2) Stop the engine and watch the gauge. If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping the engine, brake booster is functioning properly. If defective, the cause may be one of those listed below.

• Check valve malfunction
• Leak from vacuum hose
• Leak from shell jointed portion or stud bolt welded portion
• Damaged diaphragm
• Leak from valve body seal and bearing portion
• Leak from plate and seal assembly portion
• Leak from poppet valve assembly portion

• LOADED AIR TIGHTNESS CHECK

1) Start the engine and depress the brake pedal with pedal force of 196 N (20 kgf, 44 lb). Keep the engine running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point B is indicated on vacuum gauge while the pedal is still depressed.

2) Stop the engine and watch vacuum gauge. If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping the engine, brake booster is functioning properly. If defective, refer to “AIR TIGHTNESS CHECK”.<Ref. to BR-33, INSPECTION, Brake Booster.>

3) If any fault is found on brake booster, replace the brake booster with a new one.

• LACK OF BOOSTING ACTION CHECK

Turn OFF the engine, and set the vacuum gauge reading at “0”. Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

<table>
<thead>
<tr>
<th>Brake pedal force N (kgf, lb)</th>
<th>147 (15, 33)</th>
<th>294 (30, 66)</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
10. Brake Fluid

A: INSPECTION

1) Check that the brake fluid level remains between “MIN” and “MAX”. If out of the specified range, refill or drain fluid. If the fluid level becomes close to “MIN”, refill fluid.
2) Check the fluid for discoloration. If the fluid color has excessively changed, drain the fluid and refill with new fluid.

B: REPLACEMENT

CAUTION:
- To always maintain the brake fluid characteristics, replace the brake fluid according to maintenance schedule or earlier than that when used in severe condition.
- Fresh Subaru genuine fluid must be used.
- Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
- Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

NOTE:
- During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
- The brake pedal operating must be very slow.
- For convenience and safety, two people should do the work.
- The amount of brake fluid required is approximately 500 m³ (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.
1) Either lift-up the vehicle to place a rigid rack under it, or lift-up the vehicle.
2) Remove both the front and rear wheels.
3) Draw out the brake fluid from master cylinder.
4) Refill the reservoir tank with recommended brake fluid.

Recommended brake fluid:
Refer to the specification. <Ref. to BR-2, SPECIFICATION, General Description.>

5) Install one end of a vinyl tube onto air bleeder and insert the other end of the tube into a container to collect brake fluid.

CAUTION:
Brake fluid replacement sequence; (A) Front RH → (B) Rear LH → (C) Front LH → (D) Rear RH

6) Instruct your co-worker to depress the brake pedal slowly two or three times and then hold it depressed.
7) Loosen the bleeder screws to drain brake fluid. And then quickly tighten the screw.
8) Release the brake pedal slowly. Repeat steps 6) through 8) until there are no more air bubbles in the drained brake fluid.

NOTE:
Add brake fluid as necessary while performing air bleed operation, in order to prevent the tank from running short of brake fluid.
9) After completing the bleeding operation, hold the brake pedal depressed and tighten the screw and install bleeder cap.

Tightening torque (Bleeder screw):
8 N⋅m (0.8 kgf-m, 5.8 ft-lb)

10) Bleed air from each wheel cylinder using the same procedures as described in steps 6) through 8) above.
11) Depress the brake pedal with a force of approximately 294 N (30 kgf, 66 lb) and hold it there for approximately 20 seconds to check for no entry of air and if pedal height remain same. Visually inspect the bleeder screws and brake pipe joints to make sure that there is no fluid leakage.
12) Install the wheels, and drive vehicle for a short distance between 2 to 3 km (1 to 2 miles) to make sure that brakes are operating properly.
11. Air Bleeding

A: Procedure

**CAUTION:**
- Fresh Subaru genuine fluid must be used.
- Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
- Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

1. MASTER CYLINDER

**NOTE:**
- If the master cylinder is disassembled or reservoir tank is empty, bleed the master cylinder.
- During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
- The brake pedal operating must be very slow.
- For convenience and safety, two people should do the work.

1) Loosen the wheel nuts, jack-up the vehicle, support it with rigid racks, and remove the wheels.
2) Disconnect the brake line at primary and secondary sides.
3) Put a plastic bag cover on master cylinder.
4) Carefully depress and hold the brake pedal.
5) Close the outlet plug with your finger, and then release the brake pedal.

6) Repeat the step 4) and 5) until brake fluid is completely drained from outlet plug.
7) Remove the plastic bag.
8) Install the brake pipes to master cylinder.

**Tightening torque:**
- $15 \, \text{N} \cdot \text{m} \ (1.5 \, \text{kgf} \cdot \text{m}, 10.8 \, \text{ft} \cdot \text{lb})$

9) Bleed air from the brake line. <Ref. to BR-38, BRAKE LINE, PROCEDURE, Air Bleeding.>

2. BRAKE LINE

**NOTE:**
- During the bleeding operation, keep the reservoir tank filled with brake fluid to eliminate entry of air.
- The brake pedal operating must be very slow.
- For convenience and safety, two people should do the work.

1) Make sure that there is no leak from joints and connections of the brake system.
2) Fit one end of vinyl tube into the air bleeder and put the other end into a brake fluid container.

**CAUTION:**
Brake fluid replacement sequence; (A) Front RH → (B) Rear LH → (C) Front LH → (D) Rear RH

(1) Master cylinder
(2) Hydraulic unit
(3) Proportioning valve
3) Slowly depress the brake pedal and keep it depressed. Then, open the air bleeder to discharge air together with the fluid. Release the air bleeder for 1 to 2 seconds. Next, with the bleeder closed, slowly release the brake pedal. Repeat these steps until there are no more air bubbles in the vinyl tube. Allow 3 to 4 seconds between two brake pedal operations.

CAUTION: Cover the bleeder with cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.

NOTE: The brake pedal operating must be very slow.

4) Tighten the air bleeder securely when no air bubbles are visible.

**Air bleeder tightening torque:**

8 N m (0.8 kgf-m, 5.8 ft-lb)

5) Perform these steps for the brakes connecting to secondary chamber of master cylinder first, and then for the ones connecting to primary chamber. With all procedures completed, fully depress the brake pedal and keep it in that position for approximately 20 seconds to make sure that there is no leak evident in the entire system.

6) Check the pedal stroke. While the engine is idling after warming up, depress the brake pedal with a 500 N (51 kgf, 112 lb) load and measure the distance between brake pedal and steering wheel. With the brake pedal released, measure the distance between pedal and steering wheel again. The difference between the two measurements must not be more than specified value.

7) If the distance is more than specified, there is a possibility that air is in the brake line. Bleed the brake line until pedal stroke meets the specification.

8) Operate the hydraulic control unit in the sequence control mode. <Ref. to ABS-10, ABS Sequence Control.>

9) Recheck the pedal stroke.

10) If the distance is more than specified, there is a possibility that air is in the inside of the hydraulic unit. Repeat above steps 2) to 9) until pedal stroke meets the specification.

11) Add brake fluid to the required level (“MAX” level) of reservoir tank.

12) As a final step, test run the vehicle at low speed and ensure that brakes provide normal braking action.

---

**Specified pedal stroke:**

95 mm (3.74 in) or less

When depressing brake pedal with a 500 N (51 kgf, 112 lb) load.
12. Brake Hose

A: REMOVAL

1. FRONT BRAKE HOSE
   1) Separate the brake pipe from brake hose using a flare nut wrench.
   2) Remove the clamp, bolt at strut mount, and union bolt.

![Image 1](BR-00095)

(1) Brake hose
(2) Brake pipe

2. REAR BRAKE HOSE
   1) Remove the union bolt from rear brake caliper.

![Image 2](BR-00348)

(1) Brake hose

2) Separate the brake pipe from brake hose using a flare nut wrench.

![Image 3](BR-00349)

(1) Brake pipe
(2) Brake hose clamp

3) Remove the clamp and remove the brake hose.

B: INSTALLATION

1. FRONT BRAKE HOSE
   1) Secure the brake hose to strut mount.

   **Tightening torque:**
   
   33 N·m (3.4 kgf-m, 24.3 ft-lb)

   2) Install the brake hose to caliper using a new gasket.

   **Tightening torque (Union bolt):**
   
   18 N·m (1.8 kgf-m, 13.0 ft-lb)

   ![Image 4](BR-0002)

   (1) Brake pipe
   (2) Brake hose
   (3) Brake hose clamp

   3) Position the disc in straight-forward direction and route the brake hose through the hole in bracket on wheel apron side.
CAUTION: Be sure the brake hose is not twisted.

4) Temporarily tighten the flare nut to connect the brake pipe and hose.
5) Fix the brake hose with clamp at wheel apron bracket.
6) Tighten the flare nut to specified torque.

Tightening torque (Brake pipe flare nut):
15 N·m (1.5 kgf-m, 10.8 ft-lb)

7) Bleed air from brake system.

2. REAR BRAKE HOSE

1) Pass the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
2) Insert the clamp upward to fix brake hose.
3) Install the brake hose to rear brake caliper using a new gasket.

Tightening torque (Union bolt):
18 N·m (1.8 kgf-m, 13.0 ft-lb)

4) Tighten the flare nut to specified torque.

Tightening torque (Brake pipe flare nut):
15 N·m (1.5 kgf-m, 10.8 ft-lb)

5) Bleed air from the brake system.

C: INSPECTION

Ensure there are no cracks, breakage or damage on hoses. Check joints for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the hose.
13. Brake Pipe

A: REMOVAL

NOTE:
Airbag system wiring harness is routed near the center brake pipe.

CAUTION:
- All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, make sure that it is not bent.

B: INSTALLATION

NOTE:
Airbag system wiring harness is routed near the center brake pipe.

CAUTION:
- All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When installing the brake pipe, make sure that it is not bent.
- After installing the brake pipe and hose, bleed air.
- After installing the brake hose, make sure that it does not touch the tire or suspension assembly, etc.

Brake pipe tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)

C: INSPECTION

Ensure there are no cracks, breakage or damage on pipes. Check joints for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the pipes.

NOTE:
Use a mirror when inspecting the low-visible part or backside.
14. Brake Pedal

A: REMOVAL

1. LHD MT MODEL
   1) Remove the steering shaft.
   2) Disconnect the connectors (stop light switch) from pedal bracket.
   3) Remove the clevis pin which secures lever to push rod.
   4) Remove the nuts which secure clutch master cylinder.
   5) Remove the bolts and nuts which secure pedal bracket.

2. LHD AT MODEL
   1) Remove the steering shaft.
   2) Disconnect the connectors (stop light switch) from pedal bracket.
   3) Remove the clevis pin which secures lever to push rod.

3. RHD MODEL
   Refer to LHD AT model. <Ref. to BR-43, LHD AT MODEL, REMOVAL, Brake Pedal.>

B: INSTALLATION

1) Install in the reverse order of removal.

   CAUTION:
   Always use new clevis pins.

2) Inspect the brake pedal after installation. <Ref. to BR-43, INSPECTION, Brake Pedal.>

C: INSPECTION

1) Move the brake pedal pads in the lateral direction with a force of approx. 10 N (1 kgf, 2 lb) to ensure pedal deflection is in specified range.
CAUTION:
If excessive deflection is noted, replace the bushing with a new one.

Deflection of brake pedal:
Limit
5.0 mm (0.197 in) or less

2) Check the position of pedal pad.

Pedal height L:
LHD: 150 — 160 mm (5.91 — 6.30 in)
RHD: 162 — 172 mm (6.38 — 6.77 in)

Brake pedal free play A:
0.5 — 2 mm (0.02 — 0.08 in) [When the brake pedal is pulled upward with force of less than 10 N (1 kgf, 2 lb).]

3) If it is not within the specified value, adjust it by adjusting the brake booster operating rod length.
15. Stop Light Switch

**A: REMOVAL**
1) Disconnect the ground cable from battery.
2) Disconnect the stop light switch connector.
3) Loosen the nuts, and unscrew the stop light switch to remove.

**B: INSTALLATION**
1) Screw the stop light switch onto a bracket and secure it temporarily with a nut.
2) Adjust the stop light switch position, and then tighten the nut.
   <Ref. to BR-45, ADJUSTMENT, Stop Light Switch.>

_Tightening torque:_

\[8 \text{ N} \cdot \text{m (0.8 kgf-m, 5.8 ft-lb)}\]

**C: INSPECTION**
1) If the stop light switch does not operate properly (or if it does not fix at the specified position), replace with a new one.

**Specified position \(L\):**

\[2 \text{ mm (0.079 in)}\]

2) Measure the clearance between the threaded end of stop light switch and stopper.

**CAUTION:**
Be careful not to rotate the stop light switch.

_Stop light switch clearance \(A\):_  

\[0.3 \text{ mm (0.012 in)}\]

3) If it is not within the specified value, adjust it by adjusting the position of stop light switch.

**CAUTION:**
Be careful not to rotate the stop light switch.

**D: ADJUSTMENT**
Loosen the lock nut, and adjust the stop light switch position until the clearance between the threaded end of the stop light switch and stopper \(A\) becomes \(0.3 \text{ mm (0.012 in)}\). Then, tighten the lock nut.
Stop Light Switch

**Tightening torque:**
8 N·m (0.8 kgf-m, 5.8 ft-lb)

![Diagram of stop light switch components](BR-00111)

(1) Stop light switch
(2) Lock nut A
(3) Lock nut B
(4) Stopper
(5) Brake pedal

**NOTE:**
Tighten the lock nut B until the clearance between the threaded end of stop light switch and stopper becomes 0 mm (0 inch). Hold the stop light switch to prevent turning, and then loosen the lock nut B approx. 60°. The clearance (A) becomes 0.3 mm (0.012 in).
# 16. Diagnosis

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

B: COMPONENT

1. PARKING BRAKE (REAR DISC BRAKE)

(1) Back plate  (7) Strut spring  (13) Adjuster
(2) Retainer    (8) Strut          (14) Shoe hold-down cup
(3) Spring washer (9) Shoe guide plate (15) Shoe hold-down spring
(4) Lever       (10) Primary return spring (16) Shoe hold-down pin
(5) Parking brake shoe (Primary) (11) Secondary return spring (17) Adjusting hole cover
(6) Parking brake shoe (Secondary) (12) Adjusting spring
2. PARKING BRAKE CABLE

C: CAUTION
- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vice.
- Keep grease etc. away from parking brake shoes.
2. Parking Brake Lever

A: REMOVAL
1) Set the wheel stoppers to tires.
2) Remove the console box.
3) Disconnect the parking brake switch connector.
4) Remove the parking cable adjusting nut (self-locking nut).
5) Remove the parking brake lever.

B: INSTALLATION
1) Install in the reverse order of removal.
   
   **Tightening torque:**
   
   Parking brake lever
   18 N·m (1.8 kgf-m, 13.0 ft-lb)

2) Install a new adjusting nut (self-locking nut).
3) Adjust the lever stroke. <Ref. to PB-5, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION
1) Operate the parking brake lever 3 to 4 times and return the lever fully.
2) While pulling the parking brake lever upward, count the notches.
   
   **Lever stroke:**
   5 to 6 notches when pulled with a force of 200 N (20.4 kgf, 45 lb)

If it is not within the specified value, adjust the parking brake. <Ref. to PB-9, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

D: ADJUSTMENT
Adjust the parking lever stroke. <Ref. to PB-9, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
3. Parking Brake Cable

A: REMOVAL
1) Remove the rear seat cushion.
2) Remove the console box.
3) Remove the parking cable adjusting nut (self-locking nut).
4) Remove the parking brake lever. <Ref. to PB-5, REMOVAL, Parking Brake Lever.>
5) Roll up the floor mat and remove the clamps.
6) Remove the inner cable end from equalizer.
7) Lift-up the vehicle, and then remove the rear wheels.
8) Remove the parking brake cable from rear brake. <Ref. to PB-7, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
9) Remove the clamp from rear brake.
10) Remove the cable clamp from rear arm bracket.
11) Remove the cable clamp from rear floor.
12) Remove the cable assembly.

B: INSTALLATION
1) Install in the reverse order of removal.

NOTE:
Be sure to pass the cable through the cable guide inside tunnel.
2) Adjust the lever stroke. <Ref. to PB-5, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION
Check and replace the removed cable if damaged, rusty or faulty.
1) Check the cable for smooth operation.
2) Check the inner cable for damage and rust.
3) Check the outer cable for damage, bends and cracks.
4) Check the boot for damage, cracks and corrosion.
4. Parking Brake Assembly (Rear Disc Brake)

A: REMOVAL
1) Release the parking brake.
2) Remove the two mounting bolts and remove the brake caliper assembly.
3) Suspend the brake caliper assembly so that the hose is not stretched.
4) Remove the disc rotor.

NOTE:
If the disc rotor is difficult to remove, try the following two methods in order.
(1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe gets away enough from the disc rotor.
(2) If the disc rotor seizes up within hub, drive out the disc rotor by pushing two 8 mm bolts in holes B on rotor.
5) Remove the shoe return spring from parking brake assembly.
6) Remove the front shoe hold down spring and pin.
7) Remove the strut and strut spring.
8) Remove the adjuster assembly from parking brake assembly.
9) Remove the brake shoe.
10) Remove the rear shoe hold down spring and pin with pliers.
11) Remove the parking brake cable from lever.
12) Using a flat tip screwdriver, raise the retainer. Remove the parking lever and washer from brake shoe.
B: INSTALLATION

CAUTION:
Be sure the lining surface is free from oil and grease contamination.
1) Apply brake grease to the following places.

Brake grease:
Brake Grease (Part No. 003602002)
- Six contact surfaces of shoe rim and back plate packing
- Contact surface of shoe wave and anchor pin
- Contact surface of lever and strut
- Contact surface of shoe wave and adjuster assembly
- Contact surface of shoe wave and strut
- Contact surface of lever and shoe wave
2) Insert the primary side brake shoe into anchor pin groove.
3) Secure the brake shoe with the shoe hold-down pin and cup.
4) Install the plate to anchor pin, and then assemble the primary return spring to anchor pin.

5) Install the parking brake cable to parking brake lever.
6) Assemble the strut and adjuster, and then secure the secondary side brake shoe with shoe hold-down pin and cup.

NOTE:
- Install the strut spring of both right and left wheel facing vehicle front.

- Install the adjuster assembly with screw on left side.

7) Install the secondary return spring and adjusting spring.

8) Adjust the parking brake. <Ref. to PB-9, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
9) Drive the vehicle for parking brake lining “break-in”.
   (1) Drive the vehicle at about 35 km/h (22 MPH).
   (2) With the parking brake release button pushed in, pull the parking brake lever gently.
   (3) Drive the vehicle for about 200 m (0.12 mile) in this condition.
   (4) Wait 5 to 10 minutes for the parking brake to cool down.
   Repeat once more from step (1).
   (5) After breaking-in, re-adjust the parking brakes.
C: INSPECTION
1) Measure the brake disc rotor inside diameter. If the disc is scored or worn, replace the brake disc rotor.

**Disc rotor inside diameter:**
- **Standard:** 170 mm (6.69 in)
- **Service limit:** 171 mm (6.73 in)

2) Measure the lining thickness. If it exceeds the limit, replace shoe assembly.

**Lining thickness:**
- **Standard:** 3.2 mm (0.126 in)
- **Service limit:** 1.5 mm (0.059 in)

NOTE:
Replace the right and left brake shoe as a set.

D: ADJUSTMENT

1. SHOE CLEARANCE
1) Return the parking brake lever fully.
2) Remove the adjusting hole cover from back plate.
3) Turn the adjusting screw using a flat tip screwdriver until the brake shoe is in close contact with disc rotor.
4) Turn back (downward) the adjusting screw 3 to 4 notches.

**CAUTION:**
- Check there is no brake drag.

5) Install the adjusting hole cover to back plate.

5) Adjust the shoe clearance before lever stroke adjustment. <Ref. to PB-9, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2) Remove the parking lever cover.
3) Operate the parking brake lever 3 to 4 times.
4) Turn the adjusting nut until lever stroke is at the specification.

**Lever stroke:**
- 5 to 6 notches when pulled with a force of 200 N (20.4 kgf, 45 lb)

5) Check there is no brake drag.
6) Install the parking lever cover.

![Diagram of parking brake assembly](PB-0003)

(1) Adjusting nut (Self-locking nut)

(1) Adjusting screw
(2) Adjusting hole cover (rubber)
(3) Flat tip screwdriver
(4) Back plate

4) Turn back (downward) the adjusting screw 3 to 4 notches.
## General Diagnostic Table

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

Tightening torque: \( N \cdot m \) (kgf-m, ft-lb)
C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine power steering fluid, grease etc. or the equivalent. Do not mix fluid, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wooden blocks, aluminum plate or cloth between the part and the vise.

### General Description

**POWER ASSISTED SYSTEM (POWER STEERING)**

#### INSTALLER & REMOVER
- **Tool Number:** 34199AG090
- **Description:**
  - Used for installing oil seal of valve housing.
  - Used with SEAL INSTALLER (34099FA130).
  - Used for installing ball bearing of valve housing.
  - Used for removing oil seal and ball bearing from valve housing.
  - For LHD model.

#### FORMER PISTON
- **Tool Number:** 34199AG080
- **Description:**
  - Used for forming seal of rack.
  - For LHD model.
  - Used with GUIDE G (26) (34199AG060) or GUIDE G (24) (34199AG050).

#### INSTALLER
- **Tool Number:** 34199AG010
- **Description:**
  - Used for press-fit oil seal of gearbox cylinder.
  - For LHD model.
2. Steering Wheel

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Set the tire to the straight-ahead position.
3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>

WARNING:
Always refer to “Airbag System” before performing airbag module service. <Ref. to AB-4, CAUTION, General Description.>

4) Place alignment marks on the steering wheel and steering shaft.

5) Remove the steering wheel nut, and then draw out the steering wheel from shaft using steering puller.

B: INSTALLATION

WARNING:
Always refer to “Airbag System” before performing airbag module service. <Ref. to AB-4, CAUTION, General Description.>

1) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
2) Install in the reverse order of removal.

NOTE:
Align the alignment marks on the steering wheel and steering shaft.

Tightening torque:
45 N·m (4.6 kgf-m, 33.2 ft-lb)

Column cover-to-steering wheel clearance:
2 — 4 mm (0.08 — 0.16 in)

CAUTION:
Insert roll connector guide pin into guide hole on lower end of surface of steering wheel to prevent damage.

C: INSPECTION
1) Check the steering wheel for deformation. If the deformation is excessive, replace the steering wheel.

2) Check the splines on the steering wheel for damage. If the damage is excessive, replace the steering wheel.
Universal Joint
POWER ASSISTED SYSTEM (POWER STEERING)

3. Universal Joint

A: REMOVAL
1) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
2) Place alignment marks on universal joint.
3) Remove the universal joint bolts and then remove the universal joint.

B: INSTALLATION
1) Align the cutout at serrated section of the column shaft and yoke, then install the universal joint into column shaft.
2) Install the universal joint to the serrations of gearbox assembly by matching alignment marks.
3) Tighten the bolt.

Tightening torque:
24 N⋅m (2.4 kgf-m, 17.4 ft-lb)

CAUTION:
Excessively large tightening torque of universal joint bolts may lead to heavy steering wheel operation.

Clearance between coupling of universal joint to turbo cover:
15 mm (0.59 in) or more

4) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
5) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

C: INSPECTION
Check for wear, damage or any other faults. If necessary, replace it.

Service limit:
Universal joint play: 0 mm (0 in)
Maximum swing torque: 0.3 N (0.03 kgf, 0.07 lb)

Measure the folding torque of universal joint.

Service limit:
Maximum load: 3.8 N (0.39 kgf, 0.86 lb) or less

(1) Swinging torque
(2) Play

(1) Yoke (Gearbox side)
Universal Joint

**POWER ASSISTED SYSTEM (POWER STEERING)**

**Service limit:**

*Maximum load: 3.8 N (0.39 kgf, 0.86 lb) or less*

![Diagram](PS-00035)

(1) Yoke (Gearbox side)

**Service limit:**

*Maximum load: 7.3 N (0.74 kgf, 1.64 lb) or less*

![Diagram](PS-00036)

(1) Yoke (Steering column side)

**Service limit:**

*Maximum load: 7.3 N (0.74 kgf, 1.64 lb) or less*

![Diagram](PS-00037)

(1) Yoke (Steering column side)
4. Tilt Steering Column

A: REMOVAL

1) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
2) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>
3) Remove the instrument panel lower cover under.
4) Remove the instrument panel lower cover upper.
5) Remove all connectors from the steering column.
6) Remove the two bolts under instrument panel securing steering column.
7) Pull out the steering shaft assembly from the hole on toe board.

CAUTION:
- Be sure to remove the universal joint before removing steering shaft assembly installing bolts when removing steering shaft assembly or when lowering it for servicing of other parts.
- Do not loosen the tilt lever when the steering column is not secured to the vehicle.
Tilt Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION
1) Install the grommet to toe board.

2) Insert the end of steering shaft into toe board grommet.
3) With the tilt lever secured, tighten the steering shaft mounting bolts under instrument panel.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

4) Connect all the connectors under instrument panel.
5) Connect the airbag system connector at the harness spool.

**NOTE:**
Make sure to apply double lock.

6) Install the instrument panel lower cover with tilt lever held in the lowered position.
7) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
8) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
9) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

**CAUTION:**
Insert roll connector guide pin into guide hole on lower end of steering wheel surface to prevent damage.

C: DISASSEMBLY
Remove the two screws securing upper steering column covers, and the two screws securing combination switch, and then remove the related parts.

D: ASSEMBLY
Insert the combination switch to the upper column shaft, and install the upper column cover. Then route the ignition key harness and combination switch harness between column cover mounting bosses.

**Tightening torque:**
1.2 N·m (0.12 kgf-m, 0.9 ft-lb)

**CAUTION:**
Do not overtorque the screw.

E: INSPECTION

1. BASIC INSPECTION
Measure the overall length of steering column. If not as specified, replace it.

**Overall length L:**

**Standard value**
- Except for OUTBACK model: 833.6±1.5mm (32.82±0.059 in)
- OUTBACK model: 825.4±1.5mm (32.50±0.059 in)

2. AIRBAG MODEL INSPECTION

**WARNING:**
For airbag inspection procedures, refer to “Airbag System”. <Ref. to AB-4, CAUTION, General Description.>
5. Steering Gearbox [LHD Model]

A: REMOVAL

1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Loosen the front wheel nuts.
4) Lift-up the vehicle and remove the front wheels.
5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
6) Remove the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>

WARNING:
Be careful, not to burn your hand because the exhaust pipe is hot.

7) Using a puller, remove the tie-rod end from the knuckle arm after pulling off cotter pin and removing castle nut.

8) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>

9) Remove the one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

10) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>

11) Disconnect the pipe C from pressure hose first, and pipe D from return hose second.
12) Remove the clamp bolts securing gearbox to crossmember, and remove the clamp.

13) Remove the bolts which secure gearbox bracket, and remove the bracket and gearbox.

3) Tighten the gearbox to the crossmember bracket via clamp with bolt temporarily.

4) Tighten the bolts which temporary tightening the clamp and bracket of gearbox to specified torque.

*B: INSTALLATION*

1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.

2) Install the gearbox and bracket. Tighten the bolt temporarily.

5) Connect the pipe D to return hose first, and the pipe C to pressure hose second.

6) Install the universal joint. *Ref. to PS-21, INSTALLATION, Universal Joint.*

7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.
**Castle nut tightening torque:**
27 N·m (2.75 kgf-m, 19.9 ft-lb)

**CAUTION:**
When connecting, do not hit cap at the bottom of tie-rod end with hammer.

8) After tightening the castle nut to specified tightening torque, tighten it further within 60° until cotter pin hole is aligned with slot in the nut. Fit the cotter pin into nut, and then bend the pin to lock.

9) Install the front stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>
10) Install the front crossmember support plate and jack-up plate.
11) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>
12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>
13) Install the front wheels.
14) Tighten the wheel nuts to specified torque.

**Tightening torque:**
90 N·m (9.1 kgf-m, 65.8 ft-lb)

15) Lower the vehicle.
16) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
17) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>
18) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>
19) Connect the battery ground cable to battery.
20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-84, Power Steering Fluid.>
21) Check for fluid leaks.
22) Check the fluid level in oil tank.
23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

**Tightening torque:**
85 N·m (8.7 kgf-m, 62.7 ft-lb)

**NOTE:**
When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.

---

**C: DISASSEMBLY**

1. **RACK HOUSING ASSEMBLY**
   1) Disconnect the four pipes from gearbox.
   **NOTE:**
   Remove the pipes C and D, which are fixed to clamp plate, as a single unit.
   2) Secure the gearbox removed from vehicle in vice using ST.
      ST1 926200000 STAND
      ST2 34199AG000 BOSS D
   **CAUTION:**
   Secure the gearbox in a vise using ST as shown. Do not attempt to secure it without this ST.

---

3) Remove the tie-rod end and lock nut from gearbox.
4) Remove the small clip from the boot using pliers, and then move the boot to tie-rod end side.

5) Using a flat-tip screwdriver, remove the band from boot.

NOTE: Replace the boot if there is damage, cracks or deterioration.

6) Using the ST, loosen the lock nut.
   ST 926230000 SPANNER

7) Tighten the adjusting screw until it no longer tightens.

8) Hold the rack with a wrench [22 mm width across flats], and then remove the tie-rod using a wrench [32 mm width across flats] or adjustable wrench.

9) Loosen the adjusting screw, and then remove the spring and sleeve.
10) Remove the two bolts securing valve assembly.
11) Carefully draw out the input shaft, and then remove the valve assembly.

12) Using a drill, release the caulking of holder. **CAUTION:**
Make a hole approx. 2 mm (0.08 in) depth using a drill bit of 3 mm (0.12 in) diameter.

13) Using a spanner [36 mm width across flats] or adjustable wrench, remove the holder.

14) Remove the rack bushing and rack stopper from rack assembly.
15) Remove the oil seal from rack.

16) Insert the ST from pinion housing side, and then remove the oil seal using a press.
ST 34099PA010 OIL SEAL REMOVER (3.0 R model)
ST 34199AE050 OIL SEAL REMOVER (Except for 3.0 R model)

17) Using a press, remove the bushing at gearbox installation portion.

2. CONTROL VALVE
1) Disconnect the pipes A and B from gearbox.
2) Secure the gearbox removed from the vehicle in vise using ST.
ST1 926200000 STAND
ST2 34199AG000 BOSS D
**CAUTION:**
Secure the gearbox in a vise using ST as shown. Do not attempt to secure it without this ST.

3) Using the ST, loosen the lock nut.

ST 926230000 SPANNER

4) Tighten the adjusting screw until it no longer tightens.

5) Loosen the adjusting screw, and then remove the spring and sleeve.

6) Remove the two bolts securing valve assembly.

7) Carefully draw out the input shaft, and then remove the valve assembly.

8) Wrap the tape to spline part, and slide the dust cover out.

(1) Clamp

(1) Lock nut

(1) Adjusting screw

(1) Dust cover
9) Using a press remove the pinion & valve assembly from valve housing.

10) Using the ST and press, remove the bushing and oil seal from valve housing.

ST  34199AG090 INSTALLER & REMOVER

CAUTION:
- Do not apply force to the end surface of valve housing.
- Do not reuse the oil seal after removal.

11) Using a snap ring pliers, remove the snap ring, valve, oil seal and backup washer.

D: ASSEMBLY

1. RACK HOUSING ASSEMBLY

1) Using a press, install the bushing to the gearbox installation portion.

2) Insert the ST into rack.
ST  34199AG040 GUIDE (3.0 R model)
ST  34199AG030 GUIDE (Except for 3.0 R model)
3) Install the seal ring to piston portion of rack.
   (1) Using the ST, form the seal ring properly
   ST1  34199AG080 FORMER PISTON
   ST2  34199AG060 GUIDE G (26) (3.0 R model)
   ST2  34199AG050 GUIDE G (24) (Except for 3.0 R model)
   (2) Using ST-B and ST-C, install the oil seal to ST-A.
   ST  34199FE040 INSTALLER A, B, C (3.0 R model)
   ST  927490000 INSTALLER A, B, C (Except for 3.0 R model)
   NOTE:
   Face the oil seal in the direction as shown in the figure.

4) Install the backup washer from gear side of rack.

5) Install the ST on rack, and equally apply a thin coat of grease to the rack and ST, then install the oil seal.
   ST  926250000 GUIDE

CAUTION:
Be careful not to scratch the oil seal lips with the inner ring section of piston.
NOTE:
Do not use this ST for turbo model.

6) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Then insert the rack into steering body from cylinder side.
7) Check the thread part of holder and end of gearbox cylinder for burrs and scratches. Correct if necessary.
8) Insert the ST into gearbox cylinder, and then press-fit the oil seal.

ST 34199AG010 INSTALLER

9) Temporarily install the holder to gearbox cylinder.
10) Set the ST to the end of rack.

ST 34199FE000 INSTALLER & REMOVER (3.0 R model)
ST 34099FA030 INSTALLER & REMOVER (Except for 3.0 R model)

11) Using a press, press-fit until the groove of ST reaches the end of holder.

12) Secure the gearbox in a vice using ST.
ST1 926200000 STAND
ST2 34199AG000 BOSS D

13) Tighten the holder.

**Tightening torque:**

- **3.0 R model**
  - 90 N·m (9.18 kgf·m, 66.4 ft-lb)
- **Except for 3.0 R model**
  - 64 N·m (6.5 kgf·m, 47.0 ft-lb)

14) Using ST, caulk the gearbox cylinder at 2 mm (0.08 in) from end to make punch hole 2 to 2.5 mm (0.08 to 0.10 in) in diameter.
15) Apply vinyl tape to spline portion, and apply genuine grease to dust cover, and then install the dust cover to valve assembly.

**CAUTION:**
Be sure to install the dust cover to groove on shaft properly.

16) Apply genuine grease to the pinion gear and bearing of valve assembly.

17) Install a new gasket on valve assembly. Insert the valve assembly into place while facing the rack teeth toward pinion.

18) Tighten the bolts alternately to secure valve assembly.

**Tightening torque:**
25 N·m (2.5 kgf-m, 18.1 ft-lb)

**CAUTION:**
Be sure to alternately tighten the bolts.

19) Temporarily install the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

**CAUTION:**
If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

20) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

21) Tighten the adjusting screw to specified torque.

**Tightening torque:**
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

22) After tightening the adjusting screw with the specified tightening torque, loosen it by 25°.

23) Remove the tie-rod.
24) Verify that play is within specified value. <Ref. to PS-43, SERVICE LIMIT, INSPECTION, Steering Gearbox [LHD Model].>

25) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket: THREE BOND 1141

26) Tighten the adjusting screw to specified torque.

Tightening torque: 7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

27) After tightening the adjusting screw with the specified tightening torque, loosen it by 25°.

28) Install the lock nut. While holding the adjusting screw with a wrench, tighten lock nut using ST 926230000 SPANNER

Tightening torque (Lock nut): 39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

29) Extend the rack approx. 40 mm (1.57 in) beyond side of steering body.

30) Install the tie-rod and a new lock washer into rack.

31) Bend the lock washer.

CAUTION:
Be careful not to scratch the rack when bending lock washer.

32) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.
POWER ASSISTED SYSTEM (POWER STEERING)

**CAUTION:**
Right side boot has groove for identification. Be sure to install the boots after identifying left and right boots.

![Diagram of boot installation](image1)

(1) Right side boot  
(2) Groove for identification

**NOTE:**
Make sure that the boot is installed without unusual inflation or deflation.

![Diagram of boot end positioning](image2)

(B) 2 mm (0.079 in) or less

33) Install a new boot band. Using band clamp pliers, caulk the boot band until caulking part clearance is 2 mm (0.079 in) or less.

34) Fix the boot end with clip (small).

![Diagram of clip installation](image3)

(A) Boot band  
(B) 2 mm (0.079 in) or less

35) After installing, check the boot end is positioned into groove on tie-rod.

36) If the tie-rod end has been removed, screw in the lock nut and tie-rod end to screwed portion of tie-rod, and then tighten the lock nut temporarily in a position as shown in the figure.
**Installed tie-rod length L:**  
31 mm (1.22 in)

37) Inspect the gearbox as follows:  
“A” Holding the tie-rod end, repeat lock to lock two or three times as quickly as possible.  
“B” Holding the tie-rod end, turn it slowly at a radius one or two times as large as possible.  
After all, make sure that the boot is installed in specified position without deflation.

38) Remove the gearbox from ST.  
ST1  926200000  STAND  
ST2  34199AG000  BOSS D  
39) Install the four pipes on gearbox.  
   (1) Connect the pipe A and B to four pipe joints of gearbox.  
   **Tightening torque:**  
   13 N·m (1.3 kgf-m, 9.4 ft-lb)  
   (2) Connect the pipe C and D to gearbox.  
   **Tightening torque:**  
   Pipe C: 15 N·m (1.5 kgf-m, 10.8 ft-lb)  
   Pipe D: 25 N·m (2.5 kgf-m, 18.1 ft-lb)

2. **CONTROL VALVE ASSEMBLY**

   **Specified steering grease:**  
   VALIANT GREASE M2 (Part No. 003608001)  
   1) Clean all parts and tools before reassembling.  
   2) Apply a coat of specified power steering fluid to the inner wall of valve housing.  
   3) To avoid scratching the oil seal, apply a coat of grease to the contact surface of installer and oil seal.  
   4) Verify the oil seal direction.  
   Attach the oil seal to installer and position in valve housing before pressing into place.
5) Press the oil seal into place using a press. 
   6) Attach the bearing to ST, and then position in 
      value housing. Using the ST and press, install the 
      special bearing in valve housing. 
   7) Apply vinyl tape to the groove portion of pinion. 

8) Install the backup ring and oil seal to pinion, and 
   then remove the vinyl tape. 
9) Set the ST to pinion, and install the seal ring. 
10) Remove the ST GUIDE, and form the seal ring 
    properly using ST FORMER. 
11) Put vinyl tape around the pinion shaft splines to 
    protect oil seal from damage.
12) Install the valve to pinion, and install the snap ring.

13) Fit the pinion & valve assembly into valve housing.

14) Using a press, press-fit the pinion & valve assembly into housing by pressing the bearing outer race.

15) Apply the specified grease to dust cover.

16) Install the dust cover on valve assembly.

**CAUTION:**
Be sure to install the dust cover to groove on shaft properly.

17) Apply genuine grease to the pinion gear and bearing of valve assembly.

18) Install a new O-ring on valve assembly.

**Diagram**

1. Snap ring
2. Valve
3. Valve housing
4. Pinion & valve ASSY
5. Bearing
6. Housing
7. Dust cover
8. Groove
9. O-ring
19) Insert the valve assembly into place while facing rack teeth toward pinion.

20) Tighten the bolts alternately to secure valve assembly.

**Tightening torque:**
- \( 25 \, \text{N} \cdot \text{m} \) (2.5 kgf-m, 18.1 ft-lb)

**CAUTION:**
Be sure to alternately tighten the bolts.

21) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body. Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

22) Tighten the adjusting screw with specified torque.

**Tightening torque:**
- \( 7.4 \, \text{N} \cdot \text{m} \) (0.75 kgf-m, 5.4 ft-lb)

23) After tightening to the specified tightening torque, loosen it by 25°.

24) Verify that play is within specified value. <Ref. to PS-43, SERVICE LIMIT, INSPECTION, Steering Gearbox [LHD Model].>

25) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

26) Tighten the adjusting screw to specified torque.

**Tightening torque:**
- \( 39 \, \text{N} \cdot \text{m} \) (4.0 kgf-m, 28.9 ft-lb)

**NOTE:**
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

27) After tightening to the specified tightening torque, loosen it by 25°.

28) Install the lock nut. While holding the adjusting screw with a wrench, tighten the lock nut using ST. 926230000 SPANNER

**Tightening torque (Lock nut):**
- \( 39 \, \text{N} \cdot \text{m} \) (4.0 kgf-m, 28.9 ft-lb)

29) Remove the gearbox from ST.

30) Install the four pipes on gearbox.

(1) Connect the pipe A and B to the gearbox.

**Tightening torque:**
- \( 13 \, \text{N} \cdot \text{m} \) (1.3 kgf-m, 9.4 ft-lb)
(2) Connect the pipe C and D to gearbox.

**Tightening torque:**

- **Pipe C**: 15 N·m (1.5 kgf·m, 10.8 ft-lb)
- **Pipe D**: 25 N·m (2.5 kgf·m, 18.1 ft-lb)
### E: INSPECTION

#### 1. BASIC INSPECTION

1) Clean all disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.

2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

<table>
<thead>
<tr>
<th>No.</th>
<th>Parts</th>
<th>Inspection</th>
<th>Corrective action</th>
</tr>
</thead>
</table>
| 1   | Input shaft | (1) Bend of input shaft  
(2) Damage on serration | If the bend or damage is excessive, replace the entire gearbox. |
| 2   | Dust seal | (1) Crack or damage  
(2) Wear | If the outer wall slips, the lip is worn out or damage is found, replace it with a new one. |
| 3   | Rack & pinion | Poor mating of rack with pinion | (1) Adjust the backlash properly. By measuring the turning torque of gearbox and sliding resistance of rack, check if rack & pinion engage uniformly and smoothly with each other. (Refer to “Service limit”.)
(2) Keeping the rack pulled out all the way so that all teeth emerge, check teeth for damage. Even if abnormality is found in either (1) or (2), replace the entire gearbox. |
| 4   | Gearbox unit | (1) Bend of rack shaft  
(2) Bend of cylinder portion  
(3) Crack or damage on cast iron portion  
(4) Wear or damage on rack bush  
(5) Wear on input shaft bearing | Replace the gearbox with a new one. |
| 5   | Boot | Crack, damage or deterioration | Replace. |
| 6   | Tie-rod | (1) Looseness of ball joint  
(2) Bend of tie-rod | Replace. |
| 7   | Tie-rod end | Damage or deterioration on dust seal | Replace. |
| 8   | Adjusting screw spring | Deterioration | Replace. |
| 9   | Boot clip | Deterioration | Replace. |
| 10  | Sleeve | Damage | Replace. |
| 11  | Pipes | (1) Damage to flared surface  
(2) Damage to flare nut  
(3) Damage to pipe | Replace. |
2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

NOTE:
When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates, etc. between vise and gearbox.

ST1 926200000 STAND
ST2 34199AG000 BOSS D

Sliding resistance of rack shaft:
Service limit
400 N (41 kgf, 90 lb) or less

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Right-turn steering:
Service limit
0.19 mm (0.0075 in) or less

On condition
L: 5 mm (0.20 in)
P: 122.6 N (12.5 kgf, 27.6 lb)

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Left-turn steering:
Service limit
Direction
0.3 mm (0.012 in) or less
Direction
0.15 mm (0.0059 in) or less

4. INPUT SHAFT PLAY

In radial direction:
Service limit
0.18 mm (0.0071 in) or less

On condition
P: 98 N (10 kgf, 22 lb)

In axial direction:
Service limit
0.5 mm (0.020 in) or less
On condition

\[ P: 20 \text{ to } 49 \text{ N (2 \text{ to } 5 \text{ kgf, 4 \text{ to } 11 \text{ lb)}} \]

5. TURING RESISTANCE OF GEARBOX

Using the ST, measure the gearbox turning resistance.

ST 34099PA100 SPANNER

Service limit:

- Maximum allowable resistance: 
  \[ 10.5 \text{ N (1.1 \text{ kgf, 2.4 lb}} \] or less
- Difference between right and left turning resistance:
  \[ 20\% \text{ or less} \]

6. OIL LEAKING

![Diagram of the power steering system]

(1) Power cylinder  
(2) Cylinder  
(3) Rack piston  
(4) Rack axle  
(5) Input shaft  
(6) Valve housing
1) Lift up the vehicle.
2) Even if the location of leak can be easily found by observing the leaking condition, it is necessary to thoroughly remove the fluid from the suspected portion and turn the steering wheel from lock to lock about thirty to forty times with engine running, then make comparison of the suspected portion between immediately after and several hours after this operation.
3) Cause and measure for oil leakage from “a”
The oil seal is damaged. Replace the valve assembly with a new one.
4) Cause and measure for oil leakage from “b”
The torsion bar O-ring is damaged. Replace the valve assembly with a new one.
5) Cause and measure for oil leakage from “c”
The oil seal is damaged. Replace the valve assembly or oil seal with a new one.
6) Cause and measure for oil leakage from “d”
The pipe is damaged. Replace the faulty pipe or O-ring.
7) Cause and measure for oil leakage from “g”
The hose is damaged. Replace the hose with a new one.
8) If leak is other than a, b, c, d, or g, and if oil is leaking from the gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from the surrounding portions. Then, turn the steering wheel from lock to lock thirty to forty times with the engine running, and make comparison of the leaked portion immediately after and several hours after this operation.
   (1) Leakage from “e”
The cylinder seal is damaged. Replace the rack bush with a new one.
   (2) Leakage from “f”
There are two possible causes. Take the following step first. Remove the pipe assembly B from the valve housing, and close the circuit with ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock thirty to forty times with the engine running, then make comparison of the leaked portion between immediately after and several hours after this operation.
   • If leakage from “f” is noted again:
The oil seal of pinion & valve assembly is damaged. Replace the pinion & valve assembly with a new one. Or replace the oil seal and parts that are damaged during disassembly with new ones.
   • If oil stops leaking from “f”:
The oil seal of rack housing is damaged. Replace the oil seal and the parts that are damaged during disassembly with new ones.

F: ADJUSTMENT
1) Adjust the front toe. <Ref. to FS-12, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

**Standard of front toe:**
IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)

2) Adjust the steering angle of wheels.

**Standard of steering angle:**

<table>
<thead>
<tr>
<th>Model</th>
<th>2.0 i</th>
<th>2.5 i</th>
<th>3.0 R</th>
<th>OUTBACK</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inner wheel</td>
<td>37.3°±1.5°</td>
<td>37.2°±1.5°</td>
<td>37.8°±1.5°</td>
<td></td>
</tr>
<tr>
<td>Outer wheel</td>
<td>33.0°±1.5°</td>
<td>32.9°±1.5°</td>
<td>33.5°±1.5°</td>
<td></td>
</tr>
</tbody>
</table>

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, and error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in opposite direction by same angle.
6. Steering Gearbox [RHD Model]

A: REMOVAL
1) Set the vehicle on a lift.
2) Disconnect the ground cable from battery.
3) Loosen the front wheel nuts.
4) Lift-up the vehicle and remove the front wheels.
5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
6) Remove the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-7, REMOVAL, Front Exhaust Pipe.>

WARNING:
Be careful, not to burn your hand because the exhaust pipe is hot.

7) Using a puller, remove the tie-rod end from the knuckle arm after pulling off cotter pin and removing castle nut.

8) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-16, REMOVAL, Front Stabilizer.>

9) Remove the one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

10) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>
11) Disconnect the return hose and pressure hose from gearbox.

12) Remove the clamp bolts securing gearbox to crossmember, and remove the clamp.

13) Remove the bolts which secure the gearbox bracket, and remove the bracket and gearbox.

B: INSTALLATION

1) Insert the gearbox into the crossmember, being careful not to damage gearbox boot.
2) Install the gearbox and bracket. Tighten the bolt temporarily.

3) Tighten the gearbox to the crossmember bracket via clamp with bolt temporarily.

4) Tighten the bolts which temporary tightening the clamp and bracket of gearbox to specified torque.

**Tightening torque:**

60 N·m (6.1 kgf-m, 44.1 ft-lb)
5) Connect the return hose and pressure hose to gearbox.

_Tightening torque:
15 N·m (1.5 kgf-m, 10.8 ft-lb)_

6) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>

7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

_Castle nut tightening torque:
27 N·m (2.75 kgf-m, 19.9 ft-lb)_

**CAUTION:**
When connecting, do not hit cap at the bottom of tie-rod end with hammer.

8) After tightening the castle nut to specified tightening torque, tighten it further within 60° until cotter pin hole is aligned with slot in the nut. Fit the cotter pin into nut, and then bend the pin to lock.

9) Install the front stabilizer. <Ref. to FS-16, INSTALLATION, Front Stabilizer.>

10) Install the front crossmember support plate and jack-up plate.

11) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO 2.0)-8, INSTALLATION, Front Exhaust Pipe.>

12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>

13) Install the front wheels.

14) Tighten the wheel nuts to specified torque.

_Tightening torque:
90 N·m (9.1 kgf-m, 65.8 ft-lb)_

15) Lower the vehicle.

16) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>

17) Align the center of roll connector. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>

18) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

19) Connect the battery ground cable to battery.

20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-84, Power Steering Fluid.>

21) Check for fluid leaks.

22) Check the fluid level in oil tank.

23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

_Tightening torque:
85 N·m (8.7 kgf-m, 62.7 ft-lb)
NOTE:
When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.

3) Remove the tie-rod end and lock nut from gearbox.

4) Remove the clip from outside boot using pliers, and then move the boot to tie-rod end side.

C: DISASSEMBLY

1) Disconnect the pipes A and B from steering body and control valve housing.

2) Secure the gearbox removed from vehicle in a vice using ST.

   ST1 926200000 STAND
   ST2 34199AG000 BOSS D

CAUTION:
Secure the gearbox assembly in a vice using the ST as shown. Do not secure the gearbox without this ST.

5) Using a flat tip screwdriver, remove the band from boot.

NOTE:
Replace the boot if there is damage, cracks or deterioration.

6) Using the ST, loosen the lock nut.

   ST 926230000 SPANNER

(1) Pipe A
(2) Pipe B

(1) Clip

(1) Band

(1) Lock nuts

(1) Clamp
7) Tighten the adjusting screw until it no longer tightens.

8) Using a 32 mm spanner or adjustable wrench with cinching boot, remove the tie-rod.

9) Loosen the adjusting screw and remove the spring and sleeve.

10) Clean the dirt adherent to the input shaft. Remove the dust cover paying attention not to scratch the housing or input shaft and not to allow foreign matter to enter the gear box interior.

**CAUTION:**
Wrap the tape to the spline part of input shaft to avoid damaging dust cover.

11) Align the ST pin with the plug hole to install. Rotate the ST counterclockwise to remove the plug.

12) Remove the valve assembly paying attention not to scratch seal ring or valve housing inner surface.
13) Remove the holder using a 36 mm spanner or adjustable wrench.

14) Install the ST on valve side of rack and press outer side oil seal out taking care not to contact rack with steering body inner surface.

