS Wheel Speed Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Disconnect the ABS wheel speed sensor connector located next to the front strut mounting house in engine compartment.
3) Separate the sensor connector and vehicle securing clip. Apply force in the direction of (2) to unlock the pawl, and then slide the connector in the direction of (3). Pull out the connector to the tire side from grommet hole.

CAUTION:
Clip would break when removing the clip without separating sensor connector and clip.

4) Remove the sensor harness bracket.

5) Remove the bolts which secure sensor harness to front strut.
6) Remove the front ABS wheel speed sensor from housing.

CAUTION:
• Be careful not to damage the sensor portion.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Sensor:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
Bracket:
33 N·m (3.3 kgf-m, 24 ft-lb)

CAUTION:
Be careful not to damage the sensor portion.

NOTE:
• Check the identification (mark) on the harness to make sure that no warp exists. (RH: K1 (White), LH: K2 (Yellow))
• Check if the harness is not pulled and does not come in contact with the suspension or body during steering wheel effort.

C: INSPECTION

1. INSPECTION WITH SUBARU SELECT MONITOR
1) Connect the Subaru Select Monitor to data link connector.
2) Select {Current Data Display & Save}. Check if the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position.
3) If the speed indicated on the display does not change, check the ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>

2. ABS WHEEL SPEED SENSOR
1) Check the pole piece of the ABS wheel speed sensor for foreign particles or damage. If necessary, clean the pole piece or replace the ABS wheel speed sensor.
2) Charge a 12 V power supply to the No. 2 terminal of sensor connector as shown in the figure, and then install the resistance to No. 1 terminal. Rotate the wheel about 2.75 km/h (2 MPH) or equivalent, measure the voltage using oscilloscope.

**Standard value of output voltage:**

\[ 0.7 \text{ — 1.4 V} \]

---

**NOTE:**
Check the ABS wheel speed sensor cable for discontinuity. If necessary, replace with a new one.
5. Rear ABS Wheel Speed Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Disconnect the connector from rear ABS wheel speed sensor.
3) Remove the sensor harness bracket from rear arm.
4) Remove the rear ABS wheel speed sensor from rear arm.

CAUTION:  
- Be careful not to damage the sensor portion.
- Do not apply excessive force to the sensor harness.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:  
Be careful not to damage the sensor portion.

Tightening torque:

Sensor:  
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

Bracket:  
33 N·m (3.3 kgf-m, 24 ft-lb)

NOTE:  
Check the identification (mark) on the harness to make sure that no warp exists. (RH:K5(White), LH:K6(Yellow))

C: INSPECTION

1. ABS WHEEL SPEED SENSOR

<Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>
6. Front Magnetic Encoder

A: REMOVAL
Refer to “Front Hub Bearing” for removal, because the front magnetic encoder is integrated with front hub bearing.
<Ref. to DS-17, REMOVAL, Front Hub Unit Bearing.>

B: INSTALLATION
Refer to “Front Hub Bearing” for installation, because the front magnetic encoder is integrated with front hub bearing.
<Ref. to DS-17, INSTALLATION, Front Hub Unit Bearing.>

C: INSPECTION
Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit bearing.

NOTE: Replace the hub unit bearing with a new one if there is any defect found on the magnetic encoder, since the magnetic encoder is integrated with hub unit bearing assembly.
7. Rear Magnetic Encoder

A: REMOVAL
Refer to “Rear Hub Unit Bearing” for removal, because the rear magnetic encoder is integrated with rear hub unit bearing.
<Ref. to DS-19, REMOVAL, Rear Hub Unit Bearing.>

B: INSTALLATION
Refer to “Rear Hub Unit Bearing” for installation, because the rear magnetic encoder is integrated with rear hub unit bearing.
<Ref. to DS-20, INSTALLATION, Rear Hub Unit Bearing.>

C: INSPECTION
Visually check the magnetic encoder for any damage. If necessary, replace with a new hub unit bearing.

NOTE:
Replace the hub unit bearing with a new one if there is any defect found on the magnetic encoder, since the magnetic encoder is integrated with hub unit bearing assembly.
8. G Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the console box.
   <Ref. to EI-53, REMOVAL, Console Box.>
3) Disconnect the connector from G sensor.
4) Remove the G sensor from body.

CAUTION:
• Do not drop or bump the G sensor.
• Since G sensor is a unit with the bracket, do not disassemble them.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:
Do not drop or bump the G sensor.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
## C: INSPECTION

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** CHECK G SENSOR.  
1) Turn the ignition switch to OFF.  
2) Connect the Subaru Select Monitor to data link connector.  
3) Set the Subaru Select Monitor to the (Brake Control) mode.  
4) Set the display in the (Current Data Display & Save) mode.  
5) Read the G sensor output value. | Is the value $-1.2 - 1.2 \text{ m/s}^2$ when the vehicle is in horizontal position? | Go to step 2. | Repair the harness connector between G sensor and ABSCM&H/U. Or replace G sensor. |
| **2** CHECK G SENSOR.  
1) Remove the console box.  
2) Remove the G sensor from vehicle. (Do not disconnect connector.)  
3) Read the Subaru Select Monitor display. | Is the value $8.1 - 11.2 \text{ m/s}^2$ when G sensor is inclined forward to $90^\circ$? | Go to step 3. | Repair the harness connector between G sensor and ABSCM&H/U. Or replace G sensor. |
| **3** CHECK G SENSOR.  
Read the Subaru Select Monitor display. | Is the value $-8.1 - 11.2 \text{ m/s}^2$ when G sensor is inclined backward to $90^\circ$? | G sensor is normal. | Repair the harness connector between G sensor and ABSCM&H/U. Or replace G sensor. |
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

## Basic Diagnostic Procedure

### A: PROCEDURE

**CAUTION:**
Remove foreign matters (dust, water, oil, etc.) from the ABSCM&H/U connector during removal and installation.

**NOTE:**
- To check harness for broken wires or short circuits, shake trouble spot or connector.
- Refer to “Check List for Interview”. <Ref. to ABS(diag)-4, Check List for Interview.>

| 1    | CHECK PRE-INSPECTION.  
1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to ABS(diag)-4, Check List for Interview.>  
2) Before performing diagnostics, check the component which might affect ABS problems. <Ref. to ABS(diag)-8, INSPECTION, General Description.>  
CAUTION: Remove foreign matters (dust, water, oil, etc.) from the ABSCM&H/U connector during removal and installation. | Is the component that might influence the ABS problem normal? | Go to step 2. | Repair or replace each unit. |
| 2    | CHECK INDICATION OF DTC ON SCREEN.  
1) Turn the ignition switch to OFF.  
2) Connect the Subaru Select Monitor to data link connector.  
3) Turn the ignition switch to ON and Subaru Select Monitor to ON.  
NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to ABS(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>  
4) Read the DTC. <Ref. to ABS(diag)-25, OPERATION, Read Diagnostic Trouble Code (DTC).>  
5) Record all DTCs and Freeze Frame Data. | Is DTC displayed? | Go to step 4. | Go to step 3. |
| 3    | PERFORM THE GENERAL DIAGNOSTICS.  
1) Inspect using “General Diagnostic Table”. <Ref. to ABS(diag)-82, General Diagnostic Table.>  
2) Perform clear memory mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>  
3) Perform the inspection mode. <Ref. to ABS(diag)-26, Inspection Mode.>  
4) Read the DTC. <Ref. to ABS(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>  
Check the DTC does not displayed. | Does the ABS warning light go off after turning the ignition switch to ON? | Finish the diagnosis. | Check in accordance with “Diagnostic Procedure for ABS”. <Ref. to ABS(diag)-21, WITHOUT DTC, INSPECTION, Subaru Select Monitor.> |
### Basic Diagnostic Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 4    | PERFORM THE DIAGNOSIS.  
   1) Refer to the “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, LIST, List of Diagnostic Trouble Code (DTC).>  
   2) Fix the wrong part.  
   3) Perform clear memory mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>  
   4) Perform the inspection mode. <Ref. to ABS(diag)-26, Inspection Mode.>  
   5) Read the DTC. <Ref. to ABS(diag)-15, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> | Is DTC displayed? | Repeat step 1 to 4 until DTC is not shown. | Finish the diagnosis. |
Check List for Interview

2. Check List for Interview

A: CHECK
Check the following items about the vehicle’s state.

1. STATE OF ABS WARNING LIGHT

| ABS warning light comes on. | ❑ Always  
|                            | ❑ Sometimes  
|                            | ❑ Only once  
|                            | ❑ Not come on  
|                            | • When / how long does it come on? |

| Ignition key position | ❑ LOCK  
|                      | ❑ ACC  
|                      | ❑ ON (before starting engine)  
|                      | ❑ START  
|                      | ❑ ON (after Engine starting, engine is running)  
|                      | ❑ ON (after Engine starting, engine is at a standstill) |

| Timing | ❑ Immediately after turning the ignition to ON  
|        | ❑ Immediately after turning the ignition to START  
|        | ❑ When accelerating  
|        | ❑ When driving at a constant speed  
|        | ❑ When decelerating  
|        | ❑ When turning to the right  
|        | ❑ When turning to the left  
|        | ❑ When operating other electrical parts  
|        | • Parts name:  
|        | • Operating condition:  

|                 | ❑ When accelerating — km/h  
|                 | — MPH  
| Timing          | ❑ When driving at a constant speed km/h  
|                 | — MPH  
| Timing          | ❑ When decelerating — km/h  
|                 | — MPH  
| Timing          | ❑ When turning to the right  
|                 | Steering angle: deg  
|                 | Steering time: Sec.  
| Timing          | ❑ When turning to the left  
|                 | Steering angle: deg  
|                 | Steering time: Sec.  

2. STATE OF BRAKE WARNING LIGHT

| Brake warning light comes on. | ❑ Always  
|                               | ❑ Sometimes  
|                               | ❑ Only once  
|                               | ❑ Not come on  
|                               | ❑ When pulling the parking brake lever up.  
|                               | ❑ When releasing the parking brake lever down.  
|                               | • When / how long does it come on? |

| Ignition key position | ❑ LOCK  
|                      | ❑ ACC  
|                      | ❑ ON (before starting engine)  
|                      | ❑ START  
|                      | ❑ ON (after Engine starting, engine is running)  
|                      | ❑ ON (after Engine starting, engine is at a standstill) |

- How to step on brake pedal:
  a) Operating time: | — | Sec. |
  b) Operating noise: Does occur / Does not occur.