ST 34199FE010 INSTALLER & REMOVER (Turbo and 3.0 R model)
ST 34199FA030 INSTALLER & REMOVER (Except for turbo and 3.0 R model)

NOTE:
Block the pipe connection of steering body to prevent fluid from flowing out.

15) Insert the ST from the valve side and press the back-up ring and oil seal out.

ST 34199FE010 REMOVER (Turbo and 3.0 R model)
ST 927580000 REMOVER (Except for turbo and 3.0 R model)

(1) Rack piston
(2) Outer side oil seal
16) Using ST1 and ST2, repair the caulking portion of cylinder.
   ST1 34099FA080 PUNCH
   ST2 34199FE020 BASE (Turbo and 3.0 R model)
   ST2 34099FA070 BASE (Except for turbo and 3.0 R model)

17) If the cylinder edge is deformed in a convex shape, repair using an oil stone.

18) Remove the oil seal using ST and press from plug.
   ST 34199AE100 OIL SEAL PLUG REMOVER

NOTE:
Do not apply force on the plug edge surface.

19) Set the ST in the dimension as shown in the figure.
   ST 34199AE120 GEARBOX OIL SEAL REMOVER

(1) Cylinder

(1) Oil seal
(2) O-ring

(1) 70 mm (2.76 in)
20) Set the stopper to gearbox, and then insert the tip of ST to gearbox.

21) By fixing the 2-surface width, press-in by rotating the rod and attach to oil seal.

CAUTION:
Take care not to scratch the gearbox inner surface.

D: ASSEMBLY
1) Apply a coat of grease to the inside and outside of new oil seal.

Steering grease:
VALIANT GREASE M2 (Part No. 003608001)

2) Verify the oil seal direction and installation position. Using the ST and press, press-fit the oil seal to gearbox.

ST 34199AE130 GEARBOX OIL SEAL INSTALLER
3) Attach the steering body to ST as shown in the figure. Apply a coat of grease to needle bearing.
ST1 926200000 STAND
ST2 34199AG000 BOSS D

CAUTION:
Ensure the needle bearing is free from defects. If it is faulty, replace the steering body with a new one.

4) Using ST-B and ST-C, install the oil seal to ST-A.
ST 34199FE040 INSTALLER A, B, C (Turbo and 3.0 R model)
ST 927490000 INSTALLER A, B, C (Except for turbo and 3.0 R model)

NOTE:
Face the oil seal in the direction as shown in the figure.

5) Insert the ST-A with oil seal assembled from the gear side of rack. Remove the oil seal from ST-A near piston, and then remove the ST-A from rack.

6) Install the back-up washer from gear side of rack.

7) Install the ST on rack, and equally apply a thin coat of grease to the rack and ST, then install the oil seal.
ST 926250000 GUIDE

CAUTION:
Be careful not to scratch the oil seal lips with the inner ring section of piston.
NOTE:
Do not use this ST for turbo model.

8) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Install ST on the end of steering body cylinder. Then insert the rack into steering body from cylinder side.

ST 34199FE050 GUIDE (Turbo and 3.0 R model)
ST 34199AE000 GUIDE (Except for turbo and 3.0 R model)

CAUTION:
Do not allow grease to block the air vent hole on rack.

9) Make the ST2 pass through rack, and then press-in the rack and ST2 using press. Press-in the rack until ST1 comes in contact with ST2 and the edge surface of rack is aligned with that of ST2.

ST1 34199FE050 GUIDE (Turbo and 3.0 R model)
34199AE000 GUIDE (Except for turbo and 3.0 R model)

10) Install a new holder to the cylinder side of steering body.

Tightening torque:
Turbo and 3.0 R model
90 N·m (9.18 kgf·m, 66.4 ft-lb)
Except for turbo and 3.0 R model
64 N·m (6.5 kgf·m, 47.0 ft-lb)

11) Using the ST, caulk the steering body at one point less than 3mm (0.12 in) from holder.

CAUTION:
Be careful not to deform the holder.
12) Roll the vinyl tape on serration part of valve assembly, and then apply grease on the tape surface.

13) Apply a coat of grease on the gear teeth of valve assembly, and then attach the valve assembly taking care not to scratch oil seal and seal ring.

14) Apply grease on the oil seal circumference, and then press it into the plug using ST and press. Replace the O-rings of plug circumference with new ones.

CAUTION: Install the oil seal paying attention to its direction.
15) Using the ST, install plug.
ST 34199AE090  PLUG WRENCH

Tightening torque:
64 N⋅m (6.5 kgf-m, 47.0 ft-lb)

Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

16) Install the dust cover. Remove the vinyl tape.

17) Temporarily install the tie-rod to the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

CAUTION:
If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

18) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into spring body.

19) Tighten the adjusting screw to specified torque.

Tightening torque:
9.8 N⋅m (1.0 kgf-m, 7.2 ft-lb)

20) After tightening the adjusting screw with the specified tightening torque, loosen it.

Tightening torque:
4.9 N⋅m (0.50 kgf-m, 3.6 ft-lb)

21) After tightening the adjusting screw with the specified tightening torque, loosen 37° it.

Tightening torque:
4.9 N⋅m (0.50 kgf-m, 3.6 ft-lb)

22) Remove the tie-rod.

23) Verify that play is within specified value. <Ref. to PS-61, LIMIT, INSPECTION, Steering Gearbox [RHD Model].>

24) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket:
THREE BOND 1141 (Part No. 004403006)

(1) Apply liquid gasket to at least 1/3 of entire perimeter.
25) Install the lock nut. While holding adjusting screw with a wrench, tighten the lock nut using ST.
ST  926230000  SPANNER

_Tightening torque (Lock nut):_

39 N·m (4.0 kgf-m, 28.9 ft-lb)

**NOTE:**
Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

26) Install the tie-rod into rack.

_Tightening torque:_

90 N·m (9.0 kgf-m, 65.1 ft-lb)

**NOTE:**
Check the mating face of rack and tie-rod for foreign material, dirt and etc.

27) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.

**NOTE:**
Make sure that the boot is installed without unusual inflation or deflation.

28) Caulk the boot so the space inside boot band caulking portion becomes 2 mm (0.08 in) or less.

**NOTE:**
Use a new boot band.

29) Fix the boot end with clip (small).

30) After installing, check that the boot end is positioned into groove on tie-rod.

31) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut temporarily in a position as shown in figure.
Installed tie-rod length $L$:  
31 mm (1.22 in)

32) Inspect the gearbox as follows:
“A” Holding tie-rod end, repeat lock to lock two or three times as quickly as possible.
“B” Holding tie-rod end, turn it slowly at a radius one or two times as large as possible.
After all, make sure that the boot is installed in the specified position without deflation.

33) Take off the gearbox from ST.
ST1  926200000  STAND
ST2  34199AG000  BOSS D
34) Install the pipe A and B to steering body and control valve housing.

**Tightening torque:**
$T1: 20 \text{ N} \cdot \text{m} \ (2.0 \ \text{kgf} \cdot \text{m}, \ 14.5 \ \text{ft-lb})$
$T2: 24 \text{ N} \cdot \text{m} \ (2.4 \ \text{kgf} \cdot \text{m}, \ 17.4 \ \text{ft-lb})$
**E: INSPECTION**

**1. BASIC INSPECTION**

1) Clean all disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.

2) When disassembling, check inside of gearbox for water. If any water is found, carefully check boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

2. LIMIT

Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

NOTE:
When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates, etc. between vise and gearbox.

ST1 926200000 STAND
ST2 34199AG000 BOSS D

Sliding resistance of rack shaft:

Limit
314 N (32 kgf, 71 lb) or less

Difference between right and left sliding resistance:
20% or less

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Right-turn steering:

Limit
Direction \( \leftrightarrow \) \( 0.4 \text{ mm (0.016 in) or less} \)
Direction \( \leftrightarrow \) \( 0.6 \text{ mm (0.024 in) or less} \)

Left-turn steering:

Limit
Direction \( \leftrightarrow \) \( 0.4 \text{ mm (0.016 in) or less} \)

4. INPUT SHAFT PLAY

In radial direction:

Limit
\( 0.18 \text{ mm (0.0071 in) or less} \)
**On condition**

- **P**: 98 N (10 kgf, 22 lb)

**In axial direction:**

- **Service limit**: 0.27 mm (0.0106 in) or less
- **On condition**: 
  - **P**: 20 — 49 N (2 — 5 kgf, 4 — 11 lb)

---

**5. TURNING RESISTANCE OF GEARBOX**

Using the ST, measure the gearbox turning resistance.

- **ST 34099PA100 SPANNER**

- **Service limit**:
  - **Maximum allowable resistance**: 13 N (1.3 kgf, 9.6 lb) or less
  - **Difference between right and left turning resistance**: 20% or less
6. OIL LEAKING

1) Lift-up the vehicle.
2) Even if the location of leak can be easily found by observing leaking condition, it is necessary to thoroughly remove the oil from suspected portion and turn steering wheel from lock to lock about 30 to 40 times with engine running, then reinspect the suspected portion immediately after and several hours after this operation.
3) Cause and measure for oil leakage from “a”
The oil seal is damaged. Replace the valve assembly with a new one.
4) Cause and measure for oil leakage from “b”
The torsion bar O-ring is damaged. Replace the valve assembly with a new one.
5) Cause and measure for oil leakage from “c”
The oil seal is damaged. Replace the oil seal with a new one.
6) Cause and measure for oil leakage from “d”
The pipe is damaged. Replace the faulty pipe or O-ring.

F: ADJUSTMENT

1) Adjust the front toe.
<Ref. to FS-12, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

Standard of front toe:
IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)

2) Adjust the steering angle of wheels.

Standard of steering angle:

<table>
<thead>
<tr>
<th>Model</th>
<th>2.0 i, 2.5 i</th>
<th>2.0 GT, 3.0 R</th>
<th>OUTBACK</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inner wheel</td>
<td>37.3°±1.5°</td>
<td>37.2°±1.5°</td>
<td>37.8°±1.5°</td>
</tr>
<tr>
<td>Outer wheel</td>
<td>33.0°±1.5°</td>
<td>32.9°±1.5°</td>
<td>33.5°±1.5°</td>
</tr>
</tbody>
</table>
3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction each other by the same angle.
7. Pipe Assembly [LHD Model]

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Lift-up the vehicle, and then remove the front crossmember support plate and jack-up plate.

3) Remove one pipe joint at the center of gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

4) Remove the clamp E from return hose and pressure hose.

5) Disconnect the return hose and pipe D, pressure hose and pipe C.

6) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
<Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>

7) Disconnect the suction hose and pressure hose from oil pump.
8) Disconnect the suction hose and return hose from reservoir tank. Remove the oil cooler from oil cooler bracket.

9) Remove the hose bracket and take out the hose assembly from vehicle.

CAUTION: Align the installation position of the resin clip with the protector edge of suction hose.

B: INSTALLATION
1) Temporarily tighten the bolt of hose bracket.

2) Install the resin clip to the pressure hose and suction hose.

3) Connect the suction hose and return hose to reservoir tank. Install the oil cooler to oil cooler bracket. Firmly insert the resin clip of return hose to the bracket.

4) Connect the suction hose and pressure hose to the oil pump. Tighten the eye bolt of pressure hose.
Pipe Assembly [LHD Model]

**POWER ASSISTED SYSTEM (POWER STEERING)**

**Tightening torque:**
39 N·m (4.0 kgf-m, 28.9 ft-lb)

5) Temporarily connect the pressure hose and pipe C, the return hose and D. Place the clamp E in the position shown in the figure, and tighten the bolt temporarily.

**NOTE:**
Ensure that the letter “8” on each clamp are diagonally opposite each other as shown in the figure.

6) Tighten the clamp E.

**Tightening torque:**
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

7) Tighten the pressure hose and pipe C, the return hose and pipe D.

**Tightening torque:**
15 N·m (1.5 kgf-m, 10.8 ft-lb)

8) Connect the pipe A and B to the four pipe joints of gearbox.

**Tightening torque:**
13 N·m (1.3 kgf-m, 9.4 ft-lb)

9) Install the front crossmember support plate and jack-up plate.

10) Lower the vehicle.

11) Tighten the bolts which hold the hose bracket.
Tightening torque:
13 N·m (1.3 kgf-m, 9.4 ft-lb)

12) Install the air intake duct.
<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.>
<Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
13) Connect the battery ground cable to battery.
14) Feed the specified fluid.

CAUTION:
Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

15) Finally, check clearance between pipes or hoses as shown in the figure indicated in “General Diagnostic Table”. <Ref. to PS-89, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>
C: INSPECTION
Check all disassembled parts for wear, damage or other abnormalities. Repair or replace defective parts as necessary.

<table>

CAUTION:
Although surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe out immediately when the hoses are adhered with the fluids.
Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.
Particularly continuous work of relief valve over 5 seconds causes to reduce service lives of the hoses, the oil pump, the fluid, etc. due to over heat.

9. Oil Pump

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>  
   <Ref. to IN(H4SO 2.0)-9, REMOVAL, Air Intake Duct.>
3) Remove the pulley belt cover.
4) Loosen the belt tension securing bolt and generator securing bolt, and then remove the power steering pump V-belt.

5) Disconnect the connector from power steering pump switch.
6) Disconnect the pressure hose and suction hose from oil pump.

CAUTION:
- Do not allow fluid to come into contact with pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends with a clean cloth.

   • Non-turbo model

   - Turbo model

7) Remove the bolts which hold the power steering pump bracket.

8) Place the oil pump bracket in a vise, and remove the two bolts from the front side of oil pump.

CAUTION:
When securing the oil pump bracket in a vice, hold the oil pump bracket with the least possible force between two wood pieces.

9) Remove the bolt from the rear side of oil pump.
10) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.

**B: INSTALLATION**

1) Install the oil pump to bracket.
   (1) Place the oil pump bracket in a vise. Tighten the bushing using a 12.7 mm (1/2"") type 14- and 21-mm box wrench until it contact with oil pump mounting surface.
   **CAUTION:**
   When securing the oil pump bracket on a vice, hold the oil pump bracket with the least possible force between two wood pieces.

(2) Tighten the bolt which holds the oil pump to bracket.

   **Tightening torque:**
   \[ 15.7 \text{ N}\cdot\text{m} (1.6 \text{ kgf-m, 11.6 ft-lb}) \]

2) Tighten the bolts which hold the power steering pump bracket.

   **Tightening torque:**
   \[ 37.3 \text{ N}\cdot\text{m} (3.8 \text{ kgf-m, 27.5 ft-lb}) \]

3) Interconnect the pressure hose and suction hose.

   **Tightening torque:**
   **Eye bolt**
   \[ 39 \text{ N}\cdot\text{m} (4.0 \text{ kgf-m, 28.9 ft-lb}) \]

   **CAUTION:**
   If a hose is twisted at this step, take care the hose may come into contact with some other parts.
   - Non-turbo model

   (1) Suction hose
   (2) Pressure hose
• Turbo model

1) Suction hose
2) Pressure hose

4) Connect the connector to power steering pump switch.
5) Install the V-belts to oil pump.
6) Check the tension of V-belt.
<Ref. to ME(H4SO 2.0)-39, INSPECTION, V-belt.>
7) Tighten the belt tension bolt.

**Tightening torque:**
\[25 \text{ N\cdot m (2.5 kgf-m, 18.1 ft-lb)}\]

8) Install the pulley belt cover.
9) Install the air intake duct.
<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO 2.0)-9, INSTALLATION, Air Intake Duct.>
10) Connect the battery ground cable to battery.
11) Feed the specified power steering fluid. <Ref. to PS-84, Power Steering Fluid.>

**CAUTION:**
Never start the engine before feeding the fluid; otherwise vane pump might be seized up.
C: INSPECTION

1. BASIC INSPECTION

Perform the following inspection procedures and replace defective parts.

<table>
<thead>
<tr>
<th>No.</th>
<th>Parts</th>
<th>INSPECTION</th>
<th>Corrective action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Oil pump (Exterior)</td>
<td>(1) Crack, damage or oil leakage</td>
<td>Replace the oil pump with a new one.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(2) Play of pulley shaft</td>
<td>Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new one.</td>
</tr>
<tr>
<td>2</td>
<td>Pulley</td>
<td>(1) Damage</td>
<td>Replace with a new one.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(2) Bend</td>
<td>Measure the V ditch deflection. If it exceeds the service limit, replace the pulley with a new one.</td>
</tr>
<tr>
<td>3</td>
<td>Oil pump (Interior)</td>
<td>(1) Defect or burning of vane pump</td>
<td>Check the resistance to the rotation of pulley. If it exceeds the service limit, replace the oil pump with a new one.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(2) Bend in the shaft or damage to bearing</td>
<td>Oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump when turning its pulley which is put around with a string, replace the oil pump with a new one.</td>
</tr>
<tr>
<td>4</td>
<td>O-ring</td>
<td>Crack or deterioration</td>
<td>Replace with a new one.</td>
</tr>
<tr>
<td>5</td>
<td>Bracket</td>
<td>Crack</td>
<td>Replace with a new one.</td>
</tr>
</tbody>
</table>

2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the service limit, replace with a new one.

CAUTION:
- When securing the oil pump on a vice, hold the oil pump with the least possible force between two wood pieces.
- Do not set outside of flow control valve or pulley on a vice; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

Condition:

\[ P: \text{When applying the force of } 9.8 \text{ N (1.0 kgf, 2.2 lb)} \]

Service limit:
- Radial play (Direction \(\leftrightarrow\))
  \[ 0.4 \text{ mm (0.016 in) or less} \]
- Axial play (Direction \(\leftrightarrow\))
  \[ 0.9 \text{ mm (0.035 in) or less} \]
2) Ditch deflection of pulley

**Service limit:**

1.0 mm (0.039 in) or less

**NOTE:**

Read the value for one surface of V ditch, and then the value for another off the dial.

3) Resistance to rotation of pulley

**Service limit:**

Maximum load: 9.22 N (0.94 kgf, 2.07 lb) or less

**NOTE:**

- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation to make a judgment.

3. HYDRAULIC PRESSURE

**NOTE:**

- Be sure to complete all items aforementioned in “INSPECTION”, prior to measuring hydraulic pressure. Otherwise, pressure cannot be measured correctly. <Ref. to PS-85, INSPECTION, General Diagnostic Table.>
- Do not leave the valve of pressure gauge closed or hold the steering wheel at stop end for 5 seconds or more in any case, as the oil pump may be damaged due to long keep of these conditions.

- Put cloth at a place where fluid drops before pressure gauge is installed. Wipe off spilt fluid thoroughly after the measurement.

1) Regular pressure measurement

(1) Connect ST1, ST2 and ST3.

ST1 92571000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

(2) Remove the air intake duct.
(3) Disconnect the pipe C from pump.
(4) Using the gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), install the ST2 to pump instead of pressure hose.
- Non-turbo model

(1) Suction hose
(2) Pressure hose

- Turbo model

(5) Install the ST3 to the end of pressure hose which is removed from pump.
(6) Replenish the power steering fluid up to specified level.
(7) Open the valve, and start the engine.
(8) Measure the regular pressure.
ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

3) Measure working pressure.
(1) Using the STs, measure the working pressure.
(2) Close the valve.
(3) Measure the working pressure of control valve by turning steering wheel from stop to stop.
ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

Service limit:
Non-turbo model (Except for 3.0 R model):
7,650 — 8,330 kPa (78 — 85 kg/cm², 1,110 — 1,208 psi)
(4) If it is not within the specified value, measure the steering effort. <Ref. to PS-88, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specified value, replace the control valve itself or control valve and pinion as a single unit with new ones.

ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

Service limit:
Turbo model:
7,350 — 8,036 kPa (75 — 82 kg/cm², 1,067 — 1,165 psi)
3.0 R model:
8,300 — 9,000 kPa (85 — 92 kg/cm², 1,204 — 1,305 psi)
(4) If it is not within the specified value, replace the oil pump.

(1) Valve

Service limit:
981 kPa (10 kg/cm², 142 psi) or less
(9) If it is not within the specified value, replace the troubled part caused by following symptoms.
(Pipe or hose clogged, leaks from fluid line, and mixture of foreign matters in fluid line)

2) Measure the relief pressure.
(1) Using the STs, measure the relief pressure.
(2) Close the valve.
(3) Measure the relief pressure.
ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

(1) Valve

Service limit:
Non-turbo model (Except for 3.0 R model):
6,767 — 7,453 kPa
(69 — 76 kg/cm², 981 — 1,081 psi)
10. Reservoir Tank

A: REMOVAL
1) Drain fluid from the reservoir tank.
2) Disconnect the hose from reservoir tank.

CAUTION:
To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.

3) Remove the reservoir tank from body.

B: INSTALLATION
1) Install the reservoir tank to body.

Tightening torque: 13 N·m (1.3 kgf-m, 9.4 ft-lb)

2) Connect the hose to reservoir tank.

3) Feed the power steering fluid to specified level.
<Ref. to PS-84, Power Steering Fluid.>

C: INSPECTION
Check the reservoir tank for cracks, breakage and damage. If a failure is found, replace the reservoir tank.
11. Power Steering Fluid

A: SPECIFICATION

<table>
<thead>
<tr>
<th>Recommended power steering fluid</th>
<th>Manufacturer</th>
</tr>
</thead>
<tbody>
<tr>
<td>ATF DEXRON III or equivalent</td>
<td>B.P.</td>
</tr>
<tr>
<td></td>
<td>CALTEX</td>
</tr>
<tr>
<td></td>
<td>CASTROL</td>
</tr>
<tr>
<td></td>
<td>MOBIL</td>
</tr>
<tr>
<td></td>
<td>SHELL</td>
</tr>
<tr>
<td></td>
<td>TAXACO</td>
</tr>
</tbody>
</table>

B: INSPECTION

1) Check the power steering fluid for deterioration and contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.
2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.
3) Inspect the fluid level on flat and level surface with engine “OFF” by indicator of reservoir tank. If the level is at “MIN.” point or below, add fluid to keep the level in the specified range of the indicator. If at “MAX.” point or above, drain fluid by using a syringe or the like.

(1) Check at power steering fluid temperature 20°C (68°F); read the fluid level on the “COLD” side.
(2) Check at power steering fluid temperature 80°C (176°F); read the fluid level on the “HOT” side.

6) If turning the steering wheel in low fluid level condition, air will be sucked in pipe. In this case, leave it about half an hour and then do the step 5) again.
7) Start the engine and let it idle.
8) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface while keeping the fluid at the level in Step 4).

Normally bubbles stop appearing after three times turning of steering wheel from lock to lock.
9) In case bubbles do not stop appearing in the tank, leave it about half an hour and then do the step 4) all over again.
10) Lower the vehicle, and then idle the engine.
11) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).
12) In case the following happens, leave it about half an hour and then do step 8) to 11) again.

(1) The fluid level changes over 3 mm (0.12 in).
(2) Bubbles remain on the upper surface of the fluid.
(3) Grinding noise is generated from oil pump.
13) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

C: REPLACEMENT

1) Lift-up the vehicle.
2) Remove the crossmember support.
3) Remove the pipe joint in the center of gearbox, and connect the vinyl hose to the pipe and joint. Wipe fluid off while turning the steering wheel.
4) Add the specified fluid to reservoir tank at MAX level.
5) Continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface while keeping the fluid at the level in the Step 4).
### General Diagnostic Table

**POWER ASSISTED SYSTEM (POWER STEERING)**

#### A: INSPECTION

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Possible cause</th>
<th>Corrective action</th>
</tr>
</thead>
</table>
| • Heavy steering effort in all ranges  
• Heavy steering effort at stand still  
• Steering wheel surges when turning. | 1. Pulley belt  
• Unequal length of pulley belts  
• Adhesion of oil and grease  
• Loose or damage of pulley belt  
• Poor uniformity of pulley belt cross section  
• Pulley belt touches to pulley bottom  
• Poor revolution of pulleys except oil pump pulley  
• Poor revolution of oil pump pulley  
2. Tire and wheel  
• Improper tires out of specification*1  
• Improper wheel out of specification*1  
• Tires not properly inflated  
3. Fluid  
• Low fluid level  
• Aeration  
• Dust mix  
• Deterioration of fluid  
• Poor warming-up of fluid *2 | Adjust or replace.  
Replace or reinflate.  
Refill, bleed air, replace or instruct customer. |
| 4. Idle speed  
• Lower idle speed  
• Excessive drop of idle speed at start or at turning steering wheel *3 | Adjust or instruct customer. |
| 5. Measure hydraulic pressure. <Ref. to PS-80, INSPECTION, Oil Pump.>  
6. Measure steering effort. <Ref. to PS-88, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> | Replace the problem parts.  
Adjust or replace. |
| • Vehicle leads to one side or the other  
• Poor return of steering wheel to center  
• Steering wheel surges when turning. | 1. Fluid line  
• Folded hose  
• Flattened pipe  
2. Tire and wheel  
• Flat tire  
• Mix use of different tires  
• Mix use of different wheels  
• Abnormal wear of tire  
• Unbalance of remained grooves  
• Unbalance of tire pressure  
3. Front alignment  
• Improper or unbalance caster  
• Improper or unbalance toe-in  
• Loose connection of suspension  
4. Others  
• Damaged joint assembly  
• Unbalanced height  
• Unbalanced weight  
5. Measure steering effort. <Ref. to PS-88, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> | Correct or replace.  
Adjust, fix or replace.  
Adjust or retighten.  
Replace, adjust or instruct customer.  
Adjust or replace. |

*1 If the tires or wheels are wider than specifications, the load to power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before maximum turning angle. In this case, steering effort may be heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.

*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm-up fluid. Then if steering effort reduces normally, there is no abnormal thing.
*3 In cold weather or with insufficient warm-up of engine, steering effort may be heavy due to excessive drop of idling when turning steering wheel. In this case, it is recommended to start the vehicle with increasing engine speed than usual. Then if steering effort reduces normally, there is no abnormal thing.

1. NOISE AND VIBRATION

CAUTION:
Do not keep the relief valve operated over five seconds at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.

NOTE:
- Grinding noise may be heard immediately after the engine start in extremely cold condition. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristic in extremely cold condition.
- Oil pump makes whine or growl noise slightly due to its mechanism. Even if the noise can be heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is running.
- When turning the steering wheel with service brake and/or parking brake applied, the noise is generated by creaking between disc and pads. However this does not indicate abnormal function in system.
- There may be a little vibration around the steering devices when turning steering wheel at standstill, even though the component parts are properly adjusted and have no defects.

Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.
These phenomena do not indicate there are some abnormal functions in the system.

Confirm the vibration by turning the steering wheel repeatedly at various speeds from slow to rapid step by step with parking brake applied on concrete road and in “D” range for AT model.

### General Diagnostic Table

**POWER ASSISTED SYSTEM (POWER STEERING)**

#### 2. MEASUREMENT OF STEERING EFFORT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** CHECK STEERING EFFORT.  
1) Stop the vehicle on a concrete road.  
2) Start the engine.  
3) Run the engine at idle.  
4) Install a spring scale on the steering wheel.  
5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  
**NOTE:** When turning the steering more quickly than necessary from a direction to the other direction at an engine speed over 2,000 rpm, steering effort may be heavy. This is caused by flow characteristic of oil pump and is not defective. | Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lb)? | Go to step 2. | Adjust the backlash. |
| **2** CHECK STEERING EFFORT.  
1) Stop the engine.  
2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts. | Is the steering effort less than 294.2 N (30 kgf, 66.2 lb)? | Go to step 3. | Perform adjustment. |
| **3** CHECK STEERING WHEEL EFFORT.  
1) Remove the universal joint.  
2) Measure steering wheel effort. | Is steering effort less than 2.26 N (0.23 kgf, 0.51 lb)? | Go to step 4. | Check, adjust and replace if necessary. |
| **4** CHECK STEERING WHEEL EFFORT.  
Measure steering wheel effort. | Is the difference of steering effort between clockwise and counterclockwise less than 20%? | Go to step 5. | Check, adjust and replace if necessary. |
| **5** CHECK UNIVERSAL JOINT.  
Measure the folding torque of the joint (yoke of steering column side).  
<Ref. to PS-21, INSPECTION, Universal Joint.> | Is the folding torque less than 7.3 N (0.74 kgf, 1.64 lb)? | Go to step 6. | Replace with a new one. |
| **6** CHECK UNIVERSAL JOINT.  
Measure the folding torque of the joint (yoke of gearbox side).  
<Ref. to PS-21, INSPECTION, Universal Joint.> | Is the folding torque less than 3.8 N (0.39 kgf, 0.86 lb)? | Go to step 7. | Replace with a new one. |
| **7** CHECK FRONT WHEEL.  
Check the front wheel. | If the front wheels have unsteady revolution or rattling and brake for dragging? | Inspect, readjust and replace if necessary. | Go to step 8. |
| **8** CHECK TIE-ROD ENDS.  
Remove the tie-rod ends. | If the tie-rod ends of suspension have unsteady revolution or rattling? | Inspect and replace if necessary. | Go to step 9. |
| **9** CHECK BALL JOINT.  
Remove the ball joint. | If the ball joints of suspension have unsteady revolution or rattling? | Inspect and replace if necessary. | Go to step 10. |
| **10** CHECK GEARBOX.  
Measure the rotating of gearbox.  
<Ref. to PS-44, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox [LHD Model].> | Is the rotating resistance of steering gearbox less than 10.5 N (1.1 kgf, 2.4 lb)? Is the difference between clockwise and counterclockwise less than 20%? | Go to step 11. | Readjust the backlash, and if ineffective, replace the faulty parts. |
| **11** CHECK GEARBOX.  
Measure the sliding of gearbox.  
<Ref. to PS-43, SERVICE LIMIT, INSPECTION, Steering Gearbox [LHD Model].> | Is the sliding resistance of steering gearbox less than 314 N (32 kgf, 71 lb)? Is the difference between right and left sliding resistances less than 20%? | Steering effort is normal. | Readjust the backlash, and if ineffective, replace the faulty parts. |
3. INSPECTION OF CLEARANCE

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

(2) Side ventilation duct (LH)
(3) Side ventilation duct (RH)
(4) Center ventilation duct
(5) Rear heater duct (LH)
(6) Rear heater duct (RH)
C: CAUTION

1. HFC-134a A/C SYSTEM
   - The cooling system components for the HFC-134a system such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
   - Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle. Before maintenance, check which A/C system is installed to the vehicle.

2. COMPRESSOR OIL
   - HFC-134a compressor oil has no compatibility with that of CFC-12 system.
   - Use only Denso Oil 8 which is a manufacturer-authorized compressor oil for HFC-134a system.
   - Do not mix multiple compressor oils.
   If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
   On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
   - HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT
   - The CFC-12 refrigerant cannot be used in the HFC-134a A/C system. The HFC-134a refrigerant, also, cannot be used in the CFC-12 A/C system.
   - If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

4. HANDLING OF REFRIGERANT
   - The refrigerant boils at approx. −30°C (−22°F). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite.
   - If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
   - Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use hot water in 40°C (104°F) max.
   - Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
   - When the engine is running, do not open the high-pressure valve of manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
   - Provide good ventilation and do not work in a closed area.
   - In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

5. O-RING CONNECTIONS
   - Always use a new O-ring.
   - In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform operations without gloves and cloth.
General Description
HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will result in damage of O-ring and tube end distortion.
- If the operation is interrupted before completing a pipe connection; recap the tubes, components and fittings with a plug or tape to prevent foreign matter from entering.

![Image of O-ring fitting](AC-00008)

(A) Seal

- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings at right angle to tube beads.

![Image of O-ring types](AC-00009)

(A) O-ring
(B) OK
(C) NG
(D) Bead

- Use compressor oil specified in the service manual to lubricate the O-rings.
Apply oil to the top and sides of O-rings before installation.

- After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not further tighten the connections, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

![Image of tightening O-ring](AC-00010)

Apply compressor oil to the bead of tube.
D: PREPARATION TOOL

CAUTION:
When working on vehicles with HFC-134a system, only use HFC-134a specified tools and parts. Do not mix with those of CFC-12. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be destroyed.
In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

## General Description

**HVAC SYSTEM (HEATER, VENTILATOR AND A/C)**

### Refrigerant Recovery System

A **REFRIGERANT RECOVERY SYSTEM** is used for the recovery and reuse of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.

### Syringe

A graduated plastic **SYRINGE** will be needed to add oil back into the system. A syringe can be available at a pharmacy or drug store.

### Vacuum Pump

A **VACUUM PUMP** is necessary (for a good working condition), and may be available at either a refrigerant supplier or an automotive equipment supplier.

### Can Tap

A **CAN TAP** for the 397 g (14 oz.) can is available at an automotive equipment supplier.

|               | An **ELECTRONIC LEAK DETECTOR** can be available at either a specialty tool supplier or an A/C equipment supplier. |
| AC-00020      | **Weight scale**
|               | A **WEIGHT SCALE** such as an electronic charging scale or a bathroom scale with digital display will be needed, if a 13.6 kg (30 lb) refrigerant container is used. |
2. Refrigerant Pressure with Manifold Gauge Set

A: PROCEDURE
1) Place the vehicle in the shade and windless condition.
2) Connect the manifold gauge set.
3) Open the front windows and close all doors.
4) Open the front hood.
5) Increase the engine to 1,500 rpm.
6) Turn on the A/C switch.
7) Turn the temperature control switch to MAX COOL.
8) Put in RECIRC position.
9) Turn the blower control switch to HI.
10) Read the gauge.

Standard:
- Low pressure: 127 — 196 kPa (1.3 — 2.0 kg/cm², 18 — 28 psi)
- High pressure: 1,471 — 1,667 kPa (15 — 17 kg/cm², 213 — 242 psi)
- Ambient temperature: 30 — 35°C (86 — 95°F)

B: INSPECTION

<td>• Replace the compressor.&lt;br&gt;• Replace the expansion valve.&lt;br&gt;• Discharge refrigerant.</td>
</tr>
<tr>
<td>Low-pressure side is unusually low.</td>
<td>• Not enough refrigerant&lt;br&gt;• Clogged expansion valve&lt;br&gt;• Expansion valve frozen temporarily by moisture.&lt;br&gt;• Saturated receiver dryer</td>
<td>• Check for leaks.&lt;br&gt;• Replace the expansion valve.&lt;br&gt;• Replace the receiver dryer.</td>
</tr>
</tbody>
</table>
3. Refrigerant Recovery Procedure

A: PROCEDURE

CAUTION:
- During operation, be sure to wear protective goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and reuse it.
- When reusing the discharged refrigerant, keep service cans on hand. Because the discharge rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
- Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

1) Perform the compressor oil return operation. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
2) Stop the engine.
3) Make sure the valves on low-/high-pressure sides of manifold gauge set are fully closed.
4) Install the low-/high-pressure hoses to the service ports on the low-/high-pressure sides of the vehicle respectively.

5) Connect the center hose to the refrigerant recovery system.
6) Follow the operation manual to activate the refrigerant recovery system.
4. Refrigerant Charging Procedure

A: PROCEDURE

CAUTION:
• During operation, be sure to wear protective goggles and protective gloves.
• Before charging the refrigerant, evacuate the system to remove small amounts of moisture remaining in the system.

The moisture in the system can be completely evacuated only under the minimum vacuum level. The minimum vacuum level affects the temperature in the system.
• The list below shows the vacuum values necessary to boil water in various temperature. In addition, the vacuum levels indicated on the gauge are approx. 3.3 kPa (25 mmHg, 0.98 inHg) lower than those measured at 304.8 m (1,000 ft) above sea level.

<table>

</tr>
</tbody>
</table>

1) Close the valves on low-/high-pressure sides of the manifold gauge.

2) Install the low-/high-pressure hoses to the corresponding service ports on the vehicle respectively.
3) Connect the center hose of the manifold gauge set with the vacuum pump.
4) Carefully open the valves on the low-/high-pressure sides to activate the vacuum pump.

5) After the low-pressure gauge reaches 100.0 kPa (750 mmHg, 29.5 inHg) or higher, evacuate the system for approx. 15 minutes. (Continue evacuation).

6) After 15 minutes of evacuation, if the reading shows 100.0 kPa (750 mmHg, 29.5 inHg) or higher, close the valves on the both sides to stop the vacuum pump.
7) Note the low-pressure gauge reading.

8) Leave it at least 5 minutes, and then check the low-pressure gauge reading for any changes. When a gauge indicator shows near to zero point, it is a sign of leakage. Check pipe connector points, repair them, make sure there is no leakage by air bleeding.

9) Following the can tap operation manual instructions, install it to the refrigerant can.

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

11) When a 13.6 kg (30 lb) refrigerant container is used, measure the refrigerant amount in use using a weight scale.

12) Confirm that all the 3 hoses are tightly connected to the manifold gauge set.

13) Open the valve on the HFC-134a source.

14) Loosen the center hose connection on the manifold gauge set (if applicable, press a purge valve on the manifold gauge set) only for a couple of seconds to allow the air in the center hose to escape by the refrigerant.

15) Carefully open the high-pressure valve with the engine stopping.

**CAUTION:**
Do not open the low-pressure valve.

16) Close the high-pressure valve when the low-pressure gauge reaches 98 kPa (1 kg/cm², 14 psi). Using a leak tester, check the system for leaks. If any leakage is found after the refrigerant recovery is completed, repair the applicable area.
Refrigerant Charging Procedure
HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

17) After confirming that there are no leaks with the leak test, charge the required amount of refrigerant.

CAUTION:
Never run the engine during charging from the high-pressure side.

18) Close the high-pressure valve when;
• the readings of low- / high-pressure gauges become almost equal, after the charging speed is reduced,
• the HFC-134a source becomes empty, or the system is filled with the gas.

19) If the HFC-134a source is empty, close the high-pressure valve, close the valve on the can tap, and replace the HFC-134a source with a new one to restart the operation.

20) Confirm that both the low-/high-pressure valves can be closed. Start the engine with the A/C switch OFF.

21) Quickly repeat ON-OFF cycles a few times to prevent initial compressor damage.

22) Set up the vehicle to the following status:
• A/C switch ON
• Engine running at 1,500 rpm
• Blower speed setting to “HI”
• Temperature setting to “MAX COOL”
• Air inlet setting to “RECIRC”
• Window open

23) While reading the low-pressure gauge, carefully open the low-pressure valve with the refrigerant source connected and the service hose purged.

CAUTION:
Never open the high-pressure valve with the engine running. The high-pressure gas will backflow resulting in an explosion of the can.

24) Adjust the refrigerant flow to maintain the pressure on the low-pressure side at 276 kPa (2.81 kg/cm², 40 psi) max.

25) After the system is fully charged, close the low-pressure valve.

26) Close the valve on the refrigerant source.

27) Disconnect the hose from the service port, and install the service port cap.

Refrigerant amount

5. Refrigerant Leak Check

A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and confirm that the high-side pressure shows at least 690 kPa (7.03 kg/cm², 100 psi). Then stop the engine to start the leak test.
2) Starting from the connection between high-pressure pipe and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.
3) Check the joint and seam between pressure switch (dual switch) and high-pressure pipe.
4) Check the connections between condenser and pipes, and welded joints on the condenser. The leak tester may detect the oil on the condenser fins as a leak.
5) Check the joint between compressor and hoses.
6) Check the machined area of compressor and other joints on the compressor.
7) Check the compressor shaft seal at the area near the center of compressor clutch pulley. Some shaft seals show a slight amount of leakage about 3 g (0.1 oz.) per year. This is not a problem.
8) Starting from the connection between low-pressure pipe and evaporator, check the system for leakage along the low-pressure side through the compressor. The following items must be checked thoroughly.
   • Connection between 2 parts
   • Connection between pipe and plate

9) Visually check the rubber area of the flexible hose for cracks. Check the entire length of the flexible hose, especially the connection with the metal hose end.

CAUTION: Carefully check the external surface of hoses and tubes at approx. 25 mm (0.98 in) per second.

10) Disconnect the drain hose from heater case, and check the hose end for at least 10 seconds. After the test is finished, reconnect the drain hose.
11) Turn the ignition key to ON position, and run the blower at high speed for approx. 1 minute. Stop the blower to check the ventilation grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that point for at least 10 seconds.

12) Check the valve in the service port.
13) Visually check the rubber seal in the service port cap.
6. Compressor Oil

A: PROCEDURE

NOTE:
Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

1) Increase the engine to 1,500 rpm.
2) Turn ON the A/C switch.
3) Turn the temperature control switch to MAX COOL.
4) Put in RECIRC position.
5) Turn the blower control switch to HI.
6) Leave in this condition for 10 minutes.

B: REPLACEMENT

NOTE:
- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Install the new compressor after removing the same amount of oil that is remaining in the compressor removed.
7. Blower Motor Unit Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Disconnect the connectors of A/C control module, intake door actuator, blower motor, power transistor and blower resistor.
4) Loosen the bolt and nut to remove blower motor unit assembly.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AC-5, HEATER COOLING UNIT, COMPONENT, General Description.>
<Ref. to AC-7, BLOWER MOTOR UNIT, COMPONENT, General Description.>
8. Blower Motor

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box lower cover. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Disconnect the connector of blower motor.
4) Loosen the screw to remove blower motor.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Connect the battery positive (+) terminal to terminal No. 2 of blower motor, and negative (−) terminal to terminal No. 1. Check the blower motor for smooth rotation.
9. Power Transistor (Auto A/C Model)

A: REMOVAL
1) Remove the glove box lower cover on passenger side. <Ref. to EI-51, REMOVAL, Glove Box.>
2) Disconnect the power transistor connector.
3) Remove two screws, and then remove the power transistor.

B: INSTALLATION
Install in the reverse order of removal.

A: REMOVAL
1) Remove the glove box lower cover on passenger side. <Ref. to EI-51, REMOVAL, Glove Box.>
2) Disconnect the blower resistor connector.
3) Remove two screws, and then remove the blower resistor.

![Blower Resistor (Manual A/C Model)](image)

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION

![Blower Resistor (Manual A/C Model)](image)

Measure the blower resistor resistance.

<table>
<thead>

</tr>
<tr>
<td>4 and 3</td>
<td>Approx. 1.12 Ω</td>
</tr>
<tr>
<td>4 and 1</td>
<td>Approx. 2.92 Ω</td>
</tr>
</tbody>
</table>

If NG, replace the blower resistor.
11. Heater Core

A: REMOVAL
1) Remove the heater and cooling unit. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
2) Remove the screws and remove the heater core cover and pipe clamp.
3) Remove the heater core.

B: INSTALLATION
Install in the reverse order of removal.
12. Control Unit (Manual A/C Model)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the control wires.
4) Remove the integrated panel. <Ref. to ET-5, REMOVAL, Audio.>
5) Loosen the screw to remove the control unit from bracket.

B: INSTALLATION
Install in the reverse order of removal.
13. Control Unit (Auto A/C Model)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the screw, disconnect the connector and remove the control unit.

B: INSTALLATION
Install in the reverse order of removal.
14. Compressor

A: INSPECTION

1. MAGNETIC CLUTCH CLEARANCE

Check the clearance of entire circumference around the drive plate and pulley.

**Standard:**

$0.45 \pm 0.15$ mm $(0.0177 \pm 0.0059$ in)$

2. MAGNETIC CLUTCH OPERATION

1) Disconnect the compressor connector.
2) Connect the battery positive (+) terminal to terminal No. 1 of compressor connector, and negative (−) terminal to terminal No. 2.

3) Check the magnet clutch engagement. If NG, replace the compressor.

B: REMOVAL

1) Perform the compressor oil return operation. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
2) Turn the A/C switch to OFF and stop the engine.
3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
4) Disconnect the ground cable from battery.
5) Remove the V-belts. <Ref. to ME(H4SO 2.0)-38, REMOVAL, V-belt.> <Ref. to ME(H4DOTC)-39, REMOVAL, V-belt.> <Ref. to ME(H6DO)-33, REMOVAL, V-belt.>
6) Remove the generator. <Ref. to SC(H4SO 2.0)-14, REMOVAL, Generator.> <Ref. to SC(H6DO)-14, REMOVAL, Generator.>
7) Remove the bolt and remove the low-pressure hose and high-pressure hose.
8) Disconnect the compressor harness from body harness.
9) Remove the bolts and remove compressor bracket.
   - H4 model
   - H6 model
10) Remove the bolts, and then remove the bracket from compressor.
Compressor
HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSTALLATION
1) Install in the reverse order of removal.
2) Replace the O-rings on low-/high-pressure hoses with new ones, then apply compressor oil.
3) When replacing the compressor, adjust amount of compressor oil. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
4) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
   Refer to “COMPONENT” of “General Description”. <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>
   <Ref. to AC-11, COMPRESSOR, COMPONENT, General Description.>
15. Condenser

A: REMOVAL
1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
2) Disconnect the ground cable from battery.
3) Disconnect the pressure hose and pipe from condenser.
4) Remove the radiator bracket (A) and hood stay (B).
5) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
6) Remove two bolts. While lifting condenser, pull it out through the space between radiator and radiator panel.

CAUTION:
- Be careful not to damage the condenser fins.
- If a damaged fin is found, repair it using a thin screwdriver.

- If the condenser is replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-25, REPLACEMENT, Compressor Oil.>

B: INSTALLATION
1) Install in the reverse order of removal.

CAUTION:
- Replace the O-rings on hoses or pipes with new ones, and then apply compressor oil. Confirm that lower guide of condenser (A) has been fitted into holes on radiator panel.

2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
- Refer to “COMPONENT” of “General Description”. <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>
- <Ref. to CO(H4SO 2.0)-5, RADIATOR AND RADIATOR FAN, COMPONENT, General Description.>

C: INSPECTION
1) Check no dust or insects are found on the condenser fins. Air-blow or flush fins with water as needed.
2) Inspect for oil leakage from condenser. If a failure is found, replace the condenser with a new one.
16. Heater and Cooling Unit

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
3) Drain coolant from the radiator.
4) Remove the bolts securing expansion valve and pipe in engine compartment. Release the heater hose clamps in engine compartment to remove the hoses.
5) Remove the instrument panel. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
6) Remove the support beam.
7) Remove the blower motor unit assembly. <Ref. to AC-26, REMOVAL, Blower Motor Unit Assembly.>
8) Disconnect the actuator connector.
9) Remove the bolt and nuts to remove the heater and cooling unit.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AC-5, HEATER COOLING UNIT, COMPONENT, General Description.>
17. Evaporator

A: REMOVAL

1) Remove the blower motor unit assembly. <Ref. to AC-26, REMOVAL, Blower Motor Unit Assembly.>
2) Disconnect the connector, remove the screw and then remove the air-mix door actuator and mode door actuator.
3) Disconnect the connector, remove the screw and remove the pipe cover and evaporator sensor.
4) Remove the bolts securing expansion valve and pipe in engine compartment.
5) Remove the bolt which holds the pipe to evaporator.
6) Remove the screws and clip to remove the evaporator cover.
7) Pull out the evaporator (A) in the direction of arrow.

CAUTION:
If the evaporator is replaced, add an appropriate amount of compressor oil to evaporator. <Ref. to AC-25, REPLACEMENT, Compressor Oil.>

B: INSTALLATION

Install in the reverse order of removal.
18. Hose and Tube

A: REMOVAL

CAUTION:
- When disconnecting/connecting hoses, do not apply an excessive force to them. Confirm that no torsion and excessive tension is charged after installing.
- Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

1) Disconnect the ground cable from battery.
2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
3) Remove the evaporator unit mounting bolt (A) and low-pressure hose bracket bolt (B).
4) Remove the low-pressure hose attaching bolts (C).
5) Disconnect the low-pressure hose from evaporator unit.
6) Disconnect the low-pressure hose from compressor.
7) Remove the low-pressure hose from vehicle.
8) Remove the high-pressure hose attaching bolt (D).
9) Disconnect the high-pressure hose from compressor.
10) Disconnect the high-pressure hose from condenser.
11) Remove the high-pressure hose from vehicle.
12) Remove the high-pressure attaching bolt (E).
13) Remove the high-pressure tube from vehicle.

B: INSTALLATION

CAUTION:
- When disconnecting or connecting the hoses, do not apply excessive force to them. Confirm that no torsion and excessive tension is charged after installing.
- Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.

1) Install in the reverse order of removal.
2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AC-10, AIR CONDITIONING UNIT, COMPONENT, General Description.>

C: INSPECTION

Check the hoses for cracks, damage and expansion. If any fault is found, replace them with new ones.
19. Relay and Fuse

A: LOCATION

(1) Joint box
(2) Main fuse box

<table>
<thead>
<tr>
<th>Component</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main Fan Relay 1</td>
<td>(A)</td>

</tbody>
</table>

B: INSPECTION

While applying battery voltage to the terminal between (3) and (4), check continuity between (1) and (2).

(3) — (4): Continuity exists
(1) — (2): Continuity does not exist

If no continuity exists, replace the relay with a new one.
20. Pressure Switch (Triple Pressure Switch)

A: INSPECTION
1) Connect the manifold gauge to the service valve on the high-pressure side.
2) Remove the pressure switch harness connector. Using a circuit tester, inspect the ON-OFF operation of pressure switch.

<table>

21. Ambient Sensor (Auto A/C Model)

A: REMOVAL
1) Open the front hood.
2) Disconnect the ground cable from battery.
3) Disconnect the ambient sensor connector.
4) Remove the ambient sensor from the radiator lower panel.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
<Ref. to AC(diag)-30, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>
22. Sunload Sensor (Auto A/C Model)

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Disconnect the connector and remove the sunload sensor.

CAUTION:
Be careful not to damage the interior trims when removing the sensor.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

<Ref. to AC(diag)-36, SUNLOAD SENSOR, Diagnostic Procedure for Sensors.>
23. In-Vehicle Sensor (Auto A/C Model)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
3) Disconnect the connector and aspirator hose, remove the pawl and remove the in-vehicle sensor (A) from instrument lower cover.

CAUTION:
Be careful not to damage the sensors and interior trims when removing.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
<Ref. to AC(diag)-32, IN-VEHICLE SENSOR, Diagnostic Procedure for Sensors.>
24. Air Vent Grille

A: REMOVAL

1. CENTER GRILLE
   1) Disconnect the ground cable from battery.
   2) Remove the three pawls and connector to remove center air vent grill.

2. SIDE GRILLE
   Remove the two pawls to remove side air vent grill.

B: INSTALLATION
   Install in the reverse order of removal.

C: INSPECTION
   1) Check the direction and amount of air can be adjusted smoothly.
   2) Check the adjustment can be kept in each position.
25. Heater Duct

A: REMOVAL

1. FRONT HEATER DUCT

1) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Remove the screws and detach the front heater duct (A).

![Diagram of front heater duct removal](AC-00933)

2. REAR HEATER DUCT

1) Remove the heater cooling unit. <Ref. to AC-36, REMOVAL, Heater and Cooling Unit.>
2) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
3) Remove the front side sill cover.
4) Pull off the floor mat to remove the rear center heater duct (A) and rear heater duct LH, RH (B).

![Diagram of rear heater duct removal](AC-00934)

B: INSTALLATION

Install in the reverse order of removal.
26. Heater Vent Duct

A: REMOVAL

1) Remove the instrument panel. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Remove the screws and detach the center vent duct (A).
3) Remove the screws and detach the center vent duct (B).
4) Remove the insulator, remove the screws and detach the defroster duct.

B: INSTALLATION

Install in the reverse order of removal.
27. Heater Cock Solenoid Valve

**A: REMOVAL**
1) Drain the engine coolant. <Ref. to CO(H4SO 2.0)-13, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
2) Disconnect the harness connector (A) of the heater cock solenoid valve.
3) Remove the two bolts to remove the heater cock solenoid from the bracket.
4) Pull out the heater cock solenoid. Loosen the hose clamp and disconnect the two heater hoses.

**B: INSTALLATION**
Install in the reverse order of removal.

**C: INSPECTION**
1) Remove the heater cock solenoid valve. <Ref. to AC-47, REMOVAL, Heater Cock Solenoid Valve.>
2) Connect the positive terminal of battery to No. 1 terminal of heater cock solenoid valve, and the ground terminal to No. 2 terminal. Check that the heater cock solenoid valve opens and closes normally.

If any failure is found, replace the heater cock solenoid valve.
## General Diagnostic Table

### 28. General Diagnostic Table

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## Basic Diagnostic Procedure

### A: PROCEDURE

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 START INSPECTIONS.  
1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.>  
| 2 IDENTIFY MALFUNCTION PART.  
Identify the malfunction part with self-diagnosis. | Can the malfunction part be identified? | Repair the malfunction part in accordance with each diagnostic chart. | Go to step 3. |
| 3 CHECK COMPARTMENT TEMPERATURE.  
1) Turn ON the A/C switch.  
2) Turn the temperature control dial at maximum cool position.  
3) Check the compartment temperature change. | Does the compartment temperature change? | Go to step 4. | <Ref. to AC(diag)-20, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.> |
| 4 CHECK A/C SYSTEM RESPONSE.  
Change the temperature setting, and check the response of A/C system. | Does the A/C system respond quickly? | A/C system is normal. | <Ref. to AC(diag)-20, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.> |
2. General Description

A: CAUTION
1) Never connect the battery in reverse polarity.
   • Auto A/C control module may be destroyed instantly.
2) Do not disconnect the battery terminals while the engine is running.
   • A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as auto A/C control module, etc.
3) Before disconnecting the connectors of each sensor and the auto A/C control module, be sure to turn off the ignition switch.
   • Auto A/C control module may be damaged.
4) Every A/C-related part is a precision part. Do not drop them.
5) Airbag system wiring harness is routed near the A/C control panel and junction box.

CAUTION:
• For airbag system, yellow-colored wiring harness and connectors are all used. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the A/C control panel and junction box.

B: INSPECTION
Before performing the diagnosis, check the following items which might affect A/C system problems.

1. BATTERY
1) Measure the battery voltage and specific gravity of electrolyte.
   
   **Standard voltage: 12 V**

   **Specific gravity: More than 1.260**
2) Check the condition of the fuses for A/C system power supply and other fuses.
3) Check the condition of harness and harness connector connections.

2. ASPIRATOR HOSE
1) Turn the ignition switch to ON, and press the A/C switch.
2) Turn the temperature control dial at maximum hot position.
3) Turn the air flow control dial to “DEF” position.
4) Turn the fan speed control dial to 4th position.
5) Approach a strip of paper in front of the in-vehicle sensor suction port (A) located in the instrument lower cover, and check that air is being sucked into the port by seeing the paper moving towards the port.

NOTE: Be careful not to let the paper get sucked into the port.

6) If the paper does not move at all, remove the instrument panel lower cover <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.> and check for improper connection of the aspirator hose (A), in-vehicle sensor and heater unit, and repair them if necessary.

3. A/C LINE
Check the connection for A/C line (A) and lower side high-pressure pipe.

4. CONTROL LINKAGE
1) Check the state of mode door linkage.
2) Check the state of air mix door linkage.
3) Check the state of intake door linkage.
### General Description

**HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)**

5. **CONTROL SWITCHES**

Start and warm-up the engine completely.

1. **Inspection using switches**

1. **AIR CONDITIONER AUTO A/C MODEL**

<Ref. to WI-59, WIRING DIAGRAM, Air Conditioning System.>

---

AC(diag)-9
5. Diagnostic Chart for Self-Diagnosis

A: OPERATION

NOTE:
For A/C system self-diagnosis, there is one that checks the control panel, and the other that checks the whole control system (sensor, actuator, blower motor, etc.). Perform the self-diagnosis for control panel first, and then perform the self-diagnosis for control system.
# 1. A/C CONTROL PANEL SELF-DIAGNOSIS

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. <strong>SET SELF-DIAGNOSIS MODE BY OPERATING A/C CONTROL PANEL.</strong>&lt;br&gt;1) Turn the ignition switch to OFF.&lt;br&gt;2) Turn the ignition switch to ON with the defroster switch and A/C switch pressed.&lt;br&gt;3) The screen display and indicator illuminate.</td>
<td>Does the self-diagnosis mode operate?</td>
<td>Go to step 2.</td>
<td>&lt;Ref. to AC(diag)-15, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.&gt;</td>
</tr>
<tr>
<td>2. <strong>CHECK DISPLAY AND INDICATOR.</strong>&lt;br&gt;Check the display and all indicators illuminate.</td>
<td>Do the display and all indicators illuminate?</td>
<td>Go to step 3.</td>
<td>Replace the A/C control panel.</td>
</tr>
<tr>
<td>3. <strong>CHECK SWITCH AND TEMPERATURE CONTROL DIAL INPUT.</strong>&lt;br&gt;According to the switch check table, press each switch or turn the temperature control dial, and check the relative screen display and indicators illuminate. &lt;Ref. to AC(diag)-12, SWITCH CHECK TABLE, OPERATION, Diagnostic Chart for Self-Diagnosis.&gt;</td>
<td>Does the screen display related to each switch and dial input illuminate?</td>
<td>Go to step 4.</td>
<td>Replace the A/C control panel.</td>
</tr>
<tr>
<td>4. <strong>CHECK A/C CONTROL PANEL COMMUNICATION.</strong>&lt;br&gt;1) Turn the ignition switch to OFF.&lt;br&gt;2) Disconnect the auto A/C control module harness connector.&lt;br&gt;3) Using a suitable lead wire, short the terminal No. 15 and No. 16 of auto A/C control module harness connector (B283).&lt;br&gt;4) Turn the ignition switch to ON with the rear defogger switch and A/C switch pressed.&lt;br&gt;5) When no malfunction occurs in the control panel communication, “CL” is displayed in the screen; and when malfunction occurs, “OP” is displayed.</td>
<td>Is “CL” displayed in the screen?</td>
<td>A/C control panel is normal. Turn the ignition switch to OFF, and connect the auto A/C control module harness connector.</td>
<td>Replace the A/C control panel.</td>
</tr>
</tbody>

6. Diagnostics for A/C System Malfunction

A: A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

TROUBLE SYMPTOM:
- “Set” temperature is not indicated on the display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

WIRING DIAGRAM:
### Diagnostics for A/C System Malfunction

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK FUSE.  
1) Turn the ignition switch to OFF.  
2) Remove the fuse No. 8 from main fuse box.  
3) Check the condition of fuse.  
| Is the fuse blown-out? | Replace the fuse. | Go to step 2. |
| 2    | CHECK FUSE.  
1) Turn the ignition switch to OFF.  
2) Remove the fuse No. 22 and 31 from fuse & relay box.  
3) Check the condition of fuse.  
| Is the fuse blown-out? | Replace the fuse. | Go to step 3. |
| 3    | CHECK A/C CONTROL PANEL POWER CIRCUIT.  
1) Replace the A/C control panel.  
2) Disconnect the A/C control panel harness connector.  
3) Measure the voltage between A/C control panel harness connector terminal and chassis ground after turning the ignition switch to ACC position.  
**Connector & terminal**  
(88) No. 2 (+) — Chassis ground (-):  
| Is the voltage more than 10 V? | Go to step 4. | Check the harness for open or short circuit between A/C control panel and fuse. |
| 4    | CHECK A/C CONTROL PANEL POWER CIRCUIT.  
Measure the voltage between A/C control panel harness connector terminal and chassis ground after turning the ignition switch to ON position.  
**Connector & terminal**  
(88) No. 1 (+) — Chassis ground (-):  
| Is the voltage more than 10 V? | Go to step 5. | Check the harness for open or short circuit between A/C control panel and fuse. |
| 5    | CHECK A/C CONTROL PANEL GROUND POWER CIRCUIT.  
Measure the resistance in harness between A/C control panel and chassis ground after turning the ignition switch to OFF position.  
**Connector & terminal**  
(88) No. 5 — Chassis ground:  
| Is the resistance less than 10 Ω? | Go to step 6. | Repair the harness for ground line. |

### Diagnostics for A/C System Malfunction

#### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

**Diagnostics for A/C System Malfunction**

1. **Check Power Supply for Magnet Clutch.**
   1. Stop the engine and turn the A/C switch to OFF.
   2. Disconnect the harness connector of magnet clutch.
   3. Start the engine and turn the A/C switch to ON.
   4. Turn the temperature control dial at maximum cool position.
   5. Measure the voltage between magnet clutch harness connector terminal and chassis ground.

   **Connector & terminal**
   
   (F24) No. 1 (+) — Chassis ground (-):

   Is the voltage more than 10 V?  
   **Yes**: Go to step 12.  
   **No**: Check the harness for open or short circuit between A/C relay and magnet clutch.

2. **Check Harness Between Auto A/C Control Module and ECM.**
   1. Stop the engine and turn the A/C switch to OFF.
   2. Measure the resistance between magnet clutch harness connector terminal and chassis ground.

   **Connector & terminal**
   
   (F24) No. 2 — Chassis ground:

   Is the resistance less than 1 Ω?  
   **Yes**: Check the compressor. <Ref. to AC-33, INSPECTION, Compressor.>  
   **No**: Repair the harness.
7. Diagnostic Procedure for Actuators

A: INTAKE DOOR ACTUATOR

TROUBLE SYMPTOM:
FRESH/RECIIRC mode is not changed.

</table>
| 1    | CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR.  
  1) Turn the ignition switch to OFF.  
  2) Disconnect the intake door actuator connector.  
  3) Turn the ignition switch to ON.  
  4) Measure the voltage between intake door actuator connector and chassis ground.  
  **Connector & terminal**  
  *(B91) No. 7 (+) — Chassis ground (−):*  
  Is the voltage 7 V (at normal temperature)?  
  Go to step 2.  
  Check the harness for open or short circuit between intake door actuator and fuse. |
| 2    | CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR.  
  1) Turn the ignition switch to OFF.  
  2) Disconnect the auto A/C control module connector.  
  3) Measure the resistance between intake door actuator connector and auto A/C control module connector.  
  **Connector & terminal**  
  *(B283) No. 10 — (B91) No. 3:*  
  *(B283) No. 20 — (B91) No. 1:*  
  Is the resistance less than 1 Ω?  
  Go to step 3.  
  Repair the harness between auto A/C control module and intake door actuator. |
| 3    | CHECK OPERATION OF INTAKE DOOR ACTUATOR.  
  1) Connect the intake door actuator connector.  
  2) Ground the auto A/C control module connector with a suitable wire.  
  3) Turn the ignition switch to ON, and check the operation of intake door actuator.  
  **Connector & terminal**  
  *(B283) No. 10 — Chassis ground:*  
  Does the actuator move to the FRESH side?  
  Go to step 4.  
  Replace the intake door actuator. |
| 4    | CHECK OPERATION OF INTAKE DOOR ACTUATOR.  
  1) Turn the ignition switch to OFF.  
  2) Ground the auto A/C control module connector with a suitable wire.  
  3) Turn the ignition switch to ON, and check the operation of intake door actuator.  
  **Connector & terminal**  
  *(B283) No. 20 — Chassis ground:*  
  Does the actuator move to the RECIRC side?  
  Replace the auto A/C control module.  
  Replace the intake door actuator. |
Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: MODE DOOR ACTUATOR

TROUBLE SYMPTOM:
Air flow outlet is not changed.

WIRING DIAGRAM:
## Diagnostic Procedure for Actuators

**HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)**

### Step Check Yes No

1. **CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR POSITION SENSOR.**
   1) Turn the ignition switch to OFF.
   2) Disconnect the mode door actuator connector.
   3) Turn the ignition switch and AUTO switch to ON.
   4) Measure the voltage between auto A/C control module connector terminals.
      - **Connector & terminal**
        - (B282) No. 8 (+) — (B282) No. 15 (−):
   
   Is the voltage approx. 5 V?  
   Go to step 2.  
   Replace the auto A/C control module.

2. **CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.**
   Measure the voltage between auto A/C control module connector and chassis ground after turning the air flow control switch to FACE position.
      - **Connector & terminal**
        - (B283) No. 7 (+) — Chassis ground (−):
   
   Is the voltage 7 V (at normal temperature)?  
   Go to step 3.  
   Replace the auto A/C control module.

3. **CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.**
   Measure the voltage between auto A/C control module connector and chassis ground after turning the air flow control switch to DEF position.
      - **Connector & terminal**
        - (B283) No. 17 (+) — Chassis ground (−):
   
   Is the voltage 7 V (at normal temperature)?  
   Go to step 4.  
   Replace the auto A/C control module.

4. **CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.**
   1) Turn the A/C and ignition switch to OFF.
   2) Disconnect the auto A/C control module connector.
   3) Measure the resistance between auto A/C control module and mode door actuator connector.
      - **Connector & terminal**
        - (B77) No. 1 — (B282) No. 15:
        - (B77) No. 2 — (B282) No. 8:
        - (B77) No. 3 — (B282) No. 3:
        - (B77) No. 4 — (B283) No. 17:
        - (B77) No. 5 — (B283) No. 7:
   
   Is the resistance less than 1 Ω?  
   Go to step 5.  
   Repair the harness between auto A/C control module and mode door actuator.

5. **CHECK MODE DOOR ACTUATOR POSITION SWITCH SIGNAL.**
   1) Connect the connector of auto A/C control module and mode door actuator.
   2) Turn the ignition switch and AUTO switch to ON.
   3) Check the voltage between auto A/C control module connector terminals while changing the mode between DEF and FACE.
      - **Connector & terminal**
        - (B282) No. 3 (+) — (B282) No. 15 (−):
   
   Does the voltage change between 1 (DEF) — 4 (FACE) V?  
   Go to step 6.  
   Replace the mode door actuator.

6. **CHECK POOR CONTACT.**
   Check poor contact in auto A/C control module and connector.
   Is there poor contact in connector?  
   Repair connector.  
   Replace the auto A/C control module.
C: AIR MIX DOOR ACTUATOR
TROUBLE SYMPTOM:
Outlet air temperature does not change.

WIRING DIAGRAM:
## Diagnostic Procedure for Actuators

**HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)**

### Step 1: Check Power Supply for Air Mix Door Actuator Position Switch
1. **Check:** Power supply for air mix door actuator position switch.
2. **Procedure:**
   1. Turn the ignition switch to OFF.
   2. Disconnect the air mix door actuator connector.
   3. Turn the ignition switch and AUTO switch to ON.
   4. Measure the voltage between auto A/C control module connector terminals.

   **Connector & terminal**
   - (B282) No. 8 (+) — (B282) No. 15 (−):

   **Check:** Is the voltage approx. 5 V?
   - **Yes:** Go to step 2.
   - **No:** Replace the auto A/C control module.

### Step 2: Check Power Supply for Air Mix Door Actuator
1. **Check:** Power supply for air mix door actuator.
2. **Procedure:** Measure the voltage between auto A/C control module connector and chassis ground after turning the temperature control dial to maximum COOL position.

   **Connector & terminal**
   - (B283) No. 8 (+) — Chassis ground (−):

   **Check:** Is the voltage 7 V (at normal temperature)?
   - **Yes:** Go to step 3.
   - **No:** Replace the auto A/C control module.

### Step 3: Check Power Supply for Air Mix Door Actuator
1. **Check:** Power supply for air mix door actuator.
2. **Procedure:** Measure the voltage between auto A/C control module connector and chassis ground after turning the temperature control dial to maximum HOT position.

   **Connector & terminal**
   - (B283) No. 18 (+) — Chassis ground (−):

   **Check:** Is the voltage 7 V (at normal temperature)?
   - **Yes:** Go to step 4.
   - **No:** Replace the auto A/C control module.

### Step 4: Check Harness Between Auto A/C Control Module and Air Mix Door Actuator
1. **Procedure:**
   1. Turn the A/C and ignition switch to OFF.
   2. Disconnect the auto A/C control module connector.
   3. Measure the resistance between auto A/C control module and air mix door actuator connector.

   **Connector & terminal**
   - (B235) No. 1 — (B282) No. 8:
   - (B235) No. 3 — (B282) No. 15:
   - (B235) No. 5 — (B282) No. 4:
   - (B235) No. 6 — (B283) No. 8:
   - (B235) No. 7 — (B283) No. 18:

   **Check:** Is the resistance less than 1 Ω?
   - **Yes:** Go to step 5.
   - **No:** Repair the harness between auto A/C control module and air mix door actuator.

### Step 5: Check Air Mix Door Actuator Position Switch Signal
1. **Procedure:**
   1. Connect the connector of auto A/C control module and air mix door actuator.
   2. Turn the ignition switch and AUTO switch to ON.
   3. Check the voltage between auto A/C control module connector terminals while changing the setting temperature between maximum COOL and maximum HOT.

   **Connector & terminal**
   - (B282) No. 4 (+) — (B282) No. 15 (−):

   **Check:** Does the voltage change between 1 (Max. HOT) — 4 (Max. COOL) V?
   - **Yes:** Go to step 6.
   - **No:** Replace the air mix door actuator.

### Step 6: Check Poor Contact
1. **Check:** Poor contact in auto A/C control module and connector.
2. **Procedure:** Check poor contact in auto A/C control module and connector.

   **Check:** Is there poor contact in connector?
   - **Yes:** Repair the connector.
   - **No:** Replace the auto A/C control module.
8. Diagnostic Procedure for Sensors

A: AMBIENT SENSOR

TROUBLE SYMPTOM:
Fan speed is not switched when the fan speed control dial is in AUTO position.

WIRING DIAGRAM:
# Diagnostic Procedure for Sensors

## HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

### Diagnostic Procedure for Sensors

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK AMBIENT SENSOR.  
   1) Turn the ignition switch to OFF.  
   2) Disconnect the connector from ambient sensor.  
   3) Measure the resistance between connector terminals of ambient sensor.  
   **Terminals**  
   No. 1 — No. 2: | Is the resistance approx. 2.2 kΩ at 25°C (77°F)? | Go to step 2. | Replace the ambient sensor. |
| 2    | CHECK INPUT SIGNAL FOR AMBIENT SENSOR.  
   1) Turn the ignition to ON.  
   2) Measure the voltage between connector (F78) terminals.  
   **Connector & terminal**  
   (F78) No. 1 (+) — No. 2 (-): | Is the voltage approx. 5 V? | Go to step 6. | Go to step 3. |
| 3    | CHECK OUTPUT SIGNAL OF BODY INTEGRATED UNIT.  
   1) Turn the ignition switch to OFF.  
   2) Draw out the body integrated unit.  
   3) Disconnect the connector from ambient sensor.  
   4) Turn the ignition switch to ON.  
   5) Measure the voltage between connector terminals of body integrated unit.  
   **Connector & terminal**  
   (B281) No. 3 (+) — No. 10 (-): | Is the voltage approx. 5 V? | Go to step 4. | Go to step 6. |
| 4    | CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND AMBIENT SENSOR.  
   1) Turn the ignition switch to OFF.  
   2) Disconnect the connector from body integrated unit.  
   3) Measure the resistance in harness between body integrated unit and ambient sensor.  
   **Connector & terminal**  
   (F78) No. 1 — (B281) No. 10: | Is the resistance less than 1 Ω? | Go to step 5. | Repair the open circuit in harness between body integrated unit and ambient sensor. |
| 5    | CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND AMBIENT SENSOR.  
   Measure the resistance in harness between body integrated unit and ambient sensor.  
   **Connector & terminal**  
   (F78) No. 2 — (B281) No. 3: | Is the resistance less than 1 Ω? | Go to step 6. | Repair the open circuit in harness between body integrated unit and ambient sensor. |
| 6    | CHECK COMMUNICATION ERROR DISPLAY.  
   1) Connect the connectors of body integrated unit and ambient sensor to original position.  
   2) Check “Er xx” is indicated on the Odo/Trip meter in combination meter after turning the ignition switch to ON. | Is the error display “Er xx” indicated? | Check the communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.> | Go to step 7. |
| 7    | CHECK POOR CONTACT.  
   Check poor contact in auto A/C control module connector. | Is there poor contact in connector? | Repair the connector. | Replace the A/C control module. |
Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: IN-VEHICLE SENSOR

TROUBLE SYMPTOM:
Blower fan speed, outlet port and inlet port do not change after turning the AUTO switch to ON.

D: SUNLOAD SENSOR

TROUBLE SYMPTOM:
- Sensor identifies that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identifies that sunlight is at minimum. Then, A/C system is controlled to HOT side.

NOTE:
When the sunload sensor check is conducted indoors or in the shade, open circuit might be indicated. Always check the sunload sensor at the place where the sun shines directly on it.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: COMPONENT

1. DRIVER’S AIRBAG MODULE

Tightening torque: 
10 N\cdot m (1.0 kgf\cdot m, 7.2 ft-lb)

2. PASSENGER’S AIRBAG MODULE

Tightening torque: 
7.4 N\cdot m (0.75 kgf\cdot m, 5.5 ft-lb)

3. SIDE AIRBAG MODULE

Tightening torque: 
6 N\cdot m (0.61 kgf\cdot m, 4.4 ft-lb)

4. CURTAIN AIRBAG MODULE

- Sedan model

5. AIRBAG CONTROL MODULE

- Wagon model

Tightening torque: 
7.5 N\cdot m (0.77 kgf\cdot m, 5.5 ft-lb)

Tightening torque: 
25 N\cdot m (2.5 kgf\cdot m, 18.1 ft-lb)
6. FRONT SUB SENSOR

Tightening torque:
13 N\cdot m (1.32 kgf-m, 9.6 ft-lb)

7. SIDE AIRBAG SENSOR

Tightening torque:
7.4 N\cdot m (0.75 kgf-m, 5.5 ft-lb)

8. CURTAIN AIRBAG SENSOR

Tightening torque:
7.4 N\cdot m (0.75 kgf-m, 5.5 ft-lb)

9. STEERING ROLL CONNECTOR
B: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
- The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.
- If the airbag warning light illuminates, repair the vehicle immediately. Airbag or pretensioner may inflate incorrectly, or not inflate in collision.
- If sensors, airbag module, airbag control module, pretensioner and harness are deformed or damaged, replace them with new parts.
General Description

- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.

- When checking, use a test harness (1). Since damage to the connector terminal may cause the airbag to activate erroneously, do not directly apply the tester probe to any connector terminal of the airbag.

- Do not check continuity of the airbag modules for driver, passenger, side or curtain, or pretensioner.

- Do not drop the airbag modules, subject them to high temperature over 93°C (199°F), or let water, oil or grease get on them; the internal parts may be damaged and reliability greatly lowered.

- If any damage, opening or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.

- Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.
• Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

• Either of the airbag modules for driver, passenger, side or curtain, or pretensioner must not be disassembled.

• The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

• Do not use the airbag or pretensioner parts from other vehicles. Always replace the defective parts with new parts.
• Never reuse a deployed airbag and pretensioner.
• When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron front fender, and front side frame, remove the front sub sensors and wire harness of airbag system.

(1) 200 mm (8 in) or more
• When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.

(1) Driver’s airbag module

(2) Passenger’s airbag module

2. Airbag Connector

A: PROCEDURE

1. POWER SUPPLY

1) How to disconnect:
   (1) Move the slide lock (A) in the direction of arrow.
   (2) With the slide lock (A) moved, separate the connector.

   CAUTION:
   When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

2) How to connect:
   Holding the connector (A), and push it in carefully until a connecting sound is heard.

   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.

2. DRIVER’S AIRBAG MODULE AND PRE-TENSIONER

1) How to disconnect:
   (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

   (2) Pull the connector to disconnect from the driver’s airbag module assembly or retractor assembly.

2) How to connect:
   Connect the connector in the reverse order of disconnecting. At this time, be sure to insert the push lock until a connecting sound is heard.

   CAUTION:
   • Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.
   • Be sure to push the push lock in securely.

NOTE:
Connector can not be connected when the push lock is in lock position. To connect the connector, set the push lock to unlock position.
3. DRIVER’S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR), PASSENGER’S AIRBAG

1) How to disconnect:
   (1) Push the slide lock (A) into the direction of arrow.
   (2) With the slide lock pushed, disconnect the connector.

   CAUTION:
   When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

2) How to connect:
   Holding the connector, and push it in carefully until a connecting sound is heard.

   CAUTION:
   Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.

4. SIDE AIRBAG AND CURTAIN AIRBAG

1) How to disconnect:
   (1) Push the lock arm (A).
   (2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.
   (3) With the slide lock moved, release the lock arm (back to its original position), and disconnect the connector.

   CAUTION:
   When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

5. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1) How to disconnect:
   Holding the outer part (A), pull it in the direction of arrow.

   CAUTION:
   When pulling the side lock or disconnecting the connector, be sure to hold onto the connector and not the wire.
2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:
• The outer side (A) moves back, and so do not put your hand on the outer part.
• Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.
3. Inspection Locations After a Collision

A: REPLACEMENT
Replace the following parts when the airbag is deployed.

1. FRONT COLLISION
   1) Driver’s airbag module
   2) Passenger’s airbag module
   3) Driver’s seat belt (Pretensioner)
   4) Passenger’s seat belt (Pretensioner)
   5) Airbag control module
   6) Front sub sensor
   7) Roll connector
   8) Instrument panel (for integrating with passenger’s airbag module)

2. SIDE COLLISION
   1) Airbag control module
   2) Side airbag module (operating side seat backrest)
   3) Side airbag sensor (operating side)
   4) Curtain airbag module (operating side)
   5) Curtain airbag sensor (operating side)

3. INSPECTION OF OTHER PARTS
Check for the following, and replace the damaged parts with new parts.
   1) Check the steering shaft for mounting conditions and deflection of front and rear, upward and downward directions, and deflection of front and rear direction with tilt lever released. (After collision, absorbing part of steering shaft may work.)
   2) Check the direct type connector of driver’s airbag module, pretensioner, etc. for damage, and also check each harness for pinch and connector damage. Replace the harness as a unit if damage is found.
   3) Check the installing condition and play of the seat cushion, backrest, seat rail and headrest.

B: INSPECTION
If the vehicle is involved in a collision on any side, even if it is a slight collision, be sure to check the following systems.

1. DRIVER’S AIRBAG MODULE
   1) Check for the following, and replace the damaged parts with new parts.
      • Airbag module is cracked or deformed.
      • Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
      • The module surface is fouled with grease, oil, water or cleaning solvent.

2. PASSENGER’S AIRBAG MODULE
   Check for the following, and replace the damaged parts with new parts.
   • Airbag module and instrument panel are cracked or deformed.
   • Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
   • Mounting bracket is cracked or deformed.

3. SIDE AIRBAG MODULE
   Check for the following, and replace the damaged parts with new parts.
   • Front seat, airbag module and mounting bracket are damaged or deformed.
   • Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

4. CURTAIN AIRBAG MODULE
   Check for the following, and replace the damaged parts with new parts.
   • Airbag cover is scratched or broken.
   • Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
   • Mounting bracket and securing clip are cracked or deformed.

5. AIRBAG CONTROL MODULE
   Check for the following, and replace the damaged parts with new parts.
   • Control module is cracked or deformed.
Inspection Locations After a Collision

8. ROLL CONNECTOR
Check for the following, and replace the damaged parts with new parts.
• Combination switch or steering roll connector is cracked or deformed.

9. STEERING SHAFT
Check for the following, and replace the damaged parts with new parts.
• Overall length of steering column should be within specifications.

Standard value:
Overall length L

Except for OUTBACK model
833.6 ±1.3 mm (32.8 ±0.1 in)
OUTBACK model
825.4 ±1.3 mm (32.5 ±0.1 in)

• Mounting bracket is cracked or deformed.
• Connector is scratched, cracked or deformed.
• Airbag is deployed.
• Side airbag is deployed.
• Curtain airbag is deployed.

6. FRONT SUB SENSOR
If the section of vehicle as shown in the figure is damaged, check for the following and replace the damaged parts with new parts.

• Front sub sensor is cracked or deformed.
• Mounting bracket is cracked or deformed.
• Connector is scratched, cracked or deformed.
• Airbag is deployed.

7. SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR
If the section of vehicle as shown in the figure is damaged, check for the following and replace the damaged parts with new parts.

• Side airbag sensor and curtain airbag sensor are cracked or deformed.
• Mounting bracket is cracked or deformed.
• Connector is scratched, cracked or deformed.
• Side airbag sensor or curtain airbag is deployed.
(operating side)
4. Driver’s Airbag Module

A: REMOVAL

**CAUTION:**
Refer to “CAUTION” of General Description before handling the airbag module.  
<Ref. to AB-4, CAUTION, General Description.>

1) Position the front wheels straight ahead.  (After moving a vehicle more than 5 m (16 ft) with front wheels positioned straight ahead, make sure the vehicle moves straight ahead.)
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
4) Using TORX® BIT T30 (1), remove the two TORX® bolts on the side of steering wheel.
5) Disconnect the horn harness.
6) Disconnect the airbag connector on the back of airbag module, and then remove the airbag module.  
<Ref. to AB-9, PROCEDURE, Airbag Connector.>

![Airbag Module with TORX® Screws](image1)

7) Refer to “CAUTION” for handling of a removed airbag module.  
<Ref. to AB-4, CAUTION, General Description.>

---

B: INSTALLATION

**CAUTION:**
- Refer to “CAUTION” of General Description before handling the airbag module.  
<Ref. to AB-4, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.
- To prevent the misconnection, the connector is colored.  
Connect the harness side connector to the same color of module side connector.

Install in the reverse order of removal.

**Tightening torque:**

Refer to “COMPONENT” of “General Description”.  
<Ref. to AB-2, DRIVER’S AIRBAG MODULE, COMPONENT, General Description.>

---

C: INSPECTION

**CAUTION:**
Refer to “CAUTION” of General Description before handling the airbag module.  
<Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace damaged parts with new parts.
- Airbag module, harness, connector and mounting bracket are damaged.  
<Ref. to AB-12, DRIVER’S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

---
Passenger’s Airbag Module

A: REMOVAL

CAUTION:
Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel. <Ref. to EI-56, INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM), REMOVAL, Instrument Panel Assembly.>
4) Remove the pawl and remove the passenger’s airbag module.

5) Refer to “CAUTION” for handling of a removed airbag module. <Ref. to AB-4, CAUTION, General Description.>

B: INSTALLATION

CAUTION:
Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Install in the reverse order of removal.

CAUTION:
Do not allow harness and connectors to interfere or get tangled up with other parts.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AB-2, PASSENGER’S AIRBAG MODULE, COMPONENT, General Description.>

C: INSPECTION

CAUTION:
Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace damaged parts with new parts.
• Airbag module, harness, connector, and mounting bracket are damaged. <Ref. to AB-12, PASSENGER’S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>
6. Side Airbag Module

A: REMOVAL

CAUTION:
Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

NOTE:
Remove the passenger’s side by referring to driver’s side.

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
4) Remove the clip from reverse side of seat cushion assembly and slide rail IN (A), and then remove the side airbag harness.

5) Remove the backrest cover. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
6) Remove the side airbag harness from backrest frame assembly.

7) Remove the side airbag module (A) from backrest frame assembly.
B: INSTALLATION

CAUTION:
Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Ensure that there are no foreign articles on side airbag module.
2) Install the side airbag module (A) to backrest frame assembly.

Tightening torque:
6.0 N·m (0.61 kgf-m, 4.4 ft-lb)

3) Install the side airbag harness to backrest frame assembly.

NOTE:
Secure the harness to its original position of seat.

4) Install the backrest cover. <Ref. to SE-12, ASSEMBLY, Front Seat.>

5) Install the side airbag harness to slide rail IN (A), and then secure the connector to the bracket on back side of seat cushion assembly.

6) Recline the seat or slide it backward and forward, and check there is no contact between the seat backrest assembly, cushion cover assembly and side airbag harness.

C: INSPECTION

CAUTION:
Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Perform the inspection of following items, and replace the damaged parts with new ones. <Ref. to AB-12, SIDE AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when side airbag is deployed)
   • Side airbag module assembly
   • Backrest pad assembly
   • Backrest frame assembly
   • Backrest cover assembly

2) Other replacement parts, which found to be damaged by visual check
   • Headrest assembly
   • Bushing
   • Slide rail OUT
   • Slide rail IN
   • Seat hinge cover
   • Seat lifter lever
   • Reclining lever
   • Side airbag harness and connector on body side.

3) With side collision (when side airbag is not deployed)
   Check the seat and airbag module visually, and then replace them with new ones if damaged or cracked.
   Specially inspect the damage of airbag module body, mounting bracket, and harness connector.

4) Without side collision (dirt and damage of cover)
   Replace the corresponding part with a new one.
7. Curtain Airbag Module

A: REMOVAL

CAUTION:
Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the rear quarter trim. (Sedan model) <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
4) Remove the quarter rear pillar trim. (Wagon model) <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
5) Disconnect the curtain airbag module connector.
   - Sedan model
6) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
7) Remove the bolts (A) and clips (B), and then remove the curtain airbag module.

CAUTION:
- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before deploying it. Never reuse the opened curtain airbag module.

NOTE:
Remove the rear center seat belt retractor on the RH side before servicing.

8) Remove the airbag guide A from front pillar.

9) Remove the airbag guide B from center pillar.
   - Sedan model
10) Remove the airbag guide C from quarter pillar.

**B: INSTALLATION**

**CAUTION:**
- Refer to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>
- When installing the curtain airbag module, install a specified part at specified place.
- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before deploying it. Never reuse the deployed curtain airbag module.
- Ensure that there are no foreign articles on airbag module.

Install in the reverse order of removal.

**Tightening torque:**
Ref to “COMPONENT” of “General Description”. <Ref. to AB-2, CURTAIN AIRBAG MODULE, COMPONENT, General Description.>

**C: INSPECTION**

**CAUTION:**
Ref to “CAUTION” of General Description before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Perform the inspection of following items, and replace the damaged parts with new ones. <Ref. to AB-12, CURTAIN AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when curtain airbag is deployed)
   - Curtain airbag module assembly
   - Roof trim
   - Front pillar upper trim
   - Center pillar upper trim
   - Rear quarter pillar trim
   - Airbag guide A, B, C

2) Other replacement parts, which found to be damaged by visual check
   - Assist grip
   - Assist grip bracket
   - Curtain airbag harness and connector on body side.

3) With side collision (when curtain airbag is not deployed)
Check the roof trim, pillar trim and airbag module visually, and then replace them with new ones if damaged or cracked.
Specially inspect the damage of airbag module body, mounting bracket, harness connector.

4) Without side collision (dirt and damage of cover)
Replace the corresponding part with a new one.
8. Airbag Control Module

A: REMOVAL

CAUTION:
- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if water damage is suspected, replace the airbag control module with a new one.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the console front panel and console side garnish. <Ref. to EI-54, REMOVAL, Center Console.>
4) Remove the screws and pull out the audio unit assembly to disconnect the connector for removal.
5) Disconnect the connector from airbag control module.
6) Remove the bolts and remove airbag control module.

B: INSTALLATION

CAUTION:
Use new hexagon head bolts (for airbag control module only) during installation.
Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace the damaged parts with new parts.
- Control module, connector, and mounting bracket are damaged.
- Airbag is deployed.
- Side airbag is deployed.
- Curtain airbag is deployed.
9. Side Airbag Sensor

A: REMOVAL
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
4) Remove the center pillar inner protector lower.

5) Remove the front outer seat belt retractor. <Ref. to SB-12, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
6) Remove the nut and disconnect the airbag connector to remove side airbag sensor.

B: INSTALLATION

CAUTION:
Use new nuts (exclusive use for side airbag sensors) during installation.
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AB-3, SIDE AIRBAG SENSOR, COMPONENT, General Description.>

C: INSPECTION
Check for the following, and replace the damaged parts with new parts.
• Mounting bracket of airbag sensor or connector is damaged.
• Side airbag is deployed.
10. Curtain Airbag Sensor

A: REMOVAL
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
4) Detach the nuts and disconnect the airbag connector to remove the curtain airbag sensor.

B: INSTALLATION

CAUTION:
Use new nuts (exclusive use for curtain airbag sensors) during installation.
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AB-3, CURTAIN AIRBAG SENSOR, COMPONENT, General Description.>

C: INSPECTION
Check for the following, and replace the damaged parts with new parts.
- Mounting bracket of curtain airbag sensor or connector is damaged.
- Curtain airbag is deployed.
11. Roll Connector

A: REMOVAL
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the driver’s airbag module. <Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the steering column cover.
6) Remove the screws, and then remove the roll connector.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Before installing steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>

C: INSPECTION
Check for the following, and replace the damaged parts with new parts.
- Combination switch and roll connector are cracked or deformed.

D: ADJUSTMENT
1) Check that front wheels are positioned in straight ahead direction.
2) Turn the roll connector pins (A) clockwise until it stops.
3) Turn the roll connector pins (A) approx. 3.25 turns until “▲” marks are aligned.
12. Front Sub Sensor

A: REMOVAL
1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
4) Remove the bolts, and then detach the front sub sensor.
5) Disconnect the connector from front sub sensor.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to AB-3, FRONT SUB SENSOR, COMPONENT, General Description.>

C: INSPECTION
Check for the following, and replace the damaged parts with new parts.
• Front sub sensor, mounting bracket and connector are damaged.
• Airbag is deployed.
13. Disposal of Airbag Module (Deployment Processing On Vehicle)

A: PROCEDURE

CAUTION:
- Do not discard an undeployed airbag module because it may cause a serious personal injury when accidentally deployed.
- As a rule, airbag modules should be deployed while still installed in the vehicle. Do not remove airbag modules unless necessary.
- Deployment of airbag modules should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
- Deploying an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
- Some smoke will be emitted from deployment of the airbag module. Therefore, it must be deployed in a well-ventilated place with no smoke detector nearby.
- Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.
- Wrap the deployed airbag module in an airtight vinyl bag, and discard it.
- If circumstances do not permit the airbag module deployment, contact the SUBARU dealer.

1. DRIVER’S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel lower cover upper. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>

4) Disconnect the airbag connector.

5) Short the terminal to the alligator clip furnished as deployment tool (A).
6) Connect the deployment tool and deployment adapter E (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

(A) Deployment tool: (Tool number 98299PA030)
(B) Deployment adapter E: (Tool number 98299SA030)

7) Connect the deployment adapter E (1) to airbag connector (AB7).
Disposal of Airbag Module (Deployment Processing On Vehicle)

AIRBAG SYSTEM

8) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.

9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.
10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

CAUTION:
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.
11) Remove the airbag module. <Ref. to AB-14, Driver's Airbag Module.>
12) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel side cover of passenger's side and disconnect the airbag connector.
4) Short the terminal to the alligator clip furnished as deployment tool (A).
5) Connect the deployment tool (A) and deployment adapter E (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

6) Connect the deployment adapter E to airbag connector (AB10).

2. PASSENGER’S AIRBAG MODULE

1) Turn the ignition switch to OFF.
7) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.

8) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

9) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

CAUTION:
After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
Do not let water get on the deployed airbag module.

10) Remove the instrument panel upper. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
11) Remove the passenger airbag module from instrument panel upper.
12) Wrap the airbag module, which were removed from instrument panel upper, in airtight vinyl bag, and discard it.

3. SIDE AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Disconnect the side airbag module connector (yellow) under the front seat cushion.

NOTE:
For power seat type, seat need to be removed. When deploying in vehicle, reinstall the seat after disconnecting the airbag connector. When deploying after removal from vehicle, refer to “Disposal of Airbag Module (Deploying After Removal from Vehicle)”. <Ref. to AB-33, SIDE AIRBAG MODULE, PROCEDURE, Disposal of Airbag Module (Deployment Processing After Removal from Vehicle).>

4) Set the backrest at most standing position, and then set the seat position at the center of slide rail.
5) Short the terminal to the alligator clip furnished as deployment tool (A).
6) Connect the deployment tool and deployment adapter A (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

7) Connect the deployment adapter A (1) to the side airbag module connector (yellow).

CAUTION:
Do not place any object on front seat.
Disposal of Airbag Module (Deployment Processing On Vehicle)

• Deploy the side airbag one by one to discard.

8) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.

9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

CAUTION:
• After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
• Do not let water get on the deployed airbag module.

11) Remove the side airbag module. <Ref. to AB-16, REMOVAL, Side Airbag Module.>

12) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

4. CURTAIN AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the rear quarter trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
4) Disconnect the curtain airbag harness.

• Sedan model

5) Short the terminal to the alligator clip furnished as deployment tool (A).
6) Connect the deployment tool and deployment adapter A (B).

• Wagon model
Disposal of Airbag Module (Deployment Processing On Vehicle)

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

7) Connect the deployment adapter A (1) to the curtain airbag module connector (yellow).
   - Sedan model

8) Extend the wiring of deployment tool to the limit, and make sure the vehicle is empty. Close all the windows, sunroof and rear gate completely.

   SB-00016

   (A) Deployment tool:  (Tool number 98299PA030)
   (B) Deployment adapter A:  (Tool number 98299FC030)

9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

   SB-00017

10) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

   SB-00018

CAUTION:
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

11) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>

12) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

   AB-00653

   AB-00654

NOTE:
Fold the airbag cloth three or four times as required and fasten it with string and seal it with vinyl bag.
14. Disposal of Airbag Module (Deployment Processing After Removal from Vehicle)

A: PROCEDURE

CAUTION:
- Do not discard an undeployed airbag module because it may cause serious personal injury when accidentally deployed.
- As a rule, airbag modules should be deployed while still installed in the vehicle. Do not remove the airbag modules unless necessary.
- Deployment of airbag modules should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
- Do not damage the airbag module or drop it.
- Deploying an airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
- Some smoke will be emitted from deployment of the airbag module. Therefore, it must be deployed in a well ventilated place with no smoke detector nearby.
- Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.
- Wrap the deployed airbag module in an air-tight vinyl bag, and discard it.
- If circumstances do not permit the airbag module deployment, contact the SUBARU dealer.

1. DRIVER’S AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the driver’s airbag module. <Ref. to AB-14, Driver’s Airbag Module.>

4) Install the removed bolts to airbag module.

5) Bundle three automotive wire harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and bind them twofold around airbag module stay.

6) Short the terminal to the alligator clip furnished as deployment tool (A).
7) Connect the deployment tool and deployment adapter X (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

8) Connect the deployment adapter X connector to airbag module.
9) Install the airbag module with pad side facing upward on a wheel with tire.

10) Put three tires without wheels on the tire installed with the airbag module. Put on an additional tire with a wheel, and then fasten them tight with a rope.

11) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

12) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

**CAUTION:**
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

13) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

---

2. **PASSENGER’S AIRBAG MODULE**

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the instrument panel assembly. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
4) Remove the passenger airbag module. <Ref. to AB-15, Passenger’s Airbag Module.>
5) Bundle three automotive wire harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], route them through airbag module bracket (A). Then, twist them to add strength.

6) Short the terminal to the alligator clip furnished as deployment tool (A).

7) Connect the deployment tool and deployment adapter E (B).

**CAUTION:**
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

8) Connect the deployment adapter E connector to the airbag module.

9) Install the airbag module with opening side facing upward on a 14-inch or greater size wheel with tire.

10) Put three tires without wheels on the tire installed with the airbag module. Put on an additional tire with a wheel on top, and then fasten them tight with a rope.

11) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

12) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

**CAUTION:**
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.
13) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

3. SIDE AIRBAG MODULE

1) Turn the ignition switch to OFF.
2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
3) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
4) Remove the side airbag module. <Ref. to AB-16, REMOVAL, Side Airbag Module.>
5) Install the nuts (A) to airbag module, and then bind them with bundled three automotive wire harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more].

6) Short the terminal to the alligator clip furnished as deployment tool (A).
7) Connect the deployment tool and deployment adapter A (B).

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

8) Connect the deployment adapter A connector to airbag module.
9) Install the airbag module on a 14-inch or greater size tire without wheel.

10) Put two tires without wheels (A) under the tire installed with the side airbag module (B). Put on an additional tire without a wheel (C), and then put a tire with a wheel (D) on top. Fasten them tight with a rope.
11) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

12) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

**CAUTION:**
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and discard it.
- Do not let water get on the deployed airbag module.

13) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

4) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
5) Extend the airbag cloth and cut off the airbag at the position of 750 mm (29.5 in) (A) from inflator end.
6) Bundle three automotive wire harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and then bind them through the holes in airbag module bracket.

7) Short the terminal to the alligator clip furnished as deployment tool (A).
8) Connect the deployment tool and deployment adapter A (B).
Disposal of Airbag Module (Deployment Processing After Removal from Vehicle)

CAUTION:
The deployment tool should be kept shorted terminals until just before deployment of airbag module.

9) Connect the deployment adapter A connector to airbag module.
10) Install the airbag module on a 14-inch or greater size tire without wheel.

11) Put a tire without a wheel (A) under the tire installed with the curtain airbag module (B). Put on two additional tires without a wheels (C), and then put a tire with a wheel (D) on top. Fasten them tight with a rope.

12) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

13) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the airbag module.

CAUTION:
- After deployment, the airbag module will be especially hot, leave it unattended for 40 minutes, and discard it.
- Do not let water get on the deployed airbag module.

14) Wrap the deployed airbag module in airtight vinyl bag, and discard it.

(B) Deployment adapter A:
   (Tool number 98299FC030)
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

**AB(diag)-3**
3. General Description

A: CAUTION
- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
- The airbag system is equipped with a backup power source. If the airbag system is serviced within 20 seconds from the ground cable is disconnected, it may inflate.

- If sensors, airbag module, airbag control module, pretensioner and harness are deformed or damaged, replace them with new parts.

- Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new ones.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.

- When checking, use a test harness (1). Do not directly apply the tester probe to any connector terminal of the airbag.

- Do not drop the airbag module, subject them to high temperature over 93°C (199°F), or let water, oil or grease get on them; the internal parts may be damaged and reliability is greatly lowered.
General Description

If any damage, opening or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.

Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.

Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

Either of the airbag modules for driver, passenger, side or curtain, or pretensioner must not be disassembled.

The airbag module cannot be used again if once deployed.

After removal, keep the airbag module with the pad facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

Do not check continuity of either of the airbag modules for driver, passenger, side or curtain, or pretensioner.
General Description

- The removed front seat with an airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wire harness of the airbag system.
- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar and front and rear doors, remove the side airbag sensors and wire harness of the airbag system.

- Do not discard undeployed airbag modules. They could easily cause a serious accident if accidentally deployed.
General Description

- When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.

(1) Driver's airbag module

(2) Passenger's airbag module
B: INSPECTION
Measure the battery voltage and check electrolyte.

Standard voltage: 12 V
Specific gravity: Above 1.260

C: PREPARATION TOOL
CAUTION:
To check the voltage and resistance of airbag system component, be sure to use the specified test harness.

6. Airbag Connector

A: PROCEDURE

1. POWER SUPPLY

1) How to disconnect:
   (1) Move the slide lock (A) in the direction of arrow.
   (2) With the slide lock (A) moved, separate the connector.

   **CAUTION:**
   When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

2) How to connect:
   Holding the connector (A), and push it in carefully until a connecting sound is heard.

   **CAUTION:**
   Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

2. DRIVER’S AIRBAG MODULE AND PRE-TENSIONER

1) How to disconnect:
   (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

   ![Image 1](AB-00478)

   (2) Pull the connector to disconnect from driver’s side airbag module assembly or retractor assembly.

   ![Image 2](AB-00479)

2) How to connect:
   Connect the connector in the reverse order of disconnecting. At this time, be sure to insert the push lock until a connecting sound is heard.

   **CAUTION:**
   • Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.
   • Be sure to push the push lock in securely.

   ![Image 3](AB-00480)

   **NOTE:**
   Connector can not be connected when the push lock is in lock position. To connect the connector, set the push lock to unlock.
3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR), PASSENGER'S AIRBAG

1) How to disconnect:
   (1) Push the slide lock (A) into the direction of arrow.
(2) With the slide lock pushed, separate the connector.

CAUTION:
Be sure to hold onto the connector and not wire when pulling the slide lock or disconnecting the connector.

2) How to connect:
Holding the connector, push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.

4. SIDE AIRBAG AND CURTAIN AIRBAG

1) How to disconnect:
   (1) Push the lock arm (A).
   (2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.
(3) With the slide lock moved, release the lock arm (back to its original position), and disconnect the connector.

CAUTION:
Be sure to hold onto the connector and not wire when pulling the slide lock or disconnecting the connector.

5. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

1) How to disconnect:
Holding outer part (A), pull it in the direction of arrow.

CAUTION:
Be sure to hold onto the connector and not wire when pulling the slide lock or disconnecting the connector.
2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

**CAUTION:**
- Outer side (A) move back, and so do not put your hand on the outer part.
- Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.
7. Airbag Warning Light Illumination Pattern

A: INSPECTION
Keep the ignition switch ON, and confirm that the airbag warning light remains off approx. 6 seconds after being turned on.

(1) Airbag warning light
(2) Approx. 6 sec.
(3) Ignition switch (ON)
8. Read Diagnostic Trouble Code (DTC)

A: OPERATION
1) Remove the instrument panel lower cover upper. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Turn the ignition switch to ON.
3) Connect one of the ground terminals to the diagnosis connector terminal No. 2 in the instrument panel lower cover area.

NOTE:
The harness (yellow/black) of ground terminal is wrapped by tapes with the harness (red, red/black) of diagnosis connector.
4) Read the DTC by identifying the way airbag warning light blinks. The airbag warning light blinks a DTC corresponding to the faulty parts. The long segment (1.2 sec. on) indicates a “ten”, and the short segment (0.3 sec. on) indicates a “one”.