- What kind of noise?
  - Knocking
  - Gong gong
  - Bong
  - Buzz
  - Gong gong buzz
  - Others:

- Reaction force of brake pedal
  - Stick
  - Weak pedal resistance
  - Strong pedal resistance
  - Others:
### Behavior of vehicle

**a) Directional stability cannot be obtained or the steering refuses to work when applying brakes:**

- Yes / No

  - When:
    - When turning to the right
    - When turning to the left
    - When spinning
    - Others:

**a) Directional stability cannot be obtained or the steering refuses to work when accelerating:**

- Yes / No

  - When:
    - When turning to the right
    - When turning to the left
    - When spinning
    - Others:

**c) Poor brake performance:**

- Yes / No

  - What kind:
    - Long braking/stopping distance
    - Brakes lock or drag
    - Long pedal stroke
    - Pedal sticks.
    - Others:

**d) Poor acceleration:**

- Yes / No

  - What kind:
    - Not accelerate
    - Engine stalls.
    - Others:

**e) Occurrence of vibration:**

- Yes / No

  - Where
  
  - What kind:

**f) Occurrence of noise:**

- Yes / No

  - Where
  
  - What kind:

**g) Other troubles occurred:**

- Yes / No

  - What kind:

### Environment

**a) Weather**

- Fine
- Cloudy
- Rainy
- Snowy
- Others:

**b) Ambient temperature**

- °C (°F)

**c) Road**

- Inner city
- Suburbs
- Highway
- Local street
- Uphill
- Downhill
- Paved road
- Gravel road
- Muddy road
- Sandy place
- Others:

**d) Road surface**

- Dried
- Wet
- Covered with fresh snow
- Covered with hardened snow
- Frozen slope
- Others:

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the ABS wheel speed sensor and ABSCM&H/U.

CAUTION:
- All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and ABSCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect ABS problems.

1. BATTERY

Measure battery voltage and check electrolyte.

*Standard voltage: 12 V or more*

*Specific gravity: More than 1.260*

2. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

3. HYDRAULIC UNIT

Check the hydraulic unit.
- With brake tester <Ref. to ABS-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
- Without brake tester <Ref. to ABS-7, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

4. BRAKE DRAG

Check for brake drag.

5. BRAKE PAD AND ROTOR

Check the brake pad and rotor.
- FRONT <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-19, INSPECTION, Front Disc Rotor.>
- REAR <Ref. to BR-25, INSPECTION, Rear Brake Pad.> <Ref. to BR-26, INSPECTION, Rear Disc Rotor.>

6. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>
# C: PREPARATION TOOL

</table>
4. Electrical Component Location

A: LOCATION

1. ABS control module and hydraulic control unit (ABSCM&H/U)
2. Two-way connector
3. Diagnosis connector (Used for ABS sequence control.)
4. ABS warning light
5. Data link connector (For Subaru Select Monitor)
6. Transmission control module (TCM) (AT model)
7. Magnetic encoder seal
8. ABS wheel speed sensor
9. Caliper body
10. G sensor
11. Stop light switch
12. Master cylinder
13. Brake and EBD warning light
NOTE:
- Terminal numbers in ABSCM&H/U connector are as shown in the figure.
- ABS warning light is illuminates when the connector is removed from ABSCM&H/U.

6. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit. <Ref. to ABS(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to ABS(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

   (1) Data link connector is located in the lower portion of the instrument panel (on the driver’s side).

   (1) Power switch

   (1) Data link connector

   (2) Connect the diagnosis cable to data link connector.

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor switch to ON.

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.

8) Press the [YES] key after the {ABS} is displayed.

9) On the «ABS Diagnosis» display screen, select the {DTC Display} and press the [YES] key.

NOTE:
- For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTCs, refer to the “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).>
- DTCs are displayed up to three in detected order.
- If a particular DTC is not properly stored in memory (due to a drop in ABSCM&H/U power supply, etc.) on the occurrence of a problem, the DTC which is suffixed with a question mark “?” appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

10) If ABS and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to ABS(diag)-18, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>
11) When DTC is not displayed, check the meter circuit or CAN communication circuit. <Ref. to ABS(diag)-21, WITHOUT DTC, INSPECTION, Subaru Select Monitor.>

</tr>
</tbody>
</table>

### 2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
3) Press the [YES] key after the {ABS} is displayed.
4) On the «Brake Control Diagnosis» screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» screen, select the data display style and press the [YES] key.
6) Using a scroll key, move the display screen up or down until necessary data is shown.

- A list of the support data is shown in the following table.

<table>
<thead>
<tr>
<th>Display</th>

</tr>
<tr>
<td>ABS Control Flag</td>
<td>ABS control condition is displayed.</td>
<td>ON or OFF</td>
</tr>
<tr>
<td>ABS OK B Signal</td>
<td>ABS system normal/abnormal is displayed.</td>
<td>OK or NG</td>
</tr>
</tbody>
</table>

**NOTE:**
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

ABS(diag)-16
3. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the [2. Each System Check] and press the [YES] key.
2) On the «System Selection Menu» display screen, select the [Brake Control] and press the [YES] key.
3) Press the [YES] key after the [ABS] is displayed.
4) On the «Brake Control Diagnosis» display screen, select the [Clear Memory] and press the [YES] key.
5) When “Done” and “Turn ignition switch OFF” are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:
For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

4. ABS SEQUENCE CONTROL

5. FREEZE FRAME DATA

NOTE:
- Data stored at the time of trouble occurrence is shown on display.
- Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
- Freeze frame data will be memorized up to three.
- If a Freeze Frame Data is not properly stored in memory (due to a drop in ABS control module power supply, etc.), the DTC which is suffixed with a question mark “?” appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector

TROUBLE SYMPTOM:
Communication is impossible between ABS and Subaru Select Monitor.

WIRING DIAGRAM:
## Subaru Select Monitor

</table>
### Step Check

**11 CHECK HARNESS CONNECTOR BETWEEN ABSCM&H/U AND CHASSIS GROUND.**

1. Turn the ignition switch to OFF.
2. Disconnect the connector from ABSCM&H/U.
3. Measure the resistance of harness between ABSCM&H/U and chassis ground. **Connector & terminal (B301) No. 15 — Chassis ground:**
   - Is the resistance less than 0.5 Ω?
   - Go to step 12.

**12 CHECK POOR CONTACT IN CONNECTOR.**

- Is there poor contact in control module power supply, ground circuit and data link connector?
- Repair the connector.
- Replace the ABSCM only.

<Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
2. WITHOUT DTC

DETECTING CONDITION:
- Defective combination meter
- Open in harness

TROUBLE SYMPTOM:
- ABS warning light does not go off.
- “NO TROUBLE CODE” will be displayed on the Subaru Select Monitor.

NOTE:
When the ABS warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is in normal condition.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** | DATA CHECK SUBARU SELECT MONITOR.  
1) Select {Current Data Display & Save} in Subaru Select Monitor.  
2) Read the condition of “ABS warning light”. | Is “ON” indicated? | Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 2. |
| **2** | CHECK WIRING HARNESS.  
Measure the resistance between ABSCM connector and combination meter connector.  
**Connector & terminal**  
(i10) No. 5 — (B301) No. 22: | Is the resistance less than 0.5 Ω? | Go to step 3. | Repair the harness and connector between ABSCM&H/U and combination meter connector. |
| **3** | CHECK POOR CONTACT IN CONNECTOR. | Is there poor contact in ABSCM connector and combination meter connector? | Repair the connector. | Check the combination meter. |
7. Read Diagnostic Trouble Code (DTC)

A: OPERATION
For details about reading of DTCs, refer to “Subaru Select Monitor”. <Ref. to ABS(diag)-15, Subaru Select Monitor.>
8. Inspection Mode

A: PROCEDURE
Reproduce the malfunction occurrence condition as possible.
Drive the vehicle at a speed more than 40 km/h (25 MPH) for at least one minute.
9. Clear Memory Mode

A: OPERATION
For details concerning DTC clear operation, refer to “Subaru Select Monitor”. <Ref. to ABS(diag)-15, Subaru Select Monitor.>
10. ABS Warning Light / Brake Warning Light Illumination Pattern

A: INSPECTION

(1) Ignition switch
(2) OFF
(3) ON
(4) Start
(5) ABS warning light
(6) Light OFF
(7) Light ON
(8) 1.5 seconds
(9) Brake warning light (EBD warning light)
(10) Parking brake
(11) Released
1) When the ABS warning light and brake warning light do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When ABS warning light remains constantly OFF, check the combination meter circuit. <Ref. to ABS(diag)-30, ABS WARNING LIGHT DOES NOT COME ON, ABS Warning Light / Brake Warning Light Illumination Pattern.>

3) When ABS warning light does not go off, check the combination meter circuit. <Ref. to ABS(diag)-33, ABS WARNING LIGHT DOES NOT GO OFF, ABS Warning Light / Brake Warning Light Illumination Pattern.>

4) When brake warning light does not go off, check the brake warning light circuit, combination meter circuit. <Ref. to ABS(diag)-36, BRAKE WARNING LIGHT DOES NOT GO OFF, ABS Warning Light / Brake Warning Light Illumination Pattern.>

NOTE:
Even though the ABS warning light does not go off after 1.5 seconds from ABS warning light illumination, the ABS function operates normally when the warning light goes off while driving at approximately 12km/h (7 MPH). However, the ABS function does not operate while the ABS warning light is illuminated.
B: ABS WARNING LIGHT DOES NOT COME ON

DETECTING CONDITION:
- Defective combination meter
- Defective harness

TROUBLE SYMPTOM:
When the ignition switch is turned to ON (engine OFF), ABS warning light does not come on.