NOTE:
• “List of Diagnostic Trouble Code (DTC)” <Ref. to AB(diag)-37, List of Diagnostic Trouble Code (DTC).>
• “Airbag Warning Light Failure” <Ref. to AB(diag)-33, Airbag Warning Light Failure.>

5) Turn the ignition switch to OFF, and disconnect the ground terminal from diagnosis connector terminal No. 2.
6) Wind the tape around the ground terminal and return it to its original position.
9. Inspection Mode

A: PROCEDURE
Recreate the circumstance by referring to the conditions described in the checklist.
10. Clear Memory Mode

A: OPERATION

1) Remove the instrument panel lower cover upper. 
   <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>

2) Turn the ignition switch to ON.

3) Connect one of the ground terminals to the diagnosis connector terminal No. 2 in the instrument panel lower cover area.

4) While the warning light blinks, connect another diagnosis terminal to the diagnosis connector terminal No. 3.

5) Once the memory is erased, the warning light returns the normal blink pattern (0.6 sec. on). Failure to recover to the normal blink rate indicates that trouble parts still remain. Having repaired such parts, erase the memory again and confirm that the blink rate has returned to normal.

6) When the memory has been cleared, disconnect the diagnosis terminal from the diagnosis connector.

7) Wind the tape around the ground terminal and return it to its original position.
11. Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON

DETECTING CONDITION:
- Airbag warning light failure
- Airbag control module to airbag warning light circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- (AB1) and (B31) are not connected properly.
- (AB6) is not connected properly to airbag control module.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver's and passenger's seats for safety reasons.

WIRING DIAGRAM:
# Airbag Warning Light Failure

## AIRBAG SYSTEM (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** | CHECK POOR CONTACT.  
1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds.  
2) Confirm that the firm contact is secured between the airbag control module and connector (AB6).  
<Ref. to AB-20, Airbag Control Module.> | Is there poor contact in connector (AB6)? | Replace the airbag main harness with body harness or replace the airbag control module.  
<Ref. to AB-20, Airbag Control Module.> | Go to step 2. |
| **2** | CHECK AIRBAG MAIN HARNESS.  
1) Remove the instrument panel lower cover and disconnect the connector (AB7) and (AB2).  
2) Remove the instrument panel side cover of passenger side and disconnect the connector (AB10) and (AB9).  
3) Disconnect the connector (AB6) from airbag control module, and connect the connector (1U) in the test harness U.  
<Ref. to AB-20, Airbag Control Module.>  
4) Connect the battery ground terminal and turn the ignition switch ON.  
5) Connect the connectors (7U) and (8U) in the test harness U.  
NOTE: After problem has been eliminated, disconnect the connectors (7U) and (8U). | Does the airbag warning light go off? | Go to step 3.  
Go to step 4. |
| **3** | CHECK GROUND CIRCUIT.  
1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds.  
2) Disconnect the connector (AB6) from airbag control module.  
3) Connect the connector (1U) in the test harness U to body harness connector (AB6).  
4) Measure the resistance between connector (2U) in the test harness U and chassis ground.  
 Connector & terminal  
(2U) No. 10 — Chassis ground:  
(2U) No. 11 — Chassis ground: | Is the resistance less than 10 Ω? | Replace the airbag control module.  
<Ref. to AB-20, Airbag Control Module.> | Repair the chassis ground circuit. |
| **4** | CHECK AIRBAG MAIN HARNESS AND BODY HARNESS.  
1) Disconnect the connector (7U) and (8U).  
2) Remove the combination meter.  
3) Measure the resistance between connector (i10) and connector (2U) in the test harness U.  
 Connector & terminal  
(2U) No. 7 — (i10) No. 13: | Is the resistance less than 10 Ω? | Replace the combination meter printed circuit.  
<Ref. to IDI-16, Combination Meter Assembly.> | Go to step 5. |
| **5** | CHECK POOR CONTACT IN CONNECTORS (AB1) AND (B31).  
1) Turn the ignition switch OFF, disconnect the battery ground terminal, and wait more than 20 seconds.  
2) Confirm that firm contact is secured between connectors (AB1) and (B31). | Is there poor contact in connectors (AB1) and (B31)? | Repair the body harness or replace the airbag main harness with body harness. | Go to step 6. |
| **6** | CHECK AIRBAG MAIN HARNESS.  
Check the airbag main harness for abnormalities. | Is anything unusual to airbag main harness? | Replace the airbag main harness with body harness. | Repair the body harness. |
AIRBAG SYSTEM (DIAGNOSTICS)

B: AIRBAG WARNING LIGHT REMAINS OFF

DETECTING CONDITION:
- Fuse No. 5 (in fuse box) is blown.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.

WIRING DIAGRAM:
## Airbag Warning Light Failure

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK COMBINATION METER.  
Turn the ignition switch to ON, and confirm that  
warning lights equipped in the combination  
meterno are turned on. | Do warning lights other than  
the airbag turn on? | Go to step 2.  
Repair the combination  
meterno power supply.  
<Ref. to IDI-3,  
Combination  
Meter System.> | |
| 2    | CHECK FUSE NO. 5 (IN MAIN FUSE BOX).  
Remove the fuse No. 5 and perform visual  
inspection. | Is the fuse No. 5 (in main fuse  
box) blown out? | Replace the fuse  
No. 5. If the fuse  
No. 5 is blown  
again, go to step  
3. | Go to step 3. |
| 3    | CHECK AIRBAG WARNING LIGHT CIRCUIT  
(IN COMBINATION METER).  
1) Turn the ignition switch OFF, disconnect the  
battery ground terminal, and wait more than 20  
seconds.  
2) Disconnect the connector (AB1) from  
(B31).  
3) Connect the battery ground terminal and  
turn the ignition switch ON. | Does the airbag warning light  
turn on? | Go to step 4.  
Replace the airbag  
warning light bulb  
or combination  
meter printed cir-  
cuit.  
<Ref. to IDI-16,  
Combination  
Meter Assembly.> | |
| 4    | CHECK AIRBAG MAIN HARNESS.  
1) Turn the ignition switch OFF, disconnect the  
battery ground terminal, and wait more than 20  
seconds.  
2) Connect the connector (AB1) to (B31).  
3) Disconnect the connector (AB6) from air-  
bag control module.  
<Ref. to AB-20, Airbag  
Control Module.>  
4) Connect the battery ground terminal and  
turn the ignition switch ON. | Does the airbag warning light  
turn on? | Replace the airbag  
control module.  
<Ref. to AB-20,  
Airbag Control  
Module.> | Replace the airbag  
main harness with  
body harness. |
## List of Diagnostic Trouble Code (DTC)

### AIRBAG SYSTEM (DIAGNOSTICS)

#### 12. List of Diagnostic Trouble Code (DTC)

**A: LIST**

<table>
<thead>
<tr>
<th>DTC</th>

13. Diagnostic Chart with Trouble Code

A: DTC 11

DTC DETECTING CONDITION:
- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver’s side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver’s airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.

### Check
Is the resistance more than 1 MΩ?

### Yes
Replace the airbag control module. [Ref. to AB-20, Airbag Control Module.]

### No
Replace the airbag main harness with body harness.
B: DTC 12

DTC DETECTING CONDITION:
- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger’s side) circuit is open, shorted or shorted to ground.
- Passenger’s airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.

</table>
DTC DETECTING CONDITION:
- Airbag main harness circuit (Passenger’s side) is shorted to power supply.
- Airbag module harness circuit (Passenger’s side) is shorted to power supply.
- Passenger’s airbag module is faulty.
- Airbag control module is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.

P: DTC 45
DTC DETECTING CONDITION:
- Side airbag harness (RH) is shorted to power supply.
- Airbag control module is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

T:  DTC 53
DTC DETECTING CONDITION:
Side airbag sensor (RH) is faulty.
When DTC 53 is displayed, the circuit within the side airbag sensor (RH) is faulty. Replace the side airbag
sensor (RH). <Ref. to AB-21, Side Airbag Sensor.>

U:  DTC 54
DTC DETECTING CONDITION:
Side airbag sensor (LH) is faulty.
When DTC 54 is displayed, the circuit within the side airbag sensor (LH) is faulty. Replace the side airbag
sensor (LH). <Ref. to AB-21, Side Airbag Sensor.>

V:  DTC 55
This code is displayed when the side airbag module and curtain airbag module are deployed.
Once this code is displayed, the memory cannot be erased. Replace the following parts.
• Airbag control module. <Ref. to AB-20, Airbag Control Module.>
• Front seat with side airbag module. (Operating side) <Ref. to SE-7, Front Seat.>
• Side airbag sensor. (Operating side) <Ref. to AB-21, Side Airbag Sensor.>
• Curtain airbag module. (Operating side) <Ref. to AB-18, Curtain Airbag Module.>
• Curtain airbag sensor. (Operating side) <Ref. to AB-22, Curtain Airbag Sensor.>
**W: DTC 56**

**DTC DETECTING CONDITION:**
- Curtain airbag sensor (RH) is faulty.
- Curtain airbag harness (RH) is faulty.
- Airbag control module is faulty.

**CAUTION:**
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

**X: DTC 57**

**DTC DETECTING CONDITION:**
- Curtain airbag sensor (LH) is faulty.
- Curtain airbag harness (LH) is faulty.
- Airbag control module is faulty.

**CAUTION:**
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

**Y: DTC 58**

**DTC DETECTING CONDITION:**
Curtain airbag sensor (RH) is faulty.  
When DTC 58 is displayed, the circuit within the curtain airbag sensor (RH) is faulty. Replace the curtain airbag sensor (RH). <Ref. to AB-22, Curtain Airbag Sensor.>

**Z: DTC 59**

**DTC DETECTING CONDITION:**
Curtain airbag sensor (LH) is faulty.  
When DTC 59 is displayed, the circuit within the curtain airbag sensor (LH) is faulty. Replace the curtain airbag sensor (LH). <Ref. to AB-22, Curtain Airbag Sensor.>
AA:DTC 61
DTC DETECTING CONDITION:
- Seat belt pretensioner (RH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

- Airbag control module is faulty.

CAUTION:
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.

   4) Disconnect the airbag resistor from the test harness F.  
   5) Disconnect the connector (AB18) from airbag control module. <Ref. to AB-20, Airbag Control Module.>  
   6) Connect the connector (1U) in the test harness U to connector (AB18).  
   7) Connect the battery ground terminal and turn the ignition switch ON.  
   8) Measure the voltage between connector (SU) No. 6 (+) — Chassis ground (-):  
   (SU) No. 8 (+) — Chassis ground (-):  
   Is the voltage less than 1 V? | Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.> | Replace the airbag rear harness with body harness. |
**AL:DTC 96**

**DTC DETECTING CONDITION:**
- Curtain airbag harness (LH) is shorted to power supply.
- Airbag control module is faulty.

**CAUTION:**
- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground terminal from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver’s and passenger’s seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

</table>
B: CAUTION
- Before starting service, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 20 seconds or more.
- The pretensioner system has a backup power source. The pretensioner might deploy if you do not wait for 20 seconds or more before starting work.
- Do not drop or apply any impact to the pretensioner.
- If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.

C: PREPARATION TOOL

1. SPECIAL TOOL

<table>

</tr>
</tbody>
</table>
2. Pretensioner Connector

A: REMOVAL
1) Using a flat tip screwdriver, pry the push lock upward to unlock.

2) Pull out the connector to disconnect it from retractor assembly.

B: INSTALLATION
Connect the connector in the reverse order of disconnection. At this time, be sure to insert the push lock until a connecting sound is heard.

CAUTION:
- Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.
- Be sure to push the push lock in securely.
3. Inspection Locations After a Collision

A: INSPECTION
Check for the following, and replace with new parts if necessary.
- Center pillar lower garnish is discolored or cracked.
- Wire harness and connector are damaged.
### Seat Belt Warning System

</table>
| **9** CHECK SEAT BELT WARNING SYSTEM.  
1) Lift-up the vehicle.  
NOTE: Raise all wheels off floor.  
2) Insert the tang plate of driver’s seat belt into seat belt buckle.  
3) Hold the tang plate of passenger’s seat belt disconnected from seat belt buckle.  
4) Start the engine, and set the vehicle speed to more than 24 km/h (15 MPH).  
NOTE: The speed difference between front and rear wheels may light the ABS or VDC warning light, but this indicates no malfunction. When diagnosis is finished, perform the ABS or VDC memory clearance procedure. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>  
Does the seat belt warning light blink and the buzzer beep? | Go to step 10. | Replace the body integrated unit. |
| **10** CHECK SEAT BELT WARNING SYSTEM.  
While the seat belt warning light is blinking and the buzzer is beeping, decelerate the vehicle speed to less than 21 km/h (13 MPH).  
Does the buzzer stop beeping and the seat belt warning light change from blinking to illuminating? | Go to step 11. | Replace the body integrated unit. |
| **11** CHECK SEAT BELT WARNING SYSTEM.  
1) Start the engine, and set the vehicle speed to more than 24 km/h (15 MPH).  
2) Wait for approx. 108 seconds while the seat belt warning light is blinking and the buzzer is beeping.  
NOTE: The speed difference between front and rear wheels may light the ABS or VDC warning light, but this indicates no malfunction. When diagnosis is finished, perform the ABS or VDC memory clearance procedure. <Ref. to ABS(diag)-15, OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-16, OPERATION, Subaru Select Monitor.>  
Does the buzzer stop beeping and the seat belt warning light change from blinking to illuminating? | The seat belt warning system is normal. A temporary poor contact of harness connector may be the cause. Check the poor contact. | Replace the body integrated unit. |
5. Front Seat Belt

A: REMOVAL

1. OUTER SEAT BELT ASSEMBLY
1) Turn the ignition switch to OFF, disconnect the battery ground cable from battery, and wait for more than 20 seconds before starting work.
2) Fold the backrest all the way forward, and then move the front seat all the way forward.
3) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
4) Remove the center pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
5) Remove the bolt, and remove the center pillar inner protector lower.
6) Remove the bolt, and then remove the shoulder anchor.
7) Remove the bolt, and then remove the adjustable anchor assembly.
8) Disconnect the pretensioner connector (A), and remove the bolt, and then remove the seat belt retractor.

NOTE:
Disconnect the tension reducer connector (B) for the seat belt retractor with tension reducer function.

CAUTION:
• Do not drop or apply any impact to the pretensioner.
• Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

2. INNER SEAT BELT ASSEMBLY
1) Turn the ignition switch to OFF, disconnect the battery ground cable from battery, and wait for more than 20 seconds before starting work.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Disconnect the seat belt warning light connector under the seat.
4) Remove the harness clips from seat rail.
5) Remove the TORX® bolt, and then remove the inner seat belt assembly.
B: INSTALLATION

1. OUTER SEAT BELT ASSEMBLY
Install in the reverse order of removal.

CAUTION:
- The parts of driver and passenger sides are not identical. Before installation, make sure that the correct part is used.
- Be careful not to twist the seat belts during installation.

Tightening torque:
  <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

2. INNER SEAT BELT ASSEMBLY
Install in the reverse order of removal.

C: INSPECTION

1. OUTER SEAT BELT ASSEMBLY
Check for the following, and replace with new parts if necessary.
- Pretensioner is cracked or deformed.
- Seat belt is slackened, bent or worn. Seat belt is abnormally wound or extended.

2. INNER SEAT BELT ASSEMBLY
Check for the following, and replace with new parts if necessary.
- Inner seat belt assembly is deformed or damaged.
- Seat belt buckle cannot be engaged properly.
6. Rear Seat Belt

A: REMOVAL

1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

1) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the seat belt lower anchor bolt.

3) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIR-BAG), REMOVAL, Rear Quarter Trim.>
4) Remove the bolt to remove outer seat belt assembly.

2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

1) Remove the rear cushion seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the seat belt lower anchor bolt.

3) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIR-BAG), REMOVAL, Rear Quarter Trim.>
4) Remove the rear shelf trim. <Ref. to EI-70, REMOVAL, Rear Shelf Trim.>
5) Remove the bolt to remove shoulder seat belt assembly.

3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

1) Remove the rear seat cushion. <Ref. to SE-14, REMOVAL, Rear Seat.>
2) Remove the bolt to remove center seat belt LH assembly.

NOTE:
For the model with rear seat belt warning light, disconnect the connector of seat belt warning light.
4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

1) Remove the luggage floor box. <Ref. to EI-74, REMOVAL, Luggage Floor Box.>
2) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
3) Remove the rear quarter lower trim. <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
4) Remove the bolt to remove outer seat belt retractor.

5) Remove the bolts to remove outer seat belt guide.

5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)

1) Remove the quarter rear pillar trim. <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
2) Remove the seat belt extract opening (A) from roof trim, and then inset it to the inside of roof trim.

3) Remove the clips, and then lower the roof trim end.

CAUTION:
When removing the roof trim clip, do not pull the roof trim end backward with excessive force, otherwise roof trim may be damaged.
4) Remove the bolt to remove seat belt retractor.

6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

1) Remove the rear seat cushion. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
2) Remove the bolts, and then detach the center seat belt assembly.

NOTE:
For the model with rear seat belt warning light, disconnect the connector of seat belt warning light.
B: INSTALLATION

1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)
Install in the reverse order of removal.
CAUTION:
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)
Install in the reverse order of removal.
CAUTION:
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)
Install in the reverse order of removal.
CAUTION:
• During installation, make sure that the seat belts are not twisted.

4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)
Install in the reverse order of removal.
CAUTION:
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)
Install in the reverse order of removal.
CAUTION:
• After seat belt guide installation, make sure that the seat belts are wound.
• During installation, make sure that the seat belts are not twisted.
• After installation, make sure that the seat belts are smoothly extended and wound.

6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)
Install in the reverse order of removal.
CAUTION:
• During installation, make sure that the seat belts are not twisted.

C: INSPECTION

1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)
Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)
Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)
Check for the following, and replace with new parts if necessary.
• Inner belt is deformed or damaged.
• Seat belt buckle cannot be engaged properly.

4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)
Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)
Check for the following, and replace with new parts if necessary.
• Seat belt is slackened, bent or wore. Seat belt is abnormally wound or extended.

6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)
Check for the following, and replace with new parts if necessary.
• Inner belt is deformed or damaged.
• Seat belt buckle cannot be engaged properly.
Disposal of Pretensioner

**A: CAUTION**
- Discard deployed pretensioners because it may cause serious personal injury when accidentally deployed.
- Deployment of the pretensioners should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
- Wear protective gloves, safety goggles and earplugs during this operation. Wash your hands afterwards.
- Do not drop or damage the pretensioner.
- Because deploying of pretensioners cause a high-explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
- Some smoke will be emitted after deployment of the pretensioner. Therefore, it must be deployed in a well-ventilated place with no fire alarms nearby.
- After deployment, the pretensioner is especially hot, leave it unattended for 40 minutes or longer, and then discard it.
- Do not let water get on the deployed pretensioner.
- Wrap the deployed pretensioner in an airtight vinyl bag, and then discard it.
- If circumstances do not permit the pretensioner deployment, contact the SUBARU dealer.

**B: PROCEDURE**

1. **DEPLOYING OF PRETENSIONER WHILE INSTALLED IN VEHICLE**
   1) Fold the backrest all the way forward, and then move the front seat all the way forward.
   2) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait more than 20 seconds.
   3) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
   4) Disconnect the pretensioner connector (A).

5) Short the terminal to alligator clip of deployment tool (A).
6) Connect the deployment tool and deployment adapter D (B).
SEAT BELT SYSTEM

Disposal of Pretensioner

CAUTION:
• After deployment, the pretensioner is especially hot, leave it unattended for 40 minutes or longer, and then discard it.
• Do not let water get on the deployed pretensioner.

11) Remove the front outer belt. <Ref. to SB-12, REMOVAL, Front Seat Belt.>
12) Cut off the seat belt as close to retractor as possible.

13) Wrap the deployed pretensioner in airtight vinyl bag, and discard it.

CAUTION:

4) Cut off the seat belt as close to retractor as possible.

2. DEPLOYING OF PRETENSIONER AFTER REMOVAL FROM VEHICLE

1) Fold the backrest all the way forward, and then move the front seat all the way forward.
2) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait more than 20 seconds.
3) Remove the front outer belt. <Ref. to SB-12, REMOVAL, Front Seat Belt.>

5) Short the terminal to alligator clip of deployment tool.
6) Connect the deployment tool (A) and deployment adapter D (B).

CAUTION:
The terminals of deployment tool should be kept shorted until just before deployment of the pretensioner.

7) Connect the deployment adapter D connector and pretensioner connector.
8) Install the pretensioner on a wheel with tire. Then, bundle three automotive wire harness [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and bind them twofold around the pretensioner bracket and wheel.

(A) Deployment tool: (Tool number 98299PA030)
(B) Deployment adapter D: (Tool number 98299SA010)
9) Put three tires without wheels on the tire installed with pretensioner. Put on an additional tire with a wheel on top, and then fasten them tight with a rope.

10) Move the battery at least 5 m (16 ft) from tires, and secure the nearby area. Connect the deployment tool alligator clip to the battery negative (−) terminal.

11) Connect the other cable of deployment tool to the battery positive (+) terminal, and deploy the pretensioner.

CAUTION:
- After deployment, the pretensioner is especially hot, leave it unattended for 40 minutes or longer, and then discard it.
- Do not let water get on the deployed pretensioner.

12) Wrap the deployed pretensioner in airtight vinyl bag, and discard it.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

B: CAUTION

- Before removing or installing parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.

C: PREPARATION TOOL

1. GENERAL TOOL

<table>
<thead>
<tr>
<th>TOOL NAME</th>
<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Circuit tester</td>
<td>Used for measuring resistance and voltage.</td>
</tr>
</tbody>
</table>

- After reassembly, make sure functional parts operate smoothly.

WARNING:

- The air bag system wiring harness is routed near electrical parts and switches. All air bag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the air bag system wiring harness when servicing electrical parts and switches.
2. Headlight and Tail Light System

A: WIRING DIAGRAM

1. HALOGEN TYPE HEADLIGHT
   <Ref. to WI-269, WIRING DIAGRAM, Headlight System.>

2. CLEARANCE LIGHT AND ILLUMINATION LIGHT
   <Ref. to WI-259, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

B: INSPECTION

1. HEADLIGHT SWITCH
   <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. HEADLIGHT RELAY
   Measure the resistance between headlight relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

   ![Headlight Relay Diagram]

<table>
<thead>
<tr>
<th>Current</th>

<td>More than 1 MΩ</td>
</tr>
</tbody>
</table>

3. TAIL AND ILLUMINATION RELAY
   Measure the resistance between tail and illumination relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

   ![Tail and Illumination Relay Diagram]
3. Front Fog Light System

A: WIRING DIAGRAM

1. FRONT FOG LIGHT
<Ref. to WI-267, WIRING DIAGRAM, Front Fog Light System.>

B: INSPECTION

1. FRONT FOG LIGHT SWITCH
Measure the resistance between front fog light switch terminals.
<Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. FRONT FOG LIGHT RELAY
Measure the resistance between front fog light relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

<table>
<thead>
<tr>
<th>Current</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flow</td>
<td>1 and 2</td>
<td>Less than 1 Ω</td>
</tr>
<tr>
<td>No flow</td>
<td></td>
<td>More than 1 MΩ</td>
</tr>
</tbody>
</table>
4. Rear Fog Light System

A: WIRING DIAGRAM

1. REAR FOG LIGHT
<Ref. to WI-279, WIRING DIAGRAM, Rear Fog Light System.>

B: INSPECTION

1. REAR FOG LIGHT SWITCH
Measure the rear fog light switch resistance between terminals. <Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. REAR FOG LIGHT RELAY
Measure the resistance between rear fog light relay terminals while connecting terminal No. 4 to battery positive terminal and No. 3 to battery ground terminal.

<table>
<thead>
<tr>
<th>Current</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>

5. Turn Signal Light and Hazard Light System

A: WIRING DIAGRAM

1. TURN SIGNAL LIGHT AND HAZARD LIGHT SYSTEM

<Ref. to WI-282, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. TURN SIGNAL SWITCH

<Ref. to LI-10, INSPECTION, Combination Switch (Light).>

2. HAZARD SWITCH

Measure the resistance between hazard switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>2 and 3</td>
<td>More than 1 MΩ</td>
</tr>
<tr>
<td>ON</td>
<td></td>
<td>Less than 1 Ω</td>
</tr>
</tbody>
</table>

3. TURN SIGNAL LIGHT AND HAZARD LIGHT MODULE

Connect the battery and turn signal light bulb to the module. The module is properly functioning if it blinks when power is supplied to the circuit.
6. Back-up Light System

A: WIRING DIAGRAM

1. BACK-UP LIGHT
<Ref. to WI-257, WIRING DIAGRAM, Back-up Light System.>

B: INSPECTION

1. BACK-UP LIGHT SWITCH (MT MODEL)
Measure the resistance between back-up light switch terminals.

2. INHIBITOR SWITCH (4AT MODEL)
Measure the resistance between inhibitor switch terminals.

3. BACK-UP LIGHT RELAY (5AT MODEL)
Measure the resistance between back-up light relay terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

<table>
<thead>

</tr>
</tbody>
</table>
8. Room Light System

A: WIRING DIAGRAM

1. INTERIOR LIGHT
<Ref. to WI-271, WIRING DIAGRAM, Interior Light System.>

B: INSPECTION

1. DOOR SWITCH
Measure the resistance between door switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>When door is opened</td>
<td>1 and 3</td>
<td>Less than 1 Ω</td>
</tr>
<tr>
<td>When door is closed</td>
<td></td>
<td>More than 1 MΩ</td>
</tr>
</tbody>
</table>

2. REAR GATE LATCH SWITCH
Measure the resistance between rear gate latch switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>When rear gate is opened</td>
<td>1 and 2</td>
<td>Less than 1 Ω</td>
</tr>
<tr>
<td>When rear gate is closed</td>
<td></td>
<td>More than 1 MΩ</td>
</tr>
</tbody>
</table>

3. TRUNK ROOM LIGHT SWITCH
Measure the resistance between trunk room light switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>When trunk lid is opened</td>
<td>1 and 3</td>
<td>Less than 1 Ω</td>
</tr>
<tr>
<td>When trunk lid is closed</td>
<td></td>
<td>More than 1 MΩ</td>
</tr>
</tbody>
</table>
9. Combination Switch (Light)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
3) Remove the screws and remove the steering column cover (upper and lower).
4) Disconnect the connector from combination switch.
5) Remove three screws, and pull the combination base switch assembly toward you. (Only for KA model)
6) Remove the screws which secure switch, then remove the combination switch.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Measure the resistance between combination switch terminals.

10. Headlight Beam Leveler System

A: WIRING DIAGRAM

1. HEADLIGHT BEAM LEVELER SYSTEM

<Ref. to WI-243, WIRING DIAGRAM, Headlight Beam Leveler System.>

B: INSPECTION

1. HEADLIGHT BEAM LEVELER ACTUATOR

1) Turn on the headlights.
2) Confirm the headlight beam level is lowered by changing the switch position to 0 → 1 → 2 → 3 → 4 → 5.

2. HEADLIGHT BEAM LEVELER SWITCH

Connect the battery and headlight beam leveler switch connector to the circuit tester. Measure the voltage at each switch position.

<table>

11. Combination Base Switch Assembly

A: REMOVAL
1) Remove the driver’s airbag module. <Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>
2) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
3) Remove the screws and remove the steering column lower cover.
4) Remove the combination switch. <Ref. to LI-10, REMOVAL, Combination Switch (Light).> <Ref. to WW-8, REMOVAL, Combination Switch (Wiper).>
5) Remove the four screws and remove the roll connector.
6) Remove the three screws.
7) Disconnect the connector and remove the combination base switch assembly.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Before installing steering wheel, be sure the direction of roll connector is adjusted with steering. <Ref. to AB-23, ADJUSTMENT, Roll Connector.>

C: INSPECTION
1. COMBINATION BASE SWITCH ASSEMBLY
Inspect the combination base switch assembly and roll connector for crack or deformation. If any damage is found, replace with a new one.

2. PARKING SWITCH
Measure the resistance between parking switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>2 and 4</td>
<td>Less than 1 Ω</td>
</tr>
<tr>
<td>ON</td>
<td>1 and 4</td>
<td>Less than 1 Ω</td>
</tr>
</tbody>
</table>
12. Headlight Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the air intake duct. (When removing the headlight RH)
3) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
4) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
5) Disconnect each harness connector.
6) Remove the 4 bolts and disengage clips, and then detach the headlight assembly.

B: INSTALLATION
Install in the reverse order of removal.

C: DISASSEMBLY

CAUTION:
• Do not touch the bulb glass portion.
• Do not touch inside the lens (extension portion) or reflector portion.
• Replace the packing with a new one.
**CAUTION:**
Avoid heating one specific point of the seal portion and heating the headlight assembly to 100°C (212°F) or more.

5) Unhook the hook, and then take the lens off the headlight assembly.

6) Remove the packing (A) from seal groove.

**CAUTION:**
Completely remove the packing not to leave any chips behind.

**D: ASSEMBLY**
1) Cut the tip of packing (A) at an angle of 45°.
2) With the cut end facing upward, insert packing (A) into the groove around the seal.

**CAUTION:**
- If the packing protrudes, slowly take it off the groove.
- Do not stretch the packing. If the packing is stretched, seal fails.

3) After making a round of the seal, cut its tip at an angle of 45°, with its length 10 mm (0.39 in) longer than the circumference of seal so that the tip overlaps the other. Then, press it onto the seal, using a screwdriver.
4) Match the positions of the lens and headlight assembly, and then insert the lens into the headlight assembly.

**CAUTION:**
Remove the turn signal light bulb and clearance/parking light bulb before removing the lens.

5) Secure the hook, and then install the clip and screw.
6) Put the seal portion of headlight assembly into the water and check that water does not enter inside the headlight.

**CAUTION:**
Be sure that water does not enter inside the headlight through the bulb socket and ventilation hole.

**E: ADJUSTMENT**

1. **HEADLIGHT AIMING**

**CAUTION:**
Turn off the light before adjusting headlight beam level. If the light is necessary to check aiming, do not turn on for more than two minutes.

**NOTE:**
Before checking the headlight beam level, be sure of the following:
- The area around the headlight has not sustained any accident, damage or other type of deformation.
- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Vehicle’s fuel tank is fully filled.
1) Bounce the vehicle several times to normalize the suspension.
2) Make certain that someone is seated in the driver’s seat.
3) Turn the headlights on and then adjust the low beam pattern.

**NOTE:**
- Position the headlight beam leveler switch to “0”.
- Adjust the vertical aim (A) first, then horizontal aim (B).
Illustration above shows the illumination pattern for LHD model. Illumination pattern for RHD model is symmetrically opposite.

13. Headlight Bulb

A: REMOVAL

1. HIGH BEAM AND LOW BEAM

CAUTION:
- Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb’s service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.
- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

1) Disconnect the ground cable from battery.
2) Remove the air intake duct. (When removing the headlight bulb RH).
3) Remove the battery cover. (When removing the headlight bulb LH).
4) Tilt the washer tank filler neck. (When removing the headlight bulb LH).
5) Disconnect the harness connector.
6) Remove the bulb assembly (A) to remove high beam. To remove the low beam, remove the back cover (B), and then go to Step 7.
7) Remove the light bulb retaining spring (A) to remove bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. HALOGEN TYPE

1) Visually check the bulb for blow out.
2) Check the bulb specification.
   <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
14. Front Turn Signal Light Bulb

A: REMOVAL

1) When removing the turn signal light bulb, fully turn the steering wheel to opposite direction from desired turn signal light bulb.

2) Turn the mud guard inward.

3) Turn the socket (A) from wheel arch part, and then remove the front turn signal light bulb.

CAUTION:
For 5AT model, remove the turn signal light bulb LH from engine compartment with removing battery, because it cannot be removed from wheel arch part.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Visually check the bulb for blow out.

2) Check the bulb specification.
   <Ref. to LI-2, SPECIFICATION, General Description.>

3) If NG, replace the bulb with a new one.
15. Clearance/Parking Light Bulb

A: REMOVAL
1) Remove the air intake duct. (When removing the clearance light/parking light bulb RH).

2) Remove the battery cover. (When removing the clearance light/parking light bulb LH)
3) Tilt the washer tank filler neck. (When removing the clearance/parking light bulb)
4) Remove the headlight low beam back cover (B).
5) Turn the socket (A) and remove the bulb.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
16. Front Fog Light Assembly

A: REMOVAL

1. EXCEPT FOR OUTBACK MODEL

1) Disconnect the ground cable from battery.
2) Remove the front fog light cover (A).

3) Disengage the two clips, and then turn over the lower mud guard.

4) Disconnect the harness connector.
5) Remove the mounting bolts, and then detach the fog light assembly by pulling it.

2. OUTBACK MODEL

1) Disconnect the ground cable from battery.
2) Remove the two clips, and then turn over the lower mud guard.

3) Disconnect the harness connector.
4) Remove the mounting bolts, and then detach the fog light assembly by pulling it.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:
When installing the fog light assembly, be sure to secure the upper hock.
Front Fog Light Bulb

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Disengage the two clips, and then turn over the lower mud guard.
3) Disconnect the harness connector.
4) Remove the back cover.
5) Remove the spring retainer then detach the fog light bulb.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
18. Rear Fog Light

A: REMOVAL

NOTE:
Rear fog light is installed to rear combination light of driver’s side for sedan and rear gate garnish of driver’s side for wagon.

1. SEDAN MODEL

Remove the rear combination light. <Ref. to LI-25, REMOVAL, Rear Combination Light Assembly.>

2. WAGON MODEL

1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Disconnect the harness connectors and remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
3) Remove the mounting nuts and detach the rear fog light assembly.

B: INSTALLATION

Install in the reverse order of removal.
19. Side Turn Signal Light Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the scalp caps. <Ref. to GW-17, REPLACEMENT, Scalp Cap.>
3) Remove the mirror. <Ref. to GW-19, REPLACEMENT, Outer Mirror.>
4) Disconnect the harness connector, remove the 3 mounting screws and then remove the side turn signal light assembly.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Install the side turn signal light assembly and check that it blinks normally.
2) If it does not blink normally, replace the side turn signal light assembly with a new one.

NOTE:
Since LED (Light Emitting Diode) is used for side turn signal light, replace the side turn signal light assembly when the LED is powered off.
20. Rear Combination Light Assembly

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the trunk room side trim. <Ref. to EI-71, REMOVAL, Trunk Room Trim.>
3) Remove the four nuts, and then detach the rear combination light after disconnecting the connector.

2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Remove the clips.
3) While pressing the portion (A), insert your finger or flat-tip screwdriver wrapped with tape into the clearance (B) to remove pawls in the order of (C), (D), (E), and remove the rear combination cover.

4) Remove the two bolts, and then detach the rear combination light by pulling it to the rear side of vehicle.

5) Remove the rear combination light after turning the socket of tail/stop light bulb and rear turn signal light bulb to remove the bulbs.

B: INSTALLATION

Install in the reverse order of removal.
21. Tail/Stop Light Bulb

A: REMOVAL

1. SEDAN MODEL
   1) Remove the trunk side trim cover.
   2) Turn the socket and remove the bulb.

2. WAGON MODEL
   1) Remove the rear combination light assembly.
      <Ref. to LI-25, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
   2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
22. Rear Turn Signal Light Bulb

A: REMOVAL

1. SEDAN MODEL
   1) Remove the trunk side trim cover.
   2) Turn the socket and remove the bulb.

2. WAGON MODEL
   1) Remove the rear combination light assembly.  
      <Ref. to LI-25, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>  
   2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
23. Back-up Light Assembly

A: REMOVAL

NOTE:
In case of model with rear fog light, back-up light is installed to only passenger’s side.

1. SEDAN MODEL

Remove the rear combination light. <Ref. to LI-25, REMOVAL, Rear Combination Light Assembly.>

2. WAGON MODEL

1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Disconnect the harness connectors and remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
3) Remove the mounting nuts and detach the back-up light assembly.

B: INSTALLATION

Install in the reverse order of removal.
24. Back-up Light Bulb

A: REMOVAL

1. SEDAN MODEL
   1) Remove the bulb inspection cover of trunk side trim.
   2) Turn the socket and remove the bulb.

2. WAGON MODEL
   1) Remove the bulb inspection cover of rear gate trim.
   2) Turn the socket and remove the bulb.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
25. Rear Fog Light Bulb

A: REMOVAL

1. SEDAN MODEL
   1) Remove the bulb inspection cover of trunk side trim.
   2) Turn the socket and remove the bulb.

2. WAGON MODEL
   1) Remove the rear fog light assembly. <Ref. to LI-23, REMOVAL, Rear Fog Light.>
   2) Remove the mounting screws, and then remove the rear fog light assembly.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION

1. SEDAN MODEL
   1) Visually check the bulb for blow out.
   2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
   3) If NG, replace the bulb with a new one.

2. WAGON MODEL
   1) Install the rear fog light assembly to check that it illuminate normally.
   2) If it does not illuminate, replace the rear fog light assembly with a new one.

NOTE:
Since LED (Light Emitting Diode) is used for the rear fog light, replace the rear fog light assembly when the LED is powered off.
26. License Plate Light Assembly

A: REMOVAL

1. SEDAN MODEL

1) Remove the trunk lid garnish. <Ref. to EI-75, REMOVAL, Trunk Lid Garnish.>
2) Remove the trunk lid trim. <Ref. to EI-71, TRUNK LID TRIM, REMOVAL, Trunk Room Trim.>
3) Turn and remove the bulb socket (A). Disengage the clip (B) and remove the license plate light assembly.

B: INSTALLATION

Install in the reverse order of removal.
27. License Plate Light

A: REMOVAL

1. SEDAN MODEL

1) Remove the trunk lid trim. <Ref. to EI-71, TRUNK LID TRIM, REMOVAL, Trunk Room Trim.>
2) Turn and remove the bulb socket (A).
3) Remove the bulb.

2. WAGON MODEL

1) Remove the license plate light mounting screw (A) and then remove the lens (B).
2) Remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
High-mounted Stop Light

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Push the high-mounted stop light backward of the vehicle (1), raise the rear portion of it (2) and remove the clips to remove it.
3) Remove the harness from clamp.
4) Disengage two claws (A), pull out the high-mounted stop light from the cover and remove the claw (B).
5) Disengage three claws and remove the lens (A).
6) Remove the bulb.

2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Detach the roof spoiler. <Ref. to EI-40, REMOVAL, Roof Spoiler.>
3) Remove the nuts (A), then detach the high-mounted stop light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SEDAN (STANDARD TYPE)

1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. SEDAN (REAR SPOILER BUILT-IN TYPE) AND WAGON

1) Install the high-mounted stop light to test if it illuminates normally.
2) If the high-mounted stop light does not illuminate, replace it with a new one.

NOTE:
Since LED (Light Emitting Diode) is used for the high-mounted stop light of wagon model, replace the high-mounted stop light assembly when the LED is powered off.
29. Spot Map Light

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the lens (A) and spot map light mounting screws (B).

- Model with sunroof

- Model without sunroof

3) Disconnect the harness connectors and remove the spot map light.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION

1. SPOT MAP LIGHT BULB
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. SPOT MAP LIGHT SWITCH
Measure the resistance between spot map light switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>

</tbody>
</table>
30. Room Light

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the lens (A) and mounting screws (B).
3) Disconnect the harness connector and remove the room light.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1. ROOM LIGHT BULB
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. ROOM LIGHT SWITCH
Measure the resistance between room light switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>

</tbody>
</table>
31. Luggage Room Light

**A: REMOVAL**
1) Disconnect the ground cable from battery.
2) Remove luggage room light body (A).
3) Disconnect the harness connector and remove the lens.

**B: INSTALLATION**
Install in the reverse order of removal.

**C: INSPECTION**

1. LUGGAGE ROOM LIGHT BULB
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. LUGGAGE ROOM LIGHT SWITCH
Measure the resistance between luggage room light switch terminals.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>DOOR</td>
<td>2 and 3</td>
<td>1.5±0.5 Ω</td>
</tr>
</tbody>
</table>
32. Trunk Room Light

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Turn the trunk room light counterclockwise to 60° to remove it and disconnect the harness connector.
3) Remove the bulb (A).

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION

1. TRUNK ROOM LIGHT BULB
1) Visually check the bulb for blow out.
2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.

2. TRUNK LID SWITCH (TRUNK ROOM LIGHT SWITCH)
Measure the resistance between trunk lid switch terminals.

<table>
<thead>
<tr>
<th>Trunk lid position</th>
<th>Terminal No.</th>
<th>Standard</th>

33. Glove Box Light

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Disconnect the harness connector.
4) Remove the glove box light.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Visually check the bulb for blow out.
2) Check the bulb specification.
   <Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
34. Door Step Light

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the lens (A), and then remove the door step light bulb.
3) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
4) Disconnect the harness connector.
5) Remove the mounting screw from rear side of trim and remove the door step light.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1) Visually check the bulb for blow out.
2) Check the bulb specification.
<Ref. to LI-2, SPECIFICATION, General Description.>
3) If NG, replace the bulb with a new one.
35. Ignition Switch Illumination

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the screws and detach the upper column cover and lower column cover.
3) Remove the instrument panel lower cover. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
4) Disconnect the ignition switch illumination connector (A).

B: INSTALLATION
Install in the reverse order of removal.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

C: CAUTION

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.
- Be careful that wiring harnesses of airbag system pass near electrical parts and switches.
- Wiring harnesses and connectors of all airbag system are yellow color. Do not use a tester equipment on these circuits.
- Care must be taken when connecting the piping hose so that no bending, jamming, etc. are caused.
- If even a little oil or grease such as silicon oil gets in the tank and washer passages, an oil film is easily formed on the glass, causing the wiper to chatter and judder, therefore, be careful not to let this happen.

</tbody>
</table>
3. Combination Switch (Wiper)

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
3) Remove the screw to remove steering column cover (upper and lower).
4) Disconnect the connector from combination switch.
5) Remove the three screws, and pull out the combination base switch assembly toward you. (EC, EK, KS and K4 model)
6) Remove the switch securing screw to remove combination switch.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION

1. COMBINATION SWITCH
1) Inspect the continuity between each connector terminal.

2) If continuity is not as specified, replace the switch.
## Combination Switch (Wiper)

### 2. FRONT WIPER

1) Check with Subaru Select Monitor

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK INPUT SIGNAL TO BODY INTEGRATED UNIT.</td>
<td>Is the input signal normal?</td>
<td>End.</td>
</tr>
</tbody>
</table>

When the front wiper switch is operated, check the input signal using Subaru Select Monitor.

1) Connect the Subaru Select Monitor to data link connector.
2) Turn the ignition switch to ON.
3) Select (Body Integrated Unit) from the main menu.
4) Select (Current Data Display & Save).
5) When the front wiper switch is set to LO or HI, check the input signal.

2) Intermittent operation inspection

1. Turn the wiper switch to INT.
2. Adjust the intermittent control switch to MAX.
3. Apply the battery voltage to switch terminal No. 16 and 2 (EC, EK, KS and K4 model) or terminal No. 12 and 8 (KA model).
4. Measure the voltage between combination switch terminals.

#### Terminals

**No. 7 — No. 2: EC, EK, KS and K4 model**

**No. 3 — No. 8: KA model**

(A) Switch position
(B) Voltage (EC, EK, KS and K4 model) / Voltage (KA model)
(C) MIN.
(D) MAX.
(E) Non-intermittent type
(F) 12 V
(G) 0 V
(H) Approx. 2 sec.
(I) 16±6 sec.
(J) 3±1 sec.

3) If operation is not as specified, replace the switch.
## 3. REAR WIPER

1) Check with Subaru Select Monitor

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK INPUT OF REAR WIPER.  
Check the input from body integrated unit using Subaru Select Monitor.  
1) Connect the Subaru Select Monitor to data link connector.  
2) Turn the ignition switch to ON.  
3) Select (Body Integrated Unit) from the main menu.  
4) Select (Current Data Display & Save).  
5) Check the input of rear wiper switch. | Is the input normal? | Go to step 2. | Check the rear wiper switch. &lt;Ref. to WW-8,  
INSPECTION, Combination Switch (Wiper).&gt; |
| 2    | CHECK OUTPUT OF BODY INTEGRATED UNIT.  
When the rear wiper switch is operated, check the output using Subaru Select Monitor.  
1) Turn the ignition switch to ON.  
2) Operate the rear wiper switch to set to each position of ON and INT.  
3) At this time, check the output of body integrated unit. | When it is set to ON, is ON output continuously? When it is set to INT, is ON/OFF output repeatedly? (INT OFF time (when vehicle parked): 3 seconds for Sedan, 12 seconds for Wagon) | Check the rear wiper motor. &lt;Ref. to WW-23,  
INSPECTION, Rear Wiper Motor.&gt; | Replace the body integrated unit. &lt;Ref. to SL-46,  
Body Integrated Unit.&gt; |

2) Rear wiper motor circuit check

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK POWER SUPPLY CIRCUIT OF REAR WIPER MOTOR.  
1) Disconnect the harness connector of rear wiper motor.  
2) Turn the ignition switch to ACC.  
3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground.  
   **Connector & terminal**  
   **Sedan model**  
   (R132) No. 1 (+) — Chassis ground (−):  
   **Wagon model**  
   (D43) No. 1 (+) — Chassis ground (−): | Is the voltage more than 10 V? | Go to step 2. | • Check the fuse (No. 23 in fuse & relay box).  
• Check the fusible link (No. 7 in main fuse box). |
| 2    | CHECK GROUND CIRCUIT OF REAR WIPER MOTOR.  
1) Turn the ignition switch to OFF.  
2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground.  
   **Connector & terminal**  
   **Sedan model**  
   (R132) No. 3 — Chassis ground:  
   **Wagon model**  
   (D43) No. 3 — Chassis ground: | Is the resistance less than 10 Ω? | Go to step 3. | Repair the open circuit of rear wiper motor ground cable. |
**Combination Switch (Wiper)**

### Step 3: Check Harness Between Body Integrated Unit and Rear Wiper Motor.
1. Turn the ignition switch to OFF.
2. Disconnect the harness connector of body integrated unit.
3. Disconnect the harness connector of rear wiper motor.
4. Measure the resistance between the harness connector terminals of body integrated unit and rear wiper motor.

**Connector & terminal**
- **Sedan model**
  - (B280) No. 1 — (R132) No. 2:
  - (B280) No. 8 — (R132) No. 4:
- **Wagon model**
  - (B280) No. 1 — (D43) No. 2:
  - (B280) No. 8 — (D43) No. 4:

Is the resistance less than 10 Ω?

<table>

4. Wiper Blade

A: REMOVAL

CAUTION:
When replacing wiper blades or etc., be sure to stand up the driver side wiper arm first, then passenger side wiper arm next. Also, when putting the wiper arms back, be sure to start with passenger side first, then driver side next. Doing this in the reverse order may result in damage of passenger side wiper arm by hitting with driver side wiper blade.

1. FRONT
While pushing the locking clip (A) up, pull out the blade from arm to the arrow direction.

2. REAR
Turn the blade in the direction of arrow (A) and remove it from arm.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Confirm that the clip is locked securely.

C: DISASSEMBLY

1. METAL TYPE
Pull side (A) of the wiper rubber stopper and remove the rubber from blade assembly.

2. RESIN TYPE
Pull the wiper rubber top slightly from the stopper (A) and pull out fully.

(A) Turn the wiper blade.
(1) Wiper arm
(2) Wiper blade
(3) Installing part of wiper blade
D: ASSEMBLY

1. METAL TYPE
1) Insert the wiper rubber onto blade so that the stopper is in the position shown in the figure.

2) Make sure the wiper rubber is securely fastened to the pull stopper (A).

2. RESIN TYPE

1) Insert the wiper rubber through the claw (B).

2) Insert the wiper rubber until its top end protrudes approx. 20 mm (0.79 in) from stopper (D).
3) Insert the wiper rubber into the claw (A).

E: INSPECTION
1) When the wiper does not perform well, inspect the followings:
   • Make sure the movable part of the wiper blade assembly moves smoothly.
   • Make sure the wiper rubber is not deformed or damaged.
2) If damaged, replace with new one.
5. Washer Tank and Motor

A: REMOVAL
1) Open the hood.
2) Disconnect the ground cable from battery.
3) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
4) Remove the clip holding washer water supply tap.
5) Remove the two bolts and one nut, hose, connector and washer motor cover, and then remove the washer tank.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
6.0 N·m (0.61 kgf-m, 4.4 ft-lb)

C: DISASSEMBLY
Pull out the washer motor from tank.

D: ASSEMBLY
1) Assemble in the reverse order of disassembly.
2) Confirm that water does not leak from installation area of motor.

E: INSPECTION
Apply battery voltage to the connector terminal of the washer motor and make sure the motor operates.
6. Front Wiper Arm

A: REMOVAL

CAUTION:
When replacing wiper blades or etc., be sure to stand up the driver side wiper arm first, then passenger side wiper arm next. Also, when putting the wiper arms back, be sure to start with passenger side first, then driver side next. Doing this in the reverse order may result in damage of passenger side wiper arm by hitting with driver side wiper blade.

1) Open the hood.
2) Remove the cap.
3) Remove the nut to remove wiper arm.

B: INSTALLATION

1) Install in the reverse order of removal.
2) Operate the wiper once.
3) Align the wiper blade to ceramic print point mark (A) of front window panel.

C: ADJUSTMENT

Operate the wiper once. Align the wiper blade to ceramic print point mark (A) of front window panel.
7. Front Wiper Motor and Link

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the cowl panel. <Ref. to EI-39, REMOVAL, Cowl Panel.>
3) Disconnect the connector of wiper motor assembly.
4) Remove the bolt to remove wiper assembly.

NOTE:
Wiper motor and wiper link cannot be disassembled, because these are assembly parts.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”.
<Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

C: INSPECTION
1) When the battery is connected to the terminal of connectors, confirm that the wiper motor operates at low speed.
   • LHD model

2) When the battery is connected to the terminal of connectors, confirm that the wiper motor operates at high speed.
   • RHD model

3) Connect the battery to terminals of connector, and remove the terminal connection with wiper motor rotated at low speed, and stop the wiper motor through operation.
   • LHD model
4) Connect the battery and confirm that the wiper motor stops at automatic stop position after the wiper motor operates at low speed again.

- RHD model

- LHD model

- RHD model
8. Front Washer Nozzle

A: REMOVAL
1) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
2) Hold the pawl of washer nozzle (A) toward the arrow direction, and remove the washer nozzle.
3) Remove the washer hose from washer nozzle.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Adjust the washer nozzle position. <Ref. to WW-20, ADJUSTMENT, Front Washer Nozzle.>

C: INSPECTION
• Make sure the nozzle and hose are not clogged.
• Make sure the hose is not bent.

D: ADJUSTMENT
1) Turn the wiper switch to OFF position.
2) While the vehicle is at standstill, adjust the washer injection position as shown in the figure.

Injection position:
A: 250 mm (9.84 in)
B: 435 mm (17.13 in)

Injection angle should be adjusted with 0.5 mm (0.020 in) thickness steel scale. Use maximum thickness of 0.5 mm steel scale, because the injection slit width of washer nozzle is 0.6 mm (0.024 in). Adjusting with a flat tip driver may damage the injection slit and cause the faulty injection.
9. Rear Wiper Arm

A: REMOVAL

1. SEDAN MODEL
   1) Detach the wiper arm cover (A).
   2) Remove the nut (B) to remove wiper arm.

   ![Image of Sedan Wiper Arm Removal](WW-00178)

2. WAGON MODEL
   1) Detach the wiper arm cover (A).
   2) Remove the nut (B) to remove wiper arm.

   ![Image of Wagon Wiper Arm Removal](WW-00179)

B: INSTALLATION

1) Install in the reverse order of removal.
2) Operate the rear wiper once.
3) Align the blade with the marking (A) of glass.

   ![Image of Wiper Arm Installation](WW-00229)

C: ADJUSTMENT

1) Operate the rear wiper once.
2) Align the blade with the marking (A) of glass.

   ![Image of Wiper Arm Adjustment](WW-00229)

**Tightening torque:**

Refer to “COMPONENT” of “General Description”.
<Ref. to WW-4, REAR WIPER (SEDAN MODEL), COMPONENT, General Description.>
10. Rear Wiper Motor

A: REMOVAL

1. SEDAN MODEL
1) Disconnect the ground cable from battery.
2) Remove the rear wiper arm. <Ref. to WW-21, SEDAN MODEL, REMOVAL, Rear Wiper Arm.>
3) Remove the cap (A) and nut (B) from rear wiper shaft.
4) Raise the nozzle & hose assembly (C) to disconnect the washer tube and remove the nozzle & hose assembly (C).
5) Disconnect the harness connector of wiper motor assembly.
6) Remove the bolts to remove wiper motor assembly (A).

2. WAGON MODEL
1) Disconnect the ground cable from battery.
2) Remove the rear wiper arm. <Ref. to WW-21, WAGON MODEL, REMOVAL, Rear Wiper Arm.>
3) Remove the rear gate lower trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
4) Disconnect the harness connector of wiper motor assembly.
5) Remove the bolts to remove wiper motor assembly (A).

B: INSTALLATION

1. SEDAN MODEL
1) Install in the reverse order of removal.
2) Align the cutout of reverse side of nozzle & hose assembly with the cutout of rear wiper shaft for installation.

2. WAGON MODEL
1) Install in the reverse order of removal.
2) Be sure that the pivot cap with the arrow mark facing up, as shown in the figure.

Tightening torque:
Refer to “COMPONENT” of “General Description”.
<Ref. to WW-5, REAR WIPER (WAGON MODEL), COMPONENT, General Description.>
**C: INSPECTION**

1) Connect the battery to wiper motor connector and confirm that wiper motor operates.

![Diagram 1](WW-00186)

2) Connect the battery to terminals of connector, and remove the terminal connection with wiper motor rotated, and stop the wiper motor through operation.

![Diagram 2](WW-00187)

3) Connect the battery and confirm that the wiper motor stops at automatic stop position after the wiper motor operates at low speed again.

![Diagram 3](WW-00032)
11. Rear Washer

A: REMOVAL

1. SEDAN MODEL
   1) Remove the rear wiper arm. <Ref. to WW-21, SEDAN MODEL, REMOVAL, Rear Wiper Arm.>
   2) Remove the cap (A) and nut (B) from rear wiper shaft.
   3) Raise the nozzle & hose assembly (C) to disconnect the washer hose, and remove the nozzle & hose assembly (C).

2. WAGON MODEL
   1) Detach the roof spoiler. <Ref. to EI-40, REMOVAL, Roof Spoiler.>
   2) Remove the washer hose from washer nozzle.
   3) Push the pawl of nozzle from the reverse side of roof spoiler with a flat tip screwdriver or equivalent, and remove the washer nozzle.

B: INSTALLATION
   1) Install in the reverse order of removal.
   2) Adjust the washer nozzle. <Ref. to WW-24, ADJUSTMENT, Rear Washer.>

C: INSPECTION
   • Make sure the nozzle and hose are not clogged.
   • Make sure the hose is not bent.

D: ADJUSTMENT
   1) Turn the wiper switch to OFF position.
   2) While the vehicle is at standstill, adjust the washer injection position as shown in the figure.

NOTE:
Injection position of rear washer nozzle is adjustable only for sedan model.
- Sedan model

\[\text{Injection position of rear washer nozzle is adjustable only for sedan model.}\]
- Wagon model

\[\text{Injection position of rear washer nozzle is adjustable only for sedan model.}\]
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: CAUTION
- Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing the audio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure the functional parts operate smoothly.

B: INSPECTION

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Repair order</th>
</tr>
</thead>
</table>
| No power coming in. (No display and no sound from speakers) | (1) Check the fuse and power supply for audio.  
(2) Check the audio ground.  
(3) Remove the audio and repair it. |
| A specific speaker does not operate.             | (1) Check the speaker.                           
(2) Check the output circuit between audio and speaker. |
| Audio generates noise with engine running.       | (1) Check the audio ground.                      
(2) Check the generator.                          
(3) Check the ignition coil.                      
(4) Remove the audio and repair it.               |
| AM (MW, LW: Europe only) and FM modes are weak or noisy. | (1) Check the antenna.                           
(2) Check the antenna amplifier.                  
(3) Check the noise suppressor.                   
(4) Check the audio ground.                       
(5) Remove the audio and repair it.               |
3. Front Accessory Power Supply Socket System

A: WIRING DIAGRAM
<Ref. to WI-242, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>
4. Audio

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Remove the console front panel. <Ref. to EI-54, REMOVAL, Center Console.>
4) Remove the console side garnish. <Ref. to EI-54, REMOVAL, Center Console.>

5) Remove the screws, and slightly pull the audio out from center console.

6) Disconnect the harness connector and antenna feeder cord, and then remove the audio.

B: INSTALLATION
Install in the reverse order of removal.
5. Front Speaker

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the front speaker mounting screws.
4) Disconnect the harness connector and remove front speaker.

B: INSTALLATION
Install in the reverse order of removal.
6. Tweeter

A: REMOVAL

1. MODEL WITH TWEETER

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the tweeter mounting screws.
4) Disconnect the harness connector and remove tweeter.

2. MODEL WITH MCINTOSH AUDIO SYSTEM

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the gusset cover. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
4) Disconnect the harness connector and remove tweeter.

B: INSTALLATION

Install in the reverse order of removal.
7. Squawker

A: REMOVAL

NOTE:
Model with McIntosh audio system only.
1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the squawker mounting screws.

4) Disconnect the harness connectors and remove squawker.

B: INSTALLATION
Install in the reverse order of removal.
8. Rear Speaker

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the rear speaker mounting screws.

![Diagram of rear speaker with mounting screws indicated](ET-00084)

4) Disconnect the harness connector and remove the rear speaker.

B: INSTALLATION
Install in the reverse order of removal.
9. Woofer

A: REMOVAL

1. SEDAN MODEL

NOTE:
Model with McIntosh audio system only.

1) Disconnect the ground cable from battery.
2) Remove the rear shelf trim. <Ref. to EI-70, REMOVAL, Rear Shelf Trim.>
3) Remove the woofer mounting screws.
4) Disconnect the harness connector and detach woofer.

2. WAGON MODEL

NOTE:
Model with McIntosh audio system only.

1) Disconnect the ground cable from battery.
2) Remove the hooks (A) and detach woofer cover. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
3) Remove the quarter lower trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
4) Remove the woofer bracket mounting clips (A) and screws, and then remove the woofer bracket.
5) Disconnect the harness connector and detach woofer.

B: INSTALLATION

Install in the reverse order of removal.
10. Power Amplifier

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the passenger’s seat. <Ref. to SE-7, REMOVAL, Front Seat.>
3) Disconnect the harness connector.
4) Remove the nuts to remove power amplifier.

B: INSTALLATION
Install in the reverse order of removal.
11. Antenna

A: INSPECTION
Measure the resistance between antenna terminal and each antenna wire.
If an antenna wire is OK, resistance will be less than 1 Ω. If an antenna wire is broken, resistance will be more than 1 MΩ.

NOTE:
When checking the continuity, wind a piece of aluminum foil around the tip of tester probe and press the foil against wire with your finger.

To locate the broken point, move the probe along antenna wire.

B: REPAIR
1) Clean the antenna wire and surrounding area with a cloth dampened by alcohol.
2) Paste a thin masking film on the glass along broken wire.
3) Apply conductive silver composition (DUPONT No. 4817) on the broken portion with a drawing pen.
4) Dry out the deposited portion.
5) After repair has been completed, measure the resistance in repaired wire.
12. Antenna Amplifier

**A: REMOVAL**

**1. SEDAN MODEL**

1) Disconnect the ground cable from battery.
2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
3) Disconnect the harness connectors and terminals.
4) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
5) Remove the screw and detach antenna amplifier.

**2. WAGON MODEL**

1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Disconnect the harness connectors and terminals.
4) Remove the screw and detach antenna amplifier.

**B: INSTALLATION**

Install in the reverse order of removal.

**C: INSPECTION**

Measure the resistance of antenna amplifier.

- **Sedan model**

![Diagram of sedan model antenna amplifier]

- **Wagon model**

![Diagram of wagon model antenna amplifier]

13. Noise Suppressor

A: REMOVAL

1. SEDAN MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
3) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
4) Disconnect the harness connector from noise suppressor.
5) Remove the harness clip.
6) Remove the screw and detach noise suppressor.

2. WAGON MODEL

1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Disconnect the harness connector from noise suppressor.
4) Remove the screws and detach noise suppressor.

B: INSTALLATION

Install in the reverse order of removal.
14. Navigation Display

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the clips, and then remove the center upper panel.

3) Remove the display mounting screws.

4) Disconnect the harness connector, and then remove the navigation display.

B: INSTALLATION
Install in the reverse order of removal.
15. GPS Antenna

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.>
3) Remove the GPS antenna mounting screw, and then remove the GPS antenna.
4) Remove the audio. <Ref. to ET-5, REMOVAL, Audio.>
5) Remove the GPS antenna cord connector from steering support beam stay (on the driver’s side).

B: INSTALLATION
Install in the reverse order of removal.

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the navigation body mounting screws in numerical order and pull it out.

NOTE:
To remove the screw (4) easier, move the navigation body after removing the screw (3).

4) Remove the harness connector and antenna cable, and then remove the navigation body.

B: INSTALLATION
Install in the reverse order of removal.
17. Front Accessory Power Supply Socket

A: REMOVAL

1. FRONT

1) Disconnect the ground cable from battery.
2) Remove the console front panel. <Ref. to EI-54, REMOVAL, Center Console.>
3) Disconnect the harness connector, and remove the accessory power supply socket.

2. REAR

1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Disconnect the harness connector, and remove the accessory power supply socket.

B: INSTALLATION

Install in the reverse order of removal.
18. Steering Satellite Switch

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Set the tire to the straight-ahead position.
3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>

WARNING:
With the airbag module equipped, always refer to “Airbag System” when performing the airbag module repair service. <Ref. to AB-14, INSPECTION, Driver’s Airbag Module.>
4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
5) Remove the cover from steering wheel.
6) Remove each one of satellite switch mounting screw from the LH and RH side.
7) Remove the satellite switch.

B: INSTALLATION
Install in the reverse order of removal.

- No. 7 — No. 6:
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. General Description

A: CAUTION

• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing audio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.

• Reassemble in reverse order of disassembly, unless otherwise indicated.

• Adjust parts to the given specifications.

• Connect the connectors securely during reassembly.

• After reassembly, make sure functional parts operate smoothly.

3. Horn

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the two clips and turn up the lower mud guard RH.

3) Remove the horn bracket mounting bolt (A).
4) Disconnect the harness connector and remove the horn assembly (B).

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
With 12 V direct current supplied between horn terminals, check that the horn sounds properly.
4. Horn Switch

A: REMOVAL

WARNING:
Before servicing, be sure to read the notes in AB section for proper handling of driver’s airbag module. <Ref. to AB-4, CAUTION, General Description.>

NOTE:
Horn switch is a unit with the driver’s airbag module.
1) Disconnect the ground cable from battery.
2) Remove the driver’s airbag module. <Ref. to AB-14, REMOVAL, Driver’s Airbag Module.>

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Measure the resistance between horn switch terminal and chassis ground.

</tbody>
</table>

GW-8
3. Power Window Control Switch

A: REMOVAL

1. MAIN SWITCH

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Disconnect the harness connector.
4) Remove the screws from the reverse side of front door trim to remove the power window main switch.

B: INSTALLATION

1. MAIN SWITCH
Install in the reverse order of removal.

2. SUB SWITCH
Install in the reverse order of removal.

C: INSPECTION

1. MAIN SWITCH
Measure switch resistance.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO UP</td>

<td>OFF</td>
<td>1 and 2, 4 and 5</td>
<td>Less than 1 Ω</td>
</tr>
<tr>
<td>DOWN</td>
<td>1 and 2, 3 and 4</td>
<td>Less than 1 Ω</td>
</tr>
</tbody>
</table>

Replace the sub switch if faulty.
4. Front Door Glass

A: REMOVAL
1) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
3) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
4) Remove the clip (A), and remove the front end of weather strip.
5) Remove the gusset.
6) Remove the stabilizer.
7) Remove the clips (A), and remove the rear end of weather strip.
8) Remove the screw (A) from the rear end of weather strip outer to remove weather strip outer.
9) Remove the screws to remove guide assembly.
10) Operate the power window switch to move glass to position shown in the figure, and then remove the two nuts through service holes.
11) Remove the door glass.

CAUTION:
• Since the gear may be disengaged, do not turn regulator in the closing direction after removal of the glass.
• Avoid impact and damage to the glass.

B: INSTALLATION
1) Install in the reverse order of removal.
CAUTION:
Make sure that glass stay is placed securely in sash.
2) Adjust the front door glass. <Ref. to GW-11, ADJUSTMENT, Front Door Glass.>

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>

C: ADJUSTMENT

NOTE:
Before adjustment, ensure that all adjusting bolts of stabilizer, upper stopper and sash are loose and door glass is raised so that it is in contact with weather strip.

1) Temporarily tighten one adjusting bolt on one side of rear sash at the midpoint of slotted hole in the inner panel.
2) Temporarily tighten the regulator B-channel in a position at the top of slotted hole.
3) Lower the door glass 10 — 15 mm (0.39 — 0.59 in) from fully closed position. While applying outward pressure of 45.0 ± 5.0 N (4.5 ± 0.5 kgf, 9.9 ± 1.1 lb) (F) to upper edge of glass above midpoint of two outer stabilizers, press the inner stabilizer at pressure of 25 ± 5 N (2.5 ± 0.5 kgf, 5.5 ± 1.1 lb) to the glass, then secure it.

4) For adjustment of clearance between front glass and center pillar cover, loosen the nuts (A), and move the glass sash back and forth until clearance becomes the value shown.
5) To adjust the upper end and lower end of center pillar, loosen the stopper bolt (A) or nut (B) securing door sash, move the stopper position until the clearance between center pillar cover is equal.

CAUTION:
Perform the measurement of clearance between center pillar at less than 50 mm (1.969 in) from upper end of window glass.

6) Adjust so that the upper and lower ends of center pillar are the same size.

(1) Narrow
(2) Wide
(3) Glass tilts too far rearward
(4) Glass tilts too far forward
(5) Stopper adjusting direction

(1) Glass
(2) Center pillar cover
(3) Check point
(4) 50 mm (1.969 in)
(5) 11 mm (0.433 in)
7) After adjusting the clearance between center pillar, up and down the glass several times to check glass contact to stopper when glass is fully closed. Adjust it to contact the front and rear stopper simultaneously.

8) For adjustment of the upper and lower ends of center pillar, loosen the adjusting nut (A) of B-channel (B).

9) For glass stroke adjustment, install the ST to glass, close the door, and raise the glass with regulator until positional relationship between glass and weather strip becomes as shown. And secure the glass so that the upper stopper correctly touches the glass holder.

ST 61299AE000 SPACER
(Glass thickness: 5 mm (0.197 in) for front door glass)

For preventing wind noise, adjust the glass at the position where tip of gusset is raised up a little.

10) After stabilizer adjustment, carry out the glass cohesion adjustment. First, visually ensure the positional relationship between retainer & molding and glass of the roof side, and then begin with rear sash adjustment. Install the ST to glass and adjust two adjusting bolts alternately step by step to obtain dimensions shown below (cross-section A).

NOTE:
If two nuts are loosened at the same time, the sash moves back and forth. Therefore, when one nut is adjusted, secure the other.
11) Make the same adjustment of two adjusting bolts of rear sash.

ST  61299AE000  SPACER
(Glass thickness: 5 mm (0.197 in) for front door glass)

NOTE:
Do not tilt the sash bracket to inner panel during adjustment. Otherwise smooth regulator operation cannot be achieved.

12) Make adjustment of front sash in the same manner as that of rear sash.

NOTE:
Although front and rear sashes must, as a rule, be adjusted in the same manner, in some door installation, the adjustment in a different manner may be required. However, adjustment of one sash to the maximum amount and the other to the minimum amount is not permitted. Such adjustment may result in application of excessive load to regulator.

13) After adjustments, tighten the nuts.

14) After adjustment of the glass, close the door. If there is a gap between outer lip of gusset and glass surface, adjust the gap with adjusting bolt (A) in lower fitting part of gusset to prevent generation of wind noise.

15) During adjustment, loosen the other three clamping bolts.

16) After adjustment, tighten the bolts and nuts.
5. Front Regulator and Motor Assembly

A: REMOVAL
1) Remove the door glass. <Ref. to GW-10, REMOVAL, Front Door Glass.>
2) Disconnect the motor connector.
3) Remove the four bolts and two nuts to remove regulator assembly.

4) Remove the screws to remove motor assembly.

NOTE:
When removing the motor assembly, secure the arm correctly, because the regulator arm moves in the force of balancing spring.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Adjust the front door glass. <Ref. to GW-11, ADJUSTMENT, Front Door Glass.>

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>

C: INSPECTION
1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.
## 6. Remote Control Mirror System

<td>(3) Wiring harness</td>
</tr>
</tbody>
</table>
7. Scalp Cap

A: REPLACEMENT
1) Remove the outer mirror. <Ref. to GW-19, REPLACEMENT, Outer Mirror.>
2) Press-in the upper side clips (A) from inside of door mirror.

3) Pull the scalp cap frontward of door mirror, remove the upper side clips (A) and lower side hooks (B), and then remove the scalp cap.

4) Insert the lower hooks (B) of scalp cap to door mirror and push the upper clips (A) in.

5) Install the scalp cap securely.

CAUTION:
Do not remove the scalp cap forcibly. The lower hooks may be damaged.
8. Outer Mirror Assembly

A: REMOVAL
1) Remove the mirror gusset cover.

2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Disconnect the mirror connector.
4) Remove the screws to remove mirror assembly.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
Check that the rearview mirror moves properly when the battery voltage is applied to terminals.

Replace the outer mirror assembly if defective.
9. Outer Mirror

A: REPLACEMENT
1) Face the mirror upward.
2) Use a flat tip screwdriver to remove clip (A).
3) Lift the lower mirror up to remove hooks (B).

4) Disconnect the mirror heater connector from the end of mirror. (Model with mirror heater)

5) Catch the hooks (A) and install clips (B).

CAUTION:
• When removing the mirror, be careful not to damage the back side of mirror with a flat tip screwdriver.
• When installing the mirror, insert the hook and clip securely.
10. Remote Control Mirror Switch

A: REMOVAL
1) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Disconnect the connector.

3) Remove the remote control mirror switch from instrument panel lower cover.

B: INSTALLATION
Install in the reverse order of removal.
C: INSPECTION

1. REMOTE CONTROL MIRROR SWITCH

Move the remote control mirror switch to each position and check continuity between terminals.

Replace the remote control mirror switch if defective.
11. Rear Door Glass

A: REMOVAL

1) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
3) Remove the stabilizer.
4) Remove the clips (A), and remove the front end and rear end of weather strip.
5) Loosen the two screws to remove weather strip outer.
6) Operate the power window switch to move the glass to position shown in the figure, and then remove the two nuts through service holes.
7) Remove the rear sash retaining nuts (A) and move rear sash (B) backward.
8) Remove the door glass.

CAUTION:
- Since the gear may be disengaged, do not turn regulator in the closing direction after removal of the glass.
- Avoid impact and damage to the glass.
B: INSTALLATION
1) Install in the reverse order of removal.

CAUTION:
Make sure that glass stay is placed securely in sash.

2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

C: ADJUSTMENT

NOTE:
The rear door glass, as a rule, should be adjusted in the same manner as front door glass, although they are different in dimension. <Ref. to GW-11, ADJUSTMENT, Front Door Glass.>

1) Adjust the glass position using the following dimensions as a guide line.

2) Install the ST to glass and adjust the glass adhesion to the value shown.

ST 61299AE010 SPACER
(Glass thickness: 4 mm (0.157 in) for rear door glass)

NOTE:
• If rear glass adhesion is higher than necessary, glass may get caught in weather strip of center pillar corner, resulting in early wear of weather strip. Care should be taken for adjustment.
• After adjustment, move the glass up and down to check whether it is caught.
12. Rear Regulator and Motor Assembly

A: REMOVAL
1) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
2) Remove the nut (A) to remove front sash.
3) Disconnect the motor connector.
4) Remove the four bolts and two nuts to remove regulator assembly.
5) Remove the screws to remove motor assembly.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

C: INSPECTION
1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>
13. Windshield Glass

A: REMOVAL

1. USING WINDSHIELD GLASS KNIFE

1) Remove the cowl panel. <Ref. to EI-39, REMOVAL, Cowl Panel.>
2) Remove the glass molding.
3) Tape the body side of the circumference of windshield glass for protection.
4) Apply sufficient amount of soapy water to the adhesive part.
5) Insert the windshield glass knife into adhesive part.
6) While holding the knife edge and windshield glass edge at a right angle, move the windshield glass knife in parallel to the windshield glass edge along face and edge of windshield glass to cut the adhesive part.

NOTE:
• Do not twist windshield glass knife.
• Cutting of adhesive part shall be started with wider gap between windshield glass and body.

2. USING PIANO WIRE

1) Remove the cowl panel. <Ref. to EI-39, REMOVAL, Cowl Panel.>
2) Remove the molding.
3) Tape the body side of the circumference of windshield glass for protection.
4) Make a hole in the adhesive part using drill or knife.
5) Pass the piano wire through the hole, and attach securely both the wire ends to pieces of wood.
6) Pull the wire ends alternately to cut off the adhesive part.

CAUTION:
• Do not tightly pull the piano wire against the windshield glass edge.
• Be careful not to damage interior and exterior parts.
• When removal is made with area close to instrument panel, place a protection plate over it. Pay particular attention to the removal.
• Do not cross piano wires. Otherwise they may be cut.
**B: INSTALLATION**

1) Clean the external circumference of windshield glass with alcohol or white gasoline.

2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

**CAUTION:**

Be careful not to damage the body and paint surface.

3) Clean the body with alcohol or white gasoline to eliminate cutting power, dust and dirt completely from body.

4) Align the locating pin of glass side with the hole of body side, and place the glass on the body.

5) Adjust the glass position to make uniform clearance between body and glass in four corners.

6) Remove the glass temporarily from body.

7) Install the dam rubber.

8) Fit molding mark (B) to notch (A) of glass side and install the molding to entire perimeter of glass.
9) Apply two types of primers to the adhesive layer of glass using sponge.

**Glass primer:**  
*Betawipe VP04604*  
*Betaprime 5001*

10) Apply primer to the adhesive layer of body.

**Painted surface primer:**  
*Betaprime 5402*

**NOTE:**  
- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.  
- Let primer dry for about ten minutes before installing the glass.  
- Do not touch the surface coated with primer.

11) Cut off the cartridge nozzle tip as shown and set it in sealant gun.

12) Apply adhesive to the glass end surface as shown.

**Adhesive:**  
*Gurit-ESSEX*  
*Betaseal 1502 or equivalent*

13) Fit the locating pins using suction rubber cup to install windshield glass.

14) Lightly press the windshield glass for tight fit.

15) Make flush the adhesive surface jutted out using spatula.

16) After completion of all work, allow the vehicle to stand for about 24 hours.

**NOTE:**  
- When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.  
- Move the vehicle slowly.  
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

17) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

**NOTE:**  
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

18) Install the cowl panel. <Ref. to EI-39, INSTALLATION, Cowl Panel.>
### 14. Rear Gate Glass

#### A: REMOVAL
1) Remove the rear wiper motor. (Ref. to WW-22, REMOVAL, Rear Wiper Motor.)
2) Disconnect the electrical connectors from rear defogger terminal.
3) Remove the glass in the same procedure as for windshield glass. (Ref. to GW-25, REMOVAL, Windshield Glass.)

#### B: INSTALLATION
1) Apply adhesive in the same procedure as for windshield glass. (Ref. to GW-26, INSTALLATION, Windshield Glass.)
2) Insert the glass clip pin into rear gate hole, and after pushing on the area around the clip pin to secure it, push lightly all around the area to seal it.
3) About one hour after installation, conduct a leak test.

---

**NOTE:**
- When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.
- When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

5) Connect the rear defogger terminals.
6) Install the rear wiper. (Ref. to WW-22, INSTALLATION, Rear Wiper Motor.)

(7) Molding  
(8) Adhesive

4) After completion of all work, allow the vehicle to stand for about 24 hours.
15. Rear Window Glass

**A: REMOVAL**
1) Disconnect the electrical connectors from rear defogger terminal.
2) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

**B: INSTALLATION**
1) Bond the dam rubber.

2) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
3) Connect the connector to the rear defogger and antenna terminals.
4) After completion of all work, allow the vehicle to stand for about 24 hours.

**NOTE:**
- When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

5) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

17. Rear Window Defogger

A: INSPECTION

1. WITH SUBARU SELECT MONITOR

CAUTION:
Check that the rear window defogger timer is in initial setting or customize setting before inspection.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK INPUT SIGNAL TO BODY INTEGRATED UNIT. When the rear window defogger switch is operated, check the input signal using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select (Body Integrated Unit) from «Main Menu». 4) Select (Current Data Display &amp; Save). 5) When the rear window defogger switch is set to ON, check the input signal.</td>
<td>After rear defogger switch is set to ON, does it turn to OFF in 15 minutes? Or does it repeat 15 minutes operation and 2 minutes stop?</td>
<td>END. Replace the body integrated unit. &lt;Ref. to SL-46, REMOVAL, Body Integrated Unit.&gt;</td>
</tr>
</tbody>
</table>

2. HEAT WIRE INSPECTION

CAUTION:
When wiping stain on glass off with cloth, use a dry and soft cloth and move it along the heat wire to avoid damage to the heat wire.

1) Turn the ignition switch to ON.
2) Turn the defogger switch to ON.
3) Wrap the tips of tester probe with aluminum foil to avoid damage to heat wire.
4) Measure the voltage at heat wire center with DC voltmeter.

Standard voltage:
Approx. 6 V

NOTE:
- If the measured value is 12 volts, heat wire is open between heat wire center and positive (+) terminal of tester probe.
- If zero volt, heat wire is open between wire center and ground.

5) Connect the tester probe of positive lead of voltmeter to positive terminal of heat wire and move tester probe of negative lead along the heat wire up to the negative terminal end. If voltage changes from zero to several volts during movement of tester probe, heat wire is open at the voltage change point.
GLASS/WINDOWS/MIRRORS

Rear Window Defogger

B: REPAIR

1) Clean the broken portion with alcohol or white gasoline.
2) Mask both sides of wire with thin film.
3) Apply the conductive silver composition (DUPONT No. 4817) to the broken portion.

(1) Broken portion
(2) Thin film
(3) Broken wire
(4) Conductive silver composition (DUPONT No. 4817)

4) After repair, check the wire.
18. Rear Quarter Glass

A: REMOVAL
Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

B: INSTALLATION
1) Install the dam rubber.

2) Cut out the nozzle head and apply adhesive to the glass end surface as shown.

3) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
4) After completion of all work, allow the vehicle to stand for about 24 hours.

NOTE:
- When door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

5) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

NOTE:
When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.
19. Sun Roof Glass

A: REMOVAL
<Ref. to SR-6, REMOVAL, Glass Lid.>

B: INSTALLATION
<Ref. to SR-7, INSTALLATION, Glass Lid.>

C: ADJUSTMENT
<Ref. to SR-7, ADJUSTMENT, Glass Lid.>
20. Rearview Mirror

A: REMOVAL

NOTE:
Never reuse the spring. Prepare a new spring before removal.
1) Turn the mirror base 90° clockwise or counterclockwise to remove it.

2) Remove the spring from rearview mirror mount.

CAUTION:
Be careful not to damage the mirror surface.
3) When the rearview mirror mount is damaged, use the piano wire or spatula to remove.

CAUTION:
Be careful not to damage the windshield glass.

B: INSTALLATION

1) When the rearview mirror mount is removed, clean the old adhesive, and mate with the windshield glass mark to install.

Adhesive:
REPAIR KIT IN MR (Part No. 65029FC000) or equivalent

2) Ensure the rearview mirror mount is securely attached and then install the spring to it.
3) Install in the reverse order of removal.

C: INSPECTION

Check that the mirror is not damaged.
Check that the spring is not damaged.
21. Wiper Deicer System

A: WIRING DIAGRAM
<Ref. to WI-328, Wiper Deicer System.>

B: INSPECTION

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Repair order</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td></td>
<td>(5) Body integrated unit</td>
</tr>
</tbody>
</table>

Refer to “Rear Window Defogger” for inspection.
<Ref. to GW-31, INSPECTION, Rear Window Defogger.>

NOTE:
Wiper deicer system can be customized on the touch panel in center display or Subaru Select Monitor.

C: REPAIR
Refer to “Rear Window Defogger” for repair.
<Ref. to GW-32, REPAIR, Rear Window Defogger.>

*: When one of following items is occurred, finish the continuous operation and goes to OFF after 15 min.
- Ambient temperature that is more than 10°C (41°F) continues for 10 sec.
- Malfunction occurs on ambient temperature sensor
- Vehicle speed that is below 15 km/h (9 MPH) continues 15 min.
- Malfunction occurs on CAN communication
22. Wiper Deicer Switch

A: REMOVAL
1) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
2) Disconnect the harness connector and remove the wiper deicer switch.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION

1. WITH SUBARU SELECT MONITOR

CAUTION:
Check that the wiper deicer timer is in initial setting or customize setting before inspection.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK INPUT SIGNAL TO BODY INTEGRATED UNIT. When the wiper deicer switch is operated, check the input signal using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select {Body Integrated Unit} from «Main Menu». 4) Select {Current Data Display &amp; Save}. 5) When the wiper deicer switch is set to ON, check the input signal.</td>
<td>After the wiper deicer switch is set to ON, does it turn to OFF in 15 minutes? Or does it operates continuously?</td>
<td>END. Replace the body integrated unit. &lt;Ref. to SL-46, REMOVAL, Body Integrated Unit.&gt;</td>
</tr>
</tbody>
</table>

2. CHECK SWITCH
Remove the wiper deicer switch and measure the switch resistance.

<table>
<thead>
<tr>

B: CAUTION
- Be careful not to damage the meters and instrument panel.
- Be careful not to damage the meter glass.
- Make sure the electrical connector is connected securely.
- After installation, make sure that each meter operates normally.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply an excessive force on the printed circuit.
- Do not drop or otherwise apply impact.
- When the combination meter of model with immobilizer has been replaced, be sure to perform the registration procedure of immobilizer.

2. Combination Meter System

A: WIRING DIAGRAM

1. COMBINATION METER

<Ref. to WI-130, WIRING DIAGRAM, Combination Meter.>

B: INSPECTION

1. SELF-DIAGNOSIS

The self-diagnosis (checking of each meter, warning light, indicator, illumination, LCD, buzzer sound) of combination meter can be performed in the following procedure.

1) Connect the diagnostic connector (A) near the fuse & relay box.

2) Turn the ignition switch to ON.

3) While meter indicator needle deflecting, press the odo/trip meter knob twice.

NOTE:
When odo/trip meter knob is pressed only once, display mode is shifted to DTC display mode. <Ref. to IDI-12, DTC DISPLAY MODE, INSPECTION, Combination Meter System.>

When the self-diagnosis function is operated, the checking of warning light, indicator, and LCD display is performed, hereafter, every pressing the odo/trip meter knob, the operation check is performed in the order of meter, illumination and buzzer. <Ref. to IDI-4, LIST OF SELF-DIAGNOSIS MODE OPERATION, INSPECTION, Combination Meter System.>

To cancel the self-diagnosis mode, set the ignition switch to OFF or disconnect the diagnosis connector.

NOTE:
When the engine starts during diagnosis, the self-diagnosis mode is not cancelled, however, once the vehicle starts driving, the self-diagnosis mode is cancelled automatically for safety.
# Combination Meter System

## 2. LIST OF SELF-DIAGNOSIS MODE OPERATION

<table>
<thead>
<tr>
<th>Speedometer, tachometer, fuel gauge, water temperature gauge</th>
<th>Microcomputer running type warning light, indicator light</th>
<th>AT select lever position indicator light</th>
<th>Odo/Trip indicator</th>
<th>SPORT shift indicator</th>
<th>Illumination (indicator needle, plate, ring, LCD)</th>
<th>Buzzer (SPORT shift buzzer, speed warning buzzer)</th>
</tr>
</thead>
</table>

### Step 0. Processing to self-diagnosis mode

**Operating initial operation**
- **Initial illuminating**: Normal
- **Normal**
- **Initial illuminating**: Normal
- **Initial illuminating**: Not beep.

### Step 1-1. Check each indication after initial operation

- **Repeat the sweep operation (After holding on lowest position for one second, reaches to highest position within 5 seconds, and after holding on highest position for one second, reaches to lowest position within 5 seconds).**
  - **Light ON**: With the highest brightness, illuminate the position sequentially at a cycle of 1.5 seconds.
  - **Light ON**: Perform the segment check. For the illumination order, refer to the illumination order table.
  - **Light ON**: Perform the segment check. For the illumination order, refer to the illumination order table.
  - **Light ON**: Light at the highest brightness.
  - **Light ON**: Not beep.

### Step 1-2. Press the trip knob (trip knob input is not accepted till the meter indicator needle reaches the highest position): sweep complete. AT select lever position indicator display is set

- **Light OFF**: Keep the position indicated that set in step 1-2.
- **Light OFF**: Display the current meter directing angle on odometer. Ex.) Display “135054” when Speedometer/Tachometer: 135 degree, Water temperature gauge/Fuel gauge: 54 degree.
- **Light OFF**: “▼2” is displayed.
- **Light OFF**: Light at the highest brightness.
- **Light OFF**: Not beep.

### Step 2-1. Press the trip knob, and hold it: Check each meter

- **Light OFF**: Keep the position indicated that specified at step 1-2.
- **Light OFF**: Display the current meter directing angle on odometer.
- **Light OFF**: “2” is displayed.
- **Light OFF**: Light at the highest brightness.
- **Light OFF**: Not beep.

### Step 2-2. Release the trip knob: Specifying the meter directing position

- **Light OFF**: Keep the position indicated that set in step 1-2.
- **Light OFF**: Display the current meter directing angle on odometer.
- **Light OFF**: “2” is displayed.
- **Light OFF**: Light at the highest brightness.
- **Light OFF**: Not beep.

### Step 3-1. Press the trip knob, and hold it: Check illumination

- **Light OFF**: Keep the position indicated that specified at step 1-2.
- **Light OFF**: Display the current meter directing angle on odometer.
- **Light OFF**: “2” is displayed.
- **Light OFF**: Light at the highest brightness.
- **Light OFF**: Not beep.
## Combination Meter System

<table>
<thead>
<tr>
<th>Speedometer, tachometer, fuel gauge, water temperature gauge</th>
<th>Microcomputer running type warning light, indicator light</th>
<th>AT select lever position indicator light</th>
<th>Odo/Trip indicator</th>
<th>SPORT shift indicator</th>
<th>Illumination (indicator needle, plate, ring, LCD)</th>
<th>Buzzer (SPORT shift buzzer, speed warning buzzer)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keep the position that specified at step 2-2.</td>
<td>Light OFF</td>
<td>Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.</td>
<td>Illumination brightness is displayed. (From ILL6 to ILL1)</td>
<td>“▼3” is displayed.</td>
<td>Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.</td>
<td>Not beep.</td>
</tr>
</tbody>
</table>

**Step 3-2. Release the trip knob: Specifying the illumination brightness**

| Keep the position that specified at step 2-2. | Light OFF | Keep the brightness at the time when the trip knob is released. | Display the brightness at the time when the trip knob is released. | “3” is displayed. | Keep the brightness at the time when the trip knob is released. | Not beep. |

**Step 4-1. Press the trip knob: Check the beeping of SPORT shift buzzer (AT model)**

| All meter indicator needle returns to lowest position. | Light OFF | Light at the highest brightness. Keep the position indicated that set in step 1-2. | Illumination brightness is displayed. | “▲▼8” is displayed. Blinks with buzzer. | Light at the highest brightness. | SPORT shift buzzer beeps. |

**Step 4-2. Press the trip knob: Check the VDC indicator light (Model with VDC)**

| All meter indicator needle returns to lowest position. | VDC warning light and VDC operation indicator light blink. | Light at the highest brightness. Keep the position indicated that set in step 1-2. | Illumination brightness is displayed. | “4” is displayed. | Light at the highest brightness. | Not beep. |

**Step 4-3. Press the trip knob: Check the speed warning buzzer (KS model)**

| Speedometer indicates the vehicle speed, which was detected when the speed warning started. | Light OFF | Light at the highest brightness. Keep the position indicated that set in step 1-2. | Illumination brightness is displayed. | “4” is displayed. | Light at the highest brightness. | Speed warning buzzer beeps. |

**Step 5. Press the trip knob: Complete the self-diagnosis 1 cycle**

All meter indicator needle returns to lowest position, and go back to step 1 after completion.

**CAUTION:**
When measuring the voltage and resistance of each control module or sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin of more than 2 mm (0.08 in) in diameter.
### 4. CHECK POWER SUPPLY AND GROUND CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 | CHECK POWER SUPPLY FOR COMBINATION METER.  
   1) Remove the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.>  
   2) Disconnect the combination meter harness connector.  
   3) Turn the ignition switch to ON.  
   4) Measure the voltage between combination meter connector and chassis ground.  
   **Connector & terminal**  
   (i10) No. 3, No. 4 (+) — Chassis ground (−): Is the voltage more than 10 V?  
   Go to step 2.  
   Check the harness for open or short between the ignition switch and combination meter. | | |
| 2 | CHECK POWER SUPPLY FOR COMBINATION METER.  
   Measure the voltage between combination meter connector and chassis ground.  
   **Connector & terminal**  
   (i10) No. 1, No. 2 (+) — Chassis ground (−): Is the voltage more than 10 V?  
   Go to step 3.  
   Check the harness for open or short between the fuse and combination meter. | | |
| 3 | CHECK GROUND CIRCUIT OF COMBINATION METER.  
   1) Turn the ignition switch to OFF.  
   2) Measure the resistance of harness between combination meter connector and chassis ground.  
   **Connector & terminal**  
   (i10) No. 11, No. 12 — Chassis ground: Is the resistance less than 10 Ω?  
   Replace the meter case assembly.  
   Repair the wiring harness. | | |

### 5. CHECK ABSCM OR VDCCM

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>

<thead>
<tr>
<th>Step</th>
<th>Check THE IGNITION POWER SUPPLY.</th>
</tr>
</thead>
</table>
| 2    | 1) Turn the ignition switch to ON.  
      2) Measure the voltage between clock harness connector and chassis ground.  
      **Connector & terminal**  
      *(i59) No. 8 (+) — Chassis ground (−)*: |
|      | Is the voltage more than 10 V? |
|      | Yes | No | |
|      | Replace the clock body. | Check the open circuit in harness between fuse and clock. |

## 6. CHECK COMMUNICATION CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check THE HARNESS BETWEEN CLOCK AND COMBINATION METER.</th>
</tr>
</thead>
</table>
| 1    | 1) Turn the ignition switch to OFF.  
      2) Disconnect the harness of clock and combination meter.  
      3) Measure the resistance between harness connectors of clock and combination meter.  
      **Connector & terminal**  
      *(i59) No. 5 — (i10) No. 18:* |
|      | Is the resistance less than 10 Ω? |
|      | Yes | No | |
|      | Go to step 2. | Repair the wiring harness. |

<table>
<thead>
<tr>
<th>Step</th>
<th>Check COMMUNICATION ERROR DISPLAY.</th>
</tr>
</thead>
</table>
| 2    | 1) Connect all the disconnected connectors.  
      2) Turn the ignition switch to ON.  
      3) Check that the error code is displayed in odo/trip meter. |
|      | Is the error code “Er xx” displayed in odo/trip meter? |
|      | Yes | No | |
|      | Check the communication circuit.  
      <Ref. to IDI-11, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.> | Replace the clock body. |
4. Combination Meter Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Set the tilt steering at the lowest position.
3) Remove the instrument panel under cover and lower cover of driver’s seat side. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
4) Remove the screws of combination meter (one for upper side, two for lower side) and pull tilting the meter toward you.

5) Disconnect the connector in the rear side of combination meter to remove meter.

CAUTION:
- Be careful not to damage the meter or instrument panel.
- Pay particular attention to avoid damaging the meter glass.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:
- Make sure the electrical connector is connected securely.
- Make sure that each meter operates normally.
- When the combination meter of model with immobilizer has been replaced, be sure to perform the registration procedure of immobilizer.
C: DISASSEMBLY

CAUTION:
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Be careful not to apply excessive force to the trip knob.
- Be sure not to touch the meter indicator needle.

Remove the pawl (A), and then detach the meter glass assembly (B) and meter panel assembly (C) from meter case assembly (D).

1. BULB REPLACEMENT

LEDs are used for all of warning lights and indicator lights of combination meters, replace the meter case assembly if faulty.

D: ASSEMBLY

Assemble in the reverse order of disassembly.
5. Speedometer

A: SPECIFICATION
Since the meter case assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back side.)
6. Tachometer

A: SPECIFICATION
Since the meter case assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back side.)
7. Fuel Gauge

A: SPECIFICATION
Since the meter case assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back side.)
8. Water Temperature Gauge

A: SPECIFICATION
Since the meter case assembly cannot be disassembled, do not remove or inspect the water temperature gauge alone. (Do not remove the cover on the back side.)
9. Clock

**A: REMOVAL**
1) Disconnect the ground cable from battery.
2) Remove the center air vent grille. <Ref. to AC-44, REMOVAL, Air Vent Grille.>
3) Loosen the screws, and then remove the clock (B) from center air vent grille (A).

**B: INSTALLATION**
Install in the reverse order of removal.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

</tr>
</tbody>
</table>
2. Front Seat

A: REMOVAL
1) Disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.

CAUTION:
The airbag system is fitted with a backup power source. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds before starting the repair of airbag system.

2) While pressing the headrest lock button, remove the headrest.

3) Tilt the backrest forward.
4) Move the seat to full front end.
5) Remove the bolt cover at the rear side of slide rail.

6) Remove the two bolts at the rear side of slide rail.
7) Move the seat to full rear end.

8) Remove the two bolts at the front side of slide rail.

9) Disconnect the connector under the seat.
   • Seat belt warning light connector
   • Side airbag connector (model with side airbag)
   • Seat heater connector (model with seat heater)

10) Remove the front seat from vehicle.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to SE-2, FRONT SEAT (STANDARD SEAT), COMPONENT, General Description.>

C: DISASSEMBLY
1. STANDARD SEAT
1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the seat lifter cover using a flat tip screwdriver and loosen the inner bolt to remove seat lifter lever.
3) Remove the hook (A) and detach reclining lever cover.

4) Remove the screws (A) and clips (B), and then detach the seat hinge outer cover.

5) Loosen the screws to detach seat hinge inner cover.

6) Remove the TORX® bolt, and then remove the inner belt.

7) Remove the two bolts from reclining hinge on each side.

8) Remove the clips and hooks, and then detach the backrest back cover.

9) Remove the lock clip, and then remove the lumbar support lever.
10) Remove the hooks at the rear side of backrest.

11) Remove the cover frame (A).

12) Remove the headrest lock bushing.

NOTE:
Push outside to remove it from the inside of seat.

13) Pull out the backrest frame assembly.

14) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover from backrest.

15) Remove the hooks (A), and then remove the seat cushion frame assembly.

16) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.

17) Remove the bolt of sliding adjustment bar and connecting wire.
18) Remove the bolts, and then remove the slide rail.

19) Remove the hooks and hog rings at the bottom of headrest, and then remove the headrest cover from headrest.

2. POWER SEAT

1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the seat switch knob.

3) Disconnect the connector of reclining motor from the back of seat cushion.

4) Remove the screw (A) and clips (B), and then disconnect the seat switch connector to remove seat hinge outer cover.

5) Remove the screw (A) and clip (B), and then remove the seat hinge inner cover.

6) Remove the TORX® bolt, and then remove the inner belt.
7) Remove the two bolts from the reclining hinge on each left and right side.

8) Remove the clips and hooks, and then detach the backrest back cover.

9) Remove the lock clip, and then remove the lumber support lever.

10) Remove the hooks at the rear side of backrest.

NOTE:
For the seat with side airbag, the airbag module installation side is secured with hog rings (A).

11) Remove the cover frame (A).

12) Remove the headrest lock bushing.
NOTE:
Push outside to remove it from the inside of seat.

13) Pull out the backrest frame assembly.
14) Remove the two bolts on each left and right side, and then remove the reclining motor assembly.

15) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover from backrest.

16) Remove the clip (A) and straps (B) on the back of seat cushion.

17) Remove the bolt (A) and hook (B) on left and right side, and then remove the seat cushion frame from seat rail assembly.

18) Remove the hooks (A), and then remove the seat cushion from seat cushion frame.

19) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.

20) Remove the hooks and hog rings at the bottom of headrest, and then remove the headrest cover from headrest.

D: ASSEMBLY

1. STANDARD SEAT
Assemble in the reverse order of disassembly.

2. POWER SEAT
Assemble in the reverse order of disassembly.

CAUTION:
When the backrest cover is not installed securely, the side airbag module may not be deployed properly, therefore keep strictly to the following procedure.

• Be careful not to stain or damage the backrest cover during assembly.
• Always use new hog rings.
Front Seat

- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on the backrest cover.

**Tightening torque:**
Refer to “COMPONENT” of “General Description”. <Ref. to SE-2, FRONT SEAT (STANDARD SEAT), COMPONENT, General Description.>

**E: INSPECTION**

1. **SEAT COVER**
Check that no tear or fray on the backrest cover and seat cushion cover.

**NOTE:**
When the side airbag equipped model has tear or fray on the door side of backrest cover, the side airbag may not be deployed properly. Replace it with new one in such a case.

2. **SEATING SENSOR**
Make sure the passenger’s seat belt warning light illuminates when applying load to the rear surface of passenger’s seat cushion. If not, replace the seat cushion pad with a new one.
Rear Seat

3. Rear Seat

A: REMOVAL

1. SEDAN MODEL

1) Remove the two hooks while lifting up the rear seat cushion.

2) Remove the hook (A) by pushing it backward while lifting up the front side of seat cushion to detach seat cushion.

3) Remove the lower anchor bolt of rear center seat belt.

4) Remove the bolts which secure the bottom of backrest.

5) Remove the anchor part on backrest side from the hook on body side (A) while lifting up the backrest to detach it from vehicle.

2. WAGON MODEL

1) Disconnect the ground cable from battery.

2) Remove the two hooks while lifting up the rear seat cushion.

2) Remove the hook (A) by pushing it backward while lifting up the front side of seat cushion to detach seat cushion.
3) Remove the hook (A) by pushing it backward while lifting up the front side of seat cushion to detach seat cushion.

4) Remove the headrest, and then tilt the backrest forward.

5) Remove the luggage floor box. <Ref. to EI-74, REMOVAL, Luggage Floor Box.>

6) Remove the hinge assembly CTR bolts.

7) Remove the backrest from hinge assembly LH (hinge assembly RH).

B: INSTALLATION

1. SEDAN MODEL

Install in the reverse order of removal.

NOTE:
- After installing the backrest, make sure that each seat belt operates normally.
- Make sure that they are secured on each hook of vehicle side.
2. WAGON MODEL
Install in the reverse order of removal.

NOTE:
- After installing the backrest, make sure that each seat belt operates normally.
- Make sure that they are secured on each hook of vehicle side.

C: DISASSEMBLY

1. SEDAN MODEL
1) Remove the rear seat. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
2) Remove the headrest.
3) Remove the nuts, and then detach the trunk through assembly.
4) Remove the hog rings (A) on the rear side of backrest.
5) Remove the hog rings (A) on the front side of backrest.
6) Remove both sides of armrest hinge covers, and loosen the screws to remove armrest.
7) Remove the hook, and then detach the center through cover.
8) Remove the hook, and then remove the armrest cover.

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to SE-4, REAR SEAT (SEDAN MODEL), COMPONENT, General Description.>

Tightening torque:
Refer to “COMPONENT” of “General Description”. <Ref. to SE-5, REAR SEAT (WAGON MODEL), COMPONENT, General Description.>
9) Remove the hook and hog ring, and then remove the headrest cover.

10) Remove the hog rings (A) on the rear side of seat cushion.

11) Remove the hog rings (A), and then remove the seat cushion cover.

2. WAGON MODEL
   1) Remove the rear seat. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>

2) Remove the hooks at the bottom of backrest assembly LH, and then turn over the backrest cover to remove the hog rings (A) and hooks (B).

3) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover.

4) Remove the bolts, and then remove the backrest latch.

5) Loosen the screws to remove the armrest from backrest assembly RH.
NOTE:
Armrest cannot be removed when backrest assembly RH side does not mate with armrest side pin position.