WIRING DIAGRAM:
- LHD model
• RHD model

### ABS (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1.** CHECK INSTALLATION OF ABSCM&H/U CONNECTOR.  
1) Turn the ignition switch to OFF.  
2) Check that the ABSCM&H/U connector is inserted to ABSCM&H/U until the clamp locks onto it. | Is the connector correctly inserted? | Go to step 2. | Insert the ABSCM&H/U connector until the clamp locks onto it. |
| **2.** READ DTC.  
Read the DTC. <Ref. to ABS(diag)-25, Read Diagnostic Trouble Code (DTC).> | Is DTC displayed? | Perform the diagnosis according to DTC. | Go to step 3. |
| **3.** CHECK THE BRAKE FLUID AMOUNT.  
Check the amount of brake fluid in the reservoir tank of master cylinder. | Is the amount of brake fluid between the lines of MAX and MIN? | Go to step 4. | Replenish brake fluid to the specified value. |
| **4.** CHECK BRAKE FLUID LEVEL SWITCH.  
1) Disconnect the level switch connector (B16) from master cylinder.  
2) Measure the resistance of master cylinder terminals.  
*Terminals No. 1 — No. 2:* | Is the resistance more than 1 MΩ? | Go to step 5. | Replace the master cylinder. |
| **5.** CHECK PARKING BRAKE SWITCH.  
1) Disconnect the connector (R4) from parking brake switch.  
2) Release the parking brake.  
3) Measure the resistance between parking brake switch terminal and chassis ground. | Is the resistance more than 1 MΩ? | Go to step 6. | Replace the parking brake switch. |
| **6.** CHECK GROUND SHORT OF HARNESS.  
1) Disconnect the connector (i10) from combination meter.  
2) Measure the resistance between combination meter connector and chassis ground.  
*Connector & terminal (i10) No. 8 — Chassis ground:* | Is the resistance more than 1 MΩ? | Go to step 7. | Repair the harness connector between combination meter and parking brake switch. |
| **7.** CHECK HARNESS.  
1) Disconnect the connector (B301) from ABSCM&H/U.  
2) Disconnect the connector (i10) from the combination meter.  
3) Measure the resistance between ABSCM&H/U connector and combination meter connector.  
*Connector & terminal (B301) No. 8 — (i10) No. 7:* | Is the resistance less than 0.5 Ω? | Go to step 8. | Repair harness between ABSCM&H/U and combination meter connector. |
| **8.** CHECK POOR CONTACT IN CONNECTOR.  
Check poor contact in all connectors. | Is there poor contact? | Repair the connector. | Go to step 9. |
| **9.** CHECK ABSCM.  
1) Connect the connector to the ABSCM&H/U.  
2) Turn the ignition switch to ON.  
3) Measure the resistance between combination meter connector and chassis ground.  
*Connector & terminal (i10) No. 7 — Chassis ground:* | Is the resistance less than 0.5 Ω? | Check the combination meter. | Replace the ABSCM only. <Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> |

I: DTC C0115 ABS WHEEL SPEED SENSOR SIGNAL MALFUNCTION IN ONE OF FOUR WHEELS

DTC DETECTING CONDITION:
- Defective ABS wheel speed sensor signal (noise, abnormal signal, etc.)
- Defective magnetic encoder
- When a wheel is turned freely for a long time

TROUBLE SYMPTOM:
- ABS does not operate.
- EBD does not operate.

NOTE:
Brake warning light comes on as well as ABS warning light.

W: DTC C0116 FAULTY STOP LIGHT SWITCH

DTC DETECTING CONDITION:
Defective stop light switch

WIRING DIAGRAM:
<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK OUTPUT OF STOP LIGHT SWITCH USING SUBARU SELECT MONITOR.  
1) Select (Current Data Display & Save) in Subaru Select Monitor.  
2) Release the brake pedal.  
3) Read the stop light switch signal in Subaru Select Monitor. | Is “OFF” displayed on the display? | Go to step 2. | Go to step 3. |
| 2    | CHECK OUTPUT OF STOP LIGHT SWITCH USING SUBARU SELECT MONITOR.  
1) Depress the brake pedal.  
2) Read the stop light switch output in Subaru Select Monitor. | Is “ON” displayed on the display? | Go to step 5. | Go to step 3. |
| 3    | CHECK IF STOP LIGHTS COME ON.  
Depress the brake pedal. | Does the stop light illuminate? | Go to step 4. | Repair the stop lights circuit. |
| 4    | CHECK OPEN CIRCUIT IN HARNESS.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from ABSCM&H/U.  
3) Depress the brake pedal.  
4) Measure the voltage between ABSCM&H/U connector and chassis ground.  
**Connector & terminal**  
**(B301) No. 20 (+) — Chassis ground (-):**  
Is the voltage 10 — 15 V? | Go to step 5. | Repair harness between stop light switch and ABSCM&H/U connector. |
| 5    | CHECK POOR CONTACT IN CONNECTOR.  
Depress the brake pedal. | Is there poor contact in connector between stop light switch and ABSCM&H/U? | Go to step 6. | Repair the connector. |
| 6    | CHECK ABSCM&H/U.  
1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode.  
4) Read the DTC. | Is the same DTC displayed? | Replace the ABSCM only.  
<Ref. to ABS-8, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 7. |
| 7    | CHECK ANY OTHER DTC ON DISPLAY.  
Depress the brake pedal. | Is any other DTC displayed? | Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”.  
<Ref. to ABS(diag)-39, List of Diagnostic Trouble Code (DTC).> | Temporary poor contact occurs. |
X: DTC C0118 G SENSOR OUTPUT VOLTAGE MALFUNCTION

DTC DETECTING CONDITION:
Defective G sensor

TROUBLE SYMPTOM:
ABS does not operate.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

T: 33 (3.4, 24)
**General Description**

**C: CAUTION**
- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

</tr>
</tbody>
</table>
2. VDC Control Module & Hydraulic Control Unit (VDC-CM&H/U)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Use compressed air to get rid of water and dust around the VDCCM&H/U.

NOTE:
When dust and dirt are attached to the terminal, they may cause poor contact.
3) Disconnect the pressure sensor connector.

4) Disconnect the VDCCM&H/U connector with pulling up the lock lever.

CAUTION:
Do not pull the harness when disconnecting connector.

5) Disconnect the brake pipes from VDCCM&H/U.
6) Wrap the brake pipe using a vinyl bag not to spill the brake fluid on the vehicle body.

CAUTION:
When the brake fluid is attached to vehicle body, wash it off with water and wipe the water.

7) Remove the clips, and then remove the VDC-CM&H/U.

CAUTION:
- VDCCM&H/U cannot be disassembled. Do not attempt to loosen the bolts and nuts.
- Do not drop or bump the VDCCM&H/U.
- Do not turn VDCCM&H/U upside down or place it sideways for storage.
- Be careful that no foreign objects are mixed in VDCCM&H/U.
- Be careful that no water enters connectors.

B: INSTALLATION
1) Install the VDCCM&H/U bracket.

Tightening torque:
33 N·m (3.3 kgf-m, 24 ft-lb)
2) Install the VDCCM&H/U to bracket.
3) Install the clip.

NOTE:
Hook the clip on the pawl of bracket securely.
4) Connect the brake pipes to their specified VDC-CM&H/U positions.

**Tightening torque:**
15 N·m (1.5 kgf-m, 11.1 ft-lb)

5) Connect the connector to VDCCM&H/U.

**NOTE:**
- Be sure to remove all foreign matters from inside the connector before connecting.
- Ensure that the VDCCM&H/U connector is securely locked.

6) Connect the pressure sensor connector.

7) Bleed air from the brake system.

**C: INSPECTION**
1) Check the connected and fixed condition of connector.
2) Check the mark used for VDCCM&H/U identification.
Refer to “SPECIFICATION” for mark. <Ref. to VDC-2, SPECIFICATION, General Description.>

### 1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

<Ref. to ABS-7, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

### 2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

<Ref. to ABS-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

### 3. CHECKING THE HYDRAULIC UNIT VDC OPERATION BY PRESSURE GAUGE

1) Lift-up the vehicle, and then remove the wheels.
2) Remove the air bleeder screws from the FL and FR caliper bodies.
3) Connect two pressure gauges to the FL and FR caliper bodies.

#### CAUTION:
- Pressure gauges used exclusively for brake fluid must be used.
- Do not use the pressure gauge for the measurement of transmission oil pressure since the piston seal may be expanded and deformed.

**NOTE:**
Wrap a sealing tape around the pressure gauge.

4) Bleed air from the pressure gauges.
5) Perform VDC sequence control.
<Ref. to VDC-11, VDC Sequence Control.>
6) When the hydraulic unit begins to work, first the FL side performs compression, holding, and decompression, and then the FR side performs compression, holding, and decompression.
7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

<table>
<thead>
<tr>
<th>When compressed</th>
<th>Front wheel</th>
<th>Rear wheel</th>

<td></td>
</tr>
</tbody>
</table>

8) Disconnect the pressure gauges from FL and FR caliper bodies.
9) Install the air bleeder screws of FL and FR caliper bodies.
10) Remove the air bleeder screws from the RL and RR caliper bodies.
11) Connect two pressure gauges to the RL and RR caliper bodies.
12) Bleed air from the pressure gauges and the RL and RR caliper bodies.
13) Perform VDC sequence control.
<Ref. to VDC-11, VDC Sequence Control.>
14) When the hydraulic unit begins to work, first the RR side performs compression, holding, and decompression, and then the RL side performs compression, holding, and decompression.
15) Read the values indicated on the pressure gauges and check it within specified. Depress the brake pedal and check that it is not abnormally hard, and tightness is normal.
16) Disconnect the pressure gauge from the RL and RR caliper bodies.
17) Install the air bleeder screws of RL and RR caliper bodies.
18) Bleed air from the brake line.

4. CHECK HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

1) Set the wheels other than the measured one on free rollers.
2) Prepare for operating the VDC sequence control.
   <Ref. to VDC-11, VDC Sequence Control.>
3) Set the front wheels or rear wheels on the brake tester and set the select lever position to "N" range.

<table>
<thead>
<tr>

<td>500 N</td>
</tr>
<tr>
<td></td>
<td>(51 kgf, 112 lb)</td>
<td>(51 kgf, 112 lb)</td>
</tr>
</tbody>
</table>

8) After the inspection, depress the brake pedal and check that it is not abnormally hard, and tightness is normal.

D: ADJUSTMENT

When the following replacement, removal and installation is performed, be sure to perform the centering setting of steering angle sensor and zero point setting of yaw rate & lateral G sensor.
- VDCCM&H/U
- Steering angle sensor
- Yaw rate & lateral G sensor
- Steering wheel parts (Including airbag)
- Suspension parts
- Wheel alignment adjustment
1) Park the vehicle straight on a level surface. (Engine operation on “P” or “N” range)
2) Check that steering wheels are positioned in center. (When the center position is not correct, adjust the wheel alignment.)
3) Set the Subaru Select Monitor to vehicle, select the {Set up mode for Neutral of Steering Angle Sensor & Lateral G Sensor 0 point} on «Function check sequence» display. (Follow the step on display.)
4) On the «Brake Control System» display screen, select the (Current Data Display & Save), and check that the steering angle sensor is displayed “0 deg”.
5) When the “0 deg” is not displayed, repeat the above steps and check that the “0 deg” is displayed.
6) Drive the vehicle for 10 minutes, and check that the ABS and VDC warning light is not illuminated.
7) Check that the unnecessary operation of VDC, or losing control of steering is not occurred. And when the malfunction occurred, repeat the above steps.
3. ABS Sequence Control

A: OPERATION
<Ref. to ABS-10, OPERATION, ABS Sequence Control.>

1. ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR
<Ref. to ABS-10, ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR, OPERATION, ABS Sequence Control.>

2. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR
<Ref. to ABS-10, ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR, OPERATION, ABS Sequence Control.>

3. CONDITIONS FOR ABS SEQUENCE CONTROL
<Ref. to ABS-11, CONDITIONS FOR ABS SEQUENCE CONTROL, OPERATION, ABS Sequence Control.>

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL
<Ref. to ABS-12, CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL, SPECIFICATION, ABS Sequence Control.>
4. VDC Sequence Control

A: OPERATION

1) While the VDC sequence control is performed, the operation of the hydraulic unit can be checked using the brake tester or pressure gauge after the hydraulic unit solenoid valve is operated.
2) VDC sequence control can be started by diagnosis connector or Subaru Select Monitor.

1. VDC SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

NOTE:
In the event of any trouble, the VDC sequence control is not operated.
1) Turn the ignition switch to OFF at the vehicle stationary mode.
2) Take out the diagnosis connector from the inside of instrument panel lower cover on the driver’s side and connect one of the ground terminals to connector terminal No. 8.

3) Turn the ignition switch to ON and start the engine immediately without pressing the brake pedal.
4) After VDC warning light goes out and starting the engine, perform the brake pedal operation as follows; depress it within 3 seconds, → release it, → depress it again, → release it again.
5) After completion of VDC sequence control, turn the ignition switch to OFF.

2. VDC SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

NOTE:
In the event of any trouble, the sequence control may not be operative.
1) Connect the Subaru Select Monitor to data link connector under the driver’s side instrument panel lower cover.
2) Turn the ignition switch to ON.
3) Set the Subaru Select Monitor switch to ON.
4) Set the Subaru Select Monitor to the “Brake Control” mode.

5) When the “VDC Inspection Mode” is selected from the “Function check sequence” menu, the “VDC sequence control” will start.
6) Since “Press the [YES] key” is displayed, press the YES key.
7) Operation points will be displayed on the Subaru Select Monitor.
3. CONDITIONS FOR VDC SEQUENCE CONTROL

(40) ON
NOTE:
When using the Subaru Select Monitor, the control operation starts from point A. The patterns from ignition key ON to the point A show that operation is started by diagnosis connector.

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

1) When the speed of at least one wheel reaches 10 km/h (6 MPH).

2) When the diagnosis connector is disconnected. (Without Subaru Select Monitor)

3) When the brake pedal is pressed during sequence control and the stop light switch is set to ON.

4) When the brake pedal is pressed after the ignition key is turned to ON, and before VDC warning light goes out. (Without Subaru Select Monitor)

5) Turn the ignition key to ON and when 3 seconds or more have elapsed after the VDC warning light goes OFF.

6) After completion of VDC sequence control.

7) When malfunction is detected.
5. Yaw Rate & Lateral G Sensor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the console box.
<Ref. to EI-53, Console Box.>
3) Disconnect the connector from the yaw rate & lateral G sensor.
4) Remove the yaw rate & lateral G sensor.

CAUTION:
Do not drop or bump the yaw rate & lateral G sensor.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Install the yaw rate & lateral G sensor to body with directing the arrow mark on sensors to vehicle front.

CAUTION:
After completion of installation, set the following two positions.
• Positioning to the center of steering angle sensor
• Positioning of the yaw rate & lateral G sensor to zero

The above procedure is required VDCCM&H/U to identify the vehicle position afterward. For the setting procedure of step 2 above, refer to “VDC Control Module & Hydraulic Control Unit”. <Ref. to VDC-9, ADJUSTMENT, VDC Control Module & Hydraulic Control Unit (VDC-CM&H/U).>

Tightening torque:
7.5 N⋅m (0.76 kgf-m, 5.5 ft-lb)
**C: INSPECTION**

### 1. YAW RATE & LATERAL G SENSOR SIGNAL

<table>
<thead>
<tr>
<th>Step</th>

<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1</strong> CHECK YAW RATE &amp; LATERAL G SENSOR.  &lt;br&gt; 1) Turn the ignition switch to OFF. &lt;br&gt; 2) Connect the Subaru Select Monitor connector to data link connector. &lt;br&gt; 3) Turn the ignition switch to ON. &lt;br&gt; 4) Set the Subaru Select Monitor connector to the (Brake Control) mode. &lt;br&gt; 5) Select (Current Data Display &amp; Save). &lt;br&gt; 6) Read the output voltage of yaw rate &amp; lateral G sensor.</td>
<td>Are the indicated values when the vehicle is placed horizontally  &lt;br&gt; Lateral G sensor: −1.5 — 1.5 m/s  &lt;br&gt; Yaw rate sensor: −4 — 4 deg/s?</td>
<td>Go to step 2.</td>
<td>Repair the harness connector between yaw rate &amp; lateral G sensor and VDCCM&amp;H/U. Or replace the yaw rate &amp; lateral G sensor.</td>
</tr>
<tr>
<td><strong>2</strong> CHECK LATERAL G SENSOR.  &lt;br&gt; 1) Remove the console box. &lt;br&gt; 2) Remove the yaw rate &amp; lateral G sensor from vehicle. (Do not disconnect the connector.) &lt;br&gt; 3) Read the display of Subaru Select Monitor.  &lt;br&gt; NOTE: When the yaw rate &amp; lateral G sensor is moved with its power supply on, DTC of yaw rate &amp; lateral G sensor may be recorded.</td>
<td>Is the value 6.8 — 12.8 m/s when the yaw rate &amp; lateral G sensor are inclined rightward to 90°?</td>
<td>Go to step 3.</td>
<td>Repair the harness connector between yaw rate &amp; lateral G sensor and VDCCM&amp;H/U. Or replace the yaw rate &amp; lateral G sensor.</td>
</tr>
<tr>
<td><strong>3</strong> CHECK LATERAL G SENSOR.  &lt;br&gt; Read the display of Subaru Select Monitor.  &lt;br&gt; NOTE: When the yaw rate &amp; lateral G sensor is moved with its power supply on, DTC of yaw rate &amp; lateral G sensor may be recorded.</td>
<td>Is the value −6.8 — −12.8 m/s when the yaw rate &amp; lateral G sensor are inclined leftward to 90°?</td>
<td>Yaw rate &amp; lateral G sensor is normal.</td>
<td>Repair the harness connector between yaw rate &amp; lateral G sensor and VDCCM&amp;H/U. Or replace the yaw rate &amp; lateral G sensor.</td>
</tr>
</tbody>
</table>
6. Steering Angle Sensor

A: REPLACEMENT

CAUTION:
- Do not perform the removal except when the replacement.
- When replacing more than three times, replace the combination switch as assembly to protect screw part.
1) Set the steering wheel in a wheel-forward position.
2) Disconnect the ground cable from battery.
3) Remove the airbag module.
<Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>

WARNING:
Always refer to “Airbag System” when performing the airbag module repair service.
<Ref. to AB-4, CAUTION, General Description.>

4) Remove the steering wheel.
<Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the screws and detach the steering column lower cover.
6) Remove the two screws securing the steering column upper cover.
7) Unlock the harness band and disconnect the connector of steering angle sensor.

9) Remove the steering angle sensor from roll connector.

10) Turn the protrusion portion of new steering angle sensor to match the alignment mark of inspection hole.

CAUTION:
Be careful not to allow foreign particles to enter from inspection hole.

11) Align the center of roll connector.
<Ref. to AB-23, INSTALLATION, Roll Connector.>

8) Remove the screws which secure the roll connector to steering column.
12) Apply thin coat of grease which is enclosed with new part to the protruding parts (four) of steering angle sensor.

13) Align the position of protrusion portion and install the roll connector to the steering angle sensor.

**Tightening torque:**

\[ 0.5 \text{ N\cdot m (0.05 kgf\cdot m, 0.36 ft-lb)} \]

14) Install the roll connector to combination switch.

15) Install the steering wheel.

<Ref. to PS-20, INSTALLATION, Steering Wheel.>

**Tightening torque:**

\[ 44 \text{ N\cdot m (4.5 kgf\cdot m, 32.5 ft-lb)} \]

16) Install the airbag module to steering wheel.

<Ref. to AB-14, INSTALLATION, Driver's Airbag Module.>

**WARNING:**
Always refer to “Airbag System” before performing the service operation.

<Ref. to AB-4, CAUTION, General Description.>

17) Connect the battery ground cable to battery.

**CAUTION:**
After completion of installation, adjust the following two positions.
- Positioning to the center of steering angle sensor
- Positioning of the yaw rate & lateral G sensor to zero

The above procedure is required for VDCCM to identify the vehicle position afterward. For the setting procedure of step 2 above, refer to “VDC Control Module & Hydraulic Control Unit”. <Ref. to VDC-9, ADJUSTMENT, VDC Control Module & Hydraulic Control Unit (VDC-CM&H/U).>

(1) Apply grease.
Front ABS Wheel Speed Sensor

VEHICLE DYNAMICS CONTROL (VDC)

7. Front ABS Wheel Speed Sensor

A: NOTE
For the vehicle equipped with VDC, it has the same ABS wheel speed sensor as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-13, Front ABS Wheel Speed Sensor.>
8. Rear ABS Wheel Speed Sensor

A: NOTE
For the vehicle equipped with VDC, it has the same ABS wheel speed sensor as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-15, Rear ABS Wheel Speed Sensor.>
9. Front Magnetic Encoder

A: NOTE
For the vehicle equipped with VDC, it has the same magnetic encoder as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-16, Front Magnetic Encoder.>
10. Rear Magnetic Encoder

A: NOTE
For the vehicle equipped with VDC, it has the same magnetic encoder as installed to the vehicle equipped with ABS. For removal, installation and inspection procedure, refer to ABS section.
<Ref. to ABS-17, Rear Magnetic Encoder.>
11. VDC OFF Switch

A: REMOVAL
1) Remove the instrument panel lower cover.
2) Remove the screws, and then remove the VDC OFF switch.
   • RHD model

![Diagram of VDC OFF Switch](VDC00210)

• LHD model

![Diagram of VDC OFF Switch](VDC00240)

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Measure the resistance between VDC OFF switch terminals.

If NG, replace the VDC OFF switch.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

# Basic Diagnostic Procedure

## A: PROCEDURE

### CAUTION:

When the Subaru Select Monitor is communicating (except when displaying the data), the ABS warning light flashes and VDC warning light illuminates in the combination meter. Do not communicate with the Subaru Select Monitor while driving, because the ABS and VDC functions are disabled. Carefully drive the vehicle, when you have to communicate with the Subaru Select Monitor. When the data is displayed by the {Current Data Display & Save} menu, both the ABS and VDC warning lights are turned off and ABS and VDC functions are enabled.