6) After this operation, refer to the step 2) to disassemble backrest assembly RH.
7) Remove the hook, and then remove the armrest cover.

8) Remove the hook and hog ring, and then remove the headrest cover.

9) Remove the hog rings (A) on the rear side of seat cushion.

10) Remove the hog rings (A), and then remove the seat cushion cover.

D: ASSEMBLY
1. SEDAN MODEL
Assemble in the reverse order of disassembly.
NOTE:
• Do not contaminate or damage the cover.
• While installing the hog rings, prevent the seat from getting wrinkled.
CAUTION:
• Always use new hog rings.
• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and be sure to prevent backrest cover from wrinkle or twisting.

2. WAGON MODEL
Assemble in the reverse order of disassembly.
NOTE:
• Do not contaminate or damage the cover.
• While installing the hog rings, prevent the seat from getting wrinkled.
CAUTION:
• Always use new hog rings.
• Secure the hog ring using hog ring pliers.
• Install the hog rings to the specified points securely and be sure to prevent backrest cover from wrinkle or twisting.

E: INSPECTION
Check that no tear or fray on the seat cover.
4. Seat Heater System

A: REMOVAL

1. SEAT HEATER UNIT
   1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
   2) Remove the backrest cover and seat cushion cover of front seat. <Ref. to SE-7, DISASSEMBLY, Front Seat.>
   3) Remove the hog ring, and then remove the seat heater unit.

2. SEAT HEATER SWITCH
   1) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
   2) Remove the seat heater switch from console box.

B: INSTALLATION

1. SEAT HEATER UNIT
   Install in the reverse order of removal.

2. SEAT HEATER SWITCH
   Install in the reverse order of removal.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

General Description

5. KEYLESS ENTRY SYSTEM

B: CAUTION
- Before disassembling or reassembling parts, always disconnect the battery ground cable. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, these contents are erased upon disconnection.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust the parts to the specifications described in this manual if so designated.
- Connect the connectors securely during reassembly.
- After reassembly, ensure the functional parts operate smoothly.
- The air bag system wiring harness is routed near electrical parts and switches.
- All air bag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.

## Door Lock Control System

### 2. CHECK FUSE

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK FUSE. Remove and visually check the fuse No. 3 (in the fuse and relay box) and No. 7 (in the fuse and relay box).</td>
<td>Is the fuse blown out?</td>
<td>Replace the fuse with a new one.</td>
</tr>
</tbody>
</table>

### 3. CHECK POWER SUPPLY AND GROUND CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK POWER SUPPLY. 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between harness connector terminal and chassis ground. <strong>Connector &amp; terminal</strong> (i84) No. 34 (+) — Chassis ground (−); (B281) No. 2 (+) — Chassis ground (−):</td>
<td>Is the voltage more than 10 V?</td>
<td>Go to step 2.</td>
</tr>
<tr>
<td>2</td>
<td>CHECK GROUND CIRCUIT. Measure the resistance between harness connector terminal and chassis ground. <strong>Connector &amp; terminal</strong> (B280) No. 22 — Chassis ground; (B281) No. 8, 9, 22 — Chassis ground:</td>
<td>Is the resistance less than 10 Ω?</td>
<td>The power supply and ground circuit are OK.</td>
</tr>
</tbody>
</table>

### 4. CHECK DOOR LOCK SWITCH

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK DOOR LOCK SWITCH. Check the input from door lock switch to body integrated unit using Subaru Select Monitor. 1) Connect the Subaru Select Monitor to data link connector. 2) Turn the ignition switch to ON. 3) Select (body integrated unit) from main menu. 4) Select (Current Data Display &amp; Save). 5) Check the input to body integrated unit by operating the door lock switch.</td>
<td>Is the normal input signal displayed when the door lock switch is moved to LOCK/UNLOCK?</td>
<td>The door lock switch is OK.</td>
</tr>
<tr>
<td>2</td>
<td>CHECK DOOR LOCK SWITCH CIRCUIT. 1) Disconnect the body integrated unit harness connector. 2) Measure the resistance between the harness connector terminal and chassis ground when moving the door lock switch to LOCK. <strong>Connector &amp; terminal</strong> (i84) No. 15 — Chassis ground:</td>
<td>Is the resistance less than 10 Ω?</td>
<td>Go to step 3.</td>
</tr>
</tbody>
</table>
### 5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 CHECK OUTPUT SIGNAL.</td>
<td>Measure the voltage between the harness connector terminal and chassis ground of body integrated unit when moving the door lock switch to LOCK.</td>
<td>Is the voltage more than 10 V?</td>
<td>Go to step 2.</td>
</tr>
<tr>
<td>2 CHECK OUTPUT SIGNAL.</td>
<td>Measure the voltage between the harness connector terminal and chassis ground of body integrated unit when moving the door lock switch to UNLOCK.</td>
<td>Is the voltage more than 10 V?</td>
<td>Go to step 3.</td>
</tr>
<tr>
<td>3 CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL.</td>
<td>Measure the voltage between the harness connector terminal of power window main switch and chassis ground when moving the door lock switch to LOCK.</td>
<td>Is the voltage more than 10 V?</td>
<td>Go to step 4.</td>
</tr>
</tbody>
</table>
### 6. CHECK KEY CYLINDER LOCK SWITCH AND CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CHECK KEY CYLINDER LOCK SWITCH CIRCUIT.</td>
<td>Is the resistance less than 10 Ω?</td>
<td>Go to step 2.</td>
</tr>
<tr>
<td></td>
<td>1) Disconnect the body integrated unit harness connector.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>2) Measure the resistance between harness connector terminal and chassis ground when turning the key cylinder lock switch to LOCK.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Connect &amp; terminal (i84) No. 3 — Chassis ground:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>CHECK KEY CYLINDER LOCK SWITCH CIRCUIT.</td>
<td>Is the resistance less than 10 Ω?</td>
<td>Key cylinder lock switch is OK.</td>
</tr>
<tr>
<td></td>
<td>Measure the resistance between harness connector terminal and chassis ground when turning the key cylinder lock switch to UNLOCK.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Connect &amp; terminal (i84) No. 12 — Chassis ground:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>CHECK KEY CYLINDER LOCK SWITCH.</td>
<td>Is the resistance less than 1 Ω?</td>
<td>Go to step 4.</td>
</tr>
<tr>
<td></td>
<td>1) Disconnect the key cylinder lock switch connector.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>2) Measure the resistance between key cylinder lock switch terminals when turning the key cylinder lock switch to LOCK.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Terminals No. 1 — No. 2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>CHECK KEY CYLINDER LOCK SWITCH.</td>
<td>Is the resistance less than 1 Ω?</td>
<td>Check the harness for open or short circuits between body integrated unit and key cylinder lock switch.</td>
</tr>
<tr>
<td></td>
<td>Measure the resistance between key cylinder lock switch terminals when turning the key cylinder lock switch to UNLOCK.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Terminals No. 2 — No. 3</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## 7. CHECK DOOR LOCK ACTUATOR (DOUBLE LOCK) AND CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** CHECK OUTPUT SIGNAL.  
Measure the resistance between body integrated unit harness connector terminal and chassis ground when turning the key cylinder lock switch to LOCK.  
**Connector & terminal (i84) No. 35 (+) — Chassis ground (–):**  
Is the voltage more than 10 V? | Go to step 2. | Replace the body integrated unit. |
| **2** CHECK OUTPUT SIGNAL.  
Measure the resistance between body integrated unit harness connector terminal and chassis ground when turning the key cylinder lock switch to UNLOCK.  
**Connector & terminal (i84) No. 35 (+) — Chassis ground (–):**  
Is the voltage more than 10 V? | Go to step 3. | Replace the body integrated unit. |
| **3** CHECK DOOR LOCK ACTUATOR.  
Check the door lock actuator.  
Front door lock actuator: <Ref. to SL-31, Front Door Lock Actuator.>  
Rear door lock actuator: <Ref. to SL-35, Rear Door Lock Actuator.>  
Is the door lock actuator normal? | Check the harness for open or short circuits between body integrated unit and door lock actuator. | Replace the door lock actuator. |

## 2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1</strong></td>
<td>CHECK KEYLESS TRANSMITTER BATTERY.</td>
<td>Is the voltage more than 2 V?</td>
<td>Go to step 2.</td>
</tr>
<tr>
<td>1) Remove the battery from keyless transmitter. &lt;Ref. to SL-47, REMOVAL, Keyless Transmitter.&gt;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2) Check the battery voltage. &lt;Ref. to SL-47, INSPECTION, Keyless Transmitter.&gt;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>2</strong></td>
<td>CHECK KEYLESS TRANSMITTER.</td>
<td>Is the inspection target vehicle operates lock and unlock normally?</td>
<td>Go to step 3.</td>
</tr>
<tr>
<td>Register the keyless transmitter which operates normally on other vehicles to inspection target vehicle. &lt;Ref. to SL-47, REGISTRATION OF KEYLESS TRANSMITTER, REPLACEMENT, Keyless Transmitter.&gt;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1) Close all the doors and rear gate of inspection target vehicle.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2) Using keyless transmitter, lock and unlock the doors and rear gate of inspection target vehicle.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>3</strong></td>
<td>CHECK KEYLESS TRANSMITTER.</td>
<td>Is the keyless transmitter registered correctly?</td>
<td>Go to step 4.</td>
</tr>
<tr>
<td>Register the keyless transmitter of inspection target vehicle to another vehicle which operates keyless system normally. &lt;Ref. to SL-47, REGISTRATION OF KEYLESS TRANSMITTER, REPLACEMENT, Keyless Transmitter.&gt;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>4</strong></td>
<td>CHECK KEYLESS TRANSMITTER.</td>
<td>Is the vehicle operates lock and unlock normally?</td>
<td>Keyless transmitter is normal.</td>
</tr>
<tr>
<td>Check the registered keyless transmitter.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>1) Close all the doors and rear gate of the vehicle which operates keyless system normally.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2) Using keyless transmitter, lock and unlock the doors and rear gate of vehicle.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**CAUTION:**

Be sure to reset the keyless transmitter, which is registered from other vehicle to inspection target vehicle, and the vehicle, to which is registered keyless transmitter, to the condition of before inspection. (Register the keyless transmitter to original condition.)
## 3. CHECK FUSE

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK FUSE.  
Remove and visually check the fuse No. 3 (in the fuse and relay box) and No. 7 (in the fuse and relay box). | Is the fuse blown out? | Replace the fuse with a new one. | Check the power supply and ground circuit. <Ref. to SL-22, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.> |

## 4. CHECK KEYLESS ENTRY CONTROL MODULE

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK DIAGNOSTIC TROUBLE CODE (DTC)  
1) Connect the Subaru Select Monitor to data link connector.  
2) Turn the ignition switch to ON.  
3) Select {Body integrated unit} from main menu.  
4) Select the {Diagnostic Trouble Code}.  
5) Check that the DTC is displayed. | Is DTC B0500 “Keyless UART com. Malfunction” displayed? | Go to step 2. Keyless entry control module is normal. |  |
| 2    | CHECK POWER SUPPLY.  
1) Disconnect the keyless entry control module harness connector.  
2) Measure the voltage between the harness connector terminal and chassis ground.  
**Connector & terminal** *(i96) No. 4 (+) — Chassis ground (−):* | Is the voltage more than 10 V? | Go to step 3. Check the harness for open circuits and shorts between the keyless entry control module and fuse. |  |
| 3    | CHECK GROUND CIRCUIT.  
Measure the resistance between the harness connector terminal and chassis ground.  
**Connector & terminal** *(i96) No. 7 — Chassis ground:* | Is the resistance less than 10 Ω? | Go to step 4. Repair the harness. |  |
| 4    | CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT.  
1) Disconnect harness connector of body integrated unit.  
2) Measure the resistance between harness connector terminals.  
**Connector & terminal** *(i84) No. 9 — (i96) No. 3:* | Is the resistance less than 10 Ω? | Replace the keyless entry control module. <Ref. to SL-45, Keyless Entry Control Unit.> Repair the harness. |  |
### 5. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 | CHECK POWER SUPPLY OF BODY INTEGRATED UNIT.  
1) Disconnect the harness connector of body integrated unit.  
2) Measure the voltage between the harness connector terminal and chassis ground.  
**Connector & terminal**  
(B280) No. 7 (+) — Chassis ground (−);  
(B281) No. 2 (+) — Chassis ground (−):  
Is the voltage more than 10 V? | Go to step 2. | Check the harness for open or short between body integrated unit and fuse. |
| 2 | CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.  
1) Disconnect the harness connector of body integrated unit.  
2) Measure the resistance between the harness connector terminal and chassis ground.  
**Connector & terminal**  
(B280) No. 22 — Chassis ground:  
(B281) No. 8 — Chassis ground:  
(B281) No. 9 — Chassis ground:  
Is the resistance less than 10 Ω? | Check the body integrated unit.  
<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.> | Repair the harness. |

### 6. CHECK REGISTRATION CONNECTOR.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 | CHECK REGISTRATION CONNECTOR INPUT VOLTAGE.  
1) Disconnect the registration connector.  
2) Measure the voltage between the body integrated unit harness connector and chassis ground.  
**Connector & terminal**  
(B281) No. 22 (+) — Chassis ground (−):  
Is the voltage more than 10 V? | Go to step 2. | Repair the harness. |
| 2 | CHECK REGISTRATION CONNECTOR INPUT VOLTAGE.  
1) Connect the registration connector.  
2) Measure the voltage between the body integrated unit harness connector and chassis ground.  
**Connector & terminal**  
(B281) No. 22 (+) — Chassis ground (−):  
Is the voltage 0 V? | Registration connector circuit is OK. | Repair the harness. |

</table>
| 1    | CHECK HAZARD LIGHT OPERATION.  
Make sure the hazard light blinks when hazard switch is turned to ON. | Does the hazard light blink? | Go to step 2. | Check the hazard light circuit. |
| 2    | CHECK OUTPUT TO HAZARD LIGHT.  
1) Turn the ignition switch to OFF.  
2) Disconnect the key warning switch harness connector.  
3) Connect the Subaru Select Monitor to data link connector.  
4) Turn the ignition switch to ON.  
5) Select (Body integrated unit) from main menu.  
6) Select (ECM customizing).  
7) Check (Hazard answer-back setup), and then switch to ON setting if necessary.  
8) Select (Current Data Display & Save).  
9) When operating the LOCK/UNLOCK button of keyless transmitter, check the hazard output signal of body integrated unit. | Is output signal present when operating the keyless transmitter LOCK/UNLOCK button? | Go to step 3. | Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.> |
| 3    | CHECK CIRCUIT OF HAZARD LIGHT.  
1) Disconnect the harness connector of body integrated unit.  
2) Disconnect the turn signal & hazard unit harness connector.  
3) Measure the resistance between harness connector terminals.  
Connector & terminal  
(B280) No. 12 — (B32) No. 8: | Is the resistance less than 10 Ω? | Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.> | Repair the harness. |

### 11. CHECK TRUNK LID LOCK ACTUATOR

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK TRUNK LID LOCK ACTUATOR.  
1) Turn the ignition switch to OFF.  
2) Disconnect the key warning switch harness connector.  
3) Connect the Subaru Select Monitor to data link connector.  
4) Turn the ignition switch to ON.  
5) Select (Body integrated unit) from main menu.  
6) Select (Current Data Display & Save).  
7) When operating the TRUNK button of keyless transmitter, check the trunk unlock output signal of body integrated unit. | Is output signal present when operating the keyless transmitter TRUNK button? | Go to step 2. | Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.> |
| 2    | CHECK THE CIRCUIT OF TRUNK LID ACTUATOR.  
1) Disconnect harness connector of body integrated unit.  
2) Disconnect the trunk lid actuator harness connector.  
3) Measure the resistance between harness connectors.  
Connector & terminal  
(i84) No. 22 — (R186) No. 2: | Is the resistance less than 10 Ω? | Go to step 3. | Repair the harness. |

## 13. CHECK IGNITION SWITCH ILLUMINATION

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1 | **CHECK FUSE.**
   Remove and visually check the fuse No. 14 (in the main fuse box). | Is the fuse blown out? | Replace the fuse with a new one. | Go to step 2. |
| 2 | **CHECK POWER SUPPLY.**
   1) Disconnect the ignition switch illumination harness connector.
   2) Measure the voltage between the harness connector terminal and chassis ground.
   **Connector & terminal**
   (B224) No. 2 (+) — Chassis ground (−): | Is the voltage more than 10 V? | Go to step 3. | Check the harness for open circuits and shorts between the ignition switch illumination and fuse. |
| 3 | **CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.**
   1) Disconnect the harness connector of body integrated unit and ignition switch illumination harness connector.
   2) Measure the resistance between body integrated unit harness connector terminal and ignition switch illumination harness connector terminal.
   **Connector & terminal**
   (B280) No. 4 — (B224) No. 1: | Is the resistance less than 10 Ω? | Replace the ignition switch illumination bulb with a new one. 〈Ref. to LI-40, REMOVAL, Ignition Switch Illumination.〉 | Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination. |
4. Front Inner Remote

A: REMOVAL
1) Remove the door trim. <Ref. to El-48, REMOV-
AL, Door Trim.>
2) Remove the back cover (1) of inner remote.
3) Remove the outer cable (2).
4) Remove the wire end ball (3).
5) Remove the screws (4), and detach the inner re-
   mote handle.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the inner remote works correctly after in-
stallation.

C: INSPECTION
1) Check the outer wire and inner wire for deforma-
tion. When it is deformed, straighten it because fail-
ure operations may occur. When it is unrepairable,
replace the front door latch & door lock actuator as-
sembly.
2) Check the lever, rod and wire for smooth opera-
tion.
5. Front Outer Handle

A: REMOVAL

1. MODEL WITHOUT DOUBLE LOCK

1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wire from front inner remote. <Ref. to SL-28, REMOVAL, Front Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
5) Remove the rod clamps (1).
6) Remove the bolts (2), and then detach the front outer handle.

CAUTION:
Do not apply excessive force to remove the handle from door panel. Otherwise door panel may be deformed.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure the outer handle works correctly after installation.

C: INSPECTION

1) Check the rod for deformation.
2) Check the lever and rod for smooth operation.

2. MODEL WITH DOUBLE LOCK

1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wire from front inner remote. <Ref. to SL-28, REMOVAL, Front Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
5) Remove the bolt (3), and then remove the key cylinder cover B (4).
6) Remove the rod clamps (1).
7) Remove the bolt (2), and then remove the key cylinder.
8) Remove the key cylinder cover A, and then detach the front outer handle.
6. Front Door Latch and Door Lock Actuator Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wires from front inner remote. <Ref. to SL-28, REMOVAL, Front Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
5) Remove the front door glass. <Ref. to GW-10, REMOVAL, Front Door Glass.>
6) Remove the rear sash. <Ref. to GW-15, REMOVAL, Front Regulator and Motor Assembly.>
7) Remove the key cylinder cover B, and remove the key rod from key cylinder. (Model with double lock)
8) Open the handle rod cover of latch assembly.
9) Remove the three screws.
10) Remove the front door latch & door lock actuator assembly, and disconnect the connector.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION
1) Check the rod, outer wire and inner wire for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch & door lock actuator assembly.
2) Check the lever, rod and wire for smooth operation.
7. Front Door Lock Actuator

A: REMOVAL
1) Remove the front door latch & door lock actuator assembly. <Ref. to SL-30, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
2) Remove the pawl of front door latch security cover, and then remove the cover. (Model without double lock)
3) Remove the screw from the front door latch and door lock actuator, and then remove the door lock actuator. (Model without double lock)

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION
1) Disconnect the door lock actuator harness connector.
2) Connect the battery to door lock actuator terminals.
If defective, replace the door lock actuator.
1. Model without double lock

8. Rear Inner Remote

A: REMOVAL
1) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
2) Remove the back cover (1) of inner remote.
3) Remove the outer cable (2).
4) Remove the wire end ball (3).
5) Remove the screws (4), and detach the inner remote handle.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the inner remote works correctly after installation.

C: INSPECTION
1) Check the outer wire and inner wire for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch & door lock actuator assembly.
2) Check the lever, rod and wire for smooth operation.
3) Check the child safety lock for correct operations.
9. Rear Outer Handle

A: REMOVAL
1) Raise the rear door glass to the top position.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
4) Remove the rear door latch assembly. <Ref. to SL-34, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
5) Remove the wire from wire clamp (1) of outer handle.
6) Remove the two bolts.
7) Detach the outer handle bracket. (Model with double lock)
8) Detach the rear outer handle.

CAUTION:
Do not apply excessive force to remove the handle from door panel. Otherwise door panel may be deformed.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the outer handle works correctly after installation.

C: INSPECTION
1) Check the wires for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch & door lock actuator assembly.
2) Check the lever and wire for smooth operation.
10. Rear Door Latch and Door Lock Actuator Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the wires from rear inner remote. <Ref. to SL-32, REMOVAL, Rear Inner Remote.>
4) Remove the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
5) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
6) Remove the rear sash. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
7) Take out the wire from wire clamp of outer handle.
8) Detach the outer handle bracket. (Model with double lock)
9) Remove the three screws.
10) Disconnect the connectors, and then remove the rear door latch & door lock actuator assembly.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION
1) Check the wires for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch & door lock actuator assembly.
2) Check the lever and wire for smooth operation.
11. Rear Door Lock Actuator

A: REMOVAL
1) Remove the rear door latch & door lock actuator assembly. <Ref. to SL-34, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
2) Remove the pawl of rear door latch security cover, and then remove the cover. (Except for EK model)
3) Remove the screw from the rear door latch and door lock actuator, and then remove the door lock actuator. (Except for EK model)

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION
1) Disconnect the door lock actuator harness connector.
2) Connect the battery to door lock actuator terminals.
If defective, replace the door lock actuator.

12. Rear Gate Outer Handle

A: REMOVAL
1) Remove the rear gate trim. <Ref. to E1-69, REMOVAL, Rear Gate Trim.>
2) Remove the rear gate garnish. <Ref. to E1-76, REMOVAL, Rear Gate Garnish.>
3) Remove the two nuts to take out the rear gate outer handle.
4) Remove the rear gate outer handle cable.

![Diagram of Rear Gate Outer Handle]

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the outer handle works correctly after installation.

C: INSPECTION
1) Check the rear gate handle cable for deformation.
2) Check the rear gate outer handle and rear gate handle cable for smooth operation.
13. Rear Gate Latch Assembly

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Remove the two screws.

4) Remove the rear gate latch cover. (Model with double lock)

5) Disconnect the each connector and rear gate handle cable.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Make sure the lock works correctly after installation.

C: INSPECTION
1) Disconnect the rear gate lock actuator harness connector.
2) Connect the battery to rear gate lock actuator terminals.

Terminals No. | Actuator operation
---|---
No. 2 (+) and No. 1 (-) | Unlocked \(\rightarrow\) Locked
No. 1 (+) and No. 2 (-) | Locked \(\rightarrow\) Unlocked

Diagram: (Illustration of the rear gate latch assembly parts and connections.)
Replace the rear gate latch assembly if faulty.
3) Check the rear gate handle cable for deformation.
4) Check the lever and rear gate handle cable for smooth operation.
14. Trunk Lid Lock Assembly

A: REMOVAL

1. MODEL WITHOUT DOUBLE LOCK
1) Disconnect the connectors and detach the trunk opener cable.
2) Remove the two bolts to remove trunk lid lock assembly.

2. MODEL WITH DOUBLE LOCK
1) Disconnect the connectors and detach the trunk opener cable.
2) Remove the two bolts and clip to remove trunk lid lock assembly.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
• Apply grease to the movable part.
• Make sure the lock works correctly after installation.

C: INSPECTION
1) Disconnect the trunk lid actuator harness connector.
2) Connect the battery to trunk lid actuator terminals.

If defective, replace the trunk lid actuator.
3) Check the striker for deformation or abnormal wear.
4) Check the safety lever for improper movement.
5) Check other levers and the spring for rust formation and unsmooth movement.
6) Check the trunk opener cable for smooth operation.

15. Front Hood Lock Assembly

A: REMOVAL
1) Open the front hood.
2) Remove the bolts, and then detach the front hood lock assembly.
3) Remove the release cable from lock assembly.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
- Apply grease to the movable part.
- Make sure the release cable works correctly after installation.

C: ADJUSTMENT
Loosen the bolt, and adjust the lock assembly while moving it up and down.

D: INSPECTION
1) Check the striker for deformation or abnormal wear.
2) Check the safety lever for improper movement.
3) Check other levers and the spring for rust formation and unsmooth movement.
16. Remote Openers

A: REMOVAL

1. FRONT HOOD OPENER
   1) Remove the release cable from hood lock.
   2) Remove the bolt, and then detach the opener lever.

2. TRUNK LID OPENER
   1) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
   2) Remove the center pillar lower trim, side sill cover, rear pillar lower trim and floor mat on the driver’s side. Remove the clip holding cable.
   3) Remove the bolt, and then detach the opener pull handle.
   4) Remove the cable from opener pull handle.
   5) Remove the trunk lid lock assembly from trunk lid.
   6) Remove the cable from trunk lid lock assembly.

3. FUEL FLAP OPENER
   1) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
   2) Remove the center pillar lower trim, side sill cover, rear pillar lower trim and floor mat on the driver’s side. Remove the clip holding cable.
   3) Remove the bolt, and then detach the opener pull handle.
   4) Remove the cable from opener pull handle.
   5) Remove the rear quarter trim RH. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>

(A) Sedan model
(B) Wagon model
   (1) Cover
   (2) Pull handle ASSY
   (3) Cable
Remote Openers

6) Rotate the fuel lock inside of the quarter panel to 90° and remove. (Either right or left turn)

B: INSTALLATION

1. FRONT HOOD OPENER
   Install in the reverse order of removal.

2. TRUNK LID OPENER
   Install in the reverse order of removal.

3. FUEL FLAP OPENER
   Install in the reverse order of removal.

C: INSPECTION
   Make sure the front hood, trunk lid and fuel flap open and close smoothly.
Ignition Key Lock

A: REPLACEMENT
1) Disconnect the ground cable from battery.
2) Remove the steering column. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
3) Secure the steering column in a vise. Remove the bolt with a drill.
4) Remove the ignition key lock.
5) Using a new bolt, tighten the bolts all the way.

B: INSPECTION
1) Remove the instrument panel lower panel.
2) Remove the lower column cover.
3) Unfasten the fixing clip which secures harness, and then disconnect the connector of the ignition switch from body harness.
4) Turn the ignition key plate to each position and check the continuity between terminals of ignition connector.

If NG, replace the ignition switch.

18. Key Lock Cylinders

A: REPLACEMENT

1. MODEL WITHOUT DOUBLE LOCK
1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the sealing cover.
4) Remove the rod clamp. Remove the bolt. Replace the key cylinder (1).

2. MODEL WITH DOUBLE LOCK
1) Raise the front door glass to the top position.
2) Remove the door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the sealing cover.
4) Remove the bolt (2), and remove the key cylinder cover (1).
5) Remove the rod clamp. Remove the bolt (3). Replace the key cylinder.
19. Keyless Entry Control Unit

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
3) Remove the screw, then remove the keyless entry control unit while disconnecting the connector.

B: INSTALLATION
Install in the reverse order of removal.
20. Body Integrated Unit

A: REMOVAL

NOTE:
- Prepare the security ID plate.
- Prepare all registered immobilizer keys for the model with immobilizer.
- Make a registration of immobilizer for the model with immobilizer. For detailed operation procedure, refer to “IMMOBILIZER REGISTRATION MANUAL”.
- If replacing the body integrated unit, check the current setting and note it. <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

1) Disconnect the ground cable from battery.
2) Remove the instrument panel lower panel on driver’s side. <Ref. to EI-56, REMOVAL, Instrument Panel Assembly.>
3) Disconnect the connector of body integrated unit.

CAUTION:
Be careful to keep water and other foreign materials away from body integrated unit.

4) Remove the body integrated unit from the body integrated unit mounting bracket using flat tip screwdriver.

CAUTION:
Be careful not to damage the unit when removing it forcibly from the bracket.

5) Remove the clutch pedal stopper arm. (MT model) <Ref. to CL-26, REMOVAL, Clutch Pedal.>
6) Remove two body integrated unit bracket mounting bolts, and remove the bracket.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Make sure it conforms to the current setting condition after installation. <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>
Keyless Transmitter

A: REMOVAL

1. KEYLESS TRANSMITTER BATTERY

Remove the screw from keyless transmitter, and remove the keyless transmitter battery (1).

NOTE:
To prevent static electricity damage to the keyless transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the keyless transmitter.

- Except for EK model

B: INSTALLATION

1. KEYLESS TRANSMITTER BATTERY

Install in the reverse order of removal.

C: INSPECTION

1. KEYLESS TRANSMITTER BATTERY

Measure the voltage between the keyless transmitter battery (+) terminal and (-) terminal.

NOTE:
- Battery discharge occurs during the measurement. Complete the measurement within 5 seconds.

- During the battery voltage measurement, the voltage falls more than 1.8 volts in 3 seconds period.

If NG, replace the battery. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. REGISTRATION OF KEYLESS TRANSMITTER

NOTE:
- A maximum of four keyless transmitter can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of keyless transmitter is necessary.
- When replacing the keyless transmitter, registration to immobilizer system is also necessary.

1) Remove the keyless transmitter from the ignition switch.
2) Remove the lower trim cover at driver’s side, then connect the registration connectors. (1 pole white connector)
3) Press the door lock switch (1) located under the power window main switch to UNLOCK. (Make sure the room light blinks and buzzer sounds, and then system is in registration mode.)
Keyless Transmitter

SECURITY AND LOCKS

4) While pressing the button of keyless transmitter to be registered twice with door lock switch pressed to UNLOCK. (Button for LOCK, UNLOCK and TRUNK are acceptable)
5) When the registration is completed normally, the door lock actuator will lock \(\rightarrow\) unlock. If the lock \(\rightarrow\) unlock operation is not carried out, repeat the procedure 4).

NOTE:
- When pressing the keyless transmitter button, slowly press for first and second (press longer for second) to check operation of door lock actuator.
- Do not press the button of keyless transmitter more than twice.
- Do not batter the button of keyless transmitter.
6) Repeat the steps 4) if there is an additional keyless transmitter to be registered.
7) Pull out the registration connector, and install the lower trim cover at driver’s side.

NOTE:
- The transmitter can be registered only when the door lock switch is remain pushed to UNLOCK.
- Continuing to press the door lock switch to UNLOCK again allows to be registered although the door lock switch is released for once.
- When adding the keyless transmitter, re-registration of keyless transmitter which was already registered is necessary.

2. CLEAR OF KEYLESS TRANSMITTER

1) Remove the keyless transmitter from ignition switch.
2) Remove the lower trim cover at driver’s side, then connect the registration connectors. (1 pole white connector)
3) Press the door lock switch located under the power window main switch to LOCK. (Make sure the room light blinks and buzzer sounds, and system becomes in clear mode.)
4) While pressing door lock switch to LOCK, insert and remove the key on ignition switch 10 times within 10 seconds.
5) When the clearing is completed normally, the door lock actuator will lock \(\rightarrow\) unlock. If the lock \(\rightarrow\) unlock operation is not carried out, repeat the procedure 4).
6) Pull out the registration connector, and install the lower trim cover at driver’s side.

NOTE:
- The transmitter can be cleared only when the door lock switch is remain pushed to UNLOCK.
- Continuing to press the door lock switch to LOCK again allows to be cleared although the door lock switch is released for once.
- If changing from registration mode to clear mode, you cannot go to clear mode unless completing the registration mode. The reverse case is same as this.
22. Immobilizer Control Unit

A: NOTE
The control of immobilizer system is carried out in body integrated unit.

B: REMOVAL
<Ref. to SL-46, REMOVAL, Body Integrated Unit.>

C: INSTALLATION
Install in the reverse order of removal.
23. Immobilizer Antenna

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the screws, and detach the upper column cover and lower column cover.

3) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
4) Disconnect the immobilizer antenna connector (A) and ignition switch lighting connector (B).
5) Loosen the screw and release the lock (D) at opposite side using flat-tip screwdriver (1), and then detach the immobilizer antenna (C).

CAUTION:
Do not apply excessive force to remove the immobilizer antenna and lock. Otherwise they may be broken because those parts are the products made of a plastic.

B: INSTALLATION
Install in the reverse order of removal.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

T1: 7.5 (0.76, 5.3)
T2: 4.5 (0.46, 3.0)
B: CAUTION
- Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing the audio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable in order to prevent memory deletion.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely for reassembly.
- After reassembly, make sure functional parts operate smoothly.

</tbody>
</table>

- Failure turn of glass lid while driving rough road.

Glass lid has auto-reverse function. When applied above specified force to the glass lid, the lid turns back and stops. When operating the glass lid (open or close) while driving the rough road, the lid judges vibration as a force and may causes failure turns. When the failure turn is occurred, the initialize operation is required with following procedure.

1. INITIALIZE OPERATION (SEDAN MODEL)
1) Tilt up the glass lid.  
2) Release the switch once, and press the tilt up switch again for 15 seconds.  
3) When the glass lid is raised a little and returned to tilt up position, release the switch for the moment. (Initialization of position detecting function)  
4) Keep pressing the tilt up switch within 5 seconds from releasing the switch, glass lid tilts down → slides open → slides close operation automatically. (Time gap of more than 5 seconds will result in cancellation of position detecting function.)  
5) Initialize operation is completed.

2. INITIALIZE OPERATION (WAGON MODEL)
1) Apply the force to glass lid in the direction of glass lid open while glass lid (rear) is closing, and then reverse the lid five times in a row.  
However, in the following situation, the initialize operation is canceled.  
- When the lid is fully closed once during auto-reverse operation five times in a row.  
- When the interval of auto-reverse operation is more than 30 seconds once.  
2) When the operation of glass lid shift to brink operation*, fully close the lid on switch operation.  
3) Initialize operation is completed.

*Brink operation: Although keep pressing the switch, glass lid operates only at a moment when the switch is pressed.
3. Glass Lid

A: REMOVAL

1. SEDAN MODEL

1) Completely close the glass lid, and then open the sunshade.
2) Remove the cover (A), and then remove the TORX® bolts (B).

CAUTION: TORX® bolts are applied with thread locker. If they are removed, replace with new ones.

2. WAGON MODEL (FRONT)

1) Open the sunshade.
2) Pull out the cover (A) toward arrow mark, and then remove the nut (B).

3) Remove the glass lid (front) carefully.

3. WAGON MODEL (REAR)

1) Tilt up the glass lid (front), and then open the sunshade.
2) Remove the cover (A), and then remove the nut (B).

3) Remove the glass lid carefully.
Glass Lid
SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: INSTALLATION
Install in the reverse order of removal.

C: ADJUSTMENT

1. SEDAN MODEL
Loosen the glass lid mounting TORX® bolts (A), and then adjust the height with moving 9.5 mm (0.374 in) nut (B) on lid side.

\[ \text{Difference in height between glass lid and roof panel } L: \ 2.0 \pm 1.0 \text{ mm (0.079} \pm \text{0.039 in)} \]

2. WAGON MODEL
Loosen the glass lid installation nuts, and then adjust the height by adding (max: four pieces) or extracting (min: zero piece) shims (B) (standard: two pieces) which installed between glass lid (A) and body.

D: FORCED DRIVE
If glass lid dose not operate or is not supplied with power, move the glass lid using the emergency handle (wrench)*.

*: Emergency handle (L shape general purpose hexagon wrench)
  Sedan model: bolt width 4 mm (0.16 in)
  Wagon model: bolt width 5 mm (0.20 in)

1. SEDAN MODEL
1) Remove the spot map light. <Ref. to LI-34, REMOVAL, Spot Map Light.>
2) Insert the wrench securely until it touches the motor shaft edge.
3) Turn the wrench, and move the glass lid.
   • Turning right, the glass lid open.
   • Turning left, the glass lid close.
2. WAGON MODEL

1) Raise the left and right side hook (A) of sunshade.

2) Slide the sunshade forward.
3) Remove the plug in the rear side of roof trim.

4) Insert the wrench securely until it touches the motor shaft edge.
5) Turn the wrench to right, and close the glass lid (front and rear).

CAUTION:
After forced drive, the initialize operation is required. <Ref. to SR-5, INSPECTION, Sunroof Control System.>
4. Sunroof Assembly

A: REMOVAL

1. SEDAN MODEL
   1) Disconnect the ground cable from battery.
   2) Remove the roof trim. <Ref. to EI-67, SEDAN
      MODEL, REMOVAL, Roof Trim.>
   3) Disconnect the harness connector of sunroof
      motor.
   4) Remove the glass lid. <Ref. to SR-6, SEDAN
      MODEL, REMOVAL, Glass Lid.>
   5) Remove the drain tube from frame assembly.
   6) Remove the assist rail bracket (front) (A) and
      sunroof bracket (rear) (B).
   7) Remove the nuts, and then remove the frame
      assembly.

2. WAGON MODEL
   1) Disconnect the ground cable from battery.
   2) Remove the roof trim. <Ref. to EI-67, WAGON
      MODEL, REMOVAL, Roof Trim.>
   3) Disconnect the harness connector of motor as-
      sembly.
   4) Remove the front and rear glass lid. <Ref. to SR-
      6, WAGON MODEL (FRONT), REMOVAL, Glass
      Lid.> <Ref. to SR-6, WAGON MODEL (REAR),
      REMOVAL, Glass Lid.>
   5) Remove the installation bolts (A) on rear side
      frame bracket of frame assembly.
   6) Remove the drain tube from frame assembly.
   7) Remove the frame bracket (A).
8) Remove the bolts (B) and nuts (C), and then remove the frame assembly.

**B: INSTALLATION**
Install in the reverse order of removal.

**CAUTION:**
Be careful not to snag the harness.

**NOTE:**
- Be sure to connect the harness connector.
- When installing the drain tube, insert it securely into drain pipe.

**Length A:**
15 mm (0.59 in) or more

**C: DISASSEMBLY**

1. **SEDAN MODEL**
   1) Remove the glass lid.
   2) Slide the sunshade to full front end.

   3) Remove the screw from the slider bracket (A) of roof side.

   4) Pull out the sunshade from roof opening.

   **NOTE:**
   For sedan model, sunshade can be removed/installed with frame assembly installed to the vehicle.

2. **WAGON MODEL (FRONT)**
   1) Remove the frame assembly. <Ref. to SR-9, REMOVAL, Sunroof Assembly.>
   2) Slide the sunshade to fully open position, and then remove the screw from slider bracket (A).

   3) Pull out the sunshade to backward.
3. WAGON MODEL (REAR)
1) Remove the frame assembly.
2) Remove the shade stopper (A) of sunshade.
3) Pull out the sunshade (A) from sunroof frame.

D: ASSEMBLY
Assemble in the reverse order of disassembly.

E: INSPECTION
1. CHECK FOR MOVING LOAD OF SUNSHADE
1) Attach a spring balance to sunshade edge using a cloth.
2) Pull the spring balance to measure moving load of the sunshade.

Moving load of sunshade:
Standard value
18.0±5.0 N (1.8±0.5 kgf, 13±3.7 lb)

NOTE:
Moving load is larger at the beginning of pulling a spring balance, so take a spring balance reading while sunshade sliding smoothly.
3) If moving load exceeds specifications, check the glass lid, sunshade and frame assembly for improper installation.
5. Sunroof Motor

A: REMOVAL

CAUTION:
- When removing the clip, use great care not to damage the roof trim.
- Never rotate the sunroof motor after removing it.

1. SEDAN MODEL
   1) Completely close the glass lid.
   2) Disconnect the ground cable from battery.
   3) Remove the roof trim. <Ref. to EI-67, SEDAN MODEL, REMOVAL, Roof Trim.>
   4) Disconnect the harness connector, and then remove the motor assembly mounting screw.

   CAUTION:
   When removing the motor assembly, secure the cable wires to prevent moves.

B: INSTALLATION

CAUTION:
When installing the motor assembly, be careful not to move the sunroof cable.

2. WAGON MODEL
   1) Fully close the glass lid (front) and glass lid (rear).
   2) Disconnect the ground cable from battery.
   3) Remove the luggage room light. <Ref. to LI-36, REMOVAL, Luggage Room Light.>
   4) Remove the roof trim. <Ref. to EI-67, WAGON MODEL, REMOVAL, Roof Trim.>
   5) Pass the seat belt tongue (A) located on center of rear seat through the hole, and then pull it out to the opposite side of trim.

   6) Remove the clips, and then drop the rear end of roof trim.

   7) Disconnect the harness connector (A), and then remove the motor assembly mounting bolt (B) and nuts (C).
1. SEDAN MODEL

1) Align the coulisse assembly and link assembly in the same position.

2) Install the motor assembly.

3) Connect the harness connector of motor assembly, and then connect the battery ground cable to battery.

4) Perform the initialize operation of motor.

   (1) Tilt up the glass lid.
   (2) Release the switch once, and press the tilt up switch again for 15 seconds.
   (3) When the glass lid is raised a little and on tilt up position, release the switch for the moment.
   (4) Keep pressing the tilt up switch within 5 seconds from releasing the switch, glass lid tilts down → slides open → slides close operation automatically, and then initialize operation is completed.

5) Check the operation of sunroof with following table.

<table>
<thead>
<tr>
<th>Operation</th>
<th>Switch position</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Glass lid closes completely.</td>
<td>Close</td>
</tr>
<tr>
<td>(2) Glass lid tilt up to the top position.</td>
<td>Tilt up</td>
</tr>
<tr>
<td>(3) Glass lid lowers completely.</td>
<td>Tilt down</td>
</tr>
<tr>
<td>(4) Glass lid opens completely.</td>
<td>Open</td>
</tr>
<tr>
<td>(5) Glass lid closes 150 mm (5.91 in) away from completely closed position.</td>
<td>Close</td>
</tr>
<tr>
<td>(6) Glass lid closes completely.</td>
<td>Close</td>
</tr>
</tbody>
</table>

6) Install the trim in the reverse order of removal.
2. WAGON MODEL

Check that the wedge of glass lid (front) bracket part is contacting in the direction of vehicle front. At this time, the lid is at fully open position.

1) Install the motor assembly.
2) After the installation of motor assembly, check again that the wedge of glass lid (front) bracket part is contacting in the direction of vehicle front.
3) Connect the harness connector of motor assembly, and then connect the battery ground cable to battery.
4) Perform the initialize operation of motor.
   • When replacing the motor with a new one, fully close the glass once and perform the initialization of position, because the movement of glass lid shifts to brink operation.
   • When reusing the motor, operate the auto-reverse function five times in a row to shifts brink operation, and then perform the initialization of position.
5) Check the operation of sunroof with following table.

<table>
<thead>
<tr>
<th>Operation</th>
<th>Switch position</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Glass lid (front) and glass lid (rear) closes completely</td>
<td>Close</td>
</tr>
<tr>
<td>(2) Glass lid (front) tilt up to the ventilating position.</td>
<td>Open</td>
</tr>
<tr>
<td>(3) Glass lid (front) tilts up to top position, and glass lid (rear) opens near the completely open position.</td>
<td>Open</td>
</tr>
<tr>
<td>(4) Glass lid (rear) opens completely.</td>
<td>Open</td>
</tr>
<tr>
<td>(5) Glass lid (rear) closes on 150 mm (5.91 in) from rear end of tilted up glass lid (front).</td>
<td>Close</td>
</tr>
<tr>
<td>(6) Glass lid (rear) closes completely.</td>
<td>Close</td>
</tr>
<tr>
<td>(7) Glass lid (front) lowers, and then glass lid (front) and glass lid (rear) closes completely.</td>
<td>Close</td>
</tr>
</tbody>
</table>

6) Install the trim in the reverse order of removal.
6. Sunroof Switch

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the spot map light lens (A) and sunroof switch mounting screws (B).

3) Disconnect the harness connector, and then remove the sunroof switch.

B: INSTALLATION
Install in the reverse order of removal.

C: INSPECTION
1. SEDAN MODEL
Measure the sunroof switch resistance.

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Terminal No.</th>
<th>Standard</th>
<th>Connector No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>

1. General Description

A: COMPONENT

1. FRONT GRILLE

- Front grille
- Front grille emblem
- Front grille clip

Tightening torque: Nm (kgf-m, ft-lb)

\[
T = 14 \text{ (1.42, 10.3)}
\]
3. UNDER PROTECTOR

(1) Floor under protector
(2) Fuel tank protector RH
(3) Fuel tank protector LH
(4) Plastic nut
General Description

4. FRONT HOOD GRILLE

(1) Front hood grille
(2) Grille duct upper
(3) Grille duct lower
5. FRONT BUMPER

(1) Bumper face
(2) Towing hook cover
(3) Fog light cover
(4) Lower side bracket
(5) Upper bracket
(6) Side bracket
(7) Energy absorber foam upper
(8) Energy absorber foam lower
(9) Main beam reinforcement
(10) Main beam bracket
(11) Bracket support
(12) Energy absorber side
(13) Lower center bracket
(14) Radiator guide

**Tightening torque: N·m (kgf·m, ft-lb)**

- **T1:** 7.5 (0.77, 5.5)
- **T2:** 33 (3.4, 24)
6. REAR BUMPER (SEDAN MODEL)

(1) Bumper face
(2) Exhaust end cover
(3) Beam upper rear
(4) Bracket corner
(5) Lower bracket
(6) Bumper side support upper
(7) Bumper side support lower
(8) Beam main reinforcement
(9) Bumper beam bracket

Tightening torque: Nm (kgf-m, ft-lb)

T: 33 (3.4, 24)
7. REAR BUMPER (WAGON MODEL)

(1) Bumper face
(2) Exhaust end cover
(3) Beam upper rear
(4) Bracket corner
(5) Lower bracket
(6) Bumper side support upper
(7) Bumper side support lower
(8) Beam main reinforcement
(9) Bumper beam bracket

**Tightening torque: N m (kgf-m, ft-lb)**

\[ T: 33 \text{ (3.4, 24)} \]
8. MUD GUARD

- (1) Front mud guard
- (2) Rear mud guard

9. COWL PANEL

- (1) Cowl panel
- (2) Weather strip
- (3) Cover cowl panel
- (4) Cowl side panel
10. ROOF SPOILER

(1) Roof spoiler
(2) High-mounted stop light
(3) Washer nozzle

\[
\text{Tightening torque: } N \cdot m \ (kgf \cdot m, \ ft-lb) \\
T: \ 4.5 (0.46, \ 3.32)
\]

11. SIDE SILL SPOILER

(1) Side sill spoiler
(2) Double-sided tape
(3) Air flap side sill end
12. ROOF MOLDING

(1) Roof molding  (3) Clip
(2) Roof carrier attachment  (4) Roof carrier attachment bracket

Tightening torque: $Nm$ (kgf-m, ft-lb)

\[ T: \ 4.5 \ (0.46, \ 3.32) \]

13. SIDE PROTECTOR

(1) Front door protector  (2) Rear door protector
14. SIDE GARNISH

(1) Front fender garnish  (3) Rear door garnish  (4) Rear quarter garnish
(2) Front door garnish

15. TRUNK LID GARNISH
16. REAR GATE GARNISH

(1) Rear gate garnish
(2) Ornament
(3) License plate light
(4) Rear fog light or back-up light
(5) Back-up light or rear fog light
(6) License plate light bracket
17.DOOR TRIM

(1) Front door trim  (5) Door grip  (9) Power window switch
(2) Gusset cover  (6) Door grip bracket upper  (10) Step light cover
(3) Upper weather strip  (7) Door grip frame  (11) Speaker cover
(4) Inner remote cover  (8) Door grip bracket lower  (12) Rear door trim
18. CONSOLE BOX

(1) Upper lid  
(2) Console cover  
(3) Seat heater switch  
(4) Front cup holder  
(5) Console box outer  
(6) Rear lid  
(7) Rear cup holder  
(8) Ash tray  
(9) Lid hinge  
(10) Parking brake lever boot  
(11) Console pocket  
(12) Front accessory power supply socket  
(13) Console box harness
19. INSTRUMENT PANEL

(1) Steering support beam bracket
(2) Steering support beam
(3) Instrument panel pad & frame ASSY
(4) Instrument panel side cover
(5) Glove box lower cover
(6) Console side panel RH
(7) Console side panel LH
(8) Console side garnish
(9) Instrument panel lower cover upper
(10) Instrument panel lower cover under
(11) Ash tray holder
(12) Front accessory power supply socket
(13) Console front panel (AT model)
(14) Console front panel (MT model)
(15) Shift lever boot

Tightening torque: N\text{m} (kgf-m, ft-lb)
T: 25 (25.5, 18.4)
General Description

(1) Air vent side duct  (6) Navigation unit bracket (Model with navigation system)
(2) Air vent center duct  (10) Audio bracket (LH)
(3) Instrument panel pad & frame  (11) Audio bracket (RH)
(4) Air vent defroster grille  (7) Glove box panel  (12) Center panel
(5) Air vent side grille  (8) Center console frame  (13) Glove box
(9) Air vent center grille  (14) Glove box lid
20.INNER TRIM (SEDAN MODEL)

(1) Front pillar upper trim
(2) Front pillar lower trim
(3) Front outside scuff plate
(4) Front inside scuff plate
(5) Center pillar upper trim
(6) Center pillar lower trim
(7) Seat belt lower anchor bolt cover
(8) Rear outside scuff plate
(9) Rear inside scuff plate
(10) Seat belt shoulder anchor adjuster button
(11) Bolt cover (Model with curtain airbag)
(12) Center pillar inner protector lower
(13) Center pillar inner protector upper
(14) Front pillar inner protector lower
(15) Front pillar inner protector upper
(16) Roof side inner protector front
(17) Roof side inner protector center
(18) Roof side inner protector rear
(19) Curtain airbag guide front (Model with curtain airbag)
(20) Curtain airbag guide center (Model with curtain airbag)
(21) Curtain airbag guide rear (Model with curtain airbag)
(22) Rear quarter trim
(23) Rear quarter trim front (Model with curtain airbag)
(24) Rear quarter trim rear (Model with curtain airbag)
EXTERIOR/INTERIOR TRIM

21. INNER TRIM (WAGON MODEL)

(1) Front pillar upper trim
(2) Front pillar lower trim
(3) Front outside scuff plate
(4) Front inside scuff plate
(5) Center pillar upper trim
(6) Center pillar lower trim
(7) Seat belt lower anchor bolt cover
(8) Rear outside scuff plate
(9) Rear inside scuff plate
(10) Seat belt shoulder anchor adjuster button
(11) Bolt cover (Model with curtain airbag)
(12) Center pillar inner protector lower
(13) Center pillar inner protector upper
(14) Front pillar inner protector lower
(15) Front pillar inner protector upper
(16) Roof side inner protector front
(17) Roof side inner protector center
(18) Roof side inner protector rear
(19) Curtain airbag guide front (Model with curtain airbag)
(20) Curtain airbag guide center (Model with curtain airbag)
(21) Curtain airbag guide rear (Model with curtain airbag)
(22) Rear quarter front pillar trim
(23) Rear quarter rear pillar trim
(24) Rear quarter lower trim
22. REAR GATE TRIM

(1) Rear gate panel upper trim       (2) Rear gate panel pillar trim       (3) Rear gate panel lower trim

23. ROOF TRIM (SEDAN MODEL)
General Description

24. ROOF TRIM (WAGON MODEL)

25. TRUNK ROOM TRIM

(1) Trunk lid trim
(2) Trunk lid arm cover
(3) Trunk room mat
(4) Trunk side trim
(5) Combination light cover
(6) Trunk room end cover
26. LUGGAGE FLOOR MAT

(1) Front floor mat  (4) Center floor mat  (7) Luggage floor end cover
(2) Floor box (RH)  (5) Side floor mat (RH)
(3) Floor box (LH)  (6) Side floor mat (LH)
27. ROOM INNER PARTS

(1) Room mirror
(2) Sun visor

Tightening torque: $N \cdot m$ (kgf-m, ft-lb)
$T: 7.4 (0.75, 5.46)$

28. HEAT SHIELD COVER

(1) Front heat shield cover (5AT model)
(2) Front heat shield cover (4AT model and MT model)
(3) Center heat shield cover (Turbo model)
(4) Center heat shield cover (Non-turbo model)
(5) Rear heat shield cover RH
(6) Rear heat shield cover LH
## General Description

### B: PREPARATION TOOL

<table>
<thead>
<tr>
<th>TOOL NAME</th>
<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clip remover</td>
<td>Used for removal of trim.</td>
</tr>
<tr>
<td>Clip clamp pliers</td>
<td>Used for removal of various clips and clamps.</td>
</tr>
</tbody>
</table>
2. Front Grille

A: REMOVAL
1) Open the hood.
2) Remove the push clips (A) and front grille clips (B) from each side of front grille.
3) Remove the clips on the back side of front grille.
4) Pull lower side of the front grille forward, remove hooks (A), and then remove the front grille from vehicle body.