### NOTE:

- To check the harness for broken wires or short circuits, shake problem spot or connector.
- Refer to “Check List for Interview”. <Ref. to VDC(diag)-4, Check List for Interview.>

### Step Check Yes No

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. CHECK PRE-INSPECTION.</td>
<td>1) Ask the customer when and how the trouble occurred using the interview checklist. &lt;Ref. to VDC(diag)-4, Check List for Interview.&gt; 2) Before performing diagnostics, check the component which might affect VDC problems. &lt;Ref. to VDC(diag)-8, INSPECTION, General Description.&gt;</td>
<td>Is the component that might influence the VDC problem normal?</td>
<td>Go to step 2.</td>
</tr>
<tr>
<td>2. CHECK INDICATION OF DTC.</td>
<td>1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn the ignition switch to ON, and the Subaru Select Monitor switch to ON. 4) Read the DTC. &lt;Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).&gt;</td>
<td>Is DTC displayed?</td>
<td>Go to step 4.</td>
</tr>
<tr>
<td>3. PERFORM GENERAL DIAGNOSTICS.</td>
<td>1) Inspect using “General Diagnostic Table”. &lt;Ref. to VDC(diag)-132, INSPECTION, General Diagnostic Table.&gt; 2) Perform the clear memory mode. &lt;Ref. to VDC(diag)-24, OPERATION, Clear Memory Mode.&gt; 3) Perform the inspection mode. &lt;Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.&gt; 4) Read the DTC. &lt;Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC).&gt; 5) Check the DTC does not displayed.</td>
<td>Do the VDC warning light and ABS warning light go off after starting the engine?</td>
<td>Finish the diagnosis.</td>
</tr>
</tbody>
</table>
### Basic Diagnostic Procedure

#### VEHICLE DYNAMICS CONTROL (VDC) (DIAGOSTICS)

**Step** | **Check** | **Yes** | **No**
--- | --- | --- | ---
4 | PERFORM DIAGNOSIS. 1) Refer to “List of Diagnostic Trouble Code (DTC)”.  
NOTE: For the DTC list, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-37, LIST, List of Diagnostic Trouble Code (DTC)>  
2) Fix the wrong part.  
3) Perform the clear memory mode. <Ref. to VDC(diag)-24, OPERATION, Clear Memory Mode>  
4) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode>  
5) Read the DTC. <Ref. to VDC(diag)-22, OPERATION, Read Diagnostic Trouble Code (DTC)> | Is DTC displayed? | Repeat step 4 until DTC is not shown. | Finish the diagnosis.

• Contents:
3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the ABS wheel speed sensor and VDCCM&H/U.

CAUTION:
- All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and VDCCM&H/U.

B: INSPECTION

Before performing diagnosis, check the following items which might affect VDC problems.

1. BATTERY

Measure battery voltage and check electrolyte.

*Standard voltage: 12 V or more*

*Specific gravity: More than 1.260*

2. BRAKE FLUID

1) Check the brake fluid level.
2) Check the brake fluid for leaks.

3. HYDRAULIC UNIT

Check the hydraulic unit.

- With brake tester <Ref. to VDC-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>
- Without brake tester <Ref. to VDC-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).>

4. BRAKE DRAG

Check for brake drag.

5. BRAKE PAD AND ROTOR

Check the brake pad and rotor.

- FRONT <Ref. to BR-18, INSPECTION, Front Brake Pad.> <Ref. to BR-19, INSPECTION, Front Disc Rotor.>
- REAR <Ref. to BR-25, INSPECTION, Rear Brake Pad.> <Ref. to BR-26, INSPECTION, Rear Disc Rotor.>

6. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>
## C: PREPARATION TOOL

### 1. SPECIAL TOOL

<table>

C: MEASUREMENT
Measure input and output signal voltage.

1. WAVEFORM

(1) Yaw rate sensor  (2) Terminal No.  (3) Vehicle is at a standstill.
6. Subaru Select Monitor

A: OPERATION

CAUTION:
When the Subaru Select Monitor is communicating (except when displaying the data), the ABS warning light flashes and VDC warning light illuminates in the combination meter. Do not communicate with the Subaru Select Monitor while driving, because the ABS and VDC functions are disabled. Carefully drive the vehicle, when you have to communicate with the Subaru Select Monitor. When the data is displayed by the {Current Data Display & Save} menu, both the ABS and VDC warning lights are turned off and ABS and VDC functions are enabled.

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit. <Ref. to VDC(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to VDC(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver’s side).

2) Connect the diagnosis cable to data link connector.

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor switch to ON.

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.

8) Press the [YES] key after the {VDC AWD AT} is displayed.

9) On the «VDC Diagnosis» display screen, select the {Diagnostic Code(s) Display}, and then press the [YES] key.

NOTE:
- For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For details concerning DTCs, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).>
- DTCs are displayed up to three in detected order.
If a particular DTC is not properly stored in memory (due to a drop in VDCCM&H/U power supply, etc.) on the occurrence of a problem, the DTC which is suffixed with a question mark “?” appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

10) If VDC and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to VDC(diag)-19, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Brake Control} and press the [YES] key.
3) Press the [YES] key after {VDC 4WD AT} is displayed.
4) On the «Brake Control Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
5) On the «Data Display Menu» display screen, select the display method, and press the [YES] key.
6) Using a scroll key, scroll the display screen up or down until necessary data is shown.

A list of the support data is shown in the following table.

<table>
<thead>
<tr>
<th>Display</th>

<td>Acceleration opening is displayed.</td>
<td>%</td>
</tr>
</tbody>
</table>
NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

3. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the (Each System Check) and press the [YES] key.
2) On the «System Selection Menu» display screen, select the (Brake Control) and press the [YES] key.
3) Press the [YES] key after (VDC 4WD AT) is displayed.
4) On the «Brake Control Diagnosis» display screen, select the (Memory Clear) and press the [YES] key.

5) When “Done” and “Turn ignition switch OFF” are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

4. ABS SEQUENCE CONTROL

<table>
<thead>
<tr>
<th>Display</th>
<th>Contents to be monitored</th>
<th>Reference target</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABS sequence control</td>
<td>Operate the valve and pump motor continuously to perform the ABS sequence control.</td>
<td>&lt;Ref. to ABS-10, ABS Sequence Control.&gt;</td>
</tr>
<tr>
<td>VDC confirmation mode</td>
<td>Operate the valve and pump motor continuously to perform the VDC sequence control.</td>
<td>&lt;Ref. to VDC-11, VDC Sequence Control.&gt;</td>
</tr>
</tbody>
</table>

5. FREEZE FRAME DATA

NOTE:
- Data stored at the time of trouble occurrence is shown on display.
- Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
- If a freeze frame data is not properly stored in memory (due to a drop in VDC control module power supply, etc.), the DTC which is suffixed with a question mark “?” appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.
B: INSPECTION

1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

DETECTING CONDITION:
Defective harness connector

TROUBLE SYMPTOM:
Communication is impossible between VDC and Subaru Select Monitor.

WIRING DIAGRAM:
<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK IGNITION SWITCH.</td>
<td>Is the ignition switch ON?</td>
<td>Go to step 2.</td>
</tr>
</tbody>
</table>
| 2 | CHECK BATTERY.  
1) Turn the ignition switch to OFF.  
2) Measure the battery voltage. | Is the voltage more than 11 V? | Go to step 3. | Charge or replace the battery. |
| 3 | CHECK BATTERY TERMINAL. | Is there poor contact at battery terminal? | Repair or tighten the battery terminal. | Go to step 4. |
| 4 | CHECK SUBARU SELECT MONITOR COMMUNICATION.  
1) Turn the ignition switch to ON.  
2) Using the Subaru Select Monitor, check whether communication to other system can be executed normally. | Are the system name and model year displayed on Subaru Select Monitor? | Go to step 8. | Go to step 5. |
| 5 | CHECK SUBARU SELECT MONITOR COMMUNICATION.  
1) Turn the ignition switch to OFF.  
2) Disconnect the VDCCM&H/U connector.  
3) Turn the ignition switch to ON.  
4) Check whether communication to other systems can be executed normally. | Are the system name and model year displayed on Subaru Select Monitor? | Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).> | Go to step 6. |
| 6 | CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.  
1) Turn the ignition switch to OFF.  
2) Disconnect the VDCCM&H/U, ECM and TCM.  
3) Measure the resistance between data link connector and chassis ground.  
**Connector & terminal**  
(B40) No. 10 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 7. | Repair the harness and connector between each control module and data link connector. |
| 7 | CHECK OUTPUT SIGNAL FOR VDCCM&H/U.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between VDCCM&H/U and chassis ground.  
**Connector & terminal**  
(B40) No. 10 (+) — Chassis ground (-): | Is the voltage less than 1 V? | Go to step 8. | Repair the harness and connector between each control module and data link connector. |
| 8 | CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND DATA LINK CONNECTOR.  
Measure the resistance between VDCCM&H/U connector and data link connector.  
**Connector & terminal**  
(B310) No. 26 — (B40) No. 10: | Is the resistance less than 0.5 Ω? | Go to step 9. | Repair the harness and connector between VDCCM&H/U and data link connector. |
| 9 | CHECK INSTALLATION OF VDCCM&H/U CONNECTOR.  
Turn the ignition switch to OFF. | Is the VDCCM&H/U connector inserted into VDCCM&H/U until the clamp locks onto it? | Go to step 10. | Insert the VDCCM&H/U connector into VDCCM&H/U. |
### Subaru Select Monitor

#### VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 10   | CHECK POWER SUPPLY CIRCUIT.  
1) Turn the ignition switch to ON. (engine OFF)  
2) Measure the ignition power supply voltage between VDCCM&H/U connector and chassis ground.  
   *Connector & terminal (B310) No. 14 (+) — Chassis ground (-):*  
   Is the voltage 10 — 15 V? | Go to step 11. | Repair the open circuit in harness between VDCCM&H/U and battery. |
| 11   | CHECK HARNESS CONNECTOR BETWEEN VDCCM&H/U AND CHASSIS GROUND.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from VDCCM&H/U.  
3) Measure the resistance of harness between VDCCM&H/U and chassis ground.  
   *Connector & terminal (B310) No. 6 — Chassis ground:*  
   Is the resistance less than 0.5 Ω? | Go to step 12. | Repair the open circuit in harness between VDCCM&H/U and inhibitor side connector, and poor contact in coupling connector. |
| 12   | CHECK POOR CONTACT IN CONNECTOR.  
Is there poor contact in control module power supply, ground circuit and data link connector? | Repair the connector. | Replace the VDCCM&H/U.  
<Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).> |
7. Read Diagnostic Trouble Code (DTC)

A: OPERATION
For details concerning DTC reading procedure, refer to “Subaru Select Monitor”. <Ref. to VDC(diag)-16, Subaru Select Monitor.>
8. Inspection Mode

A: PROCEDURE
Reproduce the malfunction occurrence condition as possible.
Drive the vehicle at least ten minutes.

NOTE:
Make sure the vehicle is not dragged to one side under usual driving condition.
9. Clear Memory Mode

A: OPERATION

For details concerning DTC clear operation, refer to “Subaru Select Monitor”. <Ref. to VDC(diag)-16, Subaru Select Monitor.>
10. Warning Light Illumination Pattern

A: INSPECTION

1) When warning lights or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When warning lights or indicator lights remain constantly OFF, check the combination meter circuit or CAN communication circuit. (Ref. to VDC(diag)-26, VDC WARNING LIGHT, VDC OFF INDICATOR LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON, Warning Light Illumination Pattern.)

3) When ABS warning light does not go off, check the combination meter circuit. (Ref. to VDC(diag)-30, ABS WARNING LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.)

4) When the VDC indicator light, VDC warning light and VDC OFF indicator light do not go off, check the combination meter circuit or CAN communication circuit. (Ref. to VDC(diag)-32, VDC INDICATOR LIGHT DOES NOT GO OFF, Warning Light Illumination Pattern.)

NOTE:
- Even though the ABS warning light does not go off after 1.5 seconds from ABS warning light illumination, the ABS system operates normally when the warning light goes off while driving at approximately 12 km/h (7 MPH). However, the ABS system does not work while the ABS warning light is illuminated.
- It may take several minutes before VDC warning light and VDC OFF indicator light goes off if the vehicle is parked under low temperature for a specified time. This is not defective because it is resulted from low engine coolant temperature.
With the vehicle jack-up/lift-up or set on free rollers, when the wheels lock or spin after starting the engine, ABS warning light, VDC warning light and VDC OFF indicator light may illuminate because VDCCM&H/U detects the abnormal conditions from ABS wheel speed sensors. In this case, this is not a malfunction. Perform the clear memory mode.

**B: VDC WARNING LIGHT, VDC OFF INDICATOR LIGHT AND VDC INDICATOR LIGHT DO NOT COME ON**

**DETECTING CONDITION:**
- Defective combination meter
- Defective CAN communication

**TROUBLE SYMPTOM:**
When the ignition switch is turned to ON (engine OFF), VDC indicator light, VDC warning light and VDC OFF indicator light do not come on.

**NOTE:**
When pressing VDC OFF switch for more than 10 seconds, VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

| 3    | CHECK GROUND SHORT CIRCUIT OF HARNESS.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector (B310) from VDCCM&H/U.  
3) Disconnect the connector (i10) from combination meter.  
4) Measure the resistance between VDCCM&H/U connector and chassis ground. 
   **Connector & terminal**  
   (B310) No. 35 — Chassis ground: |
|      | Is the resistance more than 1 MΩ? | Go to step 4. | | |
| 4    | CHECK VDCCM.  
1) Connect the connector (B310) to VDCCM&H/U.  
2) Turn the ignition switch to ON.  
3) Measure the resistance between the combination meter connector and chassis ground soon after the ignition switch is turned to ON (within 1.5 seconds). 
   **Connector & terminal**  
   (i10) No. A5 — Chassis ground: | Is the resistance more than 1 MΩ? | Check the combination meter. | Replace VDCCM&H/U. |

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

D: ABS WARNING LIGHT DOES NOT GO OFF

DETECTING CONDITION:
- Defective combination meter
- Open in harness

TROUBLE SYMPTOM:
When starting the engine, the ABS warning light is kept ON.

WIRING DIAGRAM:
- LHD model

F: VDC WARNING LIGHT AND VDC OFF INDICATOR LIGHT DO NOT GO OFF

DETECTING CONDITION:
- Defective combination meter
- Defective CAN communication
- Defective engine
- VDC OFF switch is shorted.

TROUBLE SYMPTOM:
When starting the engine, VDC OFF indicator light is kept ON.

NOTE:
When pressing the VDC OFF switch for more than 10 seconds, the VDC OFF indicator light goes off and cannot operate any more. When turning the ignition switch from OFF to ON, the OFF operation enabled status is restored.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.  
  1) Select {Current Data Display & Save} in Subaru Select Monitor.  
  2) Read the ABS wheel speed sensor output corresponding to the faulty wheel in Subaru Select Monitor data display mode. | Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position? | Go to step 2. | Go to step 7. |
| 2    | CHECK POOR CONTACT IN CONNECTOR.  
  Turn the ignition switch to OFF. | Is there poor contact in connectors between VDCCM&H/U and ABS wheel speed sensor? | Repair the connector. | Go to step 3. |
| 3    | CHECK SOURCES OF SIGNAL NOISE.  
  Make sure the car phone, radio wave device like radio and etc., or electric device are installed correctly. | Are the car phone, radio wave device like radio and etc., or electric device installed correctly? | Go to step 4. | Install the radio wave device and electric device properly. |
| 4    | CHECK SOURCES OF SIGNAL NOISE.  
  Check if the noise sources (such as an antenna) are installed near the sensor harness. | Are noise sources installed? | Install the noise sources apart from the sensor harness. | Go to step 5. |
| 5    | CHECK VDCCM&H/U.  
  1) Connect all the connectors.  
  2) Erase the memory.  
  3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.>  
  4) Read the DTC. | Is the same DTC displayed? | Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).> | Go to step 6. |
| 6    | CHECK OTHER DTC DETECTION. | Is any other DTC displayed? | Perform the diagnosis according to DTC. | If results from a temporary noise interference. |
| 7    | CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR. | Is the ABS wheel speed sensor installation bolt tightened 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)? | Go to step 8. | Tighten the ABS wheel speed sensor installation bolts. |
| 8    | CHECK ABS WHEEL SPEED SENSOR SIGNAL.  
  1) Install the ABS wheel speed sensor.  
  2) Prepare an oscilloscope.  
  3) Check ABS wheel speed sensor. <Ref. to ABS-13, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.> | Is the oscilloscope pattern the same waveform as shown in the figure when the tire is rotated? Is the pattern as shown in the figure displayed regularly in the oscilloscope when the tire is slowly rotated more than one revolution with even speed? | Go to step 9. | Go to step 13. |
| 9    | CHECK ABS WHEEL SPEED SENSOR OR MAGNETIC ENCODER. | Are there foreign materials, breakage or damage in the protrusion of ABS wheel speed sensor or magnetic encoder? | Remove dirt thoroughly. Replace the ABS wheel speed sensor or magnetic encoder as a unit with hub unit bearing when it is broken or damaged. | Go to step 10. |
| 10   | CHECK SOURCES OF SIGNAL NOISE.  
  Make sure the car phone, radio wave device like radio and etc., or electric device are installed correctly. | Is the car phone, radio wave device like radio and etc., or electric device installed correctly? | Go to step 11. | Install the radio wave device and electric device properly. |
| 11   | CHECK SOURCES OF SIGNAL NOISE.  
  Check if the noise sources are (such as an antenna) installed near the sensor harness. | Are noise sources installed? | Go to step 12. | Install the noise sources apart from the sensor harness. |

| 1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode. <Ref. to VDC(diag)-23, PROCEDURE, Inspection Mode.>  
4) Read the DTC. | | |
| 13 CHECK OTHER DTC DETECTION. | Is any other DTC displayed? | Perform the diagnosis according to DTC. | It results from a temporary noise interference.  
NOTE: Though the ABS warning light remains on at this time, it is normal. Drive the vehicle at more than 12 km/h (7 MPH) in order to turn ABS warning light off. Be sure to drive the vehicle and check the warning light goes off. |
M: DTC C0029 ABS WHEEL SPEED SENSOR SIGNAL MALFUNCTION IN ONE OF FOUR WHEELS

DTC DETECTING CONDITION:
- Defective ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Defective magnetic encoder
- When a wheel is turned freely for a long time

TROUBLE SYMPTOM:
- ABS does not operate.
- VDC does not operate.
- EBD may not operate.

NOTE:
Brake warning light comes on as well as ABS warning light when EBD does not operate.

| 2 | CHECK BATTERY TERMINAL.  
Turn the ignition switch to OFF.  
| Are the positive and negative battery terminals clamped tightly? | Go to step 3. | Tighten the terminal. |
| 3 | CHECK INPUT VOLTAGE FOR VDCCM&H/U.  
1) Disconnect the connector from VDCCM&H/U.  
2) Run the engine at idle.  
3) Operate the devices such as headlights, air conditioner, defogger, etc. which produce much electrical loading.  
4) Measure the voltage between VDCCM&H/U connector and chassis ground.  
   **Connector & terminal**  
   (B310) No. 14 (+) — Chassis ground (-):  
| Is the voltage 10 — 15 V? | Go to step 4. | Repair the power supply circuit. |
| 4 | CHECK GROUND CIRCUIT FOR VDCCM&H/U.  
1) Turn the ignition switch to OFF.  
2) Measure the resistance between VDCCM&H/U connector and chassis ground.  
   **Connector & terminal**  
   (B310) No. 6 — Chassis ground:  
| Is the resistance less than 0.5 Ω? | Go to step 5. | Repair the VDCCM&H/U ground harness. |
| 5 | CHECK POOR CONTACT IN CONNECTORS.  
| Is there poor contact in connector between generator, battery and VDCCM&H/U? | Repair the connector. Go to step 6. |
| 6 | CHECK VDCCM&H/U.  
1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode.  
4) Read the DTC.  
| Is the same DTC displayed? | Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module & Hydraulic Control Unit (VDCCM&H/U).> Go to step 7. |
| 7 | CHECK OTHER DTC DETECTION.  
| Is any other DTC displayed? | Perform the diagnosis according to DTC. <Ref. to VDC(diag)-37, List of Diagnostic Trouble Code (DTC).> Temporary poor contact occurs. |
AB: DTC C0042 ABS WHEEL SPEED SENSOR POWER MALFUNCTION

1) Turn the ignition switch to OFF.  
2) Disconnect the stop light switch connector.  
3) Measure the resistance of stop light switch terminals. | Is the resistance more than 1 MΩ when switch is OFF (when pedal is not depressed)? | Go to step 2. | Replace the stop light switch. |
| 2    | INTERVIEWING CUSTOMERS.  
Make sure that the operation was performed in which accelerator pedal and brake pedal were depressed simultaneously (with depressing brake pedal with left foot). | Were the acceleration pedal and brake pedal depressed simultaneously during driving? | System is in good order. (DTC may be recorded while brake is applied during driving.) | Go to step 3. |
| 3    | CHECK VDCCM&H/U.  
1) Connect all the connectors.  
2) Erase the memory.  
3) Perform the inspection mode.  
4) Read the DTC. | Is the same DTC displayed? | Replace the VDCCM&H/U. | Go to step 4. |
| 4    | CHECK OTHER DTC DETECTION. | Is any other DTC displayed? | Perform the diagnosis according to DTC. | Temporary poor contact occurs. |
AQ: DTC C0057 EGI COMMUNICATION

**DTC DETECTING CONDITION:**
No CAN signal from ECM.

**TROUBLE SYMPTOM:**
- ABS does not operate.
- VDC does not operate.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

**CAUTION:**
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- When brake fluid is supplemented, be careful not to allow any dust into the reservoir.
- Use fresh SUBARU genuine brake fluid when replacing or refilling the fluid.

**NOTE:**
Refer to “PB” section for parking brake specifications. <Ref. to PB-2, SPECIFICATION, General Description.>

C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease, etc. with that of another grade or from other manufacturers.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vice.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

</thead>
<tbody>
<tr>
<td>Snap ring pliers</td>
<td>Used for removing and installing snap ring.</td>
</tr>
</tbody>
</table>
2. Front Brake Pad

A: REMOVAL

1. 15-INCH TYPE

1) Lift-up the vehicle and remove the front wheels.
2) Remove the caliper bolt.
3) Raise the caliper body and support it.