B: INSTALLATION
Install in the reverse order of removal.
3. Front Hood Grille

A: REMOVAL
1) Open the front hood.
2) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
3) Remove the screws (A) and clip (B), and remove the front hood duct.
4) Loosen the nuts (A), remove the clip (B), and then remove the front hood grille.

B: INSTALLATION
1) Fit the clip (B) of front hood grille, and install the front hood grille using nuts (A).

2) Insert the hooks (B) of the front hood duct into holes (A) of the front hood.
3) Install the front hood duct with the screws (A) and clip (B).

Tightening torque:
4.5 N·m (0.46 kgf-m, 3.32 ft-lb)
### 4. Front Under Cover

**A: REMOVAL**

1) Lift-up the vehicle.

2) Remove the clips (A), (C) and bolts (B) in front fender, and then remove the front under cover.

- **Large type (Turbo model)**

![Diagram of Large type (Turbo model)]( EI-00735)

- **Large type (DOHC non-turbo model)**

![Diagram of Large type (DOHC non-turbo model)]( EI-00635)

- **Small type (SOHC non-turbo model)**

![Diagram of Small type (SOHC non-turbo model)]( EI-00636)

**B: INSTALLATION**

Install in the reverse order of removal.

*Tightening torque:*

\[ 14 \text{ N} \cdot \text{m} (1.42 \text{ kgf-m, 10.3 ft-lb}) \]
5. Floor Under Protector

A: REMOVAL
1) Lift-up the vehicle.

NOTE:
Plate type lift can not be used.

2) Remove the push turn clips (A) and bolts (B), and remove the floor under protector.

B: INSTALLATION
Install in the reverse order of removal.
6. Fuel Tank Protector

A: REMOVAL
1) Lift-up the vehicle.
2) Remove the bolts (A) and plastic nuts (B), and then remove the fuel tank protector.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
Bolt
17.5 N\(\cdot\)m (1.78 kgf\(-\)m, 12.9 ft\(-\)lb)
7. Mud Guard

A: REMOVAL

1. FRONT MUD GUARD
   1) Jack-up the vehicle.
   2) Remove the front wheels.
   3) Loosen the screws and clips to remove mud guard.

2. REAR MUD GUARD
   1) Jack-up the vehicle.
   2) Remove the rear wheels.
   3) Loosen the screws and clips to remove mud guard.

B: INSTALLATION

1. FRONT MUD GUARD
   Install in the reverse order of removal.

2. REAR MUD GUARD
   Install in the reverse order of removal.
8. Front Bumper

A: REMOVAL

1. FRONT BUMPER FACE

1) Disconnect the ground cable from battery.
2) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
3) Turn over the front mud guard, and remove the clips connecting the fender and bumper.
4) Remove the clips at the lower side of bumper.
5) Disconnect the fog light connector. (Model with fog light)
6) Remove the bumper from vehicle body.
7) Remove the fog light from bumper face. <Ref. to LI-21, REMOVAL, Front Fog Light Assembly.>

2. FRONT BUMPER BEAM ASSEMBLY

1) Disconnect the ground cable from battery.
2) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
3) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
4) Remove the energy absorber foam from bumper beam.
5) Remove the bolts, and remove the bumper beam assembly from vehicle body.

NOTE:
After all bolts are removed, raise the whole bumper beam a little to remove it from vehicle body.
6) Remove the bolts and nuts, and disassemble the bumper beam.
7) Remove the clips, and remove the radiator guide.

8) Remove the bolts and clips, and remove the bumper lower center bracket.

B: INSTALLATION

1. FRONT BUMPER FACE
1) Install in the reverse order of removal.
2) Fit the slider (A) to the guide plate (B) securely.

2. FRONT BUMPER BEAM ASSEMBLY
Install in the reverse order of removal.

**Tightening torque:**
Refer to “COMPONENT” of “General Description”. <Ref. to EI-5, FRONT BUMPER, COMPONENT, General Description.>
# Front Bumper

## C: REPAIR

### 1. COATING METHOD FOR PP BUMPER

<table>
<thead>
<tr>
<th>Process No.</th>
<th>Process name</th>
<th>Job contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Bumper installation</td>
<td>Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper when possible.</td>
</tr>
<tr>
<td>2</td>
<td>Masking</td>
<td>Mask specified part (black base) with masking tape. Use masking tape for PP (example, Nichiban No. 533, etc.).</td>
</tr>
<tr>
<td>3</td>
<td>Degreasing, cleaning</td>
<td>Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.</td>
</tr>
<tr>
<td>4</td>
<td>Primer paint</td>
<td>Apply primer to all parts to be painted, using spray gun. Use primer (clear).</td>
</tr>
<tr>
<td>5</td>
<td>Drying</td>
<td>Dry at normal temperature [10 — 15 min. at 20°C (68°F)]. In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol, etc.</td>
</tr>
</tbody>
</table>

#### Non-colored | Metallic paint

<tbody>
<tr>
<td>11 Masking removal</td>
<td></td>
</tr>
</tbody>
</table>
2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

NOTE:
All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter. Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the lustre of the bumper due to a light touch
   Almost restorable.

<table>
<thead>
<tr>
<th>Process No.</th>
<th>Process name</th>
<th>Job contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Cleaning</td>
<td>Clean the area to be repaired using water.</td>
</tr>
<tr>
<td>2</td>
<td>Sanding</td>
<td>Grind the repairing area with #500 sand paper in a “feathering” motion.</td>
</tr>
<tr>
<td>3</td>
<td>Finish</td>
<td>Repeatedly apply wax to the affected area using a soft cloth (such as flannel). Recommended wax: NITTO KASEI Soft 99 TIRE WAX BLACK, or equivalent.</td>
</tr>
<tr>
<td></td>
<td>Resin section</td>
<td>Polish the waxed area with a clean cloth after 5 to 10 minutes.</td>
</tr>
<tr>
<td></td>
<td>Coated section</td>
<td></td>
</tr>
</tbody>
</table>

2) Deep damage caused by scratching with fences, etc.
A dent cannot be repaired but a whitened or swelled part can be removed.

<table>
<thead>
<tr>
<th>Process No.</th>
<th>Process name</th>
<th>Job contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Cleaning</td>
<td>Clean damaged area with water.</td>
</tr>
<tr>
<td>2</td>
<td>Removal of damaged area</td>
<td>Cut off protruding area, if any, due to collision, using a putty knife.</td>
</tr>
<tr>
<td>3</td>
<td>Sanding</td>
<td>Grind the affected area with #100 to #500 sand paper.</td>
</tr>
<tr>
<td>4</td>
<td>Finish</td>
<td>Same as Process No. 3 in the “1)” section.</td>
</tr>
<tr>
<td></td>
<td>Resin section</td>
<td>Perform Process No. 12 and subsequent operations in the “3)” section.</td>
</tr>
<tr>
<td></td>
<td>Coated section</td>
<td></td>
</tr>
</tbody>
</table>
3) Deep damage such as a break or hole that requires filling
Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)
Recommended repair kit: PP Part Repair Kit (NRM)

<table>
<thead>
<tr>
<th>Process No.</th>
<th>Process name</th>
<th>Job contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Bumper removal</td>
<td>Remove the bumper as required.</td>
</tr>
<tr>
<td>2</td>
<td>Removal of parts</td>
<td>Remove the parts built into bumper as required.</td>
</tr>
<tr>
<td>3</td>
<td>Bumper placement</td>
<td>Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.</td>
</tr>
<tr>
<td>4</td>
<td>Surface preparation</td>
<td>Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (NRM No. 900 Precleno, white gasoline, or alcohol, etc.).</td>
</tr>
<tr>
<td>5</td>
<td>Cutting</td>
<td>If nature of damage are cracks or holes, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper’s base surface. Then, bevel or “vee-out” the affected area using a knife or grinder.</td>
</tr>
<tr>
<td>6</td>
<td>Sanding (1)</td>
<td>Grind beveled surface with sand paper (#40 to #60) to smooth finish.</td>
</tr>
<tr>
<td>7</td>
<td>Cleaning</td>
<td>Clean the sanded surface with the same solvent as used in Process No. 4.</td>
</tr>
<tr>
<td>8</td>
<td>Temporary welding</td>
<td>Grind the side just opposite the beveled area with sand paper (#40 to #60) and clean using a solvent. Temporarily spot-weld the side, using a PP welding rod and heater gun.</td>
</tr>
</tbody>
</table>

**NOTE:**
- Do not melt welding rod until it flows out. This results in reduced strength.
- Leave the welded spot unattended until it cools completely.

9. Rear Bumper

A: REMOVAL

1. REAR BUMPER FACE

1) Disconnect the ground cable from battery.
2) Remove the rear combination light assembly. 
   <Ref. to LI-25, REMOVAL, Rear Combination Light Assembly.>
3) Remove the two clips.

4) Turn over the mud guard, and remove the bolt (A) inside wheel house, and the clips (B) on the lower side of bumper.

5) Remove the clips on the lower side of rear bumper.

6) Remove the service hole cover, and remove the bolt.

- Sedan model: trunk side trim

- Wagon model: rear quarter lower trim

NOTE:
For model with McIntosh Audio, remove the woofer cover.

7) Remove the rear bumper from vehicle body.

NOTE:
- Do not pull with excessive force. Otherwise the bracket installation area may be damaged.
- Remove from the end in order.
2. REAR BUMPER BRACKET
1) Remove the rear bumper face from vehicle body.
2) Remove the rear bumper bracket corner from vehicle body. (both sides)

3) Remove the lower brackets from vehicle body.
   • Sedan model: 2 places
   • Wagon model: 4 places

3. REAR BUMPER BEAM ASSEMBLY
1) Disconnect the ground cable from battery.
2) Remove the rear bumper face. <Ref. to EI-37, REAR BUMPER FACE, REMOVAL, Rear Bumper.>

3) Remove the nuts, and remove the beam main reinforcement from vehicle body.

4) Remove the nuts, and remove the bumper beam bracket and beam upper rear from vehicle body.

B: INSTALLATION

1. REAR BUMPER FACE
1) Install the beam upper rear to vehicle body.
2) Install the bumper face to vehicle body.

NOTE:
If the bumper face is easily come off the beam upper rear, adjust the hook area of the bracket side.
3) Install in the reverse order of removal.

Tightening torque:
Refer to "COMPONENT" of "General Description".
<Ref. to EI-6, REAR BUMPER (SEDAN MODEL), COMPONENT, General Description.>

2. REAR BUMPER BRACKET
Install in the reverse order of removal.

3. REAR BUMPER BEAM ASSEMBLY
Install in the reverse order of removal.

C: REPAIR
Refer to the description for front bumper repair.
<Ref. to EI-30, REMOVAL, Front Bumper.>
10. Cowl Panel

A: REMOVAL
1) Open the hood.
2) Remove the wiper arm. <Ref. to WW-17, REMOVAL, Front Wiper Arm.>
3) Remove the weather strip clip, and remove the weather strip.

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use a clip remover to remove.

4) Remove the clip, and remove the cover cowl panel.

5) Remove the cowl panel side and clip (A).

6) Remove the clips (A), and remove the cowl panel.

B: INSTALLATION
Install in the reverse order of removal.
11. Roof Spoiler

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
3) Disconnect the connector of the high mounted stop light and the washer hose of rear washer.
4) Remove the cap nut and plastic caps.

5) Remove the clips, and remove the roof spoiler.

B: INSTALLATION
Install in the reverse order of removal.

_Tightening torque:_

*4.5 N·m (0.46 kgf-m, 3.32 ft-lb)*
12. Side Sill Spoiler

A: REMOVAL
Remove the clips (two for front fender arch area, six for side sill spoiler lower area), and remove the side spoiler.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
For the rearmost clip securing side sill spoiler, install through the end cover.
13. Side Protector

A: REMOVAL

1) Slide in a thin thread (A) of 0.8 mm (0.031 in) diameter or less (fishing line etc.) between body and protector, cut the double-sided tape, and pull the protector toward you, and remove the clip using clip remover.

NOTE:
- To optimize the effect of solvent, slide the thread along body without removing the double-sided tape on the surface of body and spoiler.
- If it is difficult to detach the double-sided tape, warm up to approx. 40°C (104°F).

• If the double-sided tape remains thick on the surface due to interfacial peeling, apply the solvent after slicing off the double-sided tape using a cutter.

2) Apply masking tape around the double-sided tape remaining on the surface of body or spoiler.
3) Apply solvent uniformly on double-sided tape using a brush.

CAUTION:
- Do not use the solvent to the body which is repaired with lacquer paint.
- Wipe off immediately when the solvent is touched on surface of the body or spoiler.

Solvent:
3M 8907 or equivalent
4) Cover the area where solvent is applied using plastic wrap (A), and then heat the double-sided tape for 5 to 10 minutes in 40 — 60°C (104 — 140°F) using a heat lamp (B).

**CAUTION:**
Do not heat the double-sided tape until the surface becomes white and excessively dried.

5) Remove the double-sided tape using a plastic spatula.

6) After completely removing the double-sided tape, detach the masking tape and clean the surface using a cotton cloth damped with white gasoline.

**B: INSTALLATION**

1) Apply primer to the protector surface where the double-sided tape to be adhered, and then adhere the double-sided tape as shown in the figure.

**Double-sided tape:**

*3M 5531-5 or equivalent*

2) Heat the adhering part using a heat lamp.
   - Body side: 40 — 60°C (104 — 140°F)
   - Protector side: 20 — 30°C (68 — 86°F)

3) Detach the double-sided tape backing sheet, align the clip position, and then adhere to the body using care to avoid air entering.

**CAUTION:**
To keep the adhesion, do not wash the vehicle within 24 hours from installation.

**Primer:**

*3M K-500 or equivalent*
For removal of side garnish, refer to the removal procedure of “Side Protector”. <Ref. to EI-42, REMOVAL, Side Protector.>
15. Rear Quarter Protector

A: REMOVAL
1) Remove the side sill spoilers. <Ref. to EI-41, REMOVAL, Side Sill Spoiler.>
2) Remove the clips (A) with rotating it rearward using the fender arch as a fulcrum, and then remove the rear quarter protector.

B: INSTALLATION
Install in the reverse order of removal.
16. Roof Molding

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the roof carrier attachment cover, and remove the bolts. (2 places for each side)
3) Pull the roof molding upward, and remove it from vehicle body.
4) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
5) Remove the nuts, and remove the roof carrier attachment.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:
Replace the clip with new one when the broken pin grommet is found during the removal of roof molding. When the body side cap or clip is damaged, or the roof molding is lifted or peeled from body, be sure to repair them correctly, because those troubles may cause the water leakage.

_Tightening torque:_
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
17. Roof Rail

A: REMOVAL
1) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
2) Remove the six nuts.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:
When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.

Tightening torque:
7.5 N·m (0.76 kgf·m, 5.53 ft-lb)
18. Door Trim

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the cover (A) at inner remote area.

3) Pull the hand grip cover toward you, and remove it.

4) Loosen the screws.

5) Remove the clips, and disconnect each connector and wire to remove door trim.

   • Front door trim

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
Be careful not to install the hand grip cover and plate clip of hand grip in the wrong direction.

   • Hand grip cover (front and rear door)
   Convex upward

   • Rear door trim

   • Bottom clip of the front door faces the opposite direction
• Lower side of the hand grip cover for front door has pawl part.
• The lowest clip of rear door faces the opposite direction
19. Instrument Panel Lower Cover

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the front door inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

3) Remove the clips, and remove the instrument panel lower cover under.

4) Loosen the screw (A), disconnect the connectors, and remove the instrument panel lower cover upper.

B: INSTALLATION
Install in the reverse order of removal.
Glove Box

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Remove the console front panel.

4) Remove the console side garnish.
5) Remove the front inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

NOTE:
For AT model, remove the ring indicator.
For MT model, remove the shift knob.

6) Remove the clip, and remove the glove box lower cover.
7) Remove the console side panel.
8) Remove the instrument panel side cover, and remove the clip.
9) Remove the screw, and remove the glove box.
B: INSTALLATION
Install in the reverse order of removal.
Console Box

21. Console Box

**A: REMOVAL**
1) Disconnect the ground cable from battery.
2) Remove the parking brake lever cover.
3) Remove the bolts and clips.
4) Disconnect the connector, and remove the console box.

**B: INSTALLATION**
Install in the reverse order of removal.
22. Center Console

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
3) Remove the console front panel.

NOTE:
For AT model, remove the ring indicator.
For MT model, remove the shift knob.
4) Loosen the screw, remove the hook, and remove the console side garnish.

5) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>

6) Remove the clip at the console side panel tip.

7) Remove the passenger side front inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-60, REMOVAL, Lower Inner Trim.>

8) Remove the clip, and remove the glove box lower cover.
9) Remove the screws, and remove the console side panel.

10) Loosen the screws to pull out the audio unit assembly, and disconnect the connector to remove audio unit.

NOTE:
Audio unit assembly can be removed without removing the console side panel.

**B: INSTALLATION**
Install in the reverse order of removal.
23. Instrument Panel Assembly

A: REMOVAL

1. INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM)

CAUTION: Be careful to the harness of airbag system when servicing the instrument panel. Damage may cause the system malfunction.

1) Disconnect the ground cable from battery.
2) Remove the front pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
3) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
4) Remove the center console. <Ref. to EI-54, REMOVAL, Center Console.>
5) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
6) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
7) Remove the combination meter assembly. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.>
8) Remove the screws.

9) Remove the driver side instrument panel side cover, and remove the screws.

10) Remove the screw at the side of center console.

11) Remove the center air vent grille of instrument panel. <Ref. to AC-44, CENTER GRILLE, REMOVAL, Air Vent Grille.>

12) Remove the screws.

13) Remove the screws at side of passenger side instrument panel.

14) Remove the bolts securing passenger side airbag module to the steering support beam.

15) Disconnect the connectors, and remove the instrument panel from vehicle body.
NOTE:
- If necessary, make matching marks for easy re-assembly.
- When storing the removed instrument panel, be sure to prepare a table or the like to put instrument panel on to prevent damage.
16) Remove the side air vent grille. <Ref. to AC-44, REMOVAL, Air Vent Grille.>
17) Remove the heater vent duct. <Ref. to AC-46, REMOVAL, Heater Vent Duct.>
18) Loosen the screws to remove center console frame.

19) Loosen the screws to remove meter bracket.
20) Loosen the screws to remove instrument panel matching pins.

21) Loosen the screws to remove glove box striker.

22) Remove the pawl, and remove the passenger’s airbag module.

2. STEERING SUPPORT BEAM
1) Remove the instrument panel. <Ref. to EI-56, INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM), REMOVAL, Instrument Panel Assembly.>
2) Remove the steering shaft assembly. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
3) Remove each harness clip, and remove the harness from steering support beam.

NOTE:
If necessary, make matching marks for easy reassembly.
4) Remove the bolt and remove steering support beam.
5) Remove the steering support beam bracket.
8) Loosen the bolts on the center console side.

3. INSTRUMENT PANEL ASSEMBLY (INCLUDING STEERING SUPPORT BEAM)

CAUTION:
Be careful to the harness of airbag system when servicing the instrument panel. Damage may cause the system malfunction.

1) Remove the front pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
2) Remove the center console. <Ref. to EI-54, REMOVAL, Center Console.>
3) Remove the instrument panel lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.>
4) Remove the glove box. <Ref. to EI-51, REMOVAL, Glove Box.>
5) Remove the steering shaft assembly. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
6) Remove the driver side instrument panel side cover, and remove the bolts.

7) Remove the bolts at the side of passenger side instrument panel.
9) Disconnect each connector, and remove the instrument assembly.

NOTE:
If necessary, make matching marks for easy reassembly.

B: INSTALLATION

1. INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM)

1) Insert the matching pins (3 places) on the instrument panel tip into the grommet (A) and (B) on the body panel side.

2) Check the inserted state of matching pins, and pull the harness around.
3) Tighten the instrument panel with screw, and recheck the installation of instrument panel and the state of pulled harness.
4) Install in the reverse order of removal.

2. STEERING SUPPORT BEAM

1) Temporarily tighten the steering support beam with bolt, and pull the harness around.
2) Make sure that there is no mutual interference in each pedal, and tighten the each bolt.

Tightening torque: 25 N·m (25.5 kgf-m, 18.4 ft-lb)
3) Install in the reverse order of removal.
3. INSTRUMENT PANEL ASSEMBLY (INCLUDING STEERING SUPPORT BEAM)

1) Insert the matching pins (3 places) on the instrument panel tip into the grommet (A) and (B) on the body panel side.

2) Check the inserted state of matching pins, and pull the harness around.
3) Temporarily tighten the steering support beam with bolt, and pull the harness around.
4) Make sure that there is no mutual interference in each pedal, and tighten the each bolt.

* Tightening torque:*
  
  \[ 25 \text{ N} \cdot \text{m} \text{ (25.5 kgf-m, 18.4 ft-lb)} \]

5) Install in the reverse order of removal.
24. Lower Inner Trim

A: REMOVAL

1) Remove the hook, and remove the inside scuff plate.

2) Remove the door molding (A), and remove the outside scuff plate.

3) Remove the clip (A), and remove the front pillar lower trim.

4) Remove the rear seat cushion. <Ref. to SE-14, REMOVAL, Rear Seat.>

5) Remove the clip (A), and remove the inside scuff plate.

6) Remove the door molding (A) and door catcher cover (B), and then remove the outside scuff plate.

7) Remove the clips of the center pillar lower trim.
8) Remove the center pillar lower trim while pushing the pawl part on the upper and lower side of dropout prevention clip.

B: INSTALLATION
Install in the reverse order of removal.
25. Upper Inner Trim

A: REMOVAL
1) From the top side of trim, remove the metal clip using flat tip driver.

CAUTION:
When metal clip is removed from upper inner trim, replace both of upper inner trim and metal clip with new ones.
2) Remove the front pillar upper trim.

3) Remove the front inside scuff plate, rear inside scuff plate and center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
4) Remove the cap on the upper side of pillar trim, and remove the bolt inside. (Model with curtain airbag)

5) Remove the center pillar upper trim.

6) Remove the seat belt lower anchor bolt cover.

7) Remove the seat belt lower anchor bolt, and pull out the seat belt from center pillar upper trim.

B: INSTALLATION
Install in the reverse order of removal.
26. Rear Quarter Trim

A: REMOVAL

1. SEDAN MODEL (MODEL WITHOUT CURTAIN AIRBAG)
   1) Remove the rear seat. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
   2) Remove the rear quarter trim.

2. SEDAN MODEL (MODEL WITH CURTAIN AIRBAG)
   1) Remove the rear seat. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>
   2) Turn over the trim, and remove the quarter trim rear by pressing the claw (A) of metal clip using flat tip screwdriver or the like.
   3) Remove the cap on the upper side of trim, and remove the bolt inside.
   4) Remove the bolts (A), and remove the quarter trim (front).

3. WAGON MODEL
   1) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-14, SEDAN MODEL, REMOVAL, Rear Seat.>
   2) Remove the cap on the upper side of pillar trim, and remove the bolt inside. (Model with curtain airbag)
Rear Quarter Trim

3) Remove the clip, and remove the quarter front pillar trim.

4) Remove the quarter rear pillar trim.

5) Remove the luggage floor box. <Ref. to EI-74, REMOVAL, Luggage Floor Box.>
6) Remove the luggage floor end cover.

7) Remove the woofer cover. (Model with McIntosh Audio)

8) Remove the screws (A) and bolts (B), and remove the quarter lower trim.

NOTE:
- Remove the screw cover on the tonneau cover installing part.
- Pull out the shopping bag hook, remove the screw on back.

B: INSTALLATION

1. SEDAN MODEL
Install in the reverse order of removal.

2. WAGON MODEL
Install in the reverse order of removal.
27. Sun Visor

A: REMOVAL
1) Remove the cover, loosen the mounting screws, and remove the sun visor.

2) Disconnect the connector. (Model with vanity mirror light)
3) Press the (A) on both side using flat tip driver, pull the sun visor hook and remove it.

B: INSTALLATION
Install in the reverse order of removal.
28. Assist Grip

A: REMOVAL
1) Remove the screw cover, and remove the screw inside.
2) Pull the left side of assist grip toward you, and rotate the right side of it counterclockwise to remove.
3) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
4) Remove the bolts, and remove the assist grip bracket.

B: INSTALLATION
Install in the reverse order of removal.

CAUTION:
Be sure to install the grommet to assist grip bracket.
When install the assist grip without grommet, it may cause the faulty returning.
29. **Roof Trim**

**A: REMOVAL**

1. **SEDAN MODEL**
   1) Disconnect the ground cable from battery.
   2) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
   3) Remove the rear seat. <Ref. to SE-14, REMOVAL, Rear Seat.>
   4) Remove the console box. <Ref. to EI-53, REMOVAL, Console Box.>
   5) Remove the center console. <Ref. to EI-54, REMOVAL, Center Console.>
   6) Remove the select lever. (AT model) <Ref. to CS-7, REMOVAL, Select Lever.>
   7) Remove the spot map light. <Ref. to LI-34, REMOVAL, Spot Map Light.>
   8) Remove the room light. <Ref. to LI-35, REMOVAL, Room Light.>
   9) Remove the sun visor. <Ref. to EI-65, REMOVAL, Sun Visor.>
   10) Remove the assist grip. <Ref. to EI-66, REMOVAL, Assist Grip.>
   11) Remove the upper inner trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
   12) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
   13) Remove the sunroof opening trim. (Model with sunroof)
   14) Remove the clips and each harness, and remove the roof trim.
   15) Pull out the roof trim from vehicle.

2. **WAGON MODEL**
   1) Disconnect the ground cable from battery.
   2) Remove the spot map light. <Ref. to LI-34, REMOVAL, Spot Map Light.>
   3) Remove the room light. <Ref. to LI-35, REMOVAL, Room Light.>
   4) Remove the luggage room light. <Ref. to LI-36, REMOVAL, Luggage Room Light.>
   5) Remove the sun visor. <Ref. to EI-65, REMOVAL, Sun Visor.>
   6) Remove the assist grip. <Ref. to EI-66, REMOVAL, Assist Grip.>
   7) Remove the upper inner trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
   8) Remove the rear quarter trim. <Ref. to EI-63, WAGON MODEL, REMOVAL, Rear Quarter Trim.>

**CAUTION:**
Do not remove the roof end trim with excessive force. Otherwise roof trim may be damaged.
Roof trim and roof end trim are fastened by rivets.

9) Remove the sunroof opening trim. (Model with sunroof)

10) Remove the coat hook.

11) Remove the clips and each harness, pull out the rear center seat belt, and remove the roof trim.
CAUTION:
Do not remove the roof end trim with excessive force. Otherwise roof trim may be damaged.

B: INSTALLATION

1. SEDAN MODEL
Install in the reverse order of removal.

2. WAGON MODEL
Install in the reverse order of removal.
30. Rear Gate Trim

A: REMOVAL
1) Remove the clips (A), and remove the rear gate pillar trim.

2) Remove the clips, and detach the rear gate upper trim.

3) Remove the cover in the inner handle, loosen the inside screw.
4) Turn over the weather strip, and remove the clips.

5) Remove the clips (A) and (B), remove the rear gate lower trim.

6) Remove the rear gate weather strip.

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use a clip remover to remove.

B: INSTALLATION
Install in the reverse order of removal.
31. Rear Shelf Trim

A: REMOVAL

1) Disconnect the ground cable from battery.
2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL (MODEL WITH CURTAIN AIRBAG), REMOVAL, Rear Quarter Trim.>
3) Remove the high-mounted stop light. <Ref. to LI-33, REMOVAL, High-mounted Stop Light.>
4) Remove the rear seat cushion. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>
5) Remove the lower anchor bolt of rear center seat belt.

6) After disconnecting the high-mounted stop light harness connector (A) and removing the five clips, remove the rear shelf trim with pulling it forward.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:
Securely insert the vehicle body panel into the hook of rear shelf trim center, and then install the rear shelf trim.
32. Trunk Room Trim

A: REMOVAL

1. TRUNK LID TRIM

1) Remove the trim clips and stopper rubbers, and remove the trunk lid trim.

2) Remove the clip (A) of trunk side trim, and then remove the trunk lid arm cover.

2. TRUNK ROOM TRIM

1) Remove the trunk room mat.

2) Remove the trim clips (A), and remove the trunk room end cover.

3) Remove the rear seat backrest, and then remove the trim clips at the front side of trunk side trim. <Ref. to SE-14, WAGON MODEL, REMOVAL, Rear Seat.>

4) Insert the flat tip driver from the lower side of trunk hook, and then remove the trunk hook with rotating it 90°.
5) Remove the trim clips, and remove the trunk side trim.

**B: INSTALLATION**

1. **TRUNK LID TRIM**
   Install in the reverse order of removal.

2. **TRUNK ROOM TRIM**
   Install in the reverse order of removal.
33. Floor Mat

A: REMOVAL
1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
2) Remove the rear seat cushion. <Ref. to SE-14, REMOVAL, Rear Seat.>
3) Remove the console box. <Ref. to EI-53, Console Box.>
4) Remove the console side panel. <Ref. to EI-54, REMOVAL, Center Console.>
5) Remove the lower inner trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
6) Remove the footrest. (MT model)
7) Remove the clips from floor mat.
8) Remove the mat hook on both side.
9) Remove the mat from toe board area.
10) Remove the mat from rear heater duct.
11) Roll the mat, and then take it out of opened rear door.

B: INSTALLATION
Install in the reverse order of removal.

NOTE:
• Secure the mat firmly with hook and clip.
• Insert the mat edge firmly into the groove of side sill cover.
34. Luggage Floor Box

A: REMOVAL
1) Remove the luggage floor mat.
2) Remove the clips, and remove the luggage floor box.

B: INSTALLATION
Install in the reverse order of removal.
35. Trunk Lid Garnish

A: REMOVAL
Remove the license plate, loosen the bolts (A), and remove the trunk lid garnish.

B: INSTALLATION
Install in the reverse order of removal.

Tightening torque:
7.5 N·m (0.76 kgf-m, 5.5 ft-lb)
36. Rear Gate Garnish

A: REMOVAL
1) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
2) Remove the clip (A), and remove the rear gate panel side cover.
3) Remove the hexagon cap nut.
4) Remove the nuts, disconnect each connector, and remove the rear gate garnish.

B: INSTALLATION
Install in the reverse order of removal.
37. Heat Shield Cover

A: REMOVAL

1. FRONT HEAT SHIELD COVER
Remove the four bolts to remove front heat shield cover.

2. CENTER HEAT SHIELD COVER
Remove the nut and bolt to remove center heat shield cover.

3. REAR HEAT SHIELD COVER
1) Remove the muffler. <Ref. to EX(H4SO 2.0)-13, REMOVAL, Muffler.> <Ref. to EX(H4DOTC)-12, REMOVAL, Muffler.>
2) Remove the four bolts to remove rear heat shield cover.

B: INSTALLATION
Install in the reverse order of removal.
38. Ornament
A: INSTALLATION

1. LETTER MARK
Adhere the letter mark with following dimension.

- Sedan model

(a) Apply the apply tape with aligning the cut out to the end of trunk lid garnish.

(1) Letter mark

(b) Apply the apply tape with aligning R stop on the top end of trunk lid garnish.

(2) Apply tape

(c) Align the slit of apply tape to panel end.

(3) Rear combination light
2. AWD STICKER

Apply the AWD sticker from inside of glass with following dimension.

• Sedan model

(a) Apply the apply tape with aligning the cut out to the end of rear glass center.

1 mm (0.04 in) Gradation end of ceramic print (without rear wiper) End of rear glass

(1) (2) (3) (4)
**Ornament**

- **Wagon model (RH side)**

- **Wagon model (LH side)**

(a) Apply the apply tape with aligning the cut out to the ceramic print.

(b) Gradation end of ceramic print

1. 1 mm (0.04 in)
2. Glass antenna wire
3. Molding
4. Front side of vehicle

EI-00742

EI-00743
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

</tr>
<tr>
<td>Clip remover</td>
<td>Used for removing various types of clips.</td>
</tr>
</tbody>
</table>
2. Front Hood

A: REMOVAL

1. FRONT HOOD INSULATOR

1) Open the hood.
2) Release the clips to remove the front hood insulator.

2. FRONT HOOD WEATHER STRIP

1) Open the hood.
2) Remove the clips, and remove the front hood weather strip (A) and intake duct weather strip (B).

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

3. FRONT HOOD HINGE

1) Remove the bolts, and remove the front hood panel. <Ref. to EB-14, FRONT HOOD PANEL, REMOVAL, Front Hood.>
2) Remove the clips, and remove the cowl side panel front.
3) Remove the clamp (A) of the window washer hose, and remove bolt of the hinge.
Front Hood

4. FRONT HOOD STRIKER
1) Open the hood.
2) Remove the bolt, and remove the front hood striker.

5. FRONT HOOD PANEL
1) Open the front hood to remove the window washer hose.
2) Remove the front hood insulator.
   <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
3) Remove the front hood weather strip.
   <Ref. to EB-13, FRONT HOOD WEATHER STRIP, REMOVAL, Front Hood.>
4) Remove the front hood striker.
   <Ref. to EB-14, FRONT HOOD STRIKER, REMOVAL, Front Hood.>
5) Remove the front hood duct. (Turbo model)
   <Ref. to EI-25, REMOVAL, Front Hood Grille.>
6) Remove the window washer hose and nozzle.
   <Ref. to WW-20, REMOVAL, Front Washer Nozzle.>
7) Remove the bolts, and remove the front hood panel from front hood hinge.

B: INSTALLATION
1. FRONT HOOD INSULATOR
Install in the reverse order of removal.
NOTE:
Be careful not to catch the window washer hose in.

2. FRONT HOOD WEATHER STRIP
Install in the reverse order of removal.

3. FRONT HOOD HINGE
Install in the reverse order of removal.

   Tightening torque:
   \[ 24.5 \text{ N}\cdot\text{m} (2.5 \text{ kgf-m}, 18.1 \text{ ft-lb}) \]

4. FRONT HOOD STRIKER
Install in the reverse order of removal.

   Tightening torque:
   \[ 33.0 \text{ N}\cdot\text{m} (3.4 \text{ kgf-m}, 24.5 \text{ ft-lb}) \]

5. FRONT HOOD PANEL
Install in the reverse order of removal.

   Tightening torque:
   \[ 24.5 \text{ N}\cdot\text{m} (2.5 \text{ kgf-m}, 18.1 \text{ ft-lb}) \]

C: ADJUSTMENT
1) Adjust the clearance between front hood panel and front fender panel. Clearance must be equal at both sides. For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”.
   <Ref. to EB-2, SPECIFICATION, General Description.>
2) Use a hinge mounting bolts to align the front hood longitudinally and laterally.

3) Adjust the height at the front end of hood. <Ref. to SL-40, ADJUSTMENT, Front Hood Lock Assembly.>

4) Rotate the hood buffer to adjust lateral height.
3. Front Fender Panel

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the side sill spoilers. <Ref. to EI-41, REMOVAL, Side Sill Spoiler.>
3) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
4) Remove the front bumper face. <Ref. to EI-30, REMOVAL, Front Bumper.>
5) Remove the headlight assembly. <Ref. to LI-14, REMOVAL, Headlight Assembly.>
6) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
7) Remove the cowl panel side.

8) Remove the bolt, and remove the front fender panel.

B: INSTALLATION
1) Install in the reverse order of removal.
2) Install with attention to make uniform clearance between front fender panel and front hood panel.
For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

Tightening torque:
7.4 N·m (0.75 kgf-m, 5.5 ft-lb)
4. Front Door

A: REMOVAL

1. FRONT DOOR PANEL

1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
4) Remove the front door speaker. <Ref. to ET-6, REMOVAL, Front Speaker.>
5) Pull back the sealing cover. <Ref. to EB-20, REMOVAL, Front Sealing Cover.>
6) Remove the gusset and front door glass. <Ref. to GW-10, REMOVAL, Front Door Glass.>
7) Remove the door sash and front door regulator and motor. <Ref. to GW-15, REMOVAL, Front Regulator and Motor Assembly.>
8) Remove the front door latch assembly. <Ref. to SL-30, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
9) Remove the front outer handle. <Ref. to SL-29, REMOVAL, Front Outer Handle.>
10) Remove the screw to remove the door trim bracket.

11) Remove the front door weather strip.

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

12) Remove the bolts and nuts to remove the door checker.

13) Remove the front door. <Ref. to EB-17, FRONT DOOR ASSEMBLY, REMOVAL, Front Door.>

2. FRONT DOOR ASSEMBLY

1) Disconnect the ground cable from battery.
2) Remove the front pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
3) Remove the instrument panel lower cover or glove box lower cover. <Ref. to EI-50, REMOVAL, Instrument Panel Lower Cover.> or <Ref. to EI-51, REMOVAL, Glove Box.>
4) Disconnect the connector of door harness from body harness.

5) Put a wooden block on jack and place jack under the front door. Support the door with a jack to protect it from damage.

6) Remove the bolt from the door checker.

7) Remove the door-side bolts for upper and lower hinges to remove front door panel.

8) Remove the door hinge from vehicle.

---

**B: INSTALLATION**

1. FRONT DOOR PANEL

   Install in the reverse order of removal.

   **Tightening torque:**
   
   Refer to “COMPONENT” of “General Description”.
   
   <Ref. to EB-8, FRONT DOOR PANEL, COMPONENT, General Description.>

2. FRONT DOOR ASSEMBLY

   1) Put a wooden block on jack and place the front door on that.

   2) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.

   3) Install the front door to upper hinge and lower hinge adjusting by jack.

   4) Tighten the bolt of door checker.

   5) Connect the door harness connector, and install the instrument panel lower cover.

   6) Install the front pillar lower trim.

   **Tightening torque:**
   
   Refer to “COMPONENT” of “General Description”.
   
   <Ref. to EB-8, FRONT DOOR PANEL, COMPONENT, General Description.>

---

**C: ADJUSTMENT**

1) Using the ST, loosen the body-side bolts of upper and lower hinges to align the position of front door panel longitudinally and laterally.

   ST 925610000 DOOR HINGE WRENCH

---
2) Loosen the screws (A), and tap the striker (B) using plastic hammer to adjust the gap between rear end surface of front door panel and front end surface of rear door.

**CAUTION:**
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.
5. Front Sealing Cover

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the front door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the front speaker. <Ref. to ET-6, REMOVAL, Front Speaker.>
4) Pull back the sealing cover.

NOTE:
- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new one.

B: INSTALLATION
1) Install in the reverse order of removal.
2) When replacing the sealing cover, use the butyl tape.
3) Press the butyl tape-applied area firmly to prevent any floating on surface.

Butyl tape:
3M8626 or equivalent

NOTE:
- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

C: INSPECTION
If the sealing cover gets damaged, replace it with a new one.
6. Rear Door
A: REMOVAL

1. REAR DOOR PANEL
1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Remove the rear speaker. <Ref. to ET-9, REMOVAL, Rear Speaker.>
4) Pull back the sealing cover. <Ref. to EB-24, REMOVAL, Rear Sealing Cover.>
5) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
6) Remove the door sash and rear door regulator and motor assembly. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
7) Remove the rear door latch. <Ref. to SL-34, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
8) Remove the rear outer handle. <Ref. to SL-33, REMOVAL, Rear Outer Handle.>
9) Remove the screw to remove the door trim bracket.

10) Remove the rear door inner weather strip.

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

11) Remove the bolts and nuts to remove the door checker.

12) Remove the rear door. <Ref. to EB-21, REAR DOOR ASSEMBLY, REMOVAL, Rear Door.>

2. REAR DOOR ASSEMBLY
1) Disconnect the ground cable from battery.
2) Remove the center pillar lower trim. <Ref. to EI-60, REMOVAL, Lower Inner Trim.>
3) Remove the center pillar inner protector lower.

4) Remove the harness holder (A), and disconnect the door harness connector inside pillar.

5) Put a wooden block on jack and place jack under the rear door. Support the rear door with the jack to protect it from damage.

6) Remove the bolt from the door checker.

7) Remove the door-side bolts for upper and lower hinges to remove the rear door panel.

8) Remove the door hinge from vehicle.

B: INSTALLATION

1. REAR DOOR PANEL

   Install in the reverse order of removal.

   **Tightening torque:**
   
   Refer to “COMPONENT” of “General Description”.
   
   <Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>

2. REAR DOOR ASSEMBLY

   1) Put a wooden block on jack and place the rear door on that.

   2) Apply grease to sliding area of the door hinges.

   3) Install the rear door to upper hinge and lower hinge adjusting by jack.

   4) Tighten the bolt of door checker.

   5) Connect the door harness connector, and install the center pillar inner protector.

   6) Install the center pillar lower trim.

   **Tightening torque:**
   
   Refer to “COMPONENT” of “General Description”.
   
   <Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>
C: ADJUSTMENT
1) Open the rear door, loosen the door-side bolts of upper and lower hinges to align the position of rear door panel longitudinally and laterally.

2) Loosen the screws (A), and tap the striker (B) using plastic hammer to adjust the gap between rear end surface of rear door panel and body surface.

CAUTION:
Do not use an impact wrench. Welding area on the striker nut plate is easily broken.
7. Rear Sealing Cover

A: REMOVAL
1) Disconnect the ground cable from battery.
2) Remove the rear door trim. <Ref. to EI-48, REMOVAL, Door Trim.>
3) Pull back the sealing cover.

NOTE:
- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new one.

B: INSTALLATION
1) Install in the reverse order of removal.
2) When replacing the sealing cover, use the butyl tape.
3) Press the butyl tape-applied area firmly to prevent any floating on surface.

Butyl tape:
   3M8626 or equivalent

NOTE:
- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

C: INSPECTION
If the sealing cover gets damaged, replace it with a new one.
8. Trunk Lid

A: REMOVAL

1. TORSION BAR
1) Open the trunk lid.
2) Using the ST, remove the torsion bar from the hinge link.
ST 927780000 REMOVER

**CAUTION:**
During removal and installation, carefully handle the torsion bar, because it will generate reactive force.

3) Remove the right/left torsion bars.

2. TRUNK LID ARM
1) Disconnect the ground cable from battery.
2) Open the trunk lid to remove the trunk lid trim, trunk lid arm cover and trunk room trim. <Ref. to EI-71, TRUNK ROOM TRIM, REMOVAL, Trunk Room Trim.>
3) Disconnect the trunk lid release cable. <Ref. to SL-39, REMOVAL, Trunk Lid Lock Assembly.>
4) Disconnect each connector, and remove the harness clip.
5) Remove the trunk lid mounting bolts to remove the trunk lid panel from trunk lid arm.

6) Remove the torsion bar from the trunk lid hinge link. <Ref. to EB-25, TORSION BAR, REMOVAL, Trunk Lid.>

7) Remove the rear shelf trim. <Ref. to EI-70, REMOVAL, Rear Shelf Trim.>

3. TRUNK LID PANEL
1) Disconnect the ground cable from battery.
2) Open the trunk lid to remove the trunk lid trim and trunk lid arm cover. <Ref. to EI-71, TRUNK ROOM TRIM, REMOVAL, Trunk Room Trim.>
3) Disconnect the connector to remove the trunk lid harness.
4) Remove the trunk lid lock assembly. <Ref. to SL-39, REMOVAL, Trunk Lid Lock Assembly.>
5) Remove the trunk lid garnish. <Ref. to EI-75, REMOVAL, Trunk Lid Garnish.>
6) Remove the license plate light cover.

7) Remove the bolts to remove the trunk lid panel from the trunk lid arm.

B: INSTALLATION

1. TORSION BAR
1) Install in the reverse order of removal.
2) Apply grease to the rotating area of hinges and of torsion bar.
2. TRUNK LID ARM
Install in the reverse order of removal.

Tightening torque:
Refer to “COMPONENT” of “General Description”.
<Ref. to EB-10, TRUNK LID PANEL, COMPONENT, General Description.>

3. TRUNK LID PANEL
1) Install in the reverse order of removal.
2) Install with attention to make uniform clearance around the trunk lid panel. For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

Tightening torque:
14 N·m (1.43 kgf-m, 10.3 ft-lb)
9. Rear Gate
A: REMOVAL

1. REAR GATE PANEL
1) Disconnect the ground cable from battery.
2) Open the rear gate.
3) Remove the rear gate trim. <Ref. to EI-69, REMOVAL, Rear Gate Trim.>
4) Remove the rear gate garnish. <Ref. to EI-76, REMOVAL, Rear Gate Garnish.>
5) Remove the rear wiper arm. <Ref. to WW-21, REMOVAL, Rear Wiper Arm.>
6) Remove the rear wiper motor. <Ref. to WW-22, WAGON MODEL, REMOVAL, Rear Wiper Motor.>
7) Remove the rear gate outer handle. <Ref. to SL-36, REMOVAL, Rear Gate Outer Handle.>
8) Remove the rear gate latch assembly. <Ref. to SL-37, REMOVAL, Rear Gate Latch Assembly.>
9) Detach the roof spoiler. <Ref. to EI-40, REMOVAL, Roof Spoiler.>
10) Remove harness clip of each connector from the rear gate panel.
11) Remove the weather strip clips (A), and remove the rear gate panel weather strip.

12) Remove the rubber duct (A) connection, and pull out the harness and washer hose from the rear gate.

13) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

14) Remove the mounting bolts of rear gate damper stay.

NOTE:
If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.
15) Remove the rear gate hinge bolts, and remove the rear gate panel.

16) Remove the rear gate hinge from vehicle.

2. REAR GATE DAMPER STAY

CAUTION:
- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.

1) Open the rear gate.
2) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

CAUTION:
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

3) Remove the mounting bolts of rear gate damper stay.

4) Remove the clips and then detach the rear combination light covers.

5) Remove the mounting bolt (A), and remove the damper stay.

B: INSTALLATION

1. REAR GATE PANEL

1) Install in the reverse order of removal.
2) Install with attention to make uniform clearance between rear gate panel and body. For the dimension of clearance, refer to “SPECIFICATIONS” in “General Description”. <Ref. to EB-2, SPECIFICATION, General Description.>

Tightening torque:
Refer to “COMPONENT” of “General Description”.
<Ref. to EB-11, REAR GATE PANEL, COMPONENT, General Description.>
2. REAR GATE DAMPER STAY

1) Prevent the rear gate from closing using prop or the like.

**CAUTION:**
If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

2) Install in the reverse order of removal.

**Tightening torque:**
19.6 N·m (2.0 kgf-m, 14.5 ft-lb)

C: DISPOSAL

1. REAR GATE DAMPER STAY

**CAUTION:**
Gas is colorless, odorless and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

1) Cover with a vinyl sack as shown in the figure.

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.

Drill a hole in 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from door side, and bleed rear gate damper stay gas completely.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

7. Neutral Position Switch ...........................................................................9
1. General Description

A: COMPONENT

(1) Engine control module (ECM)  (4) Cruise indicator light & cruise set indicator light  (6) Inhibitor switch (AT model)
(2) Cruise control command switch  (5) Transmission control module (TCM) (AT model)  (7) Neutral position switch (MT model)
(3) Stop light & brake switch  (8) Clutch switch (MT model)
B: CAUTION
• Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, the memory will be erased.
• Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
• Adjust the parts to specifications specified in this manual.
• Connect the connectors securely during reassembly.
• After reassembly, ensure functional parts operate properly.

2. Cruise Control Unit

A: NOTE
The control of cruise control system is carried out in Engine control module (ECM).

B: REMOVAL
<Ref. to FU(H4SO 2.0)-34, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, REMOVAL, Engine Control Module (ECM).>

C: INSTALLATION
<Ref. to FU(H4SO 2.0)-34, INSTALLATION, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, INSTALLATION, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, INSTALLATION, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, INSTALLATION, Engine Control Module (ECM).>
3. Cruise Control Command Switch

A: REMOVAL

WARNING:
Before servicing, be sure to read the notes in the “AB” section for proper handling of the driver’s airbag module. <Ref. to AB-4, CAUTION, General Description.>

1) Set the front wheels in straight ahead position.
2) Turn the ignition switch to OFF.
3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
4) Using TORX® BIT T30 (Tamper resistant type), loosen the two TORX® bolts which secure driver’s airbag module.
5) Disconnect the airbag module connector on back of the airbag module.
6) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
7) Remove the four screws to remove the lower cover from steering wheel.
8) Remove one screw to remove the cruise control command switch from lower cover.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the cruise control command switch resistance.