NOTE:
Do not disconnect the brake hose from caliper body.

4) Remove the pad.

(4) Attach a rod of less than 12 mm (0.47 in) diameter to the shaded area of the brake pad, and strike the rod with a hammer to drive brake pad out of place.

NOTE:
If the brake pad is difficult to remove, proceed as follows:

(1) Remove the caliper body from support.
(2) Remove the support.
(3) Place the support in a vise between wooden blocks.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-16, 15-INCH TYPE, REMOVAL, Front Brake Pad.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-16, 15-INCH TYPE, REMOVAL, Front Brake Pad.>

B: INSTALLATION

1. 15-INCH TYPE

1) Apply a thin coat of Molykote M7439 to the pad clip.

2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the frictional portion between pad and pad inner shim.

(1) Support
(2) Wooden block
3) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the three frictional portions between inner shim and outer shim of outer pads.

4) Install the pad on support.
5) Install the caliper body on support.

**Tightening torque:**

\[27 \text{ N\cdot m (2.8 kgf-m, 19.9 ft-lb)}\]

2. **16-INCH TYPE**

Refer to 15-inch type. <Ref. to BR-16, 15-INCH TYPE, INSTALLATION, Front Brake Pad.>

3. **17-INCH TYPE**

1) Apply a thin coat of Molykote M7439 to the pad clip.

2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the frictional portion between pad and pad inner shim.

NOTE:
Install the pad indicator in proper direction.

CAUTION:
- Correctly install the pad return spring to supporting surface of pad clip as shown in the figure.
Front Brake Pad

- When the pad return spring is deformed or damaged, replace the brake pad with new one.

5) Install the caliper body on support.

**Tightening torque:**
27 N·m (2.8 kgf-m, 19.9 ft-lb)

C: INSPECTION

1. 15-INCH AND 16-INCH TYPE

Check the pad thickness A.

<table>
<thead>
<tr>
<th>Pad thickness mm (in)</th>
<th>Standard value</th>
<th>Wear limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>11 (0.43)</td>
<td>1.5 (0.059)</td>
<td></td>
</tr>
</tbody>
</table>

NOTE:
- Always replace the pads for both right and left wheels at the same time.
- Replace the pad if there is oil or grease on it.

2. 17-INCH TYPE

Check the pad thickness A.

3. 17-INCH TYPE

Check the pad thickness A.

<table>
<thead>
<tr>
<th>Pad thickness mm (in)</th>
<th>Standard value</th>
<th>Wear limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>11 (0.43)</td>
<td>1.5 (0.059)</td>
<td></td>
</tr>
</tbody>
</table>

NOTE:
- Always replace the pads for both right and left wheels at the same time.
- Replace the pad if there is oil or grease on it.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-18, 15-INCH AND 16-INCH TYPE, INSPECTION, Front Brake Pad.>
3. Front Disc Rotor

A: REMOVAL

1. 15-INCH TYPE

1) Lift-up the vehicle, and remove the front wheels.
2) Remove the caliper body and the support from housing, and suspend it from strut using a wire.
3) Remove the disc rotor.

NOTE:
If the disc rotor seizes up within hub, drive the disc rotor out by pushing with an 8 mm bolt in holes B on the rotor.

4) Clean mud and foreign particles from the caliper body assembly and the support.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-19, 15-INCH TYPE, REMOVAL, Front Disc Rotor.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-19, 15-INCH TYPE, REMOVAL, Front Disc Rotor.>

B: INSTALLATION

1) Install the disc rotor.
2) Install the caliper body and the support to housing.

Tightening torque:
80 N·m (8.2 kgf·m, 59 ft·lb)
3) Install the front wheels.

C: INSPECTION

1) Check front wheel bearing play and axial hub runout before disc rotor runout limit inspection. <Ref. to DS-15, INSPECTION, Front Axle.>
2) Secure the disc rotor by tightening five wheel nuts.
3) Set a dial gauge 10 mm (0.39 in) inward of rotor outer perimeter. Turn the disc rotor to check runout. If the disc rotor runout exceeds specified value, replace with a new disc rotor.

Disc rotor runout limit: 0.05 mm (0.0020 in)

4) Set a micrometer 10 mm (0.39 in) inward of the rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor is outside the service limit, replace with a new disc rotor.

<table>
<thead>
<tr>
<th>Disc rotor thickness A mm (in)</th>

</tbody>
</table>
4. Front Disc Brake Assembly

A: REMOVAL

1. 15-INCH TYPE

CAUTION:
Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.

1) Lift-up the vehicle, and remove the front wheels.
2) Remove the union bolt, and disconnect the brake hose from caliper body assembly.
3) Remove the bolt securing lock pin to caliper body.
4) Raise the caliper body, and then move it toward vehicle center to separate it from support.
5) Remove the support from housing.

NOTE:
Remove the support only when replacing itself or rotor. It need not be removed when servicing the caliper body assembly.

6) Clean mud and foreign particles from the caliper body assembly and the support.

2. 16-INCH TYPE

Refer to 15-inch type. <Ref. to BR-20, 15-INCH TYPE, REMOVAL, Front Disc Brake Assembly.>

3. 17-INCH TYPE

Refer to 15-inch type. <Ref. to BR-20, 15-INCH TYPE, REMOVAL, Front Disc Brake Assembly.>

B: INSTALLATION

1. 15-INCH TYPE

1) Install the support on housing.

* Tightening torque: \(80 \text{ N} \cdot \text{m (8.2 kgf} \cdot \text{m, 59 ft-lb)}\)

2) Apply a thin coat of Molykote M7439 to the pad clip.

3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and inner shim.
4) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the three frictional portions between inner shim and outer shim of outer pads.

3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and inner shim.

5) Install the pad on support.
6) Install the caliper body on support.

**Tightening torque:**
- 27 N·m (2.8 kgf-m, 19.9 ft-lb)

7) Using new brake hose gaskets, connect the brake hose.

**Tightening torque:**
- 18 N·m (1.8 kgf-m, 13.0 ft-lb)

8) Bleed air from brake system.

2. **16-INCH TYPE**

Refer to 15-inch type. <Ref. to BR-20, 15-INCH TYPE, INSTALLATION, Front Disc Brake Assembly.>

3. **17-INCH TYPE**

1) Install the support on housing.

**Tightening torque:**
- 80 N·m (8.2 kgf-m, 59 ft-lb)

2) Apply a thin coat of Molykote M7439 to the pad clip.
5) Install the pad on support.

NOTE:
Install the pad indicator in proper direction.

CAUTION:
Correctly install the pad return spring to supporting surface of pad clip as shown in the figure.
When the pad return spring is deformed or damaged, replace the brake pad with new one.

7) Using new brake hose gaskets, connect the brake hose.

**Tightening torque:**
18 N·m (1.8 kgf-m, 13.0 ft-lb)

8) Bleed air from brake system.

C: DISASSEMBLY

1. 15-INCH TYPE

1) Clean mud and foreign particles from the caliper body assembly and the support.

CAUTION:
Be careful not to allow foreign particles to enter inlet (at brake hose connector).

2) Place a wooden block in caliper body as shown in the figure to prevent piston from jumping out and avoid being damaged.

3) Gradually supply compressed air via installation hole of brake hose to force the piston out.

4) Remove the piston boot.

5) Remove the piston seal from caliper body cylinder.

6) Install the caliper body on support.
Front Disc Brake Assembly

CAUTION:
Do not damage the cylinder and piston seal groove.

1) Clean the caliper body interior using brake fluid.
2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
4) Apply a coat of specified grease to the boot and fit in to the groove on ends of cylinder.

**Grease:**

*NIGLUBE RX-2 (Part No. K0779GA102)*

5) Insert the piston into cylinder.

6) Position the boot in the grooves on cylinder and piston.

**Grease:**

*NIGLUBE RX-2 (Part No. K0779GA102)*

7) Apply a coat of specified grease to the lock pin and guide pin outer surface, cylinder inner surface, and boot grooves.

8) Install the lock pin and guide pin boot on support.

---

CAUTION:
Do not force the piston into cylinder.
2. 16-INCH TYPE
Refer to 15-inch type. <Ref. to BR-23, 15-INCH TYPE, ASSEMBLY, Front Disc Brake Assembly.>

3. 17-INCH TYPE
Refer to 15-inch type. <Ref. to BR-23, 15-INCH TYPE, ASSEMBLY, Front Disc Brake Assembly.>

E: INSPECTION
1) Repair or replace the faulty parts.
2) Check the caliper body and piston for uneven wear, damage or rust.
3) Check the rubber parts for damage and deterioration.
5. Rear Brake Pad

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Remove the caliper bolt.
3) Raise the caliper body and support it.

NOTE:
Do not disconnect the brake hose from caliper body.
4) Remove the pad.

NOTE:
If the brake pad is difficult to remove, use the same procedure as for front disc brake pad.
<Ref. to BR-16, REMOVAL, Front Brake Pad.>

B: INSTALLATION
1) Apply a thin coat of Molykote M7439 to the pad clip.
2) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and shim.
3) Install the pad on support.
4) Install the caliper body on support.

Tightening torque:
- Solid disc brake model
  27 N·m (2.8 kgf-m, 19.9 ft-lb)
- Ventilated disc brake model
  37 N·m (3.7 kgf-m, 27.2 ft-lb)

C: INSPECTION
Check the pad thickness A.

<table>
<thead>
<tr>
<th>Type of disc rotor</th>
<th>Solid</th>
<th>Ventilated</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pad thickness</td>
<td>Standard value</td>
<td>Wear limit</td>
</tr>
<tr>
<td>mm (in)</td>
<td>9.0 (0.35)</td>
<td>1.5 (0.059)</td>
</tr>
<tr>
<td></td>
<td>9.0 (0.35)</td>
<td>1.5 (0.059)</td>
</tr>
</tbody>
</table>

NOTE:
- Always replace the pads for both right and left wheels at the same time.
- Also replace pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.
6. Rear Disc Rotor

A: REMOVAL
1) Lift-up the vehicle, and then remove the rear wheels.
2) Release the parking brake.
3) Remove the two mounting bolts, and remove the disc brake assembly.
4) Suspend the disc brake assembly so that the hose is not stretched.
5) Remove the disc rotor.

NOTE:
If the disc rotor is difficult to remove, try following two methods in order.
(1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe gets away enough from the disc rotor.
(2) If the disc rotor seizes up within hub, drive the disc rotor out by pushing with an 8 mm bolt in holes B on the rotor.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Adjust the parking brake. <Ref. to PB-9, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

C: INSPECTION
1) Check rear wheel bearing play and axial hub runout before disc rotor runout limit inspection. <Ref. to DS-21, INSPECTION, Rear Hub Unit Bearing.>
2) Secure the disc rotor by tightening five wheel nuts.
3) Set a dial gauge 10 mm (0.39 in) inward of rotor outer perimeter. Turn the disc rotor to check runout. If the disc rotor runout exceeds specified value, replace with a new disc rotor.

Disc rotor runout limit: 0.05 mm (0.0020 in)
4) Set a micrometer 10 mm (0.39 in) inward of the rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor is outside the service limit, replace with a new disc rotor.

<table>
<thead>
<tr>
<th>Disc rotor thickness A mm (in)</th>

</tr>
<tr>
<td>Ventilated disc</td>
<td>18 (0.71)</td>
<td>16 (0.63)</td>
<td>290 (11.42)</td>
</tr>
</tbody>
</table>
7. Rear Disc Brake Assembly

A: REMOVAL

CAUTION:
Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.

1) Lift-up the vehicle, and then remove the rear wheels.
2) Disconnect the brake hose from caliper body assembly.
3) Remove the caliper lower bolts.
4) Raise the caliper body, and then move it toward vehicle center to separate it from the support.
5) Remove the support from housing.

NOTE:
Remove the support only when replacing itself or rotor. It need not be removed when servicing the caliper body assembly.
6) Clean mud and foreign particles from the caliper body assembly and the support.

CAUTION:
Be careful not to allow foreign particles to enter inlet (at brake hose connector).

B: INSTALLATION

1) Install the support on housing.

Tightening torque:
53 N·m (5.4 kgf-m, 39.1 ft-lb)

2) Apply a thin coat of Molykote M7439 to the pad clip.

3) Apply a thin coat of Molykote AS880N (Part No. K0777YA010) to the frictional portion between pad and shim.
4) Install the pad on support.
5) Install the caliper body on support.

Tightening torque:
Solid disc brake model
27 N·m (2.8 kgf-m, 19.9 ft-lb)
Ventilated disc brake model
37 N·m (3.7 kgf-m, 27.2 ft-lb)

6) Replace the brake hose gaskets with new ones, and then connect the brake hose.

Tightening torque:
18 N·m (1.8 kgf-m, 13.0 ft-lb)

7) Bleed air from brake system.

C: DISASSEMBLY

1) Remove the piston boot.

2) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.
3) Gradually supply compressed air via installation hole of brake hose to force the piston out.

4) Remove the piston seal from caliper body cylinder.

**CAUTION:**
Do not damage the cylinder and piston seal groove.

5) Remove the lock pin sleeve and boot from caliper body.
6) Remove the guide pin boot.

**D: ASSEMBLY**
1) Clean the caliper body interior using brake fluid.
2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
4) Apply a coat of specified grease to the boot and fit in to the groove on ends of cylinder.

**Grease:**
*NIGLUBE RX-2 (Part No. K0779GA102)*

5) Insert the piston into cylinder.

**CAUTION:**
Do not force the piston into cylinder.

6) Position the boot in grooves on cylinder and piston.

7) Apply a coat of specified grease to the guide pin, outer surface, sleeve outer surface, cylinder inner surface, and boot grooves.

**Grease:**
*NIGLUBE RX-2 (Part No. K0779GA102)*

8) Install the guide pin boot on support.
9) Install the lock pin boot on support, and then insert the lock pin sleeve into specified point.

**E: INSPECTION**
1) Repair or replace the faulty parts.
2) Check the caliper body and piston for uneven wear, damage or rust.
3) Check the rubber parts for damage or deterioration.
8. Master Cylinder

A: REMOVAL

CAUTION:
Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
1) Thoroughly drain the brake fluid from reservoir tank.
2) Disconnect the fluid level gauge harness connector.
3) Remove the brake pipes from master cylinder.
4) Remove the master cylinder mounting nuts, and take out the master cylinder from brake booster.

B: INSTALLATION
1) Replace the O-ring for the master cylinder with a new one.

CAUTION:
Do not install the O-ring in wrong place.
2) Install in the reverse order of removal.

Tightening torque:
Master cylinder mounting nut
13 N·m (1.3 kgf-m, 9.6 ft-lb)
Piping flare nut
Model with ABS
15 N·m (1.5 kgf-m, 10.8 ft-lb)
Model with VDC
19 N·m (1.9 kgf-m, 14.0 ft-lb)

CAUTION:
Be sure to use recommended brake fluid.
3) Bleed air from brake system. <Ref. to BR-38, PROCEDURE, Air Bleeding.>

C: REPLACEMENT
1) Remove mud and dirt from the surface of brake master cylinder.
2) Secure the master cylinder on a vise.

NOTE:
To avoid damaging master cylinder, use aluminum plate while holding with vise.
3) Remove the pin which secures the reservoir tank to master cylinder, and then remove the reservoir tank and seal.

4) With pushing-in the primary piston, remove the C-ring using pliers.

5) With pushing-in the primary piston, remove the straight pin from the port on installation part of reservoir tank using magnet pick-up tool.

6) Extract the primary piston assembly and secondary piston assembly straight out, while taking care not to scratch the inner surface of cylinder.
7) Clean the inside of master cylinder with brake fluid. Check the inside of cylinder for damage, deform and wear. Replace the master cylinder as assembly if faulty.
8) Apply recommended brake fluid to the inner wall of master cylinder, and outer surface of piston assembly.
9) Ensure that the inner wall of master cylinder, and piston assembly are free of dirt when assembling. Install the primary piston assembly and secondary piston assembly, while taking care not to damage the master cylinder inner wall.
10) With pushing-in the primary piston, install the cylinder pin.
11) With pushing-in the primary piston, install the C-ring to groove using pliers.

CAUTION:
Ensure the secure installation.
12) Install the seal to reservoir tank.

13) Install the reservoir tank to master cylinder, and secure with pin.
14) Replace the O-ring for the master cylinder with a new one.

D: INSPECTION
Inspect for oil leakage from the master cylinder.
NOTE:
After replacing piston kit; when the oil leakage is found without damaging or scratching the inside of cylinder, wear of master cylinder inner wall may be the cause. In this case, replace the master cylinder as assembly.
9. Brake Booster

A: REMOVAL
1) Remove or disconnect the following parts at engine compartment.
   (1) Disconnect the connector for brake fluid level gauge.
   (2) Remove the brake pipes from master cylinder.
   (3) Remove the master cylinder installing nuts.
   (4) Disconnect the vacuum hose from brake booster.
2) Remove the following parts from pedal bracket.
   (1) Snap pin and clevis pin
   (2) Four brake booster installing nuts
3) Remove the brake booster while shunning brake pipes.

NOTE:
- Do not apply strong impact to booster shell and vacuum pipe.
- Be careful not to drop the brake booster. The brake booster should be replaced if it has been dropped.
- Use special care when handling the operating rod. If excessive force is applied to operating rod, sufficient to cause a change in the angle in excess of ±3°, it may result in damage to the power piston cylinder.

B: INSTALLATION
1) Check and adjust the operating rod of brake booster.

   Standard L:
   LHD: 136.3 mm (5.38 in)
   RHD: 155.2 mm (6.11 in)

   If it is not within the specified value, adjust it by adjusting the brake booster operating rod.
2) Mount the brake booster in position.

   Use care when placing the brake booster on the floor.
   Do not change the push rod length.

CAUTION:
- Do not disassemble the brake booster.
- If external force is applied from above when brake booster is placed in this position, the resilient portion as indicated by “P”, may be damaged.
3) Connect the operating rod to brake pedal with clevis pin and snap pin.

NOTE:
Apply a thin coat of grease [SUNLIGHT 2 (Part No. 003602010) or equivalent] to clevis pin.

4) Connect the vacuum hose to brake booster.
5) After replacing the O-ring with a new one, install the master cylinder to brake booster.

8) Measure the clearance between the threaded end of stop light switch and stopper. If it is not within specified value, adjust it by adjusting the position of stop light switch. <Ref. to BR-45, ADJUSTMENT, Stop Light Switch.>

CAUTION:
Be careful not to rotate the stop light switch.

*Stop light switch clearance A: 0.3 mm (0.012 in)*

9) Apply grease to operating rod connecting pin to prevent it from wearing.
10) Bleed air from brake system.

*Tightening torque (Air bleeder screw): 8 N·m (0.8 kgf-m, 5.8 ft-lb)*

11) Conduct road tests to ensure brakes do not drag.

C: INSPECTION

1. OPERATION CHECK (WITHOUT GAUGES)

CAUTION:
When checking operation, be sure to securely apply the parking brake.

*CHECKING WITHOUT GAUGES*

This method cannot determine the exact portion which has failed. But it can provide a rough understanding of the nature of failure if checking is conducted in accordance with the following procedures.

6) Connect the brake pipes to master cylinder.
7) Connect the connector for brake fluid level gauge.
**AIR TIGHTNESS CHECK**

Start the engine, and idle it for 1 to 2 minutes, then turn it OFF. Depress the brake pedal several times applying the same pedal force as that used in ordinary braking operations. The pedal stroke should be greatest on the 1st depression, and it should become smaller with each successive depression. If no change occurs in the pedal height while in a depressed state, the brake booster is faulty.

![Diagram](BR-00080)

(1) Normal Operation  
(2) Not OK  
(3) 1st  
(4) 2nd  
(5) 3rd

**NOTE:**  
- In the event of defective operation, also inspect the condition of the check valve and vacuum hose.  
- Replace them if faulty and conduct the test again.  
- If no improvement is observed, check precisely with gauges.

**OPERATION CHECK**

1) With the engine OFF, depress the brake pedal several times applying the same pedal force and make sure that the pedal height does not vary with each depression of the pedal.

2) With the brake pedal depressed, start the engine.

3) As engine starts, the brake pedal should move slowly toward the floor. If no change occurs in the pedal height, the brake booster is faulty.

**NOTE:**  
If faulty, check precisely with gauges.

**LOADED AIR TIGHTNESS CHECK**

Depress the brake pedal while engine is running, and turn OFF the engine while the pedal is still depressed. Keep the pedal depressed for 30 seconds; if no change occurs in the pedal height, the brake booster is functioning normally; if the pedal height increases, it is faulty.

**NOTE:**  
If faulty, check precisely with gauges.

2. **OPERATION CHECK (WITH GAUGES)**

**CAUTION:**  
When checking operation, be sure to securely apply the parking brake.

**CHECKING WITH GAUGES**

Connect gauges as shown in the figure. After bleeding air from pressure gauges, proceed to each check.

![Diagram](BR-00082)

(1) Pressure gauge  
(2) Vacuum gauge  
(3) Adapter hose  
(4) Vacuum hose  
(5) Pedal force gauge
• AIR TIGHTNESS CHECK

1) Start the engine and keep it running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point A is indicated on vacuum gauge. Do not depress the brake pedal at this moment.