<table>

</table>
General Description

2. General Description

A: CAUTION
Airbag system wiring harness is routed near the cruise control command switch.

CAUTION:
• All airbag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
• Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch.

5. Subaru Select Monitor

A: OPERATION

1. GENERAL DESCRIPTION

For the on-board diagnosis function of the cruise control system, use Subaru Select Monitor.
The on-board diagnosis function operates under two categories, which are used depending on the type of problems;
1) Cruise Control Cancel Conditions Diagnosis:
   (1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.
   (2) Cruise control memory in ECM stores the cancel condition (Code No.) which occurred during driving. When there are plural cancel conditions (Code No.), they are shown on the Subaru Select Monitor.

CAUTION:
- The cruise control memory stores not only the cruise “cancel” which occurred (although “cancel” operation is not entered by the driver), but also the “cancel” condition input by the driver.
- The content of memory is cleared when ignition switch or cruise control main switch is turned OFF.

2) Real-time Diagnosis:
Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to the signal emitted from switches, sensors, etc.
   (1) Vehicle cannot be driven at cruise speed when problem occurs in the cruise control system or its associated circuits.
   (2) Monitor the signal conditions from switches and sensors.

2. CRUISE CANCEL CONDITIONS DIAGNOSIS

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to CC(diag)-4, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.
   (1) Data link connector is located in the lower portion of instrument panel (on the driver’s side).

5) Start the engine and turn the cruise control main switch to ON.

6) Turn the Subaru Select Monitor switch to ON.

7) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
On the system selection display screen, select the {Engine} and press the [YES] key. Press the [YES] key after the information of engine type is displayed.

8) Drive vehicle at least 40 km/h (25 MPH) with cruise speed set.
9) If the cruise speed is canceled by itself (without doing any cancel operations), DTC will display on the screen when selecting the {Check Cancel Code} and pressing the [YES] key on the engine malfunction diagnosis display screen.

CAUTION:
- When performing diagnostics, observe the legal speed of the road.
- DTC will also displayed when cruise control cancel is effected by driver. Do not confuse.
- Put a co-worker in the vehicle to assist the diagnosis during driving.

NOTE:
DTC will be cleared by turning ignition switch or cruise control main switch to OFF.

3. REAL-TIME DIAGNOSIS
1) Connect the Subaru Select Monitor.
2) Turn the ignition switch and cruise control main switch to ON.
3) Turn the Subaru Select Monitor switch to ON.
4) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
5) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
6) Press the [YES] key after the information of engine type is displayed.
7) On the «Cruise Control Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
8) Make sure that normal indication is displayed when operated as follows:
   - Depress/release the brake pedal. (Stop light switch and brake switch turn ON.)
   - Turn the main switch to ON.
   - Turn the “CANCEL” switch to ON.
   - Turn ON the “SET/COAST” switch.
   - Turn ON the “RESUME/ACCEL” switch.
   - Depress or release the clutch pedal.
   - Place the shift lever in any position except neutral.

NOTE:
- For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
- For DTC, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to CC(diag)-12, List of Diagnostic Trouble Code (DTC).>
# 6. Diagnostics with Phenomenon

## A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

   Is the resistance less than 10 Ω? | Go to step 3. | Repair the harness. |
| **3** | **CHECK CLUTCH SWITCH.**  
   Remove and check the clutch switch.  
   <Ref. to CC-7, Clutch Switch.>  
   Is the clutch switch OK? | Replace the ECM.  
   <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).>  
   <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> | Replace the clutch switch. |
CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Diagnostic Procedure with Diagnostic Trouble Code (DTC)

D: DTC 14 NEUTRAL POSITION SWITCH
TROUBLE SYMPTOM:
Cruise control cannot be set.

WIRING DIAGRAM:
- 2.0 L turbo model, 3.0 L model
Diagnostic Procedure with Diagnostic Trouble Code (DTC)
CRUISE CONTROL SYSTEM (DIAGNOSTICS)

- 2.5 L EC, K4 and EK model
Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

- 2.0 L non-turbo model, 2.5 L KS, KA model

[Diagram of the CRUISE CONTROL SYSTEM (DIAGNOSTICS) showing connections and terminals]
## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step Check Yes No

1. **CHECK VEHICLE FOR SPECIFICATION.**
   - Check the vehicle for destination and specification.
   - Is the vehicle turbo model or 3.0 L model?
   - Go to step 2.
   - Go to step 5.

2. **CHECK NEUTRAL POSITION SWITCH.**
   - 1) Connect the Subaru Select Monitor to data link connector.
   - 2) Turn the ignition switch and Subaru Select Monitor switch to ON.
   - 3) Select [Engine] from the main menu.
   - 4) Then, select [Current Data Display & Save].
   - 5) Check the neutral position switch signal by shifting the select lever to “P” or “N” range.
   - Is ON displayed in the Subaru Select Monitor when the select lever is in “P” or “N” range?
   - Replace the ECM.
     - <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).>
   - Go to step 3.

3. **CHECK TCM OUTPUT VOLTAGE.**
   - 1) Turn the ignition switch to ON.
   - 2) Measure the voltage between TCM harness connector terminal and chassis ground.
   - Connector & terminal
     - \((B55)\) No. 19 (+) — Chassis ground (−):
   - Is the voltage more than 10 V when the select lever is in other than “P” or “N” range?
   - Or is the voltage less than 1 V when the select lever is in “P” or “N” range?
   - Go to step 4.
   - Go to step 7.

4. **CHECK HARNESS BETWEEN TCM AND ECM.**
   - 1) Turn the ignition switch to OFF.
   - 2) Disconnect the harness connector from TCM and ECM.
   - 3) Measure the resistance between TCM harness connector terminal and ECM harness connector terminal.
   - Connector & terminal
     - \((B137)\) No. 9 — \((B55)\) No. 19:
   - Is the resistance less than 10 Ω?
   - Repair the wiring harness.

5. **CHECK TRANSMISSION TYPE.**
   - Is the transmission type AT?
   - Go to step 6.
   - Go to step 9.

6. **CHECK INHIBITOR SWITCH CIRCUIT.**
   - 1) Turn the ignition switch to OFF.
   - 2) Disconnect the starter motor harness connector.
   - 3) Measure the resistance between inhibitor switch harness connector terminal and chassis ground.
   - Connector & terminal
     - 2.5 L EC, K4 and EK model:
       - \((T7)\) No. 12 (+) — Chassis ground (−):
     - 2.0 L non-turbo model, 2.5 L KS, KA model:
       - \((T7)\) No. 7 (+) — Chassis ground (−):
   - Is the resistance less than 10 Ω?
   - Go to step 8.
   - Repair the harness.

7. **CHECK INHIBITOR SWITCH CIRCUIT.**
   - 1) Turn the ignition switch to OFF.
   - 2) Disconnect the starter motor harness connector.
   - 3) Measure the resistance between inhibitor switch harness connector terminal and chassis ground.
   - Connector & terminal
     - 2.5 L EC, K4 and EK model:
       - \((T7)\) No. 7 — Chassis ground:
     - 2.0 L non-turbo model, 2.5 L KS, KA model:
       - \((T7)\) No. 12 — Chassis ground:

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

2. General Description

A: CAUTION

CAUTION:
- All airbag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is in a key holder, remove it from the holder before carrying out diagnosis.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of “ON” for at least 5 seconds → “OFF” for at least 8 seconds.

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until immobilizer indicator light begins to flash. And then start the engine again.

- Before checking the diagnostic items, obtain all keys for the vehicle to be checked possessed by owner.

A: WIRING DIAGRAM

1. IMMobilizer

<Ref. to WI-246, WIRING DIAGRAM, Immobilizer System.>
Subaru Select Monitor

5. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor.

4) Connect the Subaru Select Monitor to data link connector.
   (1) Data link connector is located in the lower portion of the instrument panel (on the driver’s side).

5) Turn the ignition switch to ON (engine OFF), and the Subaru Select Monitor switch to ON.

6) Using the Subaru Select Monitor, call up DTCs and various data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE AND BODY INTEGRATED UNIT

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to IM(diag)-9, Read Diagnostic Trouble Code (DTC).>

3. COMMUNICATION LINE CHECK

NOTE:
The communication line between ECM and body integrated module can be checked in “System Operation Check Mode”. This is referred to as “Communication line check”.

1) Connect the Subaru Select Monitor.
2) On the «System operation check mode» display, select the (security system).
3) Start the communication line check.
4) Is “Communication Line not Shorted” displayed on screen?
   If displayed, go to step 5).
   If “NO”, go to step 6).
5) After diagnostic results, it is determined that the circuit is not shorted. Finish the communication line check.
6) If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-22, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CAUTION:
Do not connect the scan tools except for Subaru Select Monitor.
6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. ECM
   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
   3) Press the [YES] key after the information of engine type is displayed.
   4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display}, and then press the [YES] key.
   5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

   NOTE:
   • For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
   • For detailed concerning DTC, refer to the List of DTC. <Ref. to IM(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>

2. BODY INTEGRATED UNIT
   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Integ. unit mode} and press the [YES] key.
   3) Press the [YES] key after the {Integ. unit mode} is displayed.
   4) On the «Integ. unit mode failure diag» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

   NOTE:
   • For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
   • For detailed concerning DTC, refer to the List of DTC. <Ref. to IM(diag)-15, LIST, List of Diagnostic Trouble Code (DTC).>
7. Clear Memory Mode

A: OPERATION

1. ECM
   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
   3) Press the [YES] key after the information of engine type is displayed.
   4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
   5) When the ‘Done’ are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

   NOTE:
   • After the memory has been cleared, the idle air control solenoid valve must be initialized. To execute this procedure, turn the ignition switch to ON. Wait 3 seconds before starting the engine.
   • For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. BODY INTEGRATED UNIT
   1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
   2) On the «System Selection Menu» display screen, select the {Integ. unit mode} and press the [YES] key.
   3) Press the [YES] key after the {Integ. unit mode} is displayed.
   4) On the «Integ. unit mode failure diag» display screen, select the {Clear Memory} and press the [YES] key.
   5) When the ‘Done’ are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

   NOTE:
   For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
8. Diagnostics Chart for Immobilizer Indicator Light

A: INSPECTION

1. CHECK IMMobilizer INDICATOR CIRCUIT

</table>
| B0402 | Immobilizer Key collation NG| • Incorrect immobilizer key (Use of unregistered key in body integrated unit)                           | <Ref. to IM(diag)-17, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to IM(diag)-18, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> or <Ref. to IM(diag)-25, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> | • P0513     
• P1570     
• P1574                                            |
| B0403 | E/G request NG              | Communication failure between body integrated unit and ECM                                                   | <Ref. to IM(diag)-22, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> | P1572                                            |

NOTE:
- Immobilizer system of 2.5 L EC, EK model and 3.0 L model perform the starter relay control. When the body integrated unit detect the inconformity of reference code, immediately output the starter relay cut signal to ECM, and then ECM stop the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.
- DTC B0402 is recorded as freeze frame data when the ignition switch is turned to OFF. When trying to start the engine with unregistered immobilizer key, DTC is not displayed on Subaru Select Monitor immediately. Turn the ignition switch to OFF once and turn to ON again before checking DTC. At this time (when turning the ignition switch to ON again), be careful that the DTC is displayed as freeze frame data even with the registered immobilizer key.
## 10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)  
**A: DTC P0513 INCORRECT IMMOBILIZER KEY**

F: DTC P1576 EGI CONTROL MODULE EEPROM
DTC DETECTING CONDITION:
ECM malfunctioning

1. REPLACE ECM
Replace the ECM. <Ref. to FU(H4SO 2.0)-34, Engine Control Module (ECM).> <Ref. to FU(H4SO 2.5)-36, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-35, Engine Control Module (ECM).> <Ref. to FU(H6DO)-34, Engine Control Module (ECM).>
Perform the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

G: DTC P1577 IMM CONTROL MODULE EEPROM
DTC DETECTING CONDITION:
Body integrated unit malfunctioning

1. REPLACE BODY INTEGRATED UNIT
Replace the body integrated unit <Ref. to SL-46, Body Integrated Unit.> and replace all ignition keys (including transponder). Execute the registration procedure next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.
H: DTC P1578 METER FAILURE
DTC DETECTING CONDITION:
Reference code incompatibility between body integrated unit and combination meter

1. CHECK LAN COMMUNICATION SYSTEM
Inspect LAN communication system in the following situation. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
- DTC of body integrated unit B0300, B0301, B0302, B0111 or B0321 is displayed.
- “Er IU” or “Er LC” is displayed in odo/trip meter on combination meter.

2. REPLACE COMBINATION METER
Replace the combination meter. <Ref. to IDI-16, REMOVAL, Combination Meter Assembly.> Execute the registration procedure of all immobilizer part (combination meter and etc.) next. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

NOTE:
- When the combination meter has been replaced, be sure to perform the registration procedure of immobilizer.
- Engine may not start when the combination meter which removed from the model with immobilizer to the model without immobilizer. When installed wrong one, correct with the following procedure.
  1. Turn the ignition switch to OFF.
  2. Reinstall the combination meter. (Install the combination meter for the model without immobilizer.)
  3. Disconnect the ground cable from battery, and reconnect one minute later.
  4. Turn the ignition switch to START, and check that the engine starts.
- When the combination meter and body integrated unit are replaced at the same time, the registration procedure cannot be performed. In this case, it is necessary to write an ID newly to body integrated unit.
This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. **Basic Diagnostic Procedure**

### A: PROCEDURE

#### 1. WITH SUBARU SELECT MONITOR

**CAUTION:**
- Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
- Remove foreign matter (dust, water and oil etc.) from the body integrated unit connector during removal and installation.
- For the model with immobilizer, registration of immobilizer may be needed after the replacement of controller and etc. For detail procedure, refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

**NOTE:**
- To check harness for broken wires or short circuits, shake it while holding it or the connector.
- Check List for Interview <Ref. to LAN(diag)-3, Check List for Interview.>

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK PRE-INSPECTION.  
1) Ask the customer when and how the trouble occurred using interview check list. <Ref. to LAN(diag)-3, Check List for Interview.>  
2) Check the display of freeze frame data. (Combination meter, odo/trip meter) | Is freeze frame data displayed? | Go to step 3. | Go to step 2. |
| 2    | BASIC INSPECTION.  
Check the components which might affect body control. <Ref. to LAN(diag)-5, INSPECTION, General Description.> | Is the component that might influence the body control problem normal? | Go to step 3. | Repair or replace each unit. |
| 3    | CHECK INDICATION OF DTC.  
1) Read the DTC. <Ref. to LAN(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>  
NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to LAN(diag)-30, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  
2) Record all DTCs and freeze frame data. | Is DTC displayed? | Go to step 5. | Go to step 4. |
| 4    | PERFORM THE GENERAL DIAGNOSTICS.  
Inspect using “General Diagnostics Table”. <Ref. to LAN(diag)-79, General Diagnostic Table.> | Is result of inspection OK? | LAN system is normal. | Go to step 5. |
| 5    | PERFORM THE DIAGNOSIS.  
1) Fix the wrong part.  
2) Perform the clear memory mode. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>  
3) Read DTC. <Ref. to LAN(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> | Is DTC displayed? | Repeat step 5 until DTC is not shown. | Finish the diagnosis. |
2. Check List for Interview

A: CHECK
Inspect the following items about the vehicle’s state.

1. DISPLAY OF FREEZE FRAME DATA

<table>
<thead>
<tr>
<th>Freeze frame data is displayed in odo/trip meter.</th>
<th>When and how often are they displayed?</th>
</tr>
</thead>

Does it occur when operating any part?

Operated part:

Trouble Symptom:

Are other troubles occurred?

From where:

Trouble Symptom:
3. General Description

A: CAUTION

1. SRS AIRBAG SYSTEM

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

CAUTION:
- All airbag system wiring harness and connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the Airbag system wiring harness when servicing the body integrated unit and LAN system.

2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to bypass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.94 in).

- When repairing the harness, connect the wires using soldering and protect it with insulating tape, etc.

B: INSPECTION

Before performing diagnostics, check the following items which might affect body integrated unit malfunctions.

1) Measure the battery voltage and check electrolyte.

- Standard voltage: 12 V, or more
- Specific gravity: Above 1.260

2) Check the fuse condition.

Make sure that ampere of the fuse is setting value, and it is not blown out.

3) Check the connecting condition of harness and harness connector.

4) Confirm settings of body integrated unit are corresponded to vehicle equipment. <Ref. to LAN(diag)-18, REGISTRATION BODY INTEGRATED UNIT (EQUIPMENT SETTING), OPERATION, Subaru Select Monitor.>

5) Confirm setting are corresponded to vehicle equipment by function setting (ECM customizing) of body integrated unit. <Ref. to LAN(diag)-20, FREEZE FRAME DATA, OPERATION, Subaru Select Monitor.>

6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.

7) Confirm key illumination does not blink with ignition switch turned to ON.
## C: PREPARATION TOOL

(5) Steering angle sensor  (12) Clock
(6) Keyless entry receiver  (13) Exclusive communication line
(7) A/C control unit  (14) IE-Bus (AV)
6. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

NOTE:
• DTC is displayed in the sequence of inputting. (When inputting more than two simultaneously, DTC is displayed in the sequence of priority.)
• When more than two DTCs are displayed, perform the diagnosis of top of them.
1) Prepare the Subaru Select Monitor kit.
2) Connect the diagnosis cable to Subaru Select Monitor.
3) Insert the cartridge to Subaru Select Monitor. <Ref. to LAN(diag)-6, SPECIAL TOOL, PREPARATION TOOL, General Description.>
4) Connect the Subaru Select Monitor to data link connector. Data link connector is located in the lower portion of the instrument panel (on the driver’s side).

CAUTION:
Do not connect scan tools except for Subaru Select Monitor.
5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor switch to ON.
6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
7) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
8) On the «Integ. Unit mode failuer diag» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

NOTE:
• For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.
• For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to LAN(diag)-28, List of Diagnostic Trouble Code (DTC).>
2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failure diag» display screen, select the {Current Data Display & Save} and press the [YES] key.
4) On the «Current Data Display & Save» display screen, select the {12 Data Display} and press the [YES] key.
5) Using the scroll key, scroll the display screen up or down until the desired data is shown.
   • A support list contains both of analog and digital data, and they are shown in the following table.

6. REGISTRATION BODY INTEGRATED UNIT (EQUIPMENT SETTING)

CAUTION:
Body integrated unit is core of LAN system, and also can select the function of all vehicle system control. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.

If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to items below.
- Be sure to correspond registrations and function settings to vehicle equipment.
- Do not change the settings of vehicle improperly.
- Confirm key illumination does not blink or “Factory initial setting” of body integrated unit registrations is “Market”. If “Factory initial setting” is set to “Factory”, key illumination blinks with ignition key turned to ON to give warning of unconfirmed settings.
- Key illumination does not blink with ignition switch turned to ON and go off with door closed.
- Be sure to register immobilizer if body integrated unit is replaced with a new one. (Model with immobilizer)
- Make a registration of immobilizer when the parts replaced related to immobilizer. Refer to “REGISTRATION MANUAL FOR IMMOBILIZER”.

1) Turn the ignition switch to OFF.
2) Connect the Subaru Select Monitor to data link connector.
3) Turn the ignition switch to ON and Subaru Select Monitor to ON.

4) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
5) On the «Each System Check» display screen, select the {Integ. Unit mode} and then select the “ECM customizing”.

(A) Power switch
6) Change the setting with UP/DOWN key and press the [YES] key.
- List of body integrated unit registration item

**NOTE:**
Setting is different depending on grade of vehicle.

<table>

</table>

**CAUTION:**
- It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
- When body integrated unit is new one or “Factory” mode, key illumination blinks to show equipment settings does not completed.
- Be sure not to change Factory initial setting except installation of new body integrated unit.

**NOTE:**
- “Factory” mode:
  - Body integrated unit has been not set yet. It can be recognized by key illumination blinking with ignition switch turned to ON.
  - All body integrated units as part for repair are set to “Factory” mode. When replacing a body integrated unit, be sure to perform the registration operation.
- “Market” mode:
  Each settings have been set. It can be recognized by key illumination coming on in concocting with room light and going off with ignition switch turned to ON.
7) Perform the Factory setting. On the «ECM customizing» display screen of Subaru Select Monitor, select the {Factory initial setting} and press the [YES] key.
8) Change the mode from Factory into Market.
9) Replace the immobilizer cartridge, and register the immobilizer key. (Model with immobilizer)
10) Perform the registration according to the procedures of “IMMOBILIZER REGISTRATION MANUAL”.
11) When key registration is completed, “Do you want to register remote engine start?” is displayed. Perform the registration only if equipped.
12) Perform the function setting (ECM customizing).

<Ref. to LAN(diag)-21, FUNCTION SETTING (ECM CUSTOMIZING), OPERATION, Subaru Select Monitor.>

NOTE:
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

7. CLEAR MEMORY MODE
1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) Press [YES] key after displayed the information of body integrated unit type.
4) On the «Integ. Unit mode failuer diag» display screen, select the {Clear Memory} and press the [YES] key.

<table>
<thead>
<tr>
<th>Display</th>
<th>Contents to be monitored</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clear memory?</td>
<td>Clear function of DTC and freeze frame data</td>
</tr>
</tbody>
</table>

5) When the “Done” are shown on the display screen, turn the ignition switch to OFF.

NOTE:
For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

8. FREEZE FRAME DATA

NOTE:
• Data stored at the time of trouble occurrence is shown on display.
• Freeze frame data will be memorized maximum to 20.
• If freeze frame data is not stored in memory correctly (caused by low power supply of body integrated unit), DTC will be displayed with “?” on the head of it in the Subaru Select Monitor display. This shows it may be an unreliable reading.
### 9. FUNCTION SETTING (ECM CUSTOMIZING)

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {ECM customizing} and press the [YES] key.
4) Change the setting with UP/DOWN key and press the [YES] key.

5) After setting, make sure that vehicle equipment is same as the setting changed in the {Current Data Display & Save}.  

**CAUTION:**  
- It is possible to control the original functions of vehicle when settings above are corresponded to vehicle equipment.  
- Do not change the settings except for setting above during operation of equipment setting.  
- Be sure not to change “Factory” initial setting except in installation of new body integrated unit.  

**NOTE:**  
For details concerning operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

LAN(diag)-22
10. FUNCTION CHECK

In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.

3) On the «Integ. Unit mode failuer diag» display screen, select the {System Operation Check Mode} and press the [YES] key.

4) Select item to operate on the «System Operation Check Mode» display screen with “UP/Down key”, and press the [YES] key.

5) Pressing [YES] starts, [NO] cancels the operation and [YES] returns to the System Operation Check Mode display screen.

NOTE:
If not equipped (based on area or condition), process will not go on.

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

NOTE:
Use the Subaru Select Monitor, because DTCs cannot be read out.

2. WITH SUBARU SELECT MONITOR

For details concerning DTC reading procedure, refer to “Subaru Select Monitor”. <Ref. to LAN(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>
8. Clear Memory Mode

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

   NOTE:
   Use the Subaru Select Monitor for Clear Memory Mode.

2. WITH SUBARU SELECT MONITOR

   For detailed procedures of clearing DTC, refer to “SUBARU SELECT MONITOR”. <Ref. to LAN(di-ag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>
9. Read Current Data

A: OPERATION

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
2) On the «System Selection Menu» display screen, select the {Integ. Unit mode} and press the [YES] key.
3) On the «Integ. Unit mode failuer diag» display screen, select the {Current Data Display & Save} and press the [YES] key.
4) On the «Data Display Menu» screen, select the {12 Data Display} and press the [YES] key.
5) Using the scroll key, scroll the display screen up or down until the desired data is shown.

<Ref. to LAN(diag)-15, DISPLAY OF ANALOG DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-16, DISPLAY OF ON/OFF DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>
10. **Function Setting (Customize)**

**A: OPERATION**

1. **WITHOUT SUBARU SELECT MONITOR**

   **NOTE:**
   Applied to the Model with center display.

   1) Display the information screen with pressing the “INFO” switch of center display.
   2) Select “SET” on the touch panel at the right top of center display screen.
   3) Select the item from “A: Keyless entry” or “B: Various setup” on the touch panel.
   4) Change the setting on the touch panel which contains item to be changed.
   5) Return to the information display screen and complete it.

12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

NOTE:
- DTC is displayed in the sequence of the amount of counter numbers.
- When more than two DTCs are displayed, perform the diagnosis of top of them.

DIAGNOSIS:
Subaru Select Monitor communication line is open or shorted.

TROUBLE SYMPTOM:
Not communicable with Subaru Select Monitor.

WIRING DIAGRAM:
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 CHECK IGNITION SWITCH.</td>
<td>Is the ignition switch ON?</td>
<td>Go to step 2.</td>
<td>Turn the ignition switch to ON, and select Integ. Unit mode using Subaru Select Monitor.</td>
</tr>
</tbody>
</table>
| 2 CHECK BATTERY.  
1) Turn the ignition switch to OFF.  
2) Measure the battery voltage. | Is the voltage more than 11 V? | Go to step 3. | Charge or replace the battery. |
| 3 CHECK BATTERY TERMINAL. | Is there poor contact at battery terminal? | Repair or tighten the battery terminal. | Go to step 4. |
| 4 CHECK COMMUNICATION OF SUBARU SELECT MONITOR.  
1) Turn the ignition switch to ON.  
2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally. | Are system and model year displayed? | Go to step 7. | Go to step 5. |
| 5 CHECK COMMUNICATION OF SUBARU SELECT MONITOR.  
1) Turn the ignition switch to OFF.  
2) Disconnect the body integrated unit connector.  
3) Turn the ignition switch to ON.  
4) Check whether communication to other systems can be executed normally. | Are system and model year displayed? | Go to step 7. | Go to step 6. |
| 6 CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL UNIT AND SUBARU SELECT MONITOR.  
1) Turn the ignition switch to ON.  
2) Disconnect the body integrated unit connector.  
3) Measure the resistance between data link connector and chassis ground.  
   Connector & terminal (B40) No. 10 — Chassis ground: | Is the resistance more than 1 MΩ? | Go to step 7. | Repair the harness and connector between each control unit and Subaru Select Monitor. |
| 7 CHECK OUTPUT SIGNAL TO BODY INTEGRATED UNIT.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between body integrated unit and chassis ground.  
   Connector & terminal (B40) No. 10 (+) — Chassis ground (-): | Is the voltage less than 1 V? | Go to step 8. | Repair the harness and connector between each control unit and Subaru Select Monitor. |
| 8 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND DATA LINK CONNECTOR.  
Measure the resistance between body integrated unit and data link connector.  
   Connector & terminal (B40) No. 10 — (B280) No. 19: | Is the resistance less than 1 Ω? | Go to step 9. | Repair the harness and connector between body integrated unit and Subaru Select Monitor. |
| 9 CHECK INSTALLATION OF BODY INTEGRATED UNIT CONNECTOR.  
Turn the ignition switch to OFF. | Is the body integrated unit connector inserted into body integrated unit until the clamp locks onto it? | Go to step 10. | Insert the body integrated unit connector into body integrated unit. |
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 10   | CHECK POWER SUPPLY CIRCUIT.  
1) Turn the ignition switch to ON (engine OFF).  
2) Measure the ignition voltage between body integrated unit connector and chassis ground.  
   **Connector & terminal**  
   *(i84)* No. 1 (+) — Chassis ground (-):  
   Is the voltage more than 10 V? | Go to step 11. | Repair the open circuit of harness between the body integrated unit and battery. |
| 11   | CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND.  
1) Turn the ignition switch to OFF.  
2) Disconnect the connector from body integrated unit.  
3) Measure the harness resistance between the body integrated unit and chassis ground.  
   **Connector & terminal**  
   *(B280)* No. 19 — Chassis ground:  
   Is the resistance more than 1 MΩ? | Go to step 12. | Repair the poor contact of harness between the body integrated unit and ground. |
| 12   | CHECK POOR CONTACT IN CONNECTORS.  
Is there poor contact at control unit ground and Subaru Select Monitor? | Replace the body integrated unit.  
<Ref. to SL-46, Body Integrated Unit.> | Repair the poor contact connector. |

**CAUTION:**

When replacing body integrated unit on the model with immobilizer system, refer to “REGISTRATION MANUAL FOR IMMOBILIZER”. 
B: DIAGNOSTIC TROUBLE CODE (DTC) IS NOT STORED

DTC DETECTING CONDITION:
Defective combination meter

DIAGNOSIS:
- Freeze frame data in odo/trip meter is not cleared.
- “No trouble code” is displayed on Subaru Select Monitor.

NOTE:
If DTC is not displayed on Subaru Select Monitor, LAN communication System should be OK.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

**LAN SYSTEM (DIAGNOSTICS)**

### Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### Step Check Yes No

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK HARNESS.  
  1) Disconnect the body integrated unit connector (B280).  
  2) Measure the resistance between body integrated unit connector and chassis ground.  
  **Connector & terminal**  
  *(B280) No. 6 — Chassis ground:* | Is the resistance 10 — 30 Ω? | Go to step 5. | Go to step 2. |
| 2    | CHECK HARNESS.  
  1) Disconnect the body integrated unit connector (B280).  
  2) Disconnect the shift lock solenoid connector.  
  3) Measure the resistance between body integrated unit connector and shift lock solenoid connector.  
  **Connector & terminal**  
  *(B280) No. 6 — (B116) No. 3:* | Is the resistance less than 10 Ω? | Go to step 3. | Repair or replace the open or short circuit of harness. |
| 3    | CHECK SHIFT LOCK SOLENOID.  
  1) Disconnect the shift lock solenoid connector.  
  2) Measure the internal resistance of shift lock solenoid.  
  **Connector & terminal**  
  *(B116) No. 3 — No. 4:* | Is the resistance 10 — 30 Ω? | Go to step 4. | Replace the shift lock solenoid. |
| 4    | CHECK GROUND CIRCUIT.  
  1) Disconnect the shift lock solenoid connector.  
  2) Measure the resistance between shift lock solenoid connector and chassis ground.  
  **Connector & terminal**  
  *(B116) No. 4 — Chassis ground:* | Is the resistance less than 10 Ω? | Temporary poor contact occurs. Check the connection of each terminals, and then repair them if necessary. | Replace the body integrated unit.  
  <Ref. to SL-46, Body Integrated Unit.> |
| 5    | CHECK HARNESS.  
  1) Disconnect the body integrated unit connector (B280).  
  2) Measure the resistance between body integrated unit connector (B280) and chassis ground.  
  **Connector & terminal**  
  *(B280) No. 6 — Chassis ground:* | Is the resistance more than 1 MΩ? | Replace the body integrated unit.  
  <Ref. to SL-46, Body Integrated Unit.> | Repair or replace the short circuit of harness. |
I: DTC B0107 R FOG LAMP CIRCUIT FAILURE

DTC DETECTING CONDITION:
Rear fog input/output circuits are ground shorted.

TROUBLE SYMPTOM:
- Rear fog light does not come on or go off.
- Indicator in the combination meter may not be goes off.

WIRING DIAGRAM:

**Connector & terminal**  
*(B280) No. 13 (+) — Chassis ground (−)*: | Is the voltage 10 — 13 V? | Temporary poor contact. | Go to step 2. |
| 2    | CHECK HARNESS.  
1) Disconnect the body integrated unit connector (B280).  
2) Disconnect the rear fog light relay.  
3) Measure the resistance between body integrated unit connector and rear fog light relay connector.  
**Connector & terminal**  
*(B280) No. 13 — (B225) No. 27*: | Is the resistance less than 1 Ω? | Go to step 3. | Repair the open or short circuit of harness. |
| 3    | CHECK HARNESS.  
1) Disconnect the body integrated unit connector (B280).  
2) Disconnect the rear fog light relay.  
3) Measure the resistance between body integrated unit connector and chassis ground.  
**Connector & terminal**  
*(B280) No. 13 — Chassis ground*: | Is the resistance more than 1 MΩ? | Replace the body integrated unit.  
<Ref. to SL-46, Body Integrated Unit.> | Repair or replace the short circuit of harness. |
J: DTC B0201 CAN-HS COUNTER ABNORMAL

DTC DETECTING CONDITION:
High speed CAN communication of body integrated unit which monitoring the error data and non-received data are faulty.

TROUBLE SYMPTOM:
- “Er HC” is displayed in odo/trip meter.
- Engine malfunction indicator light illuminates.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| 1    | CHECK HARNESS.  
   1) Disconnect the body integrated unit connector (B280).  
   2) Measure the resistance between harness connector terminals.  
   Connector & terminal  
   (B280) No. 20 — No. 30: | Is the resistance 55 — 65 Ω?  
   Temporary poor contact occurs. | Go to step 2. |
| 2    | CHECK HARNESS.  
   1) Disconnect the body integrated unit connector (B280).  
   2) Measure the resistance between harness connector terminals.  
   Connector & terminal  
   (B280) No. 20 — No. 30: | Is the resistance more than 30 MΩ?  
   Repair or replace the open circuit of harness. | Go to step 3. |
| 3    | CHECK HARNESS.  
   1) Disconnect the body integrated unit connector (B280).  
   2) Measure the input voltage between harness connector and chassis ground while turning the ignition switch to ON.  
   Connector & terminal  
   (B280) No. 20 (+) — Chassis ground (-):  
   (B280) No. 30 (+) — Chassis ground (-): | Is the voltage more than 6 V?  
   Repair or replace the short circuit of harness. | Go to step 4. |
| 4    | CHECK HARNESS.  
   1) Disconnect the body integrated unit connector (B280).  
   2) Measure the resistance between harness connector and chassis ground.  
   Connector & terminal  
   (B280) No. 20 — Chassis ground:  
   (B280) No. 30 — Chassis ground: | Is the resistance less than 10 Ω?  
   Repair or replace the short circuit of harness. | Go to step 5. |
| 5    | CHECK BODY INTEGRATED UNIT.  
   Read the data of “body integrated unit data received” on ECM data display using Subaru Select Monitor. | Is the “Yes” displayed?  
   Go to step 6. | Replace the body integrated unit.  
   <Ref. to SL-46, Body Integrated Unit.> |
| 6    | CHECK BODY INTEGRATED UNIT.  
   Read the data of “body integrated unit counter update” on ECM data display using Subaru Select Monitor. | Is the “Yes” displayed?  
   Temporary poor contact occurs.  
   Check the connected condition of connector, read the DTC again to make sure that the DTC is not output. | Replace the body integrated unit.  
   <Ref. to SL-46, Body Integrated Unit.> |
K: DTC B0202 CAN-HS BUS OFF

DTC DETECTING CONDITION:
- Locate the unit or CAN line which trouble occurs, and repair and replace it.
- Not received data and error data may be detected at the same time.

TROUBLE SYMPTOM:
“Er HC” is displayed in odo/trip meter.

2) Measure the resistance between junction connector and combination meter connector.  
   **Connector & terminal**  
   (i10) No. 21 — (i77) No. 1:  
   (i10) No. 22 — (i77) No. 7:  
| Is the resistance less than 10 Ω? | Go to step 3. | Repair or replace the open circuit of harness. |
| 3    | CHECK HARNESS.  
1) Disconnect the center display connector (i90).  
2) Measure the resistance between junction connector and center display connector.  
   **Connector & terminal**  
   Model with navigation  
   (i90) No. 6 — (i77) No. 5:  
   (i90) No. 14 — (i77) No. 11:  
   Model without navigation  
   (i103) No. 2 — (i77) No. 5:  
   (i103) No. 4 — (i77) No. 11:  
| Is the resistance less than 10 Ω? | Go to step 4. | Repair or replace the open circuit of harness. |
| 4    | CHECK HARNESS.  
1) Disconnect the body integrated unit connector (B280) and auto A/C control unit connector (B238).  
2) Measure the resistance between body integrated unit connector and auto A/C control unit connector.  
   **Connector & terminal**  
   (B238) No. 1 — (B280) No. 26:  
   (B238) No. 11 — (B280) No. 25:  
| Is the resistance less than 10 Ω? | Go to step 5. | Repair or replace the open circuit of harness. |
| 5    | CHECK HARNESS.  
1) Connect the junction connector.  
2) Measure the resistance between body integrated unit connector and chassis ground.  
   **Connector & terminal**  
   (B280) No. 25 — Chassis ground:  
   (B280) No. 26 — Chassis ground:  
   (i84) No. 26 — Chassis ground:  
   (i84) No. 27 — Chassis ground:  
| Is the resistance less than 10 Ω? | Repair or replace the short circuit of harness. | Go to step 6. |
| 6    | CHECK HARNESS.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between body integrated unit connector and chassis ground.  
   **Connector & terminal**  
   (B280) No. 25 (+) — Chassis ground (−):  
   (B280) No. 26 (+) — Chassis ground (−):  
   (i84) No. 26 (+) — Chassis ground (−):  
   (i84) No. 27 (+) — Chassis ground (−):  
| Is the voltage more than 6 V? | Repair or replace the short circuit of harness. | Go to step 7. |
| 7    | CHECK CENTER DISPLAY FAIL.  
Read the current data of body integrated unit.  
| Is center display fail OK? | Go to step 8. | Replace the center display. |
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)
### LAN SYSTEM (DIAGNOSTICS)

### Step 8: CHECK AUTO A/C.
Perform the auto A/C self-diagnosis. <Ref. to AC(diag)-13, A/C CONTROL SYSTEM SELF-DIAGNOSIS, OPERATION, Diagnostic Chart for Self-Diagnosis.>

<table>
<thead>
<tr>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>

### Step 9: CHECK COMBINATION METER.
1) Connect all the connectors.
2) Turn the ignition switch to ON.
3) Check the display of combination meter, odo/trip.

<table>
<thead>
<tr>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is &quot;Er SS&quot; and &quot;Er SP&quot; displayed?</td>
<td>Replace the body integrated unit. &lt;Ref. to SL-46, Body Integrated Unit.&gt;</td>
<td>Replace the combination meter. &lt;Ref. to IDI-16, Combination Meter Assembly.&gt;</td>
</tr>
</tbody>
</table>
**Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

**LAN SYSTEM (DIAGNOSTICS)**

**S: DTC B0301 CAN-LS COUNTER ABNORMAL**

**DTC DETECTING CONDITION:**
Locate the unit which trouble occurs, open or short in CAN line, and repair and replace it.
(If running counter error may be detected at the same time from the unit which the malfunction occurs.)

**TROUBLE SYMPTOM:**
“Er LC” is displayed in odo/trip meter.

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>

| 1    | CHECK CENTER DISPLAY.  
1) Display the current data of body integrated unit using Subaru Select Monitor.  
2) Read the fail display of center display. | Is center display fail OK?  
Go to step 2.  
Replace the center display. |

| 2    | CHECK NAVIGATION.  
1) Display the current data of body integrated unit using Subaru Select Monitor.  
2) Read the display of NAVI fail. | Is NAVI fail OK?  
Replace the center display.  
Send the navigation unit to repair center. |
W: DTC B0321 CAN-LS METER NO-RECEIVE DATA

DTC DETECTING CONDITION:
Combination meter unit error, or harness between the main harness splice and combination meter unit is open or short, the connector is not connected securely and the terminal has poor caulking.

TROUBLE SYMPTOM:
Fail mode occurs because the data is not received from combination meter unit.

WIRING DIAGRAM:
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>

</thead>
</table>
| **1** CHECK COMMUNICATION LINE.  
1) Warm up the engine.  
2) Compare the data of body integrated unit and combination meter using Subaru Select Monitor.  
Check item:  
- Engine speed  
- Each door switch  
- P switch | Is the data displayed same? | Go to step 2. | Perform the self-diagnosis for combination meter. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.> |
| **2** CHECK HARNESS.  
1) Disconnect the body integrated unit, combination meter connector.  
2) Measure the resistance between harness connectors.  
**Connector & terminal**  
(i10) No. 21 — (i84) No. 27:  
(i10) No. 26 — (i84) No. 26: | Is the resistance less than 10 Ω? | Go to step 4. | Go to step 3. |
| **3** CHECK HARNESS.  
1) Disconnect the CAN joint connector (i77) with connector of unit is disconnected.  
2) Measure the resistance between harness connector.  
**Connector & terminal**  
(i10) No. 21 — (i77) No. 1:  
(i10) No. 26 — (i77) No. 7:  
(i84) No. 27 — (i77) No. 2:  
(i84) No. 26 — (i77) No. 8: | Is the resistance less than 10 Ω? | Go to step 4. | Repair or replace the open circuit of harness. |
| **4** CHECK HARNESS.  
Measure the resistance between harness connector (i77) and chassis ground.  
**Connector & terminal**  
(i77) No. 1 — Chassis ground:  
(i77) No. 7 — Chassis ground:  
(i77) No. 2 — Chassis ground:  
(i77) No. 8 — Chassis ground: | Is the resistance less than 10 Ω? | Repair or replace the short circuit of harness. | Go to step 5. |
| **5** CHECK HARNESS.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between harness connector (i77) and chassis ground.  
**Connector & terminal**  
(i77) No. 1 (+) — Chassis ground (-):  
(i77) No. 7 (+) — Chassis ground (-):  
(i77) No. 2 (+) — Chassis ground (-):  
(i77) No. 8 (+) — Chassis ground (-): | Is the voltage more than 6 V? | Repair or replace the short circuit of harness. | Go to step 6. |
| **6** CHECK COMBINATION METER.  
Perform the self-diagnosis for combination meter. <Ref. to IDI-3, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.> | Is the self-diagnosis OK? | Temporary poor contact occurs. | Check the connection of connector. Replace the combination meter. <Ref. to IDI-16, Combination Meter Assembly.> |
X: DTC B0500 KEYLESS UART COM. MALFUNCTION

DTC DETECTING CONDITION:
UART between keyless control unit and body integrated unit is open or shorted, connector is not connected securely, the terminal has poor caulking.

TROUBLE SYMPTOM:
Door lock does not operate with keyless.

WIRING DIAGRAM:
## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

<table>
<thead>
<tr>
<th>Step</th>
<th>Check</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>
| **1** CHECK HARNESS.  
1) Disconnect the body integrated unit connector (i84) and keyless entry control unit connector (i96).  
2) Measure the resistance between harness.  
   **Connector & terminal (i84) No. 9 — (i96) No. 3:** | Is the resistance less than 10 Ω? | Go to step 2. | Repair or replace the open circuit of harness. |
| **2** CHECK HARNESS.  
Measure the resistance between harness connector and chassis ground.  
   **Connector & terminal (i84) No. 9 — Chassis ground:** | Is the resistance less than 1 MΩ? | Repair or replace the short circuit of harness. | Go to step 3. |
| **3** CHECK HARNESS.  
1) Turn the ignition switch to ON.  
2) Measure the voltage between harness connector and chassis ground.  
   **Connector & terminal (i84) No. 9 (+) — Chassis ground (−):** | Is the voltage more than 6 V? | Repair or replace the short circuit of harness. | Go to step 4. |
| **4** OPERATION CHECK.  
Check the door lock operation when the doors LOCK/UNLOCK using manual LOCK switch. | Does it operate on switch operation? | Go to step 5. | Replace the body integrated unit. <Ref. to SL-46, Body Integrated Unit.> |
| **5** OPERATION CHECK.  
1) Disconnect the key warning switch connector (B350).  
2) Close all the door, and then perform the LOCK/UNLOCK operation on keyless entry operation. | Does it operate? | Check key warning switch. | Replace the keyless entry control module. <Ref. to SL-45, Keyless Entry Control Unit.> |
### General Diagnostic Table

#### 13. General Diagnostic Table

**A: INSPECTION**

Read the DTC or inspect and diagnose the following data in the current data display using Subaru Select Monitor.

#### 1. LAN SYSTEM

<table>
<thead>
<tr>
<th>Item</th>
<th>Operation</th>
<th>Specifications</th>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnostic code</td>
<td>DTC is not displayed when inspecting all DTCs.</td>
<td>DTC is not displayed.</td>
<td>Perform the diagnosis according to DTC.</td>
</tr>
<tr>
<td>Engine coolant temperature</td>
<td>Check the current data display of ECM, TCM and body integrated unit, and make sure all data have same values.</td>
<td>Same values</td>
<td>Inspect LAN system. If engine coolant temperature sensor is not OK, inspect the sensor circuit.</td>
</tr>
<tr>
<td>R defogger SW</td>
<td>It turns to ON when pressing switch. (Low-speed CAN is OK)</td>
<td>Turns to ON.</td>
<td>Inspect rear defogger switch. Rear defogger switch is connected with Low-speed CAN.</td>
</tr>
<tr>
<td>R defogger output</td>
<td>When switch input, it is output.</td>
<td>Output</td>
<td>Replace the body integrated unit.</td>
</tr>
<tr>
<td>Door lock SW</td>
<td>When locked with door lock switch, it turns to ON.</td>
<td>Turns to ON.</td>
<td>Inspect door lock switch. Door lock switch is connected with Low-speed CAN.</td>
</tr>
<tr>
<td>Door lock actuator</td>
<td>When locked with door lock switch, it is output.</td>
<td>Output</td>
<td>Replace the body integrated unit.</td>
</tr>
</tbody>
</table>

#### 2. BODY INTEGRATED UNIT

<table>
<thead>
<tr>
<th>Item</th>
<th>Operation</th>
<th>Specifications</th>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Illumination VR power supply</td>

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostic Procedure

A: BASIC PROCEDURES

1. GENERAL DESCRIPTION
The most important purpose of diagnostics is to determine which part is malfunctioning quickly, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM
Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE
Look at the wiring diagram and check the system’s circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE
1) Using the diagnostics, narrow down the causes.
2) If necessary, use a voltmeter, ohmmeter, etc.
3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

5. SYSTEM OPERATION CHECK
After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT
1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
3) Shift the positive lead to connector (B). The voltmeter will indicate no voltage.
4) With the test set-up held as it is, turn the switch ON. The voltmeter will indicate a voltage and, at the same time, the light will come on.

5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS
1) Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the two leads of an ohmmeter to each of the check points. If the circuit has diodes, reverse the two leads and check again.
2) Use an ohmmeter to check for diode continuity. When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity. When contacting the two leads in reverse, there should be no continuity.

3) Symbol “❍ — ❍” indicates that continuity exists between two points or terminals. For example, when a switch position is at “3”, continuity exists among terminals 1, 3 and 6, as shown in the table below.
3. HOW TO DETERMINE AN OPEN CIRCUIT

1) WITH VOLTMETER:
An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

2) WITH OHMMETER:
Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates "infinite", the wiring is open.

4. HOW TO DETERMINE A SHORT CIRCUIT

1) WITH TEST LIGHT:
Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

2) WITH OHMMETER:
Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

C: HOW TO READ WIRING DIAGRAMS

1. WIRING DIAGRAM
The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery. Sketches and codes are used in the diagrams. They should read as follows:
- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.
Basic Diagnostic Procedure

- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

<table>
<thead>
<tr>
<th>Connector used in vehicle</th>
<th>Connector shown in wiring diagram</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sketch</td>
<td>Symbol</td>
</tr>
<tr>
<td>Double frames</td>
<td>Numbered in order from upper right to lower left.</td>
</tr>
<tr>
<td>Indicates a lock is included.</td>
<td></td>
</tr>
<tr>
<td>Indicates the number of poles.</td>
<td></td>
</tr>
<tr>
<td>Single frame</td>
<td>Numbered in order from upper left to lower right</td>
</tr>
</tbody>
</table>

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

- WIRING DIAGRAM:
The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.
- The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

NOTE:
A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.
Basic Diagnostic Procedure

- In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires.

<table>
<thead>
<tr>
<th>Color code</th>
<th>Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>L</td>
<td>Blue</td>
</tr>
<tr>
<td>B</td>
<td>Black</td>
</tr>
<tr>
<td>Y</td>

<tr>
<td>V</td>
<td>Purple</td>
</tr>
<tr>
<td>SA</td>
<td>Sealed (Inner)</td>
</tr>
<tr>
<td>SB</td>
<td>Sealed (Outer)</td>
</tr>
</tbody>
</table>

- The table lists the nominal sectional areas and allowable currents of the wires.

**CAUTION:**
When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

**NOTE:**
- The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

<table>

Basic Diagnostic Procedure

- Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

![Diagram showing direct and indirect ground connections](image)

- The ground points shown in the wiring diagram refer to the following:

  **NOTE:**
  All wiring harnesses are provided with a ground point which should be securely connected.

![Diagram showing ground points](image)
Relays are classified as normally-open or normally-closed. The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

<table>

</tbody>
</table>

Key to symbols:
- **O**: Current flows.
- **X**: Current does not flow.
Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

![Wiring Diagram](WI-00115)

Each connector number shown in wiring diagram corresponds to that in the vehicle.
**D: SYMBOLS IN WIRING DIAGRAMS**

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

1. **RELAY**
   A symbol used to indicate a relay.

2. **CONNECTOR 1**
   The sketch of the connector indicates the one-pole types.

3. **WIRING CONNECTION**
   Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

4. **FUSE No. & RATING**
   The “FUSE No. & RATING” corresponds with that used in the fuse box (main fuse box, fuse and joint box).

5. **CONNECTOR 2**
   - Each connector is indicated by a symbol.
   - Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
   - For example, terminal number “G4” refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.
6. CONNECTOR SKETCH
- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND
Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE
A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS
For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.
A ←→ A, B ←→ B

10. SYMBOLS OF WIRE CONNECTION AND CROSSING

11. DC POWER SUPPLY CIRCUIT
A symbol is used to indicate the power supply in each wiring diagram.
“MB-5”, “MB-6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the “DC POWER SUPPLY CIRCUIT” in the wiring diagram.
Accordingly, using the “DC POWER SUPPLY CIRCUIT” and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

12. CLASSIFICATION BY SPECIFICATION
When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.
WIRING SYSTEM

Basic Diagnostic Procedure

E: CONNECTOR SYMBOL IN WIRING HARNESS
A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.
## Basic Diagnostic Procedure

### Wiring System

#### Standard Type

2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

1) The battery cable must be disconnected from the battery’s (−) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
2) Securely fasten the wiring harness with clamps and slips so that the harness does not interfere with the body end parts or edges and bolts or screws.
3) When installing parts, be careful not to catch them on the wiring harness.
4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.
5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.
6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always contact tester probe(s) on terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use “mini” test leads.
To check water-proof connectors (which are not measurable from the wiring side), contact test probes on the terminal side. Be careful not to bend or damage the terminals.
7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles. This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics. Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.
